MOSSBERG

ALL STEEL WRENCHES AND TOOLS

No. 612 Speed Brace

Speed Brace Socket Wrenches

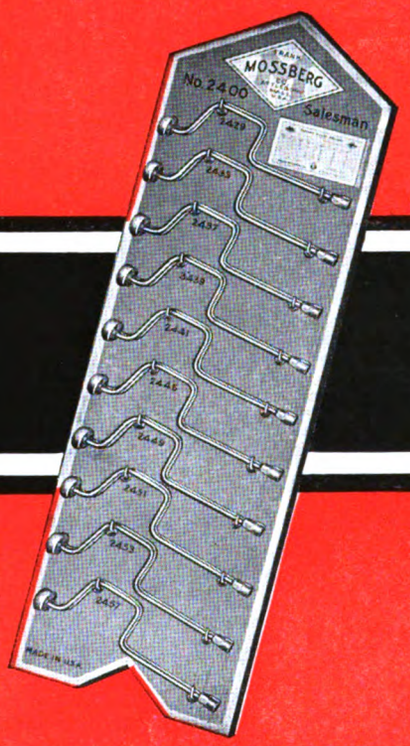
No wrench can handle that out-of-the-way nut or bolt like a Speed Brace Socket Wrench. And the Mossberg line contains a complete assortment of these efficient wrenches in all sizes and shapes for all kinds of work.

These are supplied the dealer, together with sales boards—Silent Salesmen—in assortments that correspond with the demand. All live ones. Mossberg all-steel construction, finished in burnished nickel. Rugged, practical wrenches, made for hard work. Popular among your customers.

No. 2400 Salesman

This well balanced display board assortment contains 70 Speed Braces in quantities ranging from four to nine of each wrench. Each number is made of ½ inch steel bar, is 19¼ inches in length, and is finished in burnished nickel. The board itself is made of chestnut with nickeled steel hook. Size, 20 inches by 60 inches. Free with complete assortment.

"L" Salesman



Assortment contains 140 Solid Socket Wrenches—47 6-inch "T" Wrenches—57 12-inch "T" Wrenches, and 36 10-inch Offset Wrenches. All fast sellers. Constructed of ½ inch steel bar, finished in burnished nickel. Board 20 inches by 60 inches—same high quality as "2400" board. Furnished free with complete assortment.

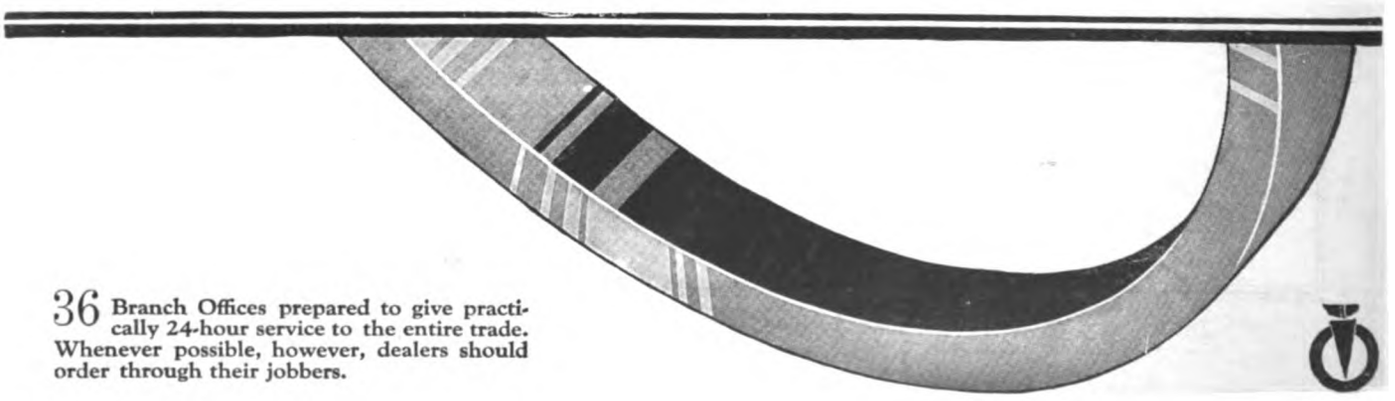
Gill One-piece Piston Rings

Price Reduced to

75¢

reduce fuel consumption

BECAUSE: they are ***individually*** cast from a special gray iron that retains its tension, elasticity, and vitality under all the intense heat and terrific stress and strain of piston ring service. Gill Piston Rings, under all conditions and for thousands of miles, exert an all-around, uniform, leakless contact with the cylinder walls. They hold ***all*** of the fuel in the combustion chamber where ***all*** of it can be compressed into power. Where there are Gill Rings there is no waste.



Identify the Gill One-piece Piston Ring by the joint, but do not measure its merit by the joint ***alone***.

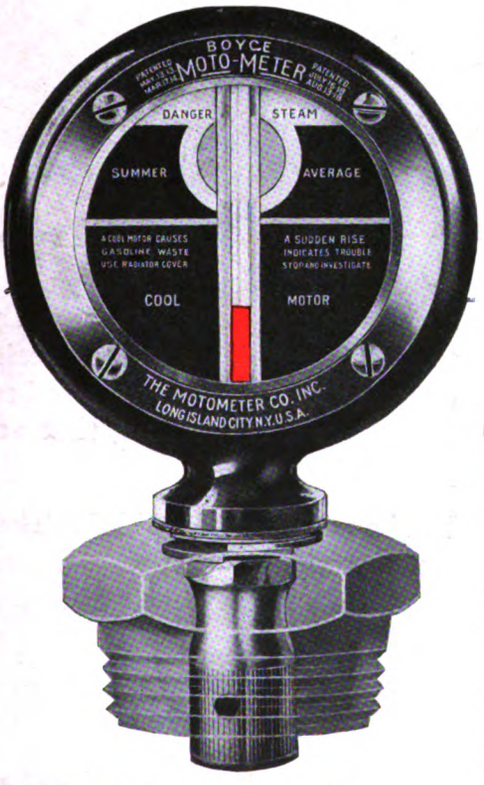
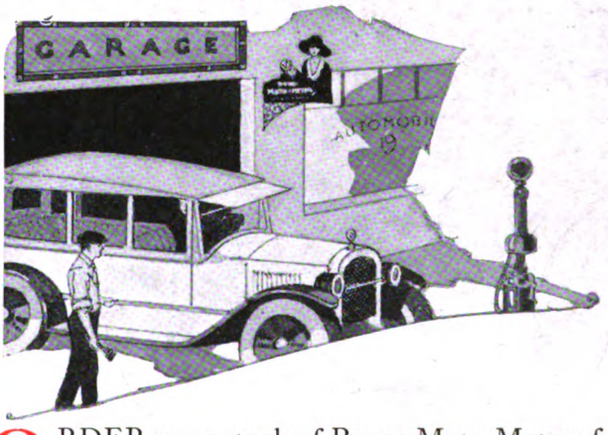
MOTOR WORLD

for

DEALERS, JOBBERS AND GARAGEMEN



Volume LXXIII
Number 3



PUBLISHED WEEKLY AT 239 WEST 39th STREET
NEW YORK, OCTOBER 18, 1922

Thirty-five cents a copy
Three dollars a year

BOYCE MOTOMETER

"Your car deserves one"

ORDER your stock of Boyce Moto-Meters for the Fall and Winter *now*, if you haven't already. Don't wait until an emergency arises—and you lose sales and good-will.

Boyce Moto-Meter dealers made new sales records during the summer months. Fall and Winter sales should keep close to this level.

The demand for the Boyce Moto-Meter is not seasonal—it is an all year round seller. Reports from automobile and accessory manufacturers indicate continued prosperity in the industry.

And note this—the proved utility of the Boyce Moto-Meter has made it *the fastest selling accessory on the market today.*

Moreover, aside from its merit as profitable merchandise, the Boyce Moto-Meter and the Service behind it create more *good-will* for the dealer than any other accessory.

"Ask 'em to buy"—

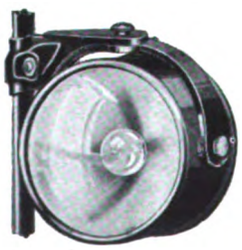
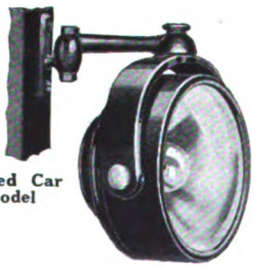
Shows the Road to Bigger Profits

Model 176



BRIGHTEN up your sales—dispel overhead gloom. The only accessories you can make money on are those that sell. The only accessories that sell are those that are advertised, that have a reputation, that are popular.



You know Stewart Searchlights. They are on cars everywhere. Build up your profits by handling them.

RIGHT to the thousandth of an inch

No matter what make or model of passenger car or truck drives up to your door for radiator hose you can supply instantly the right size and length if you sell GOODRICH.

GOODRICH furnishes all garage dealers and accessory stores featuring its radiator hose with an elaborate though easily followed chart showing just the width and length to apply. You can not go wrong. You do not waste your time fussing and measuring. You do not waste hose in cutting and recutting. Look at the chart—the job done right.

And more—

You sell hose that will do the job better and last longer—AND BRING A SATISFIED CUSTOMER BACK TO YOU!

Make This Winter Work for You

You Can Turn Cold Weather Conditions into Opportunities

1—To Get Winter Business 2—To Prepare for Spring Business
3—To Fit Your Organization for the 1923 Grade

UNTIL six or seven years ago men in the automotive trade thought of winter as a dull season. They didn't think of trying to make it anything else.

Then began the first efforts to build the automobile business into a year round business. They were feeble efforts, as a child's first steps are groping and uncertain. There were some selling efforts, some advertising efforts, but they lacked the punch that convinces. Because the men in the trade were skeptical of getting any sizable volume of business in winter, because their selling and advertising efforts were hesitant, doubtful, they failed to get winter business in any sizable volume.

This was six or seven years ago.

Since then, keeping pace with the development of the motor car and truck as transportation units of year round utility, the trade has made its winter business message stronger and stronger year after year. It has taken a leading part in the education of the public to year round motor transportation. It has fitted itself to serve this year round transportation and in the process has built up a winter business that, each year, rises like an incoming tide to a new height of profit for the trade and satisfaction for its customers.

WITHIN the past two or three years two new facts have stood out in this winter business building process.

This is the first fact: Winter conditions make motor transportation more of a necessity in winter than in summer for many users of cars and trucks. With these users many items of maintenance and equipment likewise are more of a necessity in winter than in summer.

Men in the trade who have realized this—and there are many—have been selling cars and trucks and service and equipment for them as winter necessities.

This is the second fact: Distributors, jobbers, dealers and garagemen who have gone out after business in winter have uncovered prospects for spring business.

And back of all this—getting winter business and listing spring prospects—distributors, jobbers, dealers and garagemen who have kept their organizations, large or small, at work through the winter months, have kept them fit, active, *going* organizations, ready to step off with a business getting stride when spring arrives.

TO do business all winter is no longer a hope of the automotive trade. *Doing business all winter is a fact.*

Men in the trade who are making winter profits are making their places of business an active selling force.

Are you?

They are making clean shops, bright salesrooms, attractive windows and neat store interiors ask people to buy their services and their merchandise.

Are you?

They are keeping salesmen on the go all winter, digging for winter buyers, cultivating spring buyers.

Are you?

They are keeping themselves and the merchandise or services they sell continually before the public in newspaper and other forms of advertising.

Are you?

They are writing letters and mailing cards, catalogs and circulars to prospects all winter, when people have the most time and are most inclined to read.

Are you?

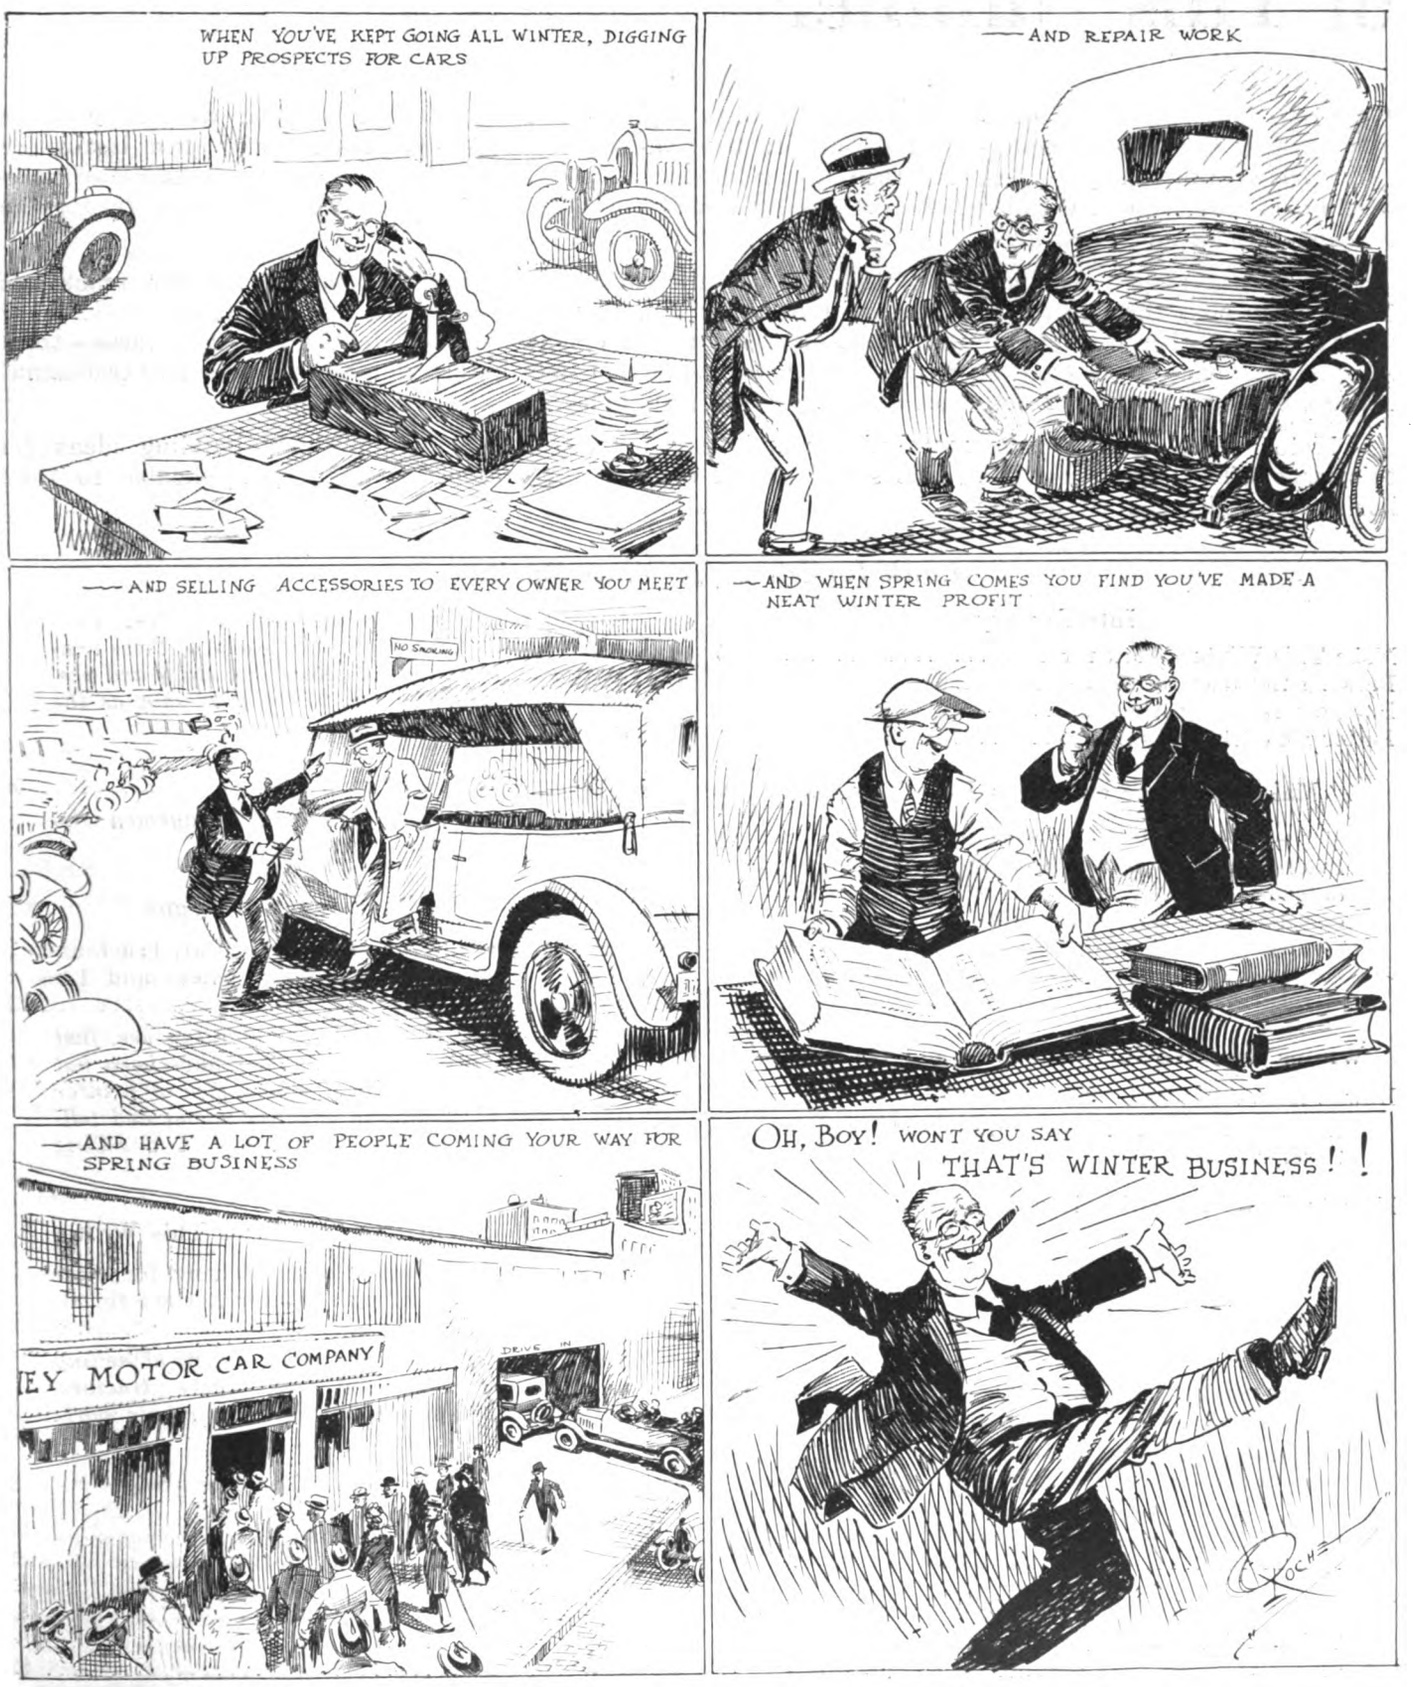
They are making the last month of the year a good month instead of a bad one by getting a share of the millions that people spend for Christmas gifts.

Are you?

EVERY man in the automotive trade can do the things these winter business getting men are doing

In this seventh annual Winter Business Number of Motor World you will find stories that tell how to—

Get winter business.



Prepare for spring business.

Fit your organization for the 1923 grade.

They are stories based on *the best practices of successful men* in the trade. They are stories that point the way to profits. Motor World invites you to read them—and use them.

The Contents of This Number

This Page Presents an Index of the Winter Business Number Arranged for the Convenience of Motor World Readers

THIS special number of Motor World contains eighty-eight editorial pages filled with suggestions which the editors believe will be of practical value to readers. Experience with past issues has shown that many readers use them for reference purposes. For this reason the editors are presenting on this page a detailed index of the editorial contents, which is intended to assist readers in locating articles and ideas likely to prove of special interest to them.

Prominent among the features of this number are plans for keeping salesmen in the car, truck and tractor field busy through the winter—profitably busy going after both winter and spring business. For these and the other divisions of the trade—automotive equipment and tires and the repair business—there is presented page after page of displays, advertisements and sales letters which the automotive tradesman can use to make his winter activities continuous and profitable.

Motor World editors have searched far and near for practical winter business building ideas for this issue. They hope that the readers will search out the suggestions particularly applicable to their businesses and make use of them.

Plowing the Way for Winter Business

Will the Highways Be Cleared in Your Town?—It Reduces Transportation Costs and Increases Profits for Men in the Trade

THREE years ago a snowstorm cost the City of New York sixty million dollars. That was the loss to business as a result of traffic paralysis. When that storm hit New York available snow removal apparatus was inadequate to the terrific task placed upon it. The storm taught New York a lesson, two or three million dollars was invested in trucks, tractors, ploughs and scrapers and the Metropolis now is ready for any kind of a storm that may come along.

New York's bill sounds large, but it is estimated that during a winter of heavy snow the business of the nation loses half a billion dollars through traffic tie-ups.

How much does business in your town lose because its main streets, and the truck highways leading to other towns, are impossible or difficult for traffic, a part of every winter?

How much do you lose, in sales of merchandise and service, because snow blockades keep cars and trucks in temporary or permanent storage?

THE questions are pertinent to every man in the automotive trade.

Dealers and garagemen get some business, in winter overhaul work and dead storage, when cars and trucks are laid up all winter. They get more when road conditions permit limited employment of motor transportation throughout the cold months. They get far more when cleared highways not only make it possible for cars and trucks to run all winter but encourage the practice of winter motoring.

In any community where there is no such thing as systematic snow removal work someone must agitate it. Public officials in many cases have to be prodded into action. They have to be shown that failure to keep key transportation routes open is not economy; it is adding tremendously to the costs of transporting persons and commodities and maintaining roads and in addition is causing abnormally rapid wear of vehicles which use the clogged thoroughfares—and in the end the public pays.

In some territories it is a State job to clear the highways of snow. In others a county, city or town is responsible. Whatever the circumstances, it is possible by obtaining and presenting facts in a constructive manner to convince public authorities that *in the interest of the public they represent highway traffic routes should be kept open through the winter.*

THE past few years have seen big forward strides in the year round use of motor vehicles. Eventually, except in far northern and remote sections, we shall see the car and the truck serving as an all year utility like the railroad and trolley line, with no thought on the part of owners of sending their vehicles to winter storage. That day will be a bright day for the automotive trade. Every additional mile of thoroughfare opened to year round traffic brings the day so much nearer. Are you going to help bring it nearer in your community?

Ask your legislators, your county, city and town officials, to work for snow removal this winter. Ask your newspaper editor to advocate the cause; he is always on the lookout for progressive issues to champion.

Get behind the snowplow this winter.

AND PUSH!

Digitized by Google

BUSINESS of a dealer or garageman in the remotest town in the country is affected by general business conditions throughout the country. If the country is prospering, so will his town and so will he. It will be decidedly encouraging to men in the automotive trade, who in many communities are not closely in touch with nationwide business and financial developments, to know that the outlook for the rest of 1922 and 1923 is decidedly bright. With the railroad and coal strikes settled, American business has taken a new hold of its task and virtually all lines of business are going ahead. This story tells about this winter's and next spring's prospects. It will be of interest and value to every reader of Motor World.

Business Is Going Ahead

Fall and Winter Prospects Are Bright and 1923 Promises to Be a Splendid Year for the Automotive Trade

By JAMES DALTON

PREDICTIONS about business for the coming year are easier to make than they were six months ago. The outlook is distinctly encouraging so far as volume of sales is concerned. This applies to passenger cars, trucks, tractors, replacement parts, accessories and garage equipment.

Unless something happens which does not now appear in the cards, 1923 will be a splendid year for the automotive industry. The fourth quarter of 1922 promises to establish a record for the last three months unless all calculations are upset by the unprecedented traffic jam which is impending on the railroads and which probably will continue the rest of this year and perhaps until the approach of spring.

Notwithstanding the complications which may result from rail congestion and a severe shortage of freight cars over an extended period, *there is every indication that a real business revival is under way and that the prosperity it will bring will continue for a long time.* The only adverse factor at the present time is the comparatively low price prevailing for some farm products, but it is probable this condition will be improved when the inevitable foreign demand gets under way. Farmers are in better position to hold their crops than they were a year ago, and the bumper grain harvest assures a profitable crop even at present prices.

WITH a production of 206,000 passenger cars and trucks in September, the industry established a record for the month. It was an increase of almost 50,000 over the same month in 1921, although it showed a falling off of about 25 per cent from August. It was, however, the sixth consecutive month showing a production of more than 200,000. The total for the first nine months of this year exceeds the total for the full year of 1921 and with three months more to go it is certain that 1922 will be another two million car year, although it will fall somewhat short of the 1920 record.

The automotive industry as a whole is operating on a basis of at least 80 per cent of capacity. Many plants are turning out goods as fast as they can make them and there are few which are not above 70 per cent of capacity. In some lines all the facilities available are far short of the demand. This is true particularly in relation to closed bodies.

Parts makers are greatly pleased with the amount of business they are getting at a period when they usually feel a sharp let-up in sales. Nearly all of them have commitments running into 1923 and there is a disposition on the part of vehicle manufacturers to place their commitments for a longer period ahead, which is in itself the best indication of renewed confidence in the future.

BUSINESS in replacement parts, accessories and garage equipment is better than it has been since 1920.

So far as passenger cars are concerned, sales have fallen off considerably in some sections of the country, but they have increased in other districts, in spite of the approach of fall. Demand in the southeast, especially, is stronger. The farm market generally is better than it has been for a long time but it is not so strong in the grain growing districts as it promised to be a few weeks ago. This is because of the lower price for grains.

Closed car demand, taking the country as a whole, is averaging around 35 per cent of the total sales. In some sections the proportion is much higher and in some it is lower.

While there has been no great increase in truck sales, the market is firm and it will grow steadily stronger as rail congestion becomes more serious. In anticipation of the necessity for keeping motor transport moving as an auxiliary to the hard pressed railroads, the Federal Bureau of Roads is already making plans for more vigorous effort the coming winter in the removal of snow.

Digitized by Google

It should not be forgotten that motor transport did not reach important proportions until it became apparent in 1917 that the railroads would be unable to move the volume of traffic offered them. They did not have a surplus of cars until late in 1920 and by that time highway transport was so firmly established that only a comparatively small part of it went back to the rail carriers. It had demonstrated its efficiency and economy in time of need. The conditions which now prevail, or will prevail in the near future, will parallel precisely those which inaugurated general use of the truck, and motor transport will be given another push forward. It is inevitable that it will increase the demand for trucks for the remainder of this year. This will include both light and heavy duty vehicles.

SO far as 1923 is concerned, there is no doubt that it will be a splendid year for all branches of the automotive industry. The volume of passenger car business is not likely to be more than 10 per cent larger than it has been this year, but that has been a mighty good business. Truck demand will shoot upward, however, and in this field the percentage of gain over 1922 is likely to be comparable to the gain in passenger car sales this year over 1921. Truck makers and dealers would do well to get ready for a heavy volume of business. This does not mean, nevertheless, that they should accumulate large inventories or expand their facilities. There is plenty of truck manufacturing and sales space for some time to come.

The automobile market should be built on a sane and solid foundation. The constant strife to sell more cars, regardless of whether they are well sold, is not good business. It is one of the main reasons for the used car problem, which retains serious proportions. The handling of used cars is largely a dealer problem, but it is aggravated by those manufacturers who insist upon their dealers straining every nerve to sell more cars, regardless of the actual needs of their territories.

WHILE it would be unwise to accumulate inventories of raw materials at the factories or of vehicles on dealers' floors or in warehouses, beyond the expected needs for a comparatively short period, some consideration should be given to the effects of the rail situation and the difficulty of getting shipments through in anything like the usual length of time. The time will soon be here when it may take a month to get a shipment that usually would require only a week. For that reason dealers and manufacturers will be entirely justified in giving themselves more latitude than they have for many months past.

Fundamental indications are that the present industrial revival is not a flash in the pan, resulting from an attempt to fill empty shelves, but rather that it is a sound movement which will continue. Car loadings are rapidly approaching the high record set in October, 1920. This is not entirely the result of the feverish effort to move fuel dammed up by the long continued coal strike, for miscellaneous freight car loadings are nearly at the peak of two years ago. There can be no better barometer of business than car loadings.

Reports from all sections of the country show that business and industry went ahead with renewed confidence as soon as the coal and rail strikes were settled. They were not uncertain at any time about the improvement in demand, but the day by day problems caused them to hesitate and they did not move with as much confidence as they would had there been no strikes. This hesitation has practically disappeared.

Practically all lines of trade and industry are going ahead, with no serious obstacles in the way. Farmers, to a certain extent, are marking time but their prospects are good. In general they have good crops, at least materially larger than last year, and while prices at the moment are rather disappointing there is every reason to believe they will go up rather than down. There has been a shortage of European crops this year and practically all the countries of Europe will have to come into the American market for foodstuffs before the winter is over. Automotive dealers in rural districts will have a gratifying market for the next fifteen months.

THE cotton crop is nearly a million bales short of expectations early in the year because of weather and weevil damage, but the latest government estimate is for 10,135,000 bales as compared with a harvest of 8,039,673 in 1921. There will be a market for at least 13,000,000 bales of American cotton, so it is evident that the new crop and whatever carry over there may be from last year, will be marketed at a good price. This assures comparative prosperity for all the cotton growing states, with good markets for motor vehicles.

The farmer's situation all over the country, while it is not such as to send him rushing into the market to buy everything he wants, is far from discouraging. Farmers who got into debt in the crash of produce prices in 1920 paid off some of their obligations last fall. They will still further clear them up this fall and in some cases will be able to liquidate entirely. Other farmers, through the entire reconstruction period, have had money in the bank and have held it until prices of the things they buy approached nearer to the level of values of the things they sell. This level is not here, but the farmer's situation is better than it was and many of these farmers with money will buy equipment for the farm this fall, winter and spring. With the average farmer an automobile is just as much equipment for the farm as a reaper or binder, and trucks and tractors are included in many cases, also in the equipment the farmer must have.

All this promises good business in most localities, certainly better than fair business in all sections for automotive tradesmen who will actively canvass their territories for farmers' business.

In country districts, in city and town territories, there is plenty of justification in the months ahead for dealers to put active effort into canvasses leading to fall, winter and spring business.

Better Men

Reilly Tells How He Is Going to Get Up Speed for the 1923 Grade

By NEAL G. ADAIR

THE sunshine of a bright October morning was no brighter than the smile of Henry Bennett as he walked briskly into the office of C. J. Reilly.

"Cornelius," said Bennett the moment he crossed the threshold, "do you know we've just finished the biggest six months in the history of the Bennett Motor Co?"

"Not surprised," Reilly replied as they shook hands. "We've just made the same kind of record ourselves."

There was another handshake by way of mutual congratulation, after which the dealers lighted cigars to encourage the swapping of experiences that had to do with Bennett's scattering of Redman cars and Reilly's distribution of Sennetts throughout the Callawassa territory.

"Yes sir," Bennett exclaimed. "We sure made a clean-up. Guess maybe I'm entitled to disappear into the woods after some deer or something. What?"

"Feel like resting on your laurels?" Reilly suggested.

"Earned 'em, haven't I?" Bennett retorted.

"I was thinking about laurels," Reilly said, musing. "Sometimes I think the luckiest man in business is the fellow who has no laurels to rest on. He isn't tempted to do anything but just keep plugging ahead."

"I haven't said anything about not plugging, have I?" Bennett asked.

"Not exactly, except that you seem to be set on jumping away from your business just at the time when—"

"—just at the time when things are slowing up and I can get away without gumming up the works," Bennett finished.

"Things are slowing up, of course," Reilly conceded, "but does that mean you should be, too?"

"But winter's coming, isn't it?" Bennett retorted.

"And so is—" Reilly interrupted himself. "I was reading a book the other day, Henry, and a little quotation in it set me thinking, harder, I guess, than I ever thought before about this seasonal side of the automobile business. The quotation said, 'If winter comes, can spring be far behind?' then the book went on and told how Nature uses winter time to get ready for the coming spring. And I couldn't help thinking that you and I and some of the other men in the automobile business aren't quite so wise as Nature. We say, 'Winter's coming, consarn the luck,' then we puddle around for a month or so waiting for it to come and two or three months more wishing it would go and suddenly come to with a start at show time and run

around in circles trying to get ready for spring with spring right on top of us."

"What's that got to do with my going off to shoot some wild animals in October?" Bennett demanded.

"It's like this," Reilly answered. "You've got a good organization and so have I. But I'm not so sure that this year's good organization is going to be good enough to meet next year's competition. And this year's organization won't be likely to be as good next spring as it is now unless we do something to keep it up to snuff through the winter, when business is bound to fall off a little.

"So, Henry, I'm not going hunting or anywhere else until I work out a program and get it going—a program that will help my salesmen to become better salesmen, my service men better service men and my office folks better office folks before next spring rolls around. Every man in the place is going to be busy this winter learning some things that he never knew before about the Sennett car and how it is made and how it can be sold, and the house of Reilly and how it is run. We're going to have weekly meetings for salesmen, weekly meetings for service men, weekly meetings for the people in the office and monthly meetings for everybody."

"But this meeting stuff, don't you think it's overdone?" Bennett asked.

"It all depends on the kind of meetings you hold," Reilly answered, "and whether you lead your people into them, or drive them in. We sent individual letters to everybody in the place the other day, asking, 'Are you going to make the 1923 grade?' We called our meetings a course in self-improvement and asked for volunteer enrollments. The whole place signed up in a day. Now we're going ahead with a program that will get some real meat into these meetings, keep them interesting and hold the crowd right through the season."

"Sounds first rate," Bennett commented," but you know my organization isn't as big as yours and—"

"What has size got to do with it?" Reilly broke in. "Is there any reason why three people, for instance, can't get together once in so often and talk about the work they are all trying to do, just as well as twenty people? I have dealers out in the territory, fellows with only two or three salesmen and half a dozen men in the shop, who hold staff meetings as regularly as clockwork and get a lot of good out of them. In these regular meetings the ideas of the whole organization can be brought out and made available for everybody."

"Sounds better yet," Bennett said. Then, regretfully shaking his head: "I sure did want to get out and shoot me a deer, BUT—"

Make Your Place of Business an Active Selling Force

THERE are thousands of dealers throughout the country with businesses just about as big as the business of W. A. La Motte, who runs a general automobile establishment with sales and service in Elizabeth, N. J. But how many dealers have A PLACE OF BUSINESS THAT SELLS like this North End Garage? A little salesroom, but inviting; signs that sell without offending good appearance; a neat, clean entrance to the garage and service station —these are things that make La Motte's place of business an active selling force.

"SO this is Bill Smith's place!" says the man you dearly want to sell to—the man you want to make a regular customer in your place of business.

And then, as he stands before your store or your garage, or just inside the door, he proceeds to look YOU over. He judges you, your organization, your ability to satisfactorily s e r v e him by APPEARANCES. Doesn't he?

You can just bet he does! It is a human trait to judge people and things by appearances—and to form likes and dislikes from first impressions.

Bill Smith may be a corking good salesman—he may be the best mechanic in town. He may have the best organization, the best tools, the best personality—when you know him—but if his place of business doesn't create favorable impressions there are a lot of people that are never going to know him.

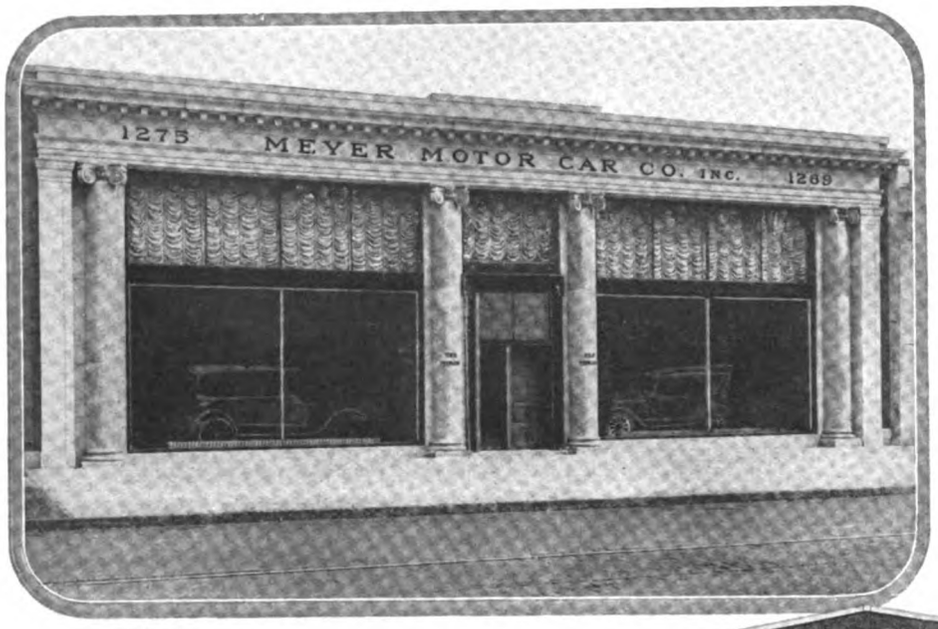
Bill Smith, dealer or garageman, has to MAKE HIS PLACE OF BUSINESS AN ACTIVE SELLING FORCE. He has to make it neat, clean, attractive. He has to plan the appearance of his salesroom, store or shop to attract customers.

Other trades learned the lesson long ago and most of them are doing it in a fine way. Many men in the automotive business have done it, too—and the rest of the trade is going to do it.

This winter is going to afford you time to think and plan. Why not direct some thinking and planning toward making your establishment an active selling force? There's a tendency of business to slacken in winter. Why not direct your energies toward straightening out this winter's drooping sales curve by putting your place of business to work attracting customers?

Most people buy where parting with their money is made easier by interesting and pleasing displays of things that create desire to buy. Most people like to do business with establishments that look prosperous, dependable and well managed. Great financial and insurance companies have invested millions in home office buildings that are towering monuments of strength and stability. And they don't neglect the opportunity of impressing people with their strength and stability by printing pictures of their great buildings on their literature. They know the human trait of judging things by appearances, and cash in on the public confidence that their great business monuments inspire. *They make their places of business an active selling force.* And in many a small city or town one of the finest business buildings is an automobile establishment. *The owner has made his store and shop an active selling force.*

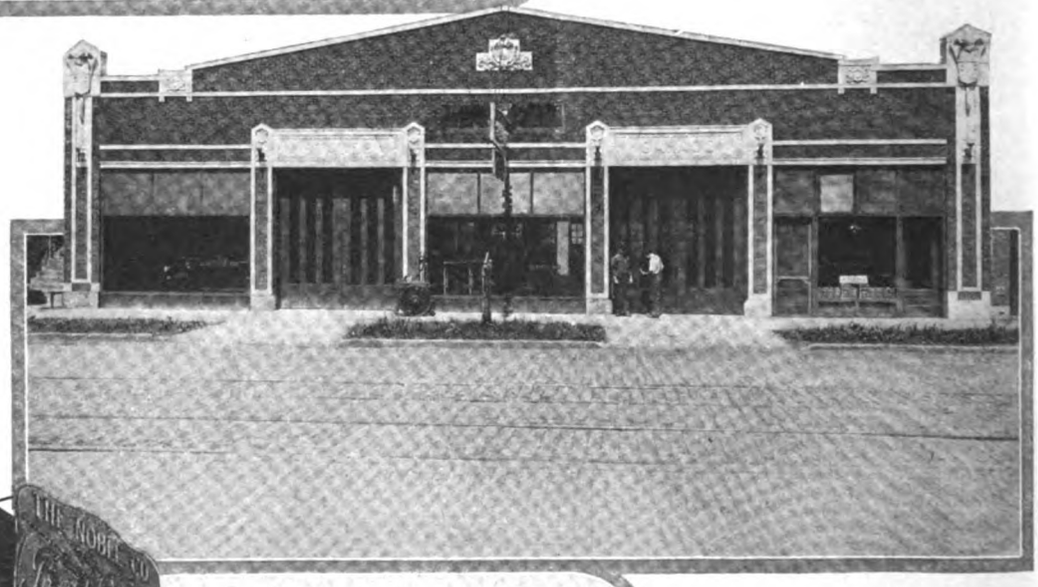
As you turn the next fifteen pages study them. The pictures have been selected from hundreds of similar ones from all parts of the country. Every one shows how a dealer, a garageman or a service station manager has put selling force into the appearance of his establishment. These pages show how some dealers have made the fronts of their buildings pleasing to the eye and interesting to prospective purchasers of automotive products. Some show how dealers have arranged the fixtures and stock in their stores to display the products they sell to the best advantage and make this display a selling force. Some show windows that carry a merchandising message and create the desire for ownership. Some show how dealers utilize the Christmas appeal to put forward the things they sell as Christmas gift suggestions. And some show samples of effective store lighting and its merchandising power.



With each of the pictures there is a paragraph that will help you to single out for special study some phase of selling by appearance. Study these paragraphs. Think what you can get in the way of suggestion from these pictures that will help you make your place of business an active selling force this winter.

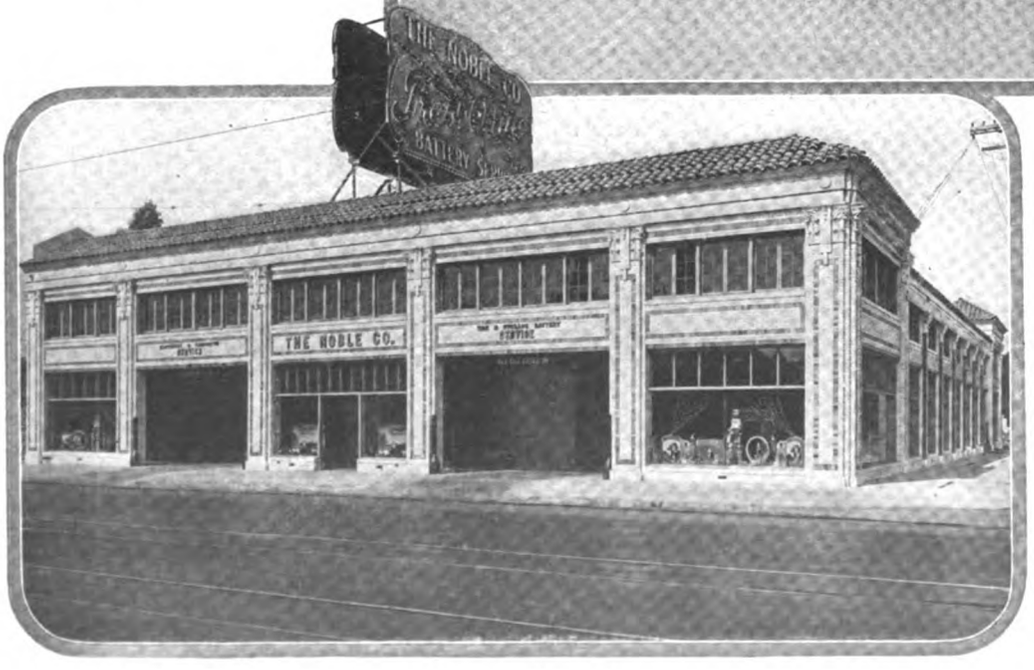
Plan now to make your investment in brick and mortar, in plate glass and fixtures, in merchandise and equipment, a silent, forceful salesman.

Make it sell this winter!



Digitized by Google

Three Fronts That Sell—Study Them



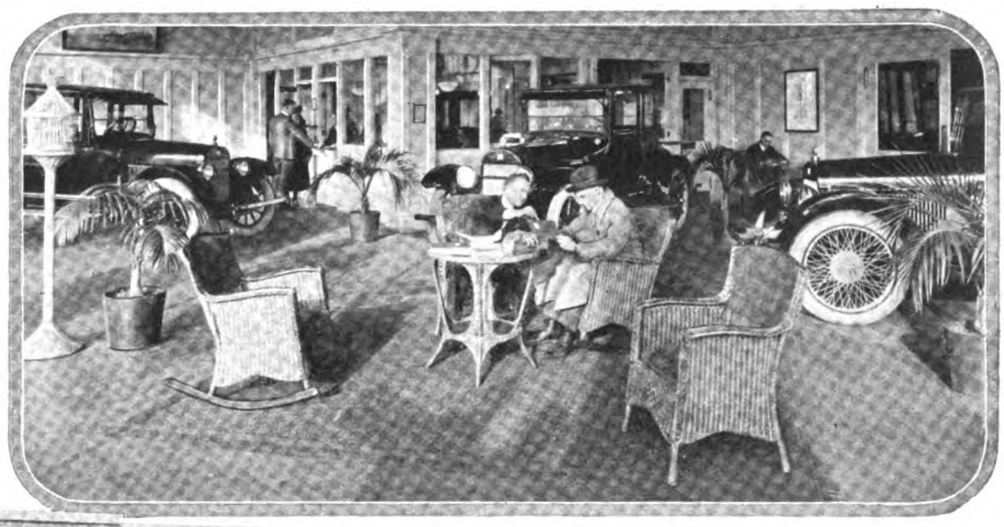
THE CAR SALESROOM

THIS front, in the most appealing language, says, "Come in." It isn't one of those great, expensive dealer buildings of the great cities, but its dignity and beauty fit the dignity and beauty of the merchandise it contains — motor cars. Notice that chief prominence is given to the dealer's name; his building is helping to establish him as one of the community's merchants. Names of the cars he sells are lettered on the entrance pillars. —Meyer Motor Car Co., Inc., Peerless and Reo, Buffalo, N. Y.

THE GARAGE

THIS front, of the States Garage, in a section of Chicago far from the downtown metropolitan section, gives every indication that there is progressive management of the service and selling facilities housed behind it. Neat, clean and with an electric sign showing up and down the street, it says "Drive in."

THE SERVICE STATION



THE street front of this battery service station in Los Angeles is an effective advertisement, bidding night and day for business. The fine, wide driveways make it easy for customers to get in and out and the electric sign on the roof can be seen for many blocks. The windows sell the company's service and merchandise.

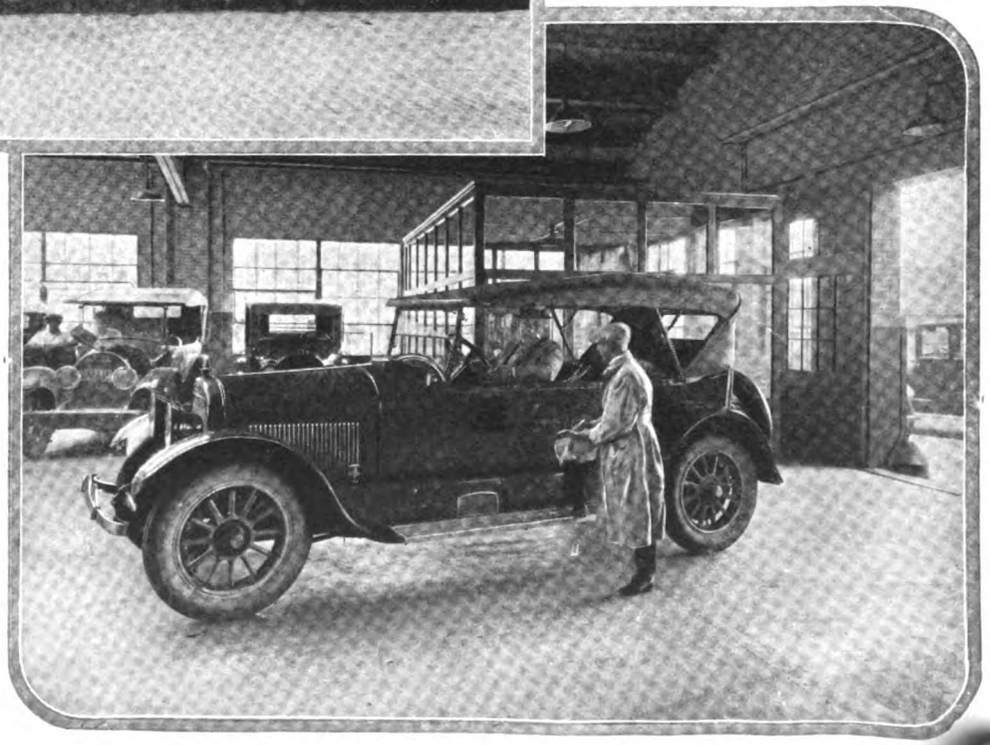
Meeting the Prospect With Salesmanship

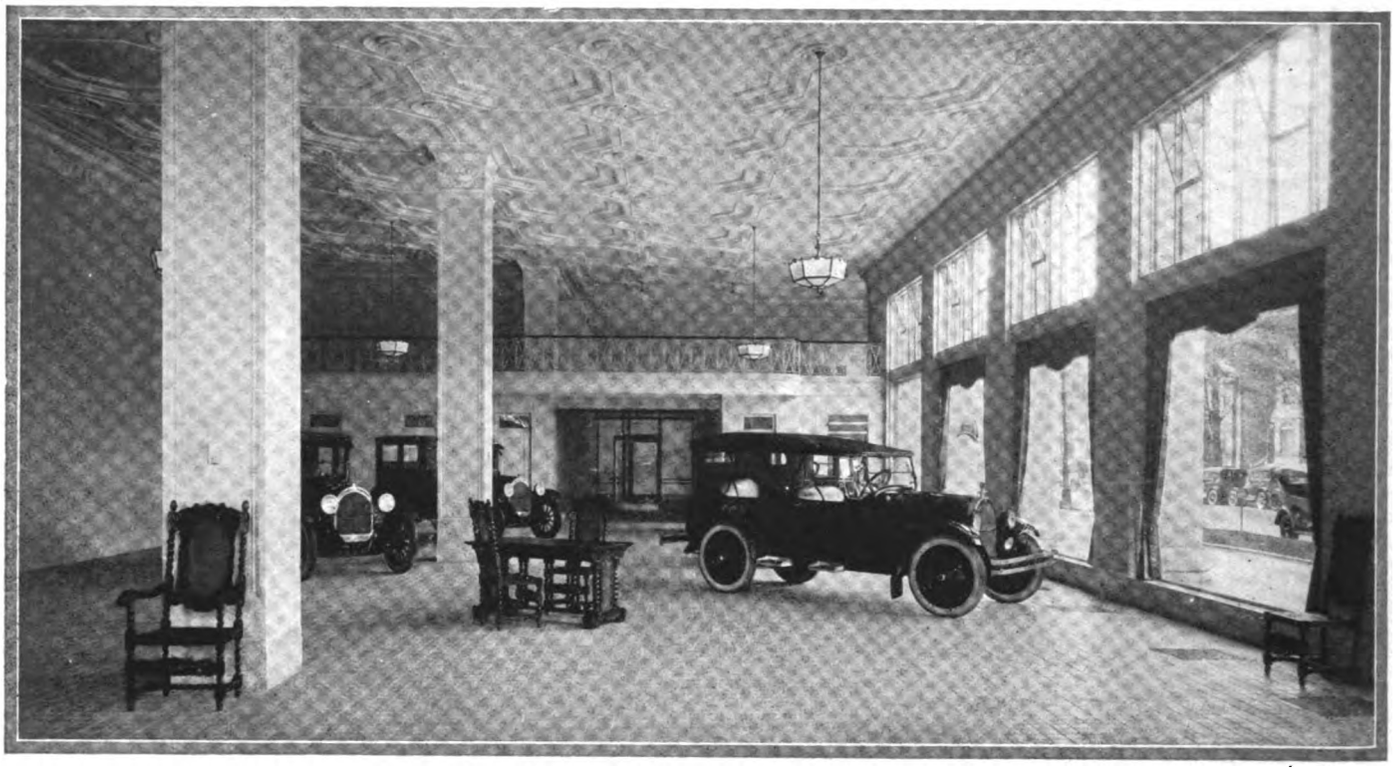
IN THE SALESROOM

AN ideal place to sell a car, isn't it? Homelike atmosphere, comfortable chairs for the salesman and prospect, a table to hold catalogs and other reference literature, cars all around—cars clean and bright with polish, appealing to the prospect's natural desire to have one. And, at the rear, a convenient place to introduce the customer to the head of the house and the service manager. This is the salesroom of Eldridge-Buick, Seattle, Wash.



AT THE SUPPLY STORE

CAN'T you picture the smile of satisfaction that lights the motorist's features as he draws up to the curb here? Everything is provided to render instant service—gasoline pumps, air pump, water lines and grease server. And as the motorist receives service attractive windows ask him to buy equipment and tires. This is the equipment and tire store of Amedeo Scala, Perth Amboy, N. J.



IN THE SHOP

WHEN the repair work prospect drives in he finds everything neat and clean—floors, walls and ceiling. There's no grease spilled around to suggest what might happen to his car, no loose tools and parts scattered about. The service manager's office is right by the doorway and a service salesman meets the car owner immediately. Substituting a foreman for a service salesman, the smaller repairshop can do the same thing. You can make your repairshop invite business like this service station entrance of Cadillac in Detroit.

Salesrooms That Invite People to Buy

IN THE BIG CITY

THIS salesroom can hold its own with the stores of the city's highest class mercantile establishments. It suggests financial strength and stability in the organization behind the car. It is typical of many salesrooms in the larger cities that have put the presentation of the automobile on the high plane that it deserves as the costliest unit of merchandise that the average citizen ever buys.—Retail salesroom, Oldsmobile, General Motors Building, Detroit.

IN THE SMALL TOWN

THIS Ford dealer's salesroom in the Northwest fairly bristles with selling atmosphere. The camera could take in only part of the floor and it excluded the space near the windows, devoted to the showing of cars and trucks. Here we have the tractor and, breaking up an otherwise empty-looking space in the center of the floor, an attractive set-up of wire wheels. But look at the showcases and shelving! Everything is in perfect order, yet item after item stands out so as to suggest itself to the possible purchaser. The showcase in the center background, it will be noted, has a staggered rack for containing and displaying small items. Any dealer with a spare corner in his salesroom or service waiting room or any garageman with available space in his office can make a display like this. Shelving, showcases and all equipment can be purchased ready to set up.

Neatness and Display as Sales Helps

JOBBER'S MODEL STORE

EFFECTIVE display for a small, widely selected stock is made in this branch store of the Pruden Hardware Co. in Newark, N. J. The store's immaculate appearance and the wide range of accessories and equipment displayed combine in it a strong wholesale selling establishment and an inspiration for the dealer customer. Although the store is less than twenty-five feet wide and about sixty feet deep it displays the entire Pruden line, including heavy garage equipment. Only enough stock to make the display on the shelves and in the cases is carried in the store. All large wholesale orders and most of the small ones are filled from the reserve stock on the second floor. The floor is light and well oiled and a wide strip of rubber floor covering running the length of the store protects it.

DISPLAYING LARGE STOCK IN A WIDE, SHALLOW STORE

ALTHOUGH this store carries a large stock of tires and parts the arrangement is neat and pleasing. The clean, oiled floor and the neatly kept cases and shelves are inviting. This is an interior view of the accessory and tire store of Amedeo Scala, Perth Amboy, N. J., the remarkably good front of which is shown on a previous page. Scala's tire business alone reaches $100,000 a year.

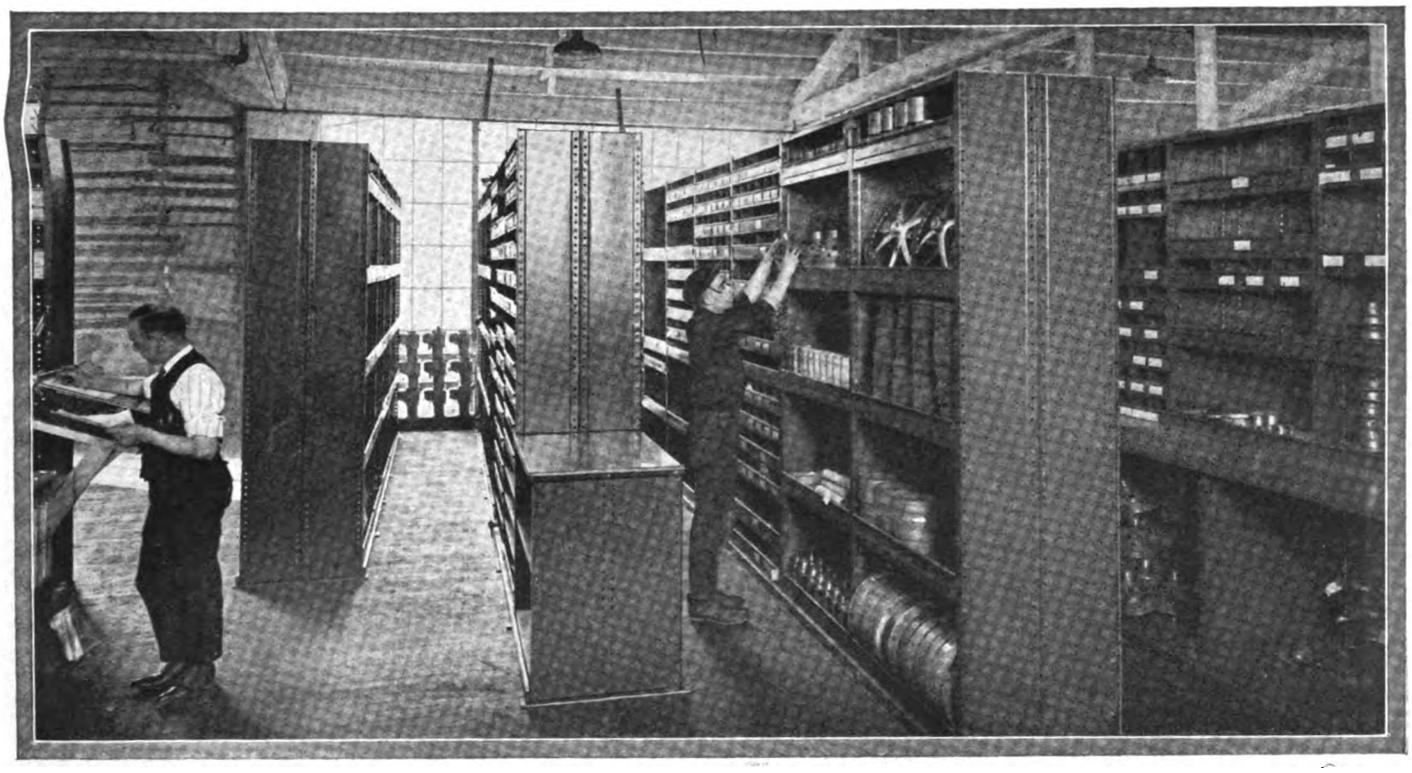
Display Cabinets and Boards Attract Customers

A SMALL, NEAT TOOL DISPLAY

BUYING is made easy for the customer at every turn in the John & Arthur accessory store in Boston. This picture shows a particularly effective placing of a display cabinet in which is shown a few staple tools. The entire interior arrangement is pleasing and interesting. Among the things that make it so are the attractively trimmed cases, the inclined display counter at the rear (shown at the extreme left of the picture) on which polishes and greases are shown. In front of this display is the wrapping counter. Displays and motoring pictures under the wrapping counter attract the customer's attention to the rear of the store. Selling messages are printed on the beams of the ceiling, the last syllables of the word "satisfaction" showing in the upper left corner. Large drawers, plainly labeled, carry much of the small stock.

A SILENT SALESMAN

THESE novel display and stock cabinets are effective selling agencies in the store of John T. Geran, Keyport, N. J. Below is shown two views of one of several cabinets that spot the floor of Geran's store. Items are mounted on white plaster board behind the glass of the doors.



REVOLVING DISPLAY BOARDS

A POSTCARD display rack furnished the idea for this display board. It was designed and used by Metcalfe & James, equipment dealers, New York. The racks may be made in size desired.

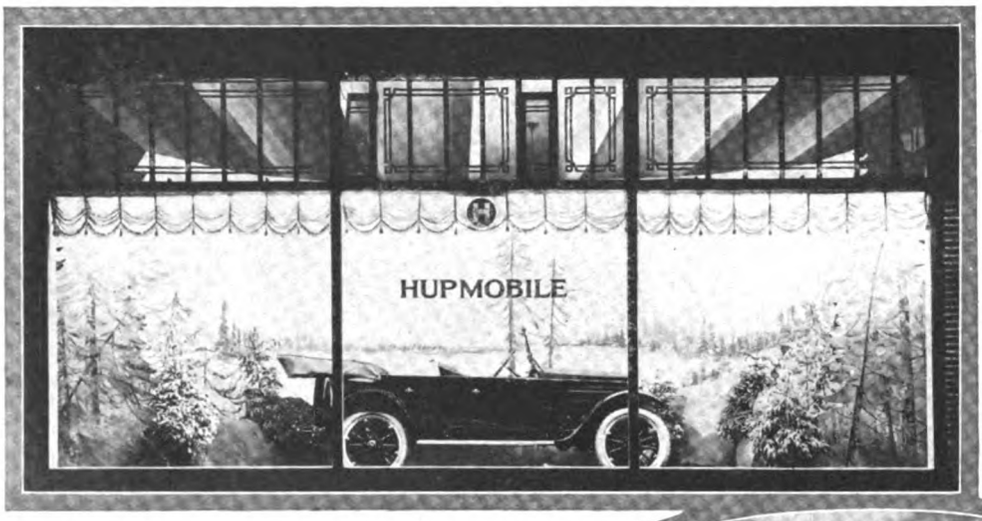
When Your Customer Looks Across Your Parts Counter

EVERYTHING WHERE IT OUGHT TO BE

YOU won't be running out of essential parts or keeping your customers or shopmen waiting while you look for mislaid parts if you have an orderly, attractive bin system like this in the Reo Motor Car Co., San Francisco, with an inventory system to tell you when to re-order. Customers looking into a well-kept stock department can't help having a feeling of confidence in your ability to help them keep their cars in order. Bins like this can be purchased in units to meet your needs.



ACCESSORIES DISPLAYED

THIS Ford dealer's parts counter in Yonkers, N. Y., has a system that rapidly fills the orders of customers and men from the shop and in addition plays an active part in the sale of accessories. Notice how various utility items of equipment for the car are attractively displayed where the parts customer must see them. The parts clerk, while filling an order, has a fine opportunity to sell the customer an accessory or two, and if there is a commission for the parts man for these extra sales, an arrangement prevailing in many dealer establishments, he will be alert to make them as big as he can. Are you exposing accessories for sale at every logical point in your sales and service quarters?

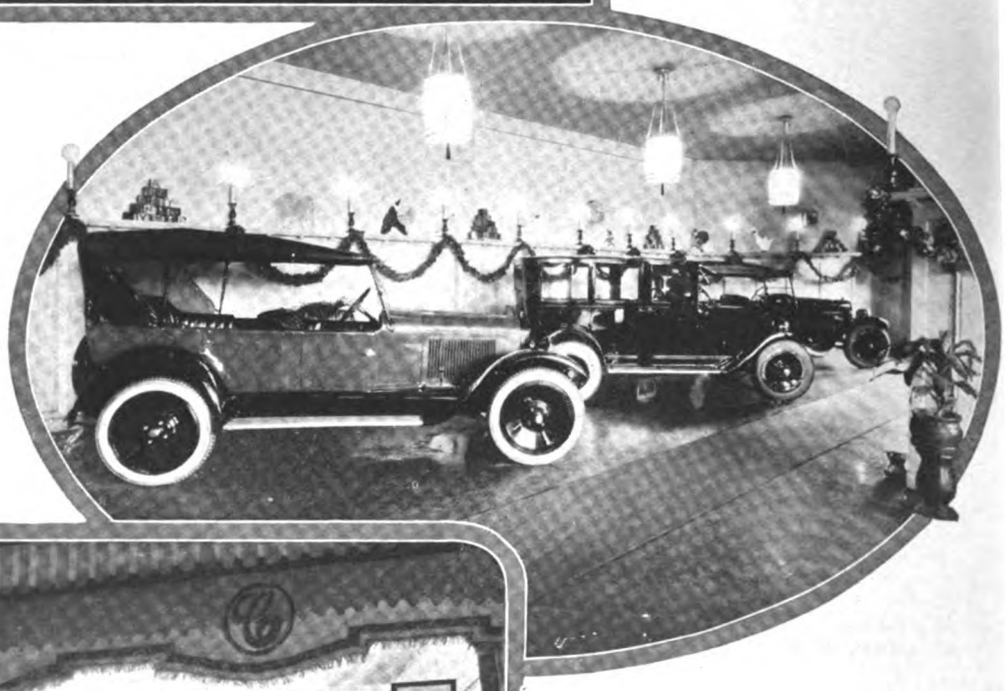
Putting Winter Atmosphere into Car Displays



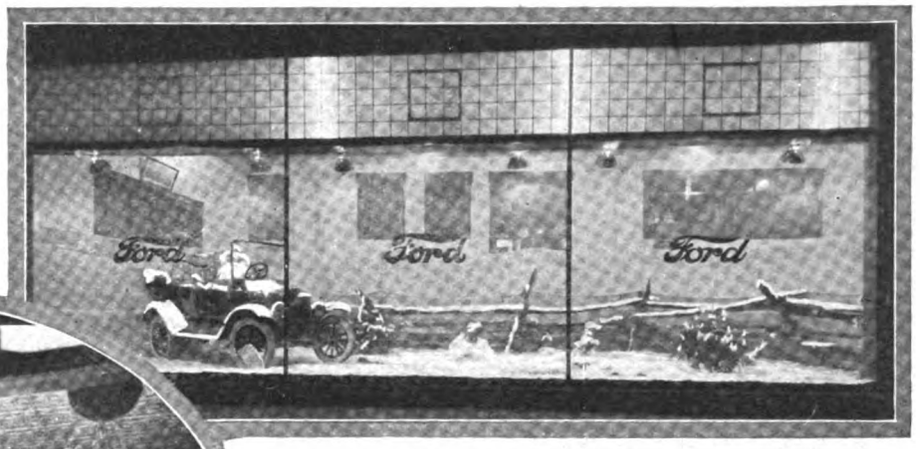
WINTER LANDSCAPE WINDOW

THIS effect in a window may be secured by employing a landscape drop similar to the ones used in the theatre. Evergreens are covered with cotton and placed on the floor at the sides of the scene. About three weeks was required to make the set illustrated. It was used by the A. L. Englander Motor Co., Cleveland.

A TOUCH OF CHRISTMAS

THIS remarkably effective interior treatment was used last Christmas by Harry J. De Bear, then manager of the Maxwell - Chalmers branch in New York. Alphabet blocks and small toys on the top of the wainscoting rail and draped holly rope carried the Christmas appeal. Lights were enclosed in appropriate hangings.

WINTER SCENE IN CORNER WINDOW



THIS shows a pleasing display made by Chevrolet in Detroit, using a scenic back curtain and a few evergreens. The drop was hung at the edge of the side window and the trees arranged to space off the floor in the corner. An appropriately dressed dummy from the cloak department of a dry goods store occupied the rear seat. Artificial snow made by sprinkling Epsom Salts lightly on cotton completes the winter effect. Blue-white lighting at night enhanced the beauty of the display.

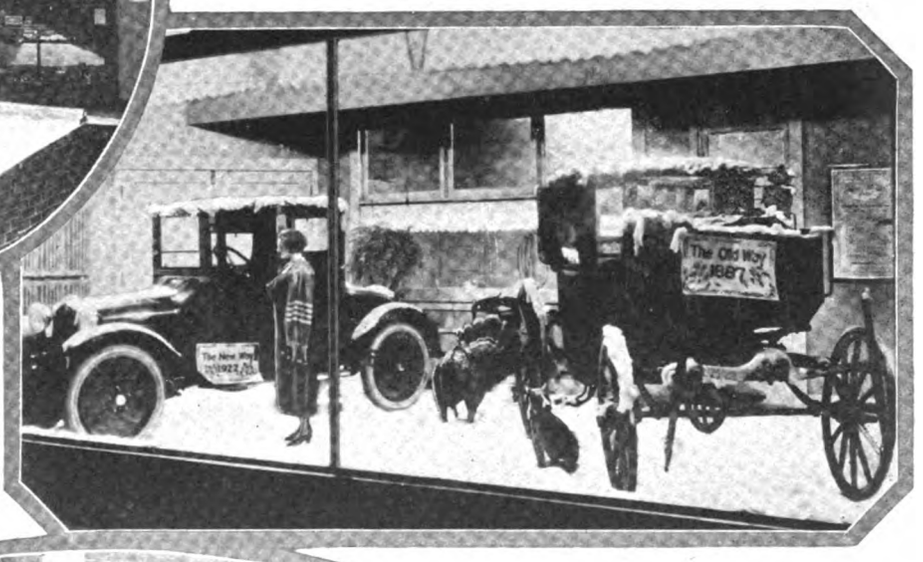
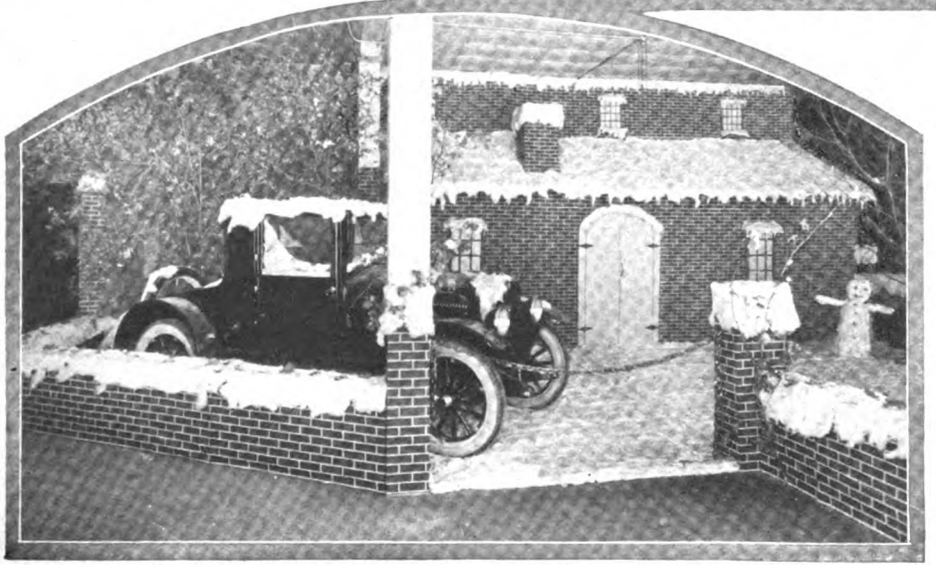
Windows and Interiors with a Seasonal Appeal

SANTA CLAUS



A SECTION of an old rail fence, a few yards of white cotton cloth and some cotton were used here. A Santa Claus dummy at the wheel and a bag in the rear of the car completed the picture. — West Detroit Auto Sales Co.

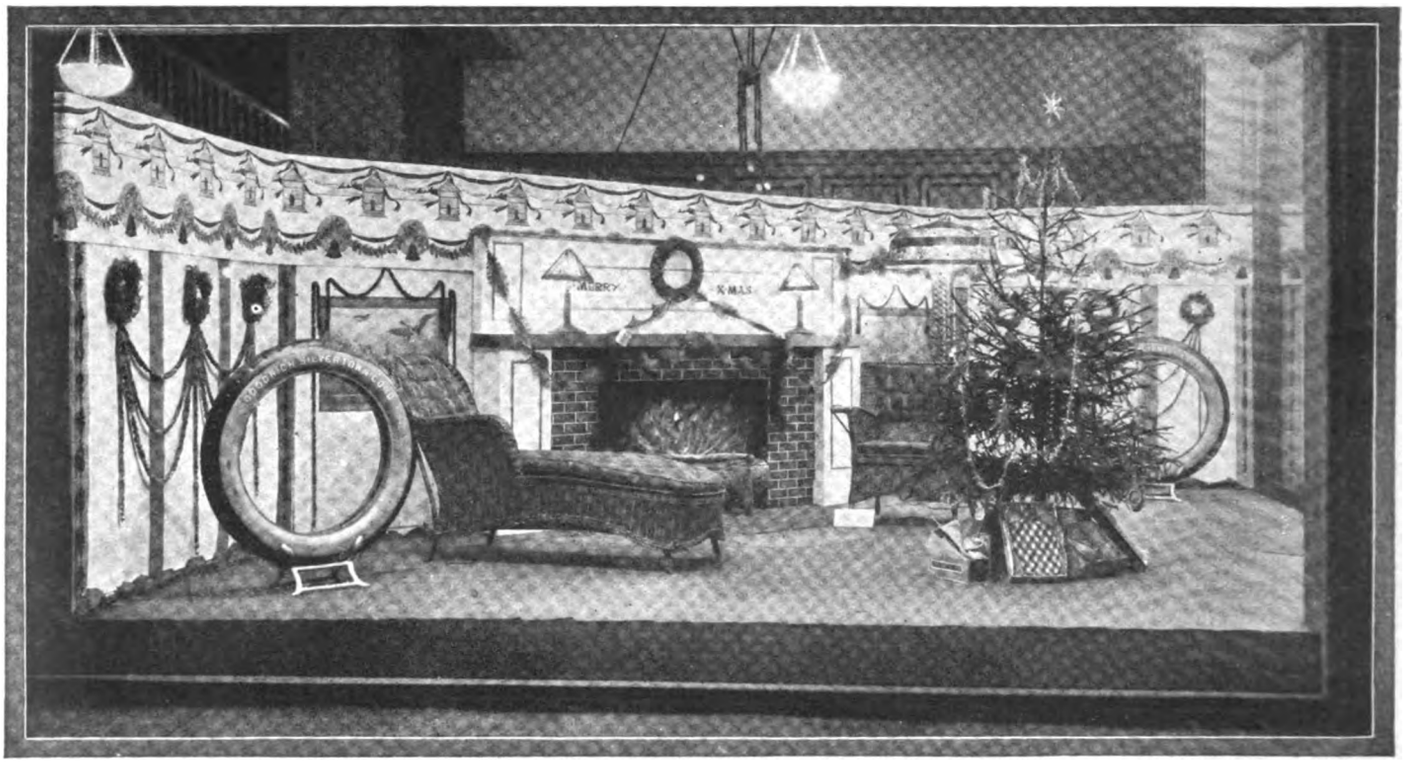


GOING DOWN THE CHIMNEY

THIS roof was built in the window. The car stood just behind it on the salesroom floor. The sign said: Santa Knows Ford Will Get Him There and Get Him Back.—Beaverhead Motor Co., Dillon, Mont.

THANKSGIVING WINDOW

CONTRASTING early and modern transportation used in getting back to the farm for Thanksgiving dinner, this window by Kimball & Delay, Parsons, Kan., made a timely appeal.



A CHRISTMAS CORNER

A CORNER of the salesroom was used for this Christmas scene by the Fain - Bender Motor Co., Fort Worth, Texas. Oak limbs formed the foliage background. Plaster board on a light frame might be used for the building and walls. The snowman of cotton puts a smile into the display.

Making the Holiday Tire Display Window

CHRISTMAS MORNING SCENE IN TIRE WINDOW

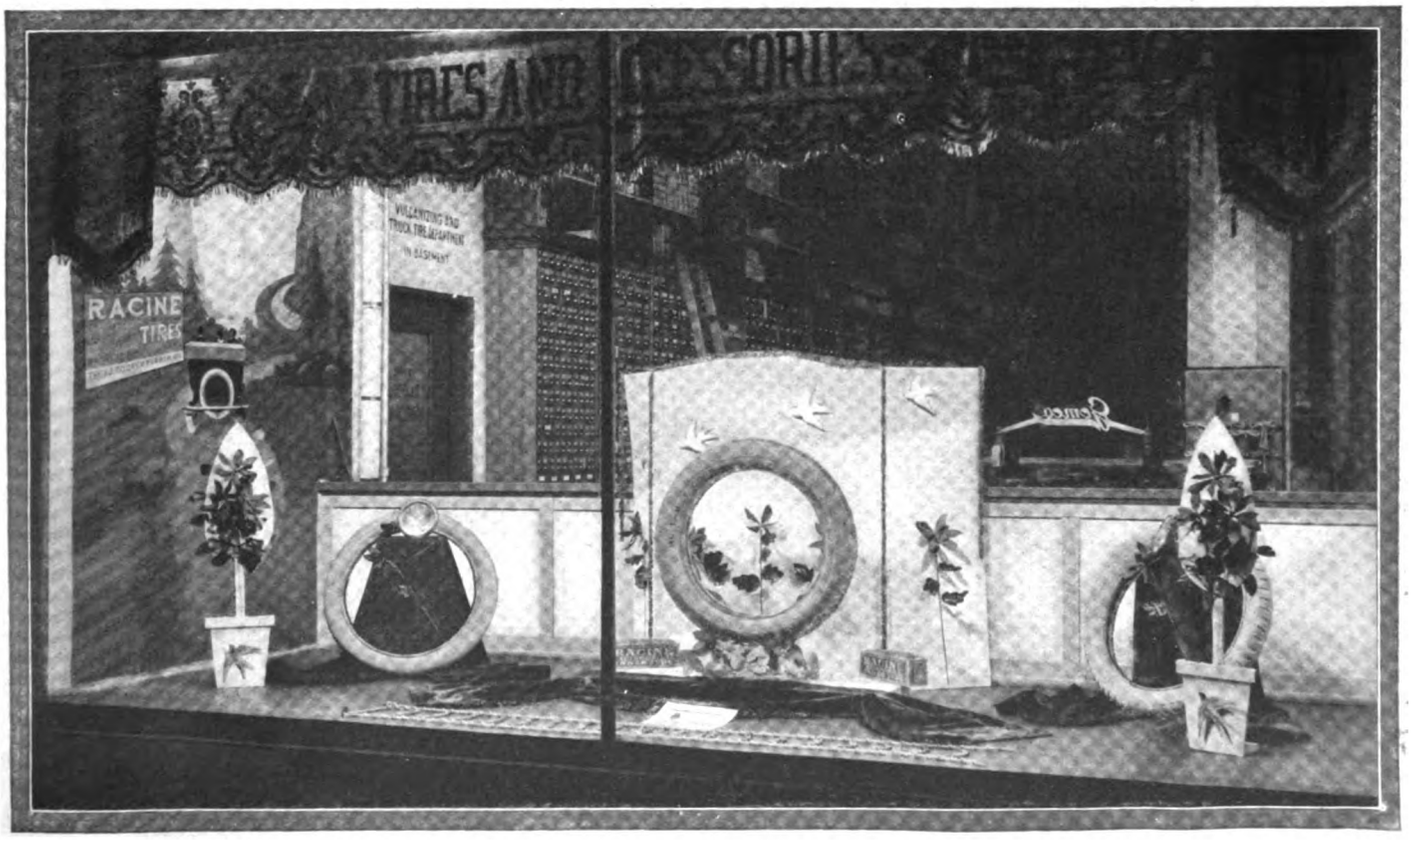
THIS handsome window by Goodrich in Detroit drives home the idea of tires as Christmas gifts. Screens covered with crepe paper might be used as a background. Furniture and a trimmed Christmas tree are the only "properties." Gifts grouped under the Christmas tree include boxes of inner tubes. Holly wreaths and ropes and twisted paper ribbons are used as wall decorations.

WASHINGTON'S BIRTHDAY TIRE WINDOW

THIS Washington's Birthday window is particularly practicable and effective because it may be made in a comparatively small window. The sides and back are covered with a light cloth to form a background against which the tires and picture stand out prominently. The center figure is obtained by placing a tire on an easel and draping flags over it. The picture is centered by pasting it to a piece of dark cardboard in the tire. Tubes and patches under the center figure carry the service idea, while display cards dress the front corners, leaning against the tires.

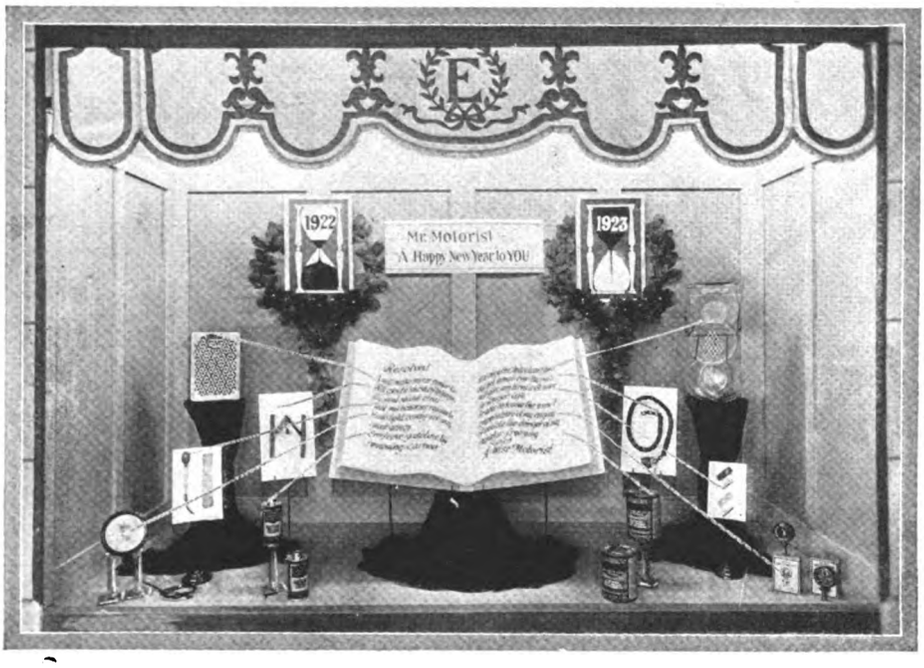
Digitized by Google

The Christmas Display in Truck and Tire Windows



CHRISTMAS TRUCK WINDOW

HERE is a window display idea for the truck dealer. It directs attention to the power plant of the truck sold by the dealer and the general tone of the window blends with the Christmas atmosphere. The background is made by draping heavy black hangings. The floor of the window is covered with the same material. An engine, white enameled, hangs from the ceiling by white chains with a huge holly wreath around it. Framed cross section views of the engine on easels at the sides complete the picture. This display was made by Eldridge-Buick, G. M. C. dealer in Seattle.



SIMPLICITY AND BEAUTY IN CHRISTMAS ACCESSORY WINDOW

THIS is a good example of how a few items, tastefully arranged, can be made into a striking window. Three tires, two tube boxes, a tire chain and a couple of spotlights are the only items used. The properties consist of a screen and artificial flowers in pots and a few lengths of black plush cloth. Artificial poinsetta are used in the decorative scheme. A painted sign on the side of the window carries the tire advertisement.

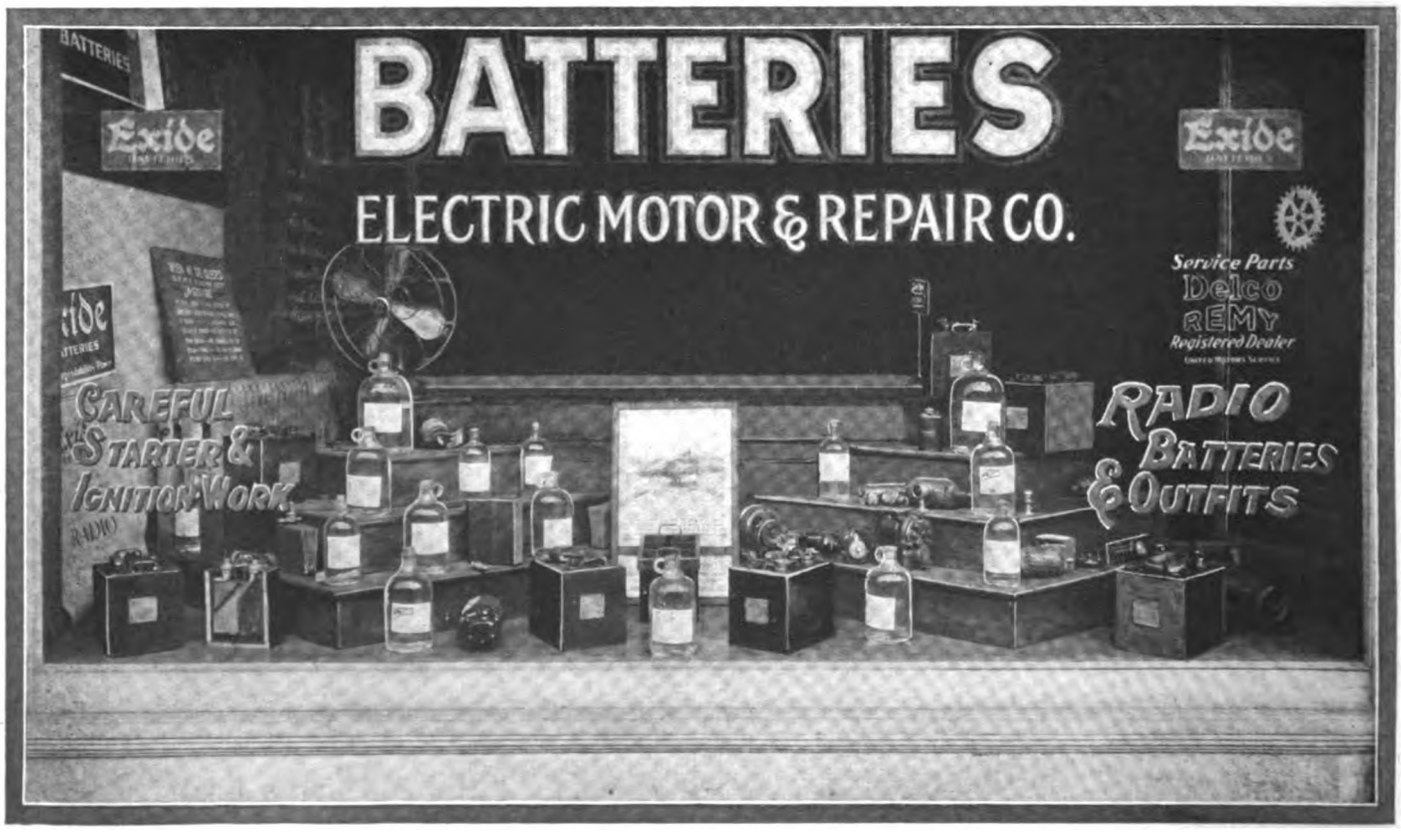
New Year's Accessory Window—Battery Window



NEW YEAR RESOLUTION WINDOW

THE safety idea, one of the big winter accessory selling opportunities, is strikingly presented in this window. The book shows a set of safety resolutions signed by "A Wise Motorist." From each resolution a ribbon leads to an appropriate accessory.

The text in the book reads: Resolved: I will make my car comfortable—Will avoid a smashup by keeping my windshield clear—Test my batteries regularly—Have light ready for any emergency—Conserve gasoline by removing carbon—Will obey the anti-glare laws—Will not tempt car thieves—Will give my tires a chance for longer life—Will know the temperature of my engine—Eliminate the danger of my radiator freezing.

A BATTERY WINDOW DISPLAY

IT is not easy to make a battery window that will attract attention. The "mysterious black box" doesn't lend itself very readily to display. In this window, the Electric Motor & Repair Co., Newark, N. J., makes an interesting display by showing batteries, bottles of distilled water, battery parts, and other kindred articles on steps built in the window. The framed picture in the center is an illustrated news feature. Just inside the window, and readable from outside, is a blackboard on which is written seasonable battery advice. Another sign in the window lists the names of garages and stations where emergency repair service may be had when this store is closed.

Accessory Window Ideas for This Winter

FEATURING A WINTER ACCESSORY

HERE is a simple and effective presentation of a single winter accessory. A white sheet spotted with cotton to represent snow is draped over boxes or other objects to give the impression of drifted snow. On this are groups of the accessory in a pleasing display. The background is formed by a series of screens. The accessory shown in this window is steer warms. The cut-out in the center of the window, supplied by the maker, carries the merchandising message.

CHRISTMAS TREE IN SALESROOM

THERE is a spot in every accessory store where a Christmas tree may be set up and used to drive home the idea of giving automotive equipment as Christmas gifts. The tree need not be a large one. The idea is to select from stock a number of items that may be recommended to the Christmas shopper for presentation to motorist friends. Such a display may be made particularly striking by placing it in the center of the store floor where the width permits. Colored lights on the tree, or a spotlight or two trained on it at night when in this position will extend the merchandising value of the display. This idea also may be used in the display window. It is a good idea to put such a display in the window for a week or two early in December and then move it back onto the store floor when the window is changed.

MOVING OLD STOCK

WHEN certain items of stock linger on the shelves they can be given a helping push by grouping them in piles in the window occasionally this winter and presenting them as special offerings. Such a window will get the clean-out idea over stronger if there is little or no attempt to make the display orderly. This window by the Plainfield Auto Tire Co., Plainfield, N. J., carries out the idea effectively.

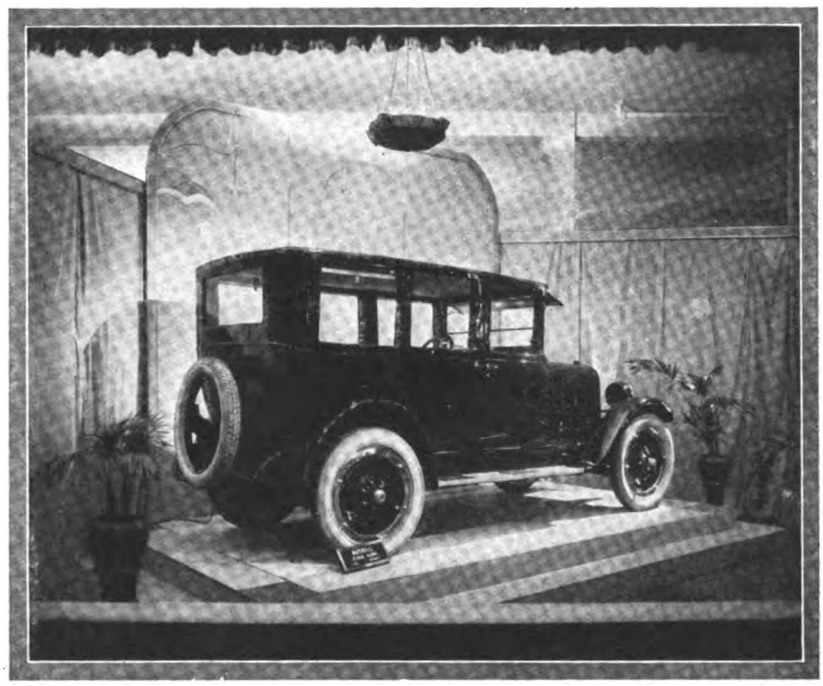
Make Light Sell For You This Winter

ADVERTISE your business and your merchandise with light.

Good light will add to the advertising value and increase the selling power of your salesroom, store and display windows. Use it during the long winter nights.



A walk down the main street of your town or city after dark will convince you of the merchandising power of good light. Watch to see which stores and displays attract the attention of the people on the street. You will find it an almost invariable rule that people hesitate or stop before the well-lighted stores and windows. You notice also that very fine displays that are poorly or insufficiently lighted command practically no attention.

Compare the lighting in your building with that of other automotive merchants. Does yours suffer by comparison? Are they getting business that you might get if your lighting were better?

After dark, the pulling power of an attractive salesroom or an interesting display window is largely determined by the effectiveness with which it is lighted. If your lighting system provides comfortable vision, people will look at your displays and your merchandise. Customers, who come into your store or salesroom, will be easier to sell if the lighting conditions are right. A good lighting system is essential in the late afternoon and evening during the winter months.

Actual tests have proven that a mediocre display, well lighted, attracts more attention and interest than a good display, poorly lighted. Make your salesroom and display windows attractive and realize on this attractiveness after dark by providing good light—light that will advertise and sell your merchandise.

Light your salesroom, store and display windows a little more brightly than the ones on either side. The stronger light will give them greater prominence. Their advertising value will be increased proportionately. *Bright light attracts the eye. Use it to attract eyes to your business.*

THIS beautiful display in the New York Maxwell salesroom is more striking at night than it is in the day time. Good light makes it stand out. The details are brought out clearly and there is an entire absence of glare. General lighting is supplied by the indirect unit suspended from the ceiling. Additional light is provided by lamps concealed along the upper edges of the window.

Direct the light you pay for to the merchandise you want to sell. There are reflectors for every condition. Proper reflecting equipment will enable you to get the maximum results from the light you buy at the minimum expense.

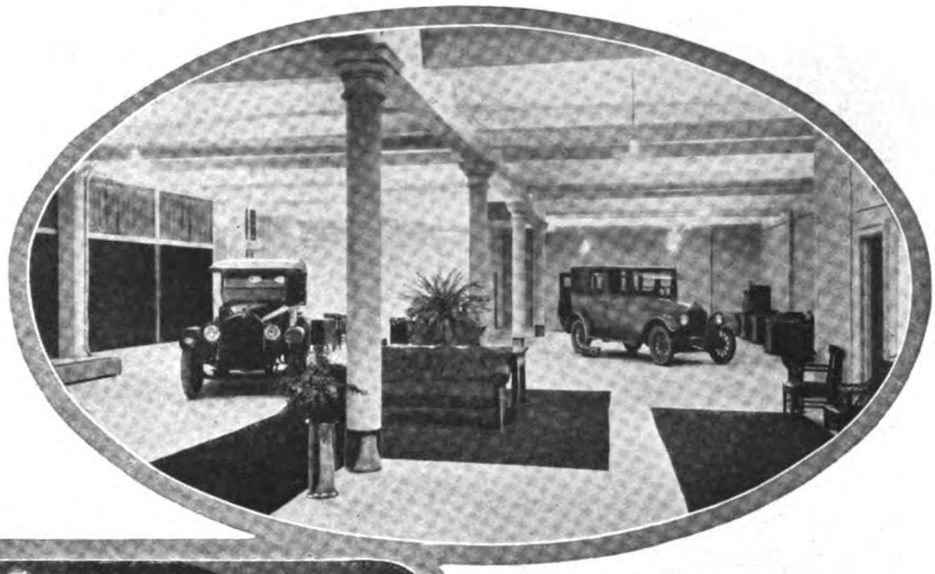
Avoid glare. A bright light in the field of vision interferes with a comfortable view of the merchandise you want the light to sell. All lamps should be shielded from direct view. Use your light so that attention is attracted to your merchandise and not the lighting units. Glare distracts attention from the merchandise to the light source. For similar reasons, avoid direct reflections. Deep shadows also interfere with comfortable vision.

Keep the bulbs and reflectors clean. Wash them at least once a month. Replace blackened bulbs. Dirt will reduce the efficiency of your lights and reflectors. You won't get the light you pay for unless you keep the lighting equipment clean. Maintenance is just as important to a lighting system as it is to an automobile. Neither operate efficiently if neglected.

You can have good light in your salesroom. Frequently inexpensive changes can be made that work wonders in increasing the effectiveness of the lighting.

Your local electric power company will be glad to help you and tell you how to improve the illumination of your building. Practically all such companies have illuminating engineers for this purpose. If your power company happens to be one that does not provide this service for its customers, ask Motor World to tell you where you can get the information you require.

On this and the two following pages are some pictures of salesrooms and displays on Broadway, New York City. Everyone of these merchants is using light as an active selling force. Even on New York's brightly lighted Gay White Way these salesrooms and displays stand out from their neighbors.



Good light will do the same for yours.

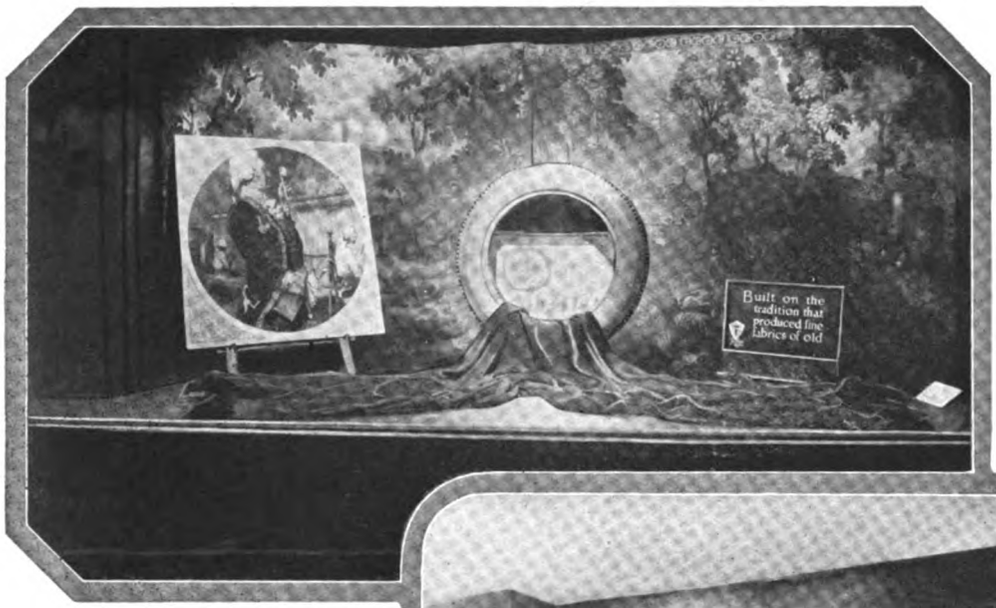
Digitized by Google

Good Light Makes These Salesrooms Stand Out

COMFORTABLE VISION HELPS SELLING

GOOD light brings out every detail of the cars on display, yet there are no glare nor heavy shadows to interfere with comfortable vision. The fixtures direct most of the light upward, where it strikes the white ceiling and is diffused downward. The light colored floor is also an aid in distributing the light evenly. The picture was taken in the New York salesroom of Studebaker. In this salesroom the visual selling points of the car are as easily demonstrated after dark as during the daylight hours.

LOOKING THROUGH THE WINDOW



THE picture at the left shows how the effect in the picture below is obtained. The general illumination of the interior of the salesroom is provided for by the direct units on the ceiling. Enclosing glassware shields the bulbs in these fixtures from direct view. The rows of light concealed along the upper edge of the window and in back of one of the ceiling beams throw a strong light on the car surfaces that are visible from Broadway.

THE picture on the right is a view into the Lexington salesroom from Broadway. The details of the cars on display stand out clearly because of the lights concealed along the upper edges of the window. These lights are necessary if the surfaces facing the street are to be visible. If no special provision is made for lighting these surfaces the cars near the windows are in their own shadow when viewed from the street.

Digitized by Google

Light Draws Buyers to These Displays

LIGHTING A FEATURE WINDOW

THE Firestone tire window at the left is illuminated by a single light. It is located at the center of the upper edge of the window. The reflector throws a high intensity of light on the tire so that it stands out from the background. There is sufficient light on the tapestry background so that the details can be seen easily, but the illumination here is much less intense than on the tire.

A LIGHTED SHOWCASE

THE glass display case at the right is located at the rear of the Essex salesroom in New York. The attractive display is lighted by special showcase lamps and reflectors located along the upper front inside edge. There are some strong reflections from the reflectors of the spotlights on display, but they are an advantage, as they bring out the quality of this equipment.

SELLING WITH LIGHT

THE fire extinguisher display at the left illustrates how much good light adds to night time attractiveness of an accessory display window. This window is in the store of Ryan & Hughes, automotive equipment and tire dealer in New York. The lighting is furnished by powerful units concealed along the upper inside edge of the window.

How to

Keep Your Salesmen Profitably Busy This Winter

This Story Tells How the Car Dealer, Truck Dealer and Tractor Dealer Can Work His Territory to

1—Make Winter Sales
2—Develop Spring Prospects

By DONALD D. BLANCHARD

ANY dealer who will work his territory intensively this winter will make sales. And, when spring rolls around, he will have a prospect file that is full of worth-while names and information for his sales force to work on.

Whether a sales organization runs in high gear or in low gear during the winter months, the expenses of the business go right on. If the sales department operates in high gear during this period, it will produce sales both for immediate and spring delivery and it will pave the way for a larger and more profitable spring business. If the sales department runs in low gear during the cold weather, winter expenses must be paid from the profits of other seasons of the year.

There are no holiday periods in the business of selling cars, trucks and tractors. It is an all-year round business and one that requires twelve months of hard plugging if maximum results are to be obtained. Dealers who have been conspicuously successful do not consider the approach of winter as a signal for slackening their sales efforts. Rather they see in the increased sales resistance of this season a reason for greater sales effort. They see an opportunity for cultivating their territories in an intensive manner that is impossible during the other seasons of the year.

There are three big things any automotive sales organization can do profitably this winter:

1—Find the people who will buy for immediate delivery.
2—Find the people who will buy for spring delivery.
3—Find the people who will buy in the spring.

The thorough accomplishment of these things is a whole winter's work for any sales organization. This story will point out some of the ways of attaining these three ends.

A canvass of the people in a territory is a most prolific source of prospects for passenger cars. What form the canvass should take depends on the price class of the car sold. The house-to-house canvass has been used successfully to sell cars in the lower price ranges. In the higher price classes, it is better to use carefully selected lists of names as the basis of the canvass. A farm-to-farm canvass is a practical means of locating tractor prospects. The vocational canvass has been used successfully to sell trucks.

Many automotive dealers depend almost entirely on their owners as a source of prospects. Satisfied owners help to sell their friends on the make of car or truck they own and, in most cases, are glad to give a dealer the names of people who are probable buyers. Salesmen should not make these canvass calls with a "Say, Mr. Jones, where can I sell a car to-day?" attitude. Such an attitude is not likely to make Mr. Jones do any thinking, and he will probably rattle off two or three names that happen to come into his mind without any consideration of the possibility of their buying cars.

These calls should be made of definite service value to the owner. The salesman should first find out whether the owner is satisfied with his car. If there are any difficulties to be adjusted they should be straightened out. During the progress of the call, the salesman will be of real service to the owner if he sells him on the advantage of having his service work done during the slack winter

This Is a Story of SELLING SUGGESTIONS—Read It

IT'S a poor rule that won't work both ways. Here is one that will:

A salesman who is canvassing prospects in an attempt to make winter time sales is bound to find spring prospects.

A salesman who is canvassing in winter for spring prospects is bound to make winter sales.

The rule applies to the business of the car dealer, truck dealer and tractor dealer.

The story, beginning on this page, which is one of intensive canvassing in winter, applies equally in some respects to the business of the car dealer, truck dealer and tractor dealer. In other features separate treatment is given the car, truck and tractor businesses.

This is a story of SELLING SUGGESTIONS for the dealer—any dealer who employs a salesman or a staff of them. It is a story of suggestions to make the winter time a busy time—a profitably busy time. Read it for suggestions to KEEP YOUR SALESMEN PROFITABLY BUSY THIS WINTER.

Digitized by Google

period. Many dealers pay their owners a small commission on all names turned in which result in sales.

The usual method of conducting a house-to-house or a farm-to-farm canvass is to district the territory, giving each salesman a district. The salesman is expected to call on each person in his district. Some dealers provide their salesmen with assistants or junior salesmen who do the actual canvassing of the district, the salesmen's efforts being reserved for the live prospects the assistants turn up.

School boys are being used successfully for house-to-house canvass work. It is worth while to spend some time in educating these boys in a general way on the product, the policies of the dealer and the manufacturer. A good demonstration will add to their enthusiasm, as every youngster enjoys a good ride in a car. These boys are paid a percentage on the list price of the car for all sales made to prospects they turn up. These boys are, of course, not expected to sell cars, but only to discover prospects for the sales force to work on.

The more expensive a car is the narrower is the market for it. Consequently the house-to-house idea is not so well adapted to the sale of cars in the higher price classes, as the percentage of non-productive calls would be prohibitively large. A canvass for this class of product must be based on selected lists of names. These names are selected by reason of information that the dealer has been able to get regarding them which indicates that they are likely to have the means to buy his car. Of course, any of the sources of selected lists for canvass purposes may also be used by dealers selling cars in the lower price ranges.

The list of car and truck registrants in the territory gives the names and addresses of all owners and the make and age of vehicle owned. The car dealer can select the names of the owners of cars in his price range from this list. The truck dealer can classify the truck owners by vocation by reference to trade, telephone and other directories. He can also classify the owners by sizes of trucks. This information will help him to determine what sizes are best adapted to different businesses and also in mapping out his mail advertising.

Tax lists, which are public property, show the real and personal wealth of people in a territory. Post offices receive lists of all people who paid Federal income taxes. Membership in clubs and lodges shows a certain social standing and, in many cases, such membership gives an indication of the wealth of an individual. Doctors, lawyers and other professional men are usually financially able to own automobiles.

Service station records will provide much useful information for canvass work. They will show what people drive their cars through the winter. They will show what classes of businesses require transportation during winter, which information is of value for vocational canvass work both for cars and trucks. Service records also show what cars are about worn out. Owners of cars or trucks on which the repair expense is heavy are likely buyers.

Many cars and trucks are sold as the result of tips. The dealer should open channels through which he will receive tips. Garagemen in his territory can tip him off on people that are going to buy. One dealer wrote all the barbers in his territory asking them to tip him off on sales possibilities and offering them $25 for each sale made as a result of these tips. He sold several cars as a result. News items often contain hints where sales might be made. Bankers, secretaries of local trade associations, freight agents, etc., know a great deal about the finances of people and businesses in a territory.

Branch salesrooms are helping some dealers sell more cars. One dealer is opening eight in his territory this fall. He is placing a resident sales manager in each one. This man will have two assistants. He will receive a 10 per cent commission on all cars sold by his organization. His assistants will receive 5 per cent from him on sales they make. In other words, the resident sales manager will make 10 per cent on the cars he personally sells and 5 per cent on those his assistants sell. From his commissions he will pay the rent, light, heat and telephone expenses of his salesrooms. The dealer will furnish the cars for display in the branch salesrooms, will handle time payments and will operate the prospect file and do the advertising. A dealer in a city of 150,000 or more, or in a large territory, could use this method of cultivating his territory intensively.

National and local business conditions affect the buying power of the people and businesses in a territory. Some local industry may be booming because its product is enjoying a nationwide prosperity. Some local businesses may be prosperous because of strictly local conditions. The dealer should know about these conditions so that he can canvass the people affected. He can find out about these conditions from bankers, the financial pages of newspapers, commercial surveys prepared by governmental and other agencies, and from trade associations.

Cars and trucks on the streets are another source of prospects. Owners of vehicles parked on the street can be interviewed by salesmen. The license numbers of shabby looking cars and trucks and worn out machines can be taken, and their owners traced through the registration lists.

Every year passenger cars are being used more and more for business purposes. This market can be expanded if the dealer will analyze the transportation needs of the businesses in his territory. Take, for example, a company having a number of traveling salesmen. At present these

Six Things You Can Do This Winter to Keep Your Salesmen Profitably Busy

1 Have your salesmen call on owners to eliminate any dissatisfaction they may feel, to sell them on the idea of having their cars put in first class shape in winter while the shop is slack, and to get prospects for immediate and spring sales.

2 Have your salesmen canvass your territory. If you handle a low-priced car, you may be able to use the house-to-house canvass profitably. If you sell a medium or high priced car, use selected lists of people with the means to buy your car as the basis of the canvass. If you are a truck dealer, find out what businesses use trucks through the winter and then have your sales force canvass these businesses. If you are a tractor dealer, make a farm-to-farm canvass.

3 Sell passenger cars to business. Analyze the transportation requirements of companies having travelling representatives. Prepare facts and figures to show that your car will reduce the transportation expense of these representatives. Your salesmen can sell cars for this purpose if they're armed with information that shows the profitableness of automobile transportation.

4 Advertise the car and truck as an all year round utility. Use newspapers and mail advertising to keep your product before the public. Advertising will find both winter and spring buyers, and it will introduce your salesmen who are making canvass calls.

5 Use the telephone to discover new prospects and to follow up old ones. Conserve the time and energy of your salesmen by arranging appointments for them by telephone.

6 Display the models your sales force is trying to sell. Make your salesroom look like "Business as Usual" during the winter months.

Digitized by Google

salesmen are using the trains and the interurban electric lines. The territory they can cover and the number of calls they can make are limited by train schedules.

A dealer can show the sales manager of such a company how automobiles will increase sales and reduce expenses. The sales manager should be asked for the routes and territories covered by his salesmen. The dealer can take this data, and with the aid of railroad time tables show how much time the salesman loses waiting for trains and how many calls he should make but doesn't because of the inconvenience of the railroad schedules. With an automobile, the salesman can reach all the prospects in his territory more frequently and with less waste time. Furthermore, the automobile enables the salesman to carry a more extensive line of samples. When a man buys a car for use in his business, it is a strictly business proposition. The dealer must be prepared to show figures on cost of operation and to prove that a car will be a profitable investment. The arguments that sell a car for private use will not work on this class of prospect.

The telephone is a quick, convenient and inexpensive means of reaching persons in a territory. Some dealers have their salesmen on their floor days spend their spare time calling prospects. Others have a telephone man who spends all his time calling people to ask them whether they are in the market for a car. Either plan will produce live prospects at a comparatively small expense.

SELLING A BUSINESS CAR

Here the automobile salesman is shown in the office of the sales manager of a company having several traveling salesmen. He is using railroad time tables, road maps, catalogs and a carefully prepared analysis of relative costs to prove that motor car transportation will mean more sales at less cost. Will your salesmen be doing this, this winter?

Buyers of used cars and trucks one or two years back should be followed up. They are likely to be in the market for a new car or another used one. Their old vehicles may be worn out or may require expensive repairs.

In order to make a canvass really effective, the dealer or his sales manager must provide a means of following up the work of the salesmen closely. The tendency to slow up in winter when business is hard to get is perfectly natural. When salesmen are not engaged in following active prospects they should be expected to be at work digging up new names for the prospect file. The management should have some means of knowing that they are.

The prospect file used by an Eastern dealer provides such a check up. Each salesman has a desk file which contains the names of his prospects. This file is divided into five sections numbered from one to five. Active prospects are filed in the first section. These are followed closely by the salesman. The second section contains inactive prospects and the salesman receives three weeks' protection on these. However, if another salesman sells a prospect in this class during the protection period, he receives half the commission. If a salesman fails to report on a prospect in this section within a three weeks' period he loses his protection, and if another salesman sells him, the salesman making the sale gets the entire commission.

The third section contains the names of deferred prospects—people who are likely to buy within three months. During the winter months, spring buyers are filed in this section. The fourth section contains remote prospects who may buy in the next six months. The fifth section contains the names of owners. A salesman must call on an owner within 30 days of the delivery of the car and at least once every six months to receive any protection on him.

The names in the fourth section are obtained by canvass. As the prospects in the higher number sections approach the buying point they are moved into a lower numbered section. Of course, if a canvass call produces a live prospect, the name is put in the first section at once. Suppose that a salesman found that John Jones would buy in May as a result of the canvass. He would put John Jones' card in the fourth section. In the latter part of February he would be followed, and if still a prospect would be placed in the third section. Early in April he would go in the second section and, if he developed further into the first section.

The salesmen's desk files are always accessible to the sales manager. They are arranged so that he can follow the work easily. If a salesman loafs, he losses his protection and is likely to find that other salesmen have sold his inactive prospects or perhaps his active ones. The rules are simple and they avoid disputes between salesmen.

Every year, the all-year use of automobiles is becoming more common. Except in sections of the country where snow makes the roads impassable, people are using their cars right through the winter to a large extent. Owners of open cars are good prospects for closed cars. Owners of open cars selling for about the same price as the closed cars of the line the dealer handles should be canvassed. Some people will buy open cars in winter, which also opens up the possibility of selling the winter top.

Many dealers in the snow belt have had much success in selling cars for spring delivery. Dealers in other sections of the country have also done this successfully. The main reason why a person should place an order in winter for a car for spring delivery is, of course, the fact that thereby he insures himself against inconvenience through delayed delivery. And the deposit that goes with his order often

Digitized by Google

helps to finance the dealer's business during the winter months.

There have been many springs in the past when salesmen have secured orders more rapidly than the dealers could get cars from the factory. Many of these orders have not been converted into sales because the buyer has become disgusted waiting for his car and cancelled his order, buying instead a car on which he could get better delivery. The dealer who is able to line up spring business definitely in the winter helps himself and his factory because he can place his orders for cars far enough in advance to insure delivery.

Where these sales for spring delivery involve a trade-in, many dealers have made a practice of getting the used car in at once. This gives their shops an opportunity to recondition the used car while the shop is slack and have it all ready for sale in the spring. If the used car does not come in until spring, the shop is so rushed with other work that it cannot handle its overhaul as easily.

How the Prepayment Plan Works

A prepayment plan has also been used successfully to get orders for spring delivery. A dealer intending to employ the plan should make sure that it is legal in his State. The prospect when signing the order agrees to pay the dealer so much every week until the car is delivered. The dealer credits the buyer with the savings bank rate of interest on this money. Of course, the buyer could lay aside this money himself, but most people are so constituted that they save more easily when they have stipulated periodical payments to make.

For example, suppose a man buys a $1,000 car on Dec. 1 for delivery April 1, and is able to pay one-third down and the balance in ten months. Leaving out the finance company charges, here is what the prepayment plan would do for him, assuming that he makes prepayments at the rate of $10 a week. There are 17 weeks between Dec. 1 and April 1. Consequently on the delivery date he would have accumulated $170 plus interest of a little more than a dollar. He has $333 to pay down, and this, added to the $170 he has saved, enables him to make a 50 per cent down payment. This reduces his monthly payments by $17 each and incidentally reduces the financing charges. This reduction in the monthly payments is an advantage to him because after the delivery of the car he also has the operating expenses.

Of course, the agreement should provide that if the buyer changes his mind before delivery of the car he can have his money back with interest.

A few cars may possibly be sold as Christmas gifts. An automobile is an expensive Christmas present. Few men can afford to buy a car for this purpose. But there are some men who intend to buy cars in the near future and their intentions can be crystallized in actual buying by impressing them with the desirability of buying the car at the Christmas season and presenting it to the family as a Christmas gift.

Advertising Will Help Your Salesmen

The assistance that advertising gives a sales force is needed in winter when selling is most difficult. Dealers should plan to carry their advertising right through the winter months. Where a dealer can write or can get someone to write good newspaper advertising copy for him, it is a good idea to use this type of copy, as it has a local appeal, in addition to that furnished by the factory.

Mail advertising should also be continued through the winter months. It will help the salesmen in their canvass work if the people they call on have been receiving mail advertising and reading newspaper advertising concerning the car sold. When using a selected list as the basis of a canvass, it is a good plan to send a postal card carrying some sales message to everyone on the list before the canvass is started. Cards bearing incorrect addresses will be returned by the post office, thus saving useless later letters and calls. Some dealers send letters to the people on the list to be canvassed announcing the visit of the salesman and introducing him. After the call, they follow up with a letter of thanks for the courteous treatment afforded the salesman. Sometimes a definite time at which the salesman will call is put in an introductory letter and the recipient is requested to call the salesroom if he cannot see the salesman then or a post card is put in the letter which he can use to notify the dealer that he will or will not be able to see the salesman at the appointed time. This post card usually provides spaces for filling in another date and time when the salesman can see the prospect. If the prospect does not answer he can be reached on the phone.

Winter advertising, whether by newspaper or by mail, should feature the year round serviceability and utility of the product. This is what the salesman has to sell when he talks to a prospect, and the advertising should be designed to make it easier for him to get these points across. The power, strength and durability of the car should be featured. The comfort and protection offered by the closed models should be emphasized.

Salesroom displays are another aid to winter profits. An empty salesroom makes it more difficult to sell. Models that are being pushed by the sales force should be on display in the salesroom. Of course, the salesroom should be neat and clean, and the cars on display should be dusted every day and the exposed metal parts polished as often as necessary.

Special Displays on Holidays

Winter offers many opportunities for seasonable displays. Hallowe'en, Thanksgiving, Christmas, New Year's, Lincoln's Birthday and Washington's Birthday can all be featured by special displays. Something special once in a while helps to attract people to the salesroom. Just a lot of cars stuck in the salesroom is likely to become monotonous. Frequent changes in the arrangement of the cars, with occasional special displays, will maintain popular interest.

Many of the things that a passenger car sales organization can do profitably in winter can also be adapted to the business of selling trucks and tractors. *The vocational plan of truck selling is likely to reap the greatest results. This plan necessitates the classification of businesses in the territory.*

Lists of businesses in a territory can be secured from telephone directories, the local board of trade or chamber of commerce, business directories and from companies making a business of compiling such lists. These names should be classified vocationally—that is, all the laundries should be grouped under one head, all the moving companies under another head, etc. A comparison of the vocational list with the truck registration will show what classes of businesses and what individual business are now using trucks and the capacities in use.

Some businesses are busiest in winter. Some may be enjoying a period of unusual prosperity. In any event the dealer should select the classes of businesses that are most likely to be in immediate need of trucks and direct his selling efforts at these classes. When mail advertising is sent out, it should be of a vocational nature. That is, literature sent to plumbers should tell how other plumbers are using the make of truck sold by the dealer, how the dealer can supply special body equipment for his needs, etc. In selling a truck to a prospect the salesman should refer to other owners in the same business as the prospect to prove that his truck is adapted to the needs of that particular business.

Digitized by Google

Of course, in following out this vocational plan, the dealer should, at the same time, follow up other information he receives or is able to obtain. The owner of the worn out truck on the street is a prospect. Tips from garagemen, friends, etc., should be followed. Newspaper items furnish ideas for sales work.

Winter Canvass for Tractor Dealers

The tractor dealer's best bet during the winter months is a farm to farm canvass. Such a canvass may produce a few immediate orders for spring delivery, but, more important, it will now provide information for a profitable spring canvass. When spring comes, the dealer who conducts a canvass will have accurate information as to what farmers are likely to buy tractors. When the farmers are ready to buy in the spring, the dealer who has conducted a winter canvass has a selected list of prospects for his salesmen to work on.

Winter is the best time for a farm canvass. The farmers are not busy, nor is the dealer's sales force busy unless he keeps them busy on work of this character. The farmer has the time and he is glad of the opportunity to talk to someone. The salesman has an opportunity in the canvass calls to make personal acquaintanceships that will be invaluable aids to selling in the spring. The salesman can find out accurately just what the power and machinery needs of the farmer will be in the spring.

USE SCHOOLBOYS FOR CANVASSING

There are many bright high school boys in every locality who would be glad of an opportunity to make some money after school. The picture shows such a boy making a call. These boys are paid a commission on each name they turn in which results in a sale

The dealer can take the results of the canvass calls and check up the credit of the farmers listed as prospects by the salesman. He can follow these prospects with mail advertising featuring the equipment these prospects need. When spring comes, he will know what farmers need equipment, what equipment they need and whether they can pay for it. He will be all set to put on an aggressive sales campaign that will produce sales and profits.

How to Make a Farm Canvass

The conduct of such a canvass is comparatively simple. One dealer made the township the unit of canvass. His territory included all of one county. He secured maps of each township from the county surveyor. These maps showed the owner, size and location of the farms in the township. Each salesman was given a township map and instructed to call on each farmer in the township. The salesmen were provided with report forms that indicated what information he was to obtain. When a salesman completed one township, he was given another one to cover.

The sales force can also help to get service work during the winter months. Complete overhaul jobs are profitable. There is money in replacement parts and the farmer should buy and install them in the winter months when his machinery is idle. Service schools have been potent factors in advertising and selling tractors.

The annual automobile show in any town presents an opportunity for much profitable work on the part of the sales organizations of the dealers participating in it. Automobile shows do not sell cars. Neither do they put new names in the prospect file. But they do present an opportunity for dealers to do both of these things.

Dealers who accept the show opportunity and act on it will have their sales organizations working at top speed before, during and after the show. By so doing, they will make sales for immediate and spring delivery. They will add many new and active names to their prospect files. They will get invaluable advertising for the cars they sell. They will instil new enthusiasm into their salesmen. They will more than pay the costs of exhibiting.

Good attendance is the first requirement for a successful show. People must come to see the exhibits. People will come if they are invited. The show management should advertise the show. Newspapers, window cards and bill boards should be used. Interesting publicity stories should be furnished the newspapers regularly for publication in the editorial columns.

Special features are a powerful factor in attracting crowds to an automobile show. Exhibits portraying the history of transportation and highway displays have been used successfully in this way.

The individual dealers making up the show are interested in securing a general attendance. But they also have an interest in getting the people who attend to visit their exhibits. This is the object of show promotion work by the individual dealer. His promotion work will bring people to the show and it will bring them to his exhibit.

At least a week before the opening date of the show the dealer should start to tell about his exhibit and where it will be located in the show, through newspaper advertising. These ads should tell where and what—where the exhibit of X—— cars is located in the show and what will be on exhibition there. The copy should arouse interest in the models on display so that people will make it a point to see them when at the show. And having created an interest in the models on display, the advertising should impress the location of the exhibit in relation to other spaces in the show.

Dealers should circularize their entire mailing lists before the show. Some dealers send out formal invitations to the names on this list. These invitations are either engraved or a high-class printing job. Announcements of the show should be prominently displayed in the salesroom. Envelope stuffers should be used. Prospects should be invited by telephone.

During the time immediately preceding the show, the salesmen should be hard at work calling on their prospects, endeavoring to get them to come to the show. They should also prepare prospects so that they will go into the

Digitized by Google

show favorably disposed to the car they are selling and be able to make comparisons of its selling points with those of other cars in the show.

Training Salesmen for the Show

The salesmen should be trained prior to the show in the special features of handling show records. They should be impressed with the importance of alertness and courtesy. Special instructions should be given on the models to be exhibited so that they will be able to answer all ordinary questions. Deportment in the exhibit should also be considered. Salesmen on duty should be on their feet and they should have the appearance of having but one interest, and that to receive visitors. Many a show visitor has walked out of an exhibit because a salesman has delayed greeting him while he finished a story he was telling another salesman.

A special prospect card comes in handy at show time. These should preferably be supplied the salesman in pad form. These forms should provide for all the information desired about a prospect and the salesman should endeavor to get as much of it as possible. Some dealers provide a box with a slit in the top in which the salesmen deposit filled-in prospect cards. Many dealers put a clerk in the booth to handle the prospect records.

A great deal of study should be given to the arrangement and decoration of the exhibit. A good way to secure an attractive arrangement is to mark out the space on the floor of the service station. Then put the cards that are to be shown in this space. Various arrangements can be tried here and the one that gives the best display selected. Or the space can be drawn to scale and scale dummies of the cars and furniture made. These can be juggled to get the most desirable arrangement.

In arranging the show space, ease of entrance to the exhibit should be considered. The booth should be open to the aisle. There should be plenty of room around the cars for visitors to inspect them. Two cars well displayed are better than three cars poorly displayed. Crowding too many cars into a display space reduces its attractiveness.

The appearance of one or more stock models can be materially improved by the addition of equipment such as nickel-plated bumpers, windshield wings, spotlights, etc. Cleanliness is another important factor in appearance. Models on display should be kept clean inside and out. Finished surfaces should be polished. The booth itself should be kept clean and neat. Literature should be neatly stacked. The floor should be kept clear of litter. A chest for coats and hats is preferable to a hat tree. It is a good plan to have a porter on duty all the time for just this sort of work.

During the show it is a good plan to have a booth manager to take charge of the display. He should be responsible for the conduct of the salesmen and the appearance of the exhibit. The schedule should be posted showing when the salesmen are on duty. The importance of getting names and addresses of visitors should be stressed. Salesmen should not be allowed to judge by appearances. Anybody who shows any interest in the car is worth following up.

Follow Show Prospects Quickly

Names obtained during the show should be followed up as quickly as possible. Some dealers make a practice of mailing a catalog to each address obtained the same day so that it will be received in the first mail the next day. As far as possible salesmen should spend the time they are not on duty in the exhibit following show prospects.

The salesroom should also be decorated specially during show week. Every possible agency should be used to make people think automobiles during show week. A special display in the salesroom will assist in this work and will focus attention on the particular make of car sold by a dealer.

After the show comes follow-up work. The show arouses a buying interest in automobiles. Dealers can only realize on this interest by solicitation of the people whose names were obtained at the show and by advertising after the show.

After the Show—Work

Show prospects should be followed immediately. The dead ones should be eliminated as quickly as possible and efforts concentrated on the live ones, as other dealers have their names and are making every effort to sell them. During this period the sales force needs all the assistance that advertising can give them.

The show gives the sales force new enthusiasm. It gets them a large number of new names to work on. A sales contest starting immediately after the show and lasting for perhaps a month will help to maintain this enthusiasm at a high point.

The annual automobile show in any town can be made the biggest advertisement of the year for the automobile. The advertising that any one dealer gets out of the show is measured by the effort he puts into it. The advertising that all the dealers get out of the show is determined by what they do co-operatively. Maximum returns on the cost of the show are secured only as the result of hard work on the part of the dealers individually and collectively. A show that has the right kind of promotion will be well attended and it will renew the popular interest in automobiles.

Dealers who are located in towns that do not have shows can put on their own individual shows in their own salesrooms. All the things that can be done to make a co-operative show successful can be done by the individual dealer to make his show successful.

A dealer undertaking to put on a show in his own salesroom should set aside a week for the purpose. During this week his salesroom should be decorated distinctively and the atmosphere of a big automobile show copied as nearly as possible. Prior to and during the show the dealer should advertise that during the week of the show he will hold open house. Everybody should be invited to come in to inspect the models on display. The salesmen should be trained and organized to handle visitors just as though the display were in an automobile show. Some dealers, with the co-operation of local merchants, have put on fashion displays to attract the women to the display.

Winter Work Produces Winter Profits

Whether a dealer sells cars or trucks or tractors, or all three of them, any falling off in demand that comes with the winter months should not be taken as a signal to stop selling. *When it is hardest to sell is the time to sell hardest.* A sales organization that does not operate with an open throttle during the winter months is eating up the profits that were made during the preceding summer or that will be made during the coming spring and summer.

Suppose you can't sell a car, truck or tractor during January and February. You are going to sell some in March, April and May. If you find out this winter some of the people who are going to buy in the spring, you will be in a position to get more business and get it more profitably than if you wait for buying to commence in the spring.

Much of the expense of conducting your business continues right through the winter months. This expense will not be a loss if you work for winter sales and spring prospects.

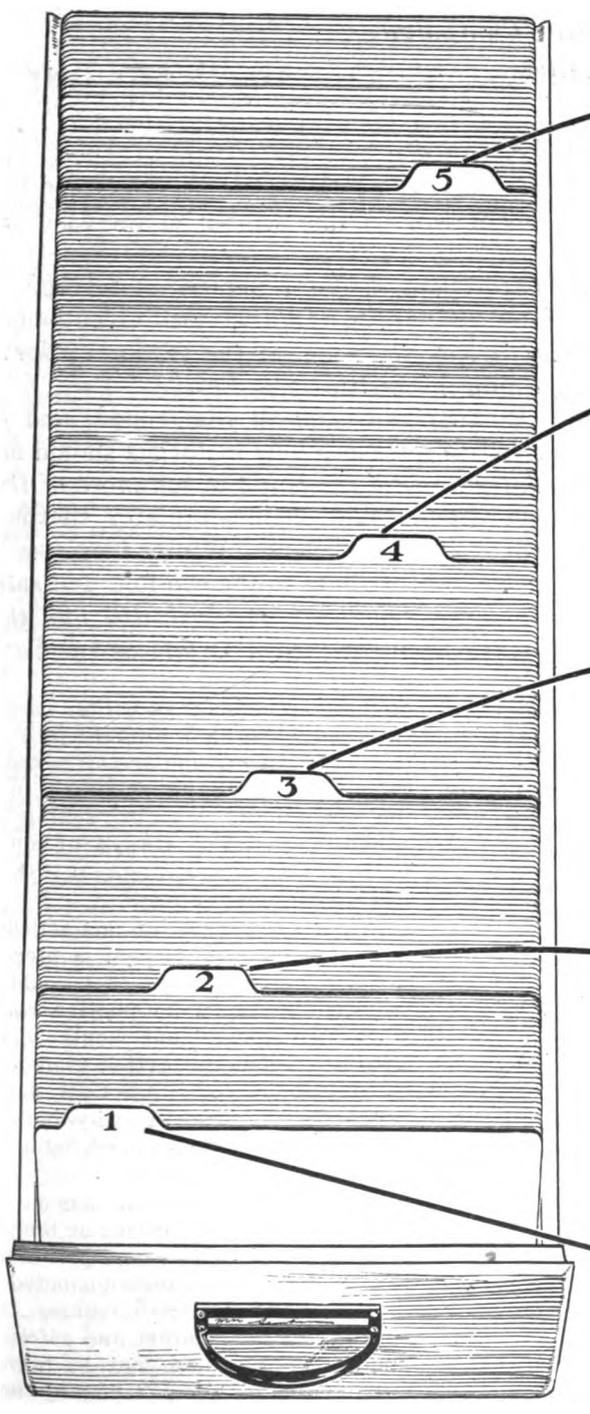
Would This Help YOU?—*A Salesman's Prospect File*



Organized to Make Winter Sales and Get Spring Prospects

THE management of a sales organization has two things to do this winter:

1—Plan an aggressive sales campaign that will get winter sales and spring prospects.

2—See that the salesmen carry out this campaign.

This page describes and illustrates a plan for the organization of the salesmen's individual prospect files that will simplify the work of seeing that the salesmen do carry out the sales plans. Furthermore, it provides an incentive to the salesforce to work as hard in winter as in spring and summer.

OWNERS. A salesman must call on the owner within 30 days of delivery of his car and at least every six months thereafter to retain protection.

REMOTE Prospects. Prospects who may buy in six months or less. Canvassing will produce most of the names in this and the third section. The dealer or sales manager should watch these sections in winter to see that the salesmen canvass in their spare time.

DEFERRED Prospects. People who will buy in three months. Prospects for early spring business should be filed here. Salesmen receive three months' protection on this class, although if another salesman effects the sale during the protection period, he receives a portion of the commission. As prospects develop in this section, they are transferred to the second section.

INACTIVE Prospects. Salesman is protected on these prospects provided he reports on them at least once every three weeks. If another salesman sells one of these prospects during the protection period, he receives half the commission. If a salesman allows his protection on any prospect in this class to lapse, any salesman may sell him and get the entire commission. As prospects develop in this section they are transferred to the first section.

ACTIVE Prospects. Salesmen are protected on these prospects and must follow them up closely. The dealer or sales manager should watch this section to see that salesmen are not neglecting likely prospects.

How to

Make This Winter Sell More Automotive Equipment

A Plan to Turn the Necessity for Safety and Comfort in Motoring Into Winter Sales and Profits

1. By Organizing a Winter Selling Campaign
2. By Featuring Winter Necessities

By LEON F. BANIGAN

THERE is one thing that every automotive equipment merchant can do this winter to increase sales and profits.

That is: *Sell the motorist something to add to the comfort and safety of winter motoring.* To do this it is not necessary to invest a lot of money in so-called winter specialties. In any stock of automotive equipment, whether it is in the large accessory store or the little corner stockroom of the garage or service station, there will be found several items that can be sold as winter necessities.

Take such a widely stocked item as the bumper, for example. Bumpers are sold all year round, and yet, winter with its wet and slippery pavements furnishes particularly strong reasons why motorists should have them. *And the dealer who sells the bumper this winter as a winter necessity is going to sell more of them than the fellow who doesn't.* The same thing is true of windshield wipers, skid chains, radiator thermometers, and many other accessories that are usually regarded as all year round sellers. Winter increases the necessity for practically all of the items of equipment that are made to contribute to the comfort and safety of motoring. *And because winter does increase the necessity for these items, the motorist will buy them more freely if the dealer's winter merchandising plans are designed to present them to him as such.*

IT is not enough for the equipment merchant to merely tell people he has them in stock. He must tell people why they NEED them this winter—and why they should buy them.

Now is the time to plan the details of how accessories are to be sold this winter as winter necessities. These details will vary, of course, according to the locality, the size of the dealer's business, and the amount of effort and money he can afford to invest in a winter selling campaign—*but every accessory merchant can do SOMETHING this winter to sell more accessories as winter necessities.* The reward is more winter profits and more customers.

For the average accessory merchant the first step will be to make a list of the accessories in stock that may be sold as winter necessities. He may wish to talk it over with his jobber salesmen and learn what assistance his jobbers can give him in presenting the winter items through cutouts, pamphlets, etc.

When he has decided upon the items that may be used, he will regard these as his WINTER LEADERS. That is, he will make a special effort each week during the winter to sell one or more of these accessories as winter necessities, and when he is brought into contact with buyers who are attracted by these LEADERS he will cash in on the opportunity by also selling the staple items, which always, of course, form a large percentage of the accessory merchant's sales.

A WINTER DISPLAY IDEA

Make a sign listing winter necessities for the motor car and display it prominently on the wall of the automotive equipment store

It is not the object of this article to lay out a detailed plan of winter accessory merchandising that could be followed by every automotive equipment merchant. That would be impossible. What this article aims to do is to present some practical winter merchandising ideas in a way that may be made adaptable to most retail accessory businesses.

Assuming that the automotive equipment merchant is sold on the possibilities of more sales and profits this winter through a campaign based on selling the motorist something that will add to the comfort and safety of winter driving—and that he has selected from his stock a list of items that he is going to make WINTER

Digitized by Google

LEADERS—he will wish to get into the details of his winter selling campaign.

These details group themselves under the following headings:

1—*Display*
2—*Advertising*
3—*Letters*
4—*Canvassing*

How to put the winter merchandising campaign into the window displays:

1—*Feature each week one or a related group of winter leaders and surround them with a few staple items as reminders.*

The WINTER LEADER should dominate the window. But it should be more than displayed. It should be SOLD as a winter necessity with signs, cutouts, catalogs, etc. Suppose the winter leader this week is a windshield wiper. One might be mounted on a windshield in the center of the window, the glass covered with Bon-Ami or some other white substance to show the sweep of the wiper. A neatly lettered card mounted on the windshield or in the window, in front of it, would carry the selling message—tell the public why motorists NEED windshield wipers in winter. Make the display SELL the featured article.

2—*Make a timely special display.* On stormy mornings feature some particular items such as skid-chains, windshield wiper, radiator hood. In white paint, on the side of the window glass where it will not obscure the view of its contents, print—SPECIAL—Windshield Wiper.. (Price).

How to sell winter accessories in store displays:

1—*Above all else the store should be neat, clean and well lighted.* These are essentials. Most people dislike buying in a dirty, untidy, ill-smelling store just as much as they do eating in a dirty, untidy, ill-smelling restaurant.

2—*Feature winter necessities on a table in the center of the store near the entrance, or on a counter, near the entrance.* Use a cut-out counter stand or a home-made card to attract particular attention to this display.

3—*Display conspicuously in the store a sign* calling attention to a list of winter necessities carried in stock—items that contribute to the comfort and safety of winter driving.

How to carry the winter appeal to customers in letters, pamphlets, postcards, etc.

1—*Keep the mailing list up-to-date.* The most important factor in a mail advertising campaign is the list. In another section of this issue the subject of letter writing is taken up in detail. The best mailing list is one which contains the names of all people who have purchased previously. These names may be gotten and added to the list by providing that the name and address and name of car owned be inquired for and written on the sales check when it is being made out. The duplicates then go to the person in charge of the mailing list to be added to it. Classification of the mailing list according to car ownership is sometimes of practical assistance when its size warrants.

2—*Have letters typed or pamphlets printed presenting certain accessories as winter necessities and attach to these descriptive factory literature.*

3—*Have postcards printed presenting newly stocked items and send them out as required.* Postcard efforts of this nature are usually most effective if they contain a short, trite message and a picture of the article. Suppose the article to be sold is a radiator cover. A cut of the cover one-quarter to one-half the size of the postcard probably would be supplied by the jobber or manufacturer on request. In fairly large type under it or over it might be placed the name of the particular item and its retail price. The selling message might be as follows: "Are You Wasting Power this Winter? Heat is essential for the efficient operation of your engine. Protect it with a well-fitted radiator cover and relieve your nerves and your battery of the strain of starting a cold engine. We have just received a brand new stock of ———— Radiator Covers. Come in and let us fit one to your car. *Don't waste power this winter!*"

Selling literature can be made stronger this winter if it always does these things:

1—*Tell the motorist WHY he needs a particular accessory this winter.*

2—*Tell him that you SELL just the item to meet that necessity.*

3—*Ask him to BUY it FROM YOU.*

How to put the winter selling effort into newspaper advertising.

1—*Make one winter leader the feature of every advertisement.* Present it to the motorist by telling WHY it is needed this winter and WHY he

Sell the Winter Merchandising Campaign to the Organization

IT'S a very fine thing to decide to put on a real aggressive winter merchandising campaign, but there are two vitally important things that must be done to insure the success of such a project.

1—Lay out a definite plan of action.
2—Sell the campaign to the whole organization.

A good start is half the battle in any undertaking. When the dealer has decided upon his plan it is a good practice to call a meeting of his whole organization in the store some evening, or at a dinner table and lay the plan before the employees. Encourage them to make suggestions on "How We Can Sell More Accessories This Winter."

The idea of selling accessories as winter necessities should be explained thoroughly and the announcement of a small commission on sales should be made. If it is practicable to organize teams and begin a sales contest—fine.

But the big idea is to get the plan definitely launched and the organization enthusiastically behind it. Occasional meetings throughout the winter will help keep the organization on its toes.

Digitized by Google

should buy the particular type of item you sell—ask him to buy it from you. Any number of other items, staple articles among them, may be used in the same advertisement, showing cuts, and giving short descriptions and prices, but—MAKE THE WINTER LEADER THE FEATURE OF THE ADVERTISEMENT. Make your advertisement attract the attention and interest of the reader by making a timely appeal—by presenting to him just the thing that he probably has felt the need for that very day. Remember that winter increases the necessity for almost all accessories designed to add to the comfort and safety of motoring and, therefore, a GOOD REASON FOR BUYING ALMOST ALL ACCESSORIES EXISTS THIS WINTER. The advertising that points out the need for an item and presents the items for that need convincingly has the strongest selling power.

2—*Advertisements that sell special groups of winter necessities are effective sometimes.* Several good advertisements based on the words "Comfort" and "Safety" may be used this winter effectively. In such advertising the feature should be a short, convincing message which points out the desirability of comfort or safety in winter driving and then presents specifically several articles that will enhance comfort or safety. A safety advertisement may be written as follows: "Can You Afford to Take Chances? Winter's icy pavements, its rain and snow and sleet, increase the hazards of motoring and rob it of pleasure and safety UNLESS the motorist is equipped with good, dependable safety devices. Most of them cost so little that no motorist can afford to take chances by driving without them. Wet and icy pavements and ruts and partly obscured vision cause most of winter's motoring accidents. And almost every accident caused by these conditions *could have been prevented. Stop taking chances this winter.* See that your car is equipped with these safety devices."

This may be followed by a division of the remaining space into squares in each of which is shown a picture of one of the following items, with the price and a short description that tells HOW it prevents accidents in winter; Bumpers, windshield wipers, skid chains, stoplights, rear view mirrors, steering wheel warmers, spotlights, goggles, brake lining, pedal pads, windshield visor, etc.

How to sell the necessity of accessories in winter in the store:

1—*Ask people to buy winter accessories, mentioning particularly the WINTER LEADERS,* and telling why these items OUGHT TO BE ON EVERY CAR this winter.

2—*Make a practice of mentioning at least one WINTER LEADER to every customer* who comes in to buy something else. Mention new goods particularly, saying: "Have you seen the new ——?" etc., and proceed to tell its virtues as a winter accessory.

3—*On stormy days mention particularly some item that MIGHT be needed by the motorist on account of the weather condition of that day.* People buy when necessity presses.

4—*Put on a sales contest with monthly prizes* for the winners and small commissions on gross sales.

5—*Use the telephone.* Make a selected list of customers and phone them telling them about your WINTER LEADERS and point out the necessity for them this winter.

How to sell the necessity of accessories in winter in the garage and service station.

1—*Supply employees with slips of paper on which are typed a list of winter necessities* and have them check the items that are not on the cars that come in for repairs and storage. Turn the slips over to one or two men to be designated as accessory salesmen in the garage and pay them a small commission on sales.

2—*Display WINTER LEADERS* in a wall case or display counter near the door where motorists going in and out will see them and SELL THE ITEMS DISPLAYED WITH SIGNS, CUT-OUTS and personal canvassing.

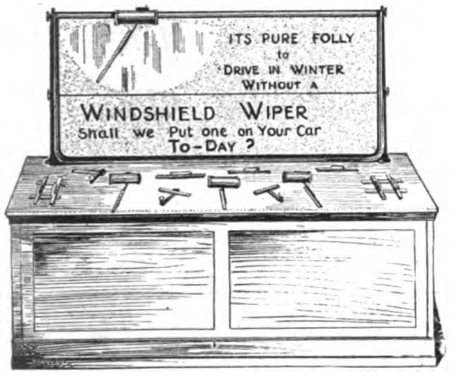
Whether accessories are sold in a store, or in a garage or service station they can be made to move in greater volume and produce greater winter profits if they are sold with a timely appeal.

The importance of timeliness in merchandising is well illustrated in the story of two bootblacks at a busy corner in New York one Saturday afternoon. Both had plush covered chairs well decorated with shining brass tacks. Both stood in front of his place of business and called his wares. Tony yelled: "Shine, shine 'em up, mister!" Michael yelled: "Don't forget your *Sunday shine!*" It was not surprising that Michael's receipts were twice as large as Tony's. He was actually rendering a service. Men were glad he reminded them they'd need a shine for Sunday. THEY BOUGHT BECAUSE OF THE TIMELINESS OF THE APPEAL.

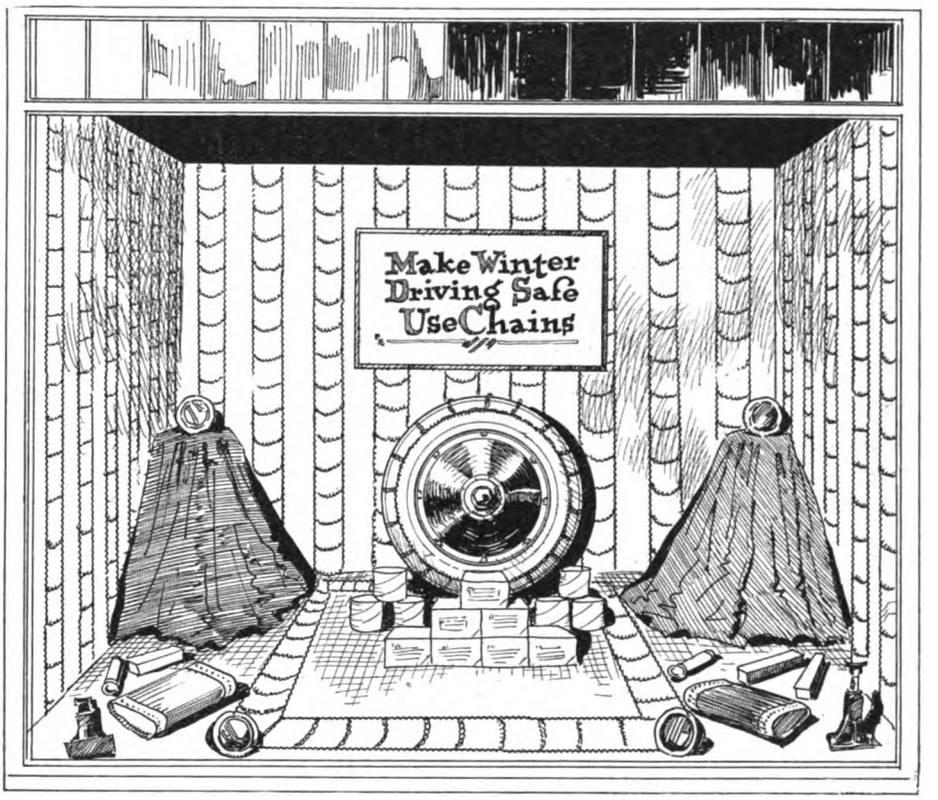
There are going to be some Michaels and some Tonys handling automotive equipment in every town this winter. The Tonys are just going to "keep store." They are going to expect that they cannot do business in winter and they are not going to try. They are going to neglect their stores and their stock and spend most of their time entertaining a few cronies who are more fortunate than they are and don't have to hustle to make a living. They're going to have an easy time of it—nothing to do but warm their shins by the stove and talk about the good old summer when everybody is driving his car and rushing in for supplies.

But the Michaels are going to get the business and the profits through the fact that their timely winter selling efforts carry a suggestion of the need for their merchandise and their service. They are going to point out to the motorists that they *can* drive their cars in winter in comfort and safety if they are properly equipped. They are going to keep their stores bright and clean and well lighted. They

Some Accessories to Sell This Winter



THERE are some items of automotive equipment that add particularly to the comfort and safety of motoring in winter. These may be regarded as WINTER NECESSITIES and may very profitably be made WINTER LEADERS by the accessory dealer, garageman and service man.



Here are some suggestions for WINTER LEADERS. You may wish to add others or substitute in places:

Alcohol
Anti-Freeze Solutions
Bulbs (extra)
Bumpers
Cigar Lighter
Chamois
Celluloid Cement
Floor Mats
Flashlights
Gloves
Garage Heaters
Goggles
Heaters
Heat Holders
Hood Covers
Lubricants (Winter Grade)
Mud Hooks
Mirrors
Polish
Polish Sprayer
Parking Lamp
Primer
Radiator Cover
Radiator Thermometer
Radiator Cement
Rain Shield
Robes
Robe Lock
Step Mats
Step Plates
Steering Wheel Warmer
Spotlight
Stop Signal
Tire Chains
Tire Cover
Tire Putty
Top Dressing
Tonneau Windshield
Trouble Lamp
Vacuum Bottle
Windshield Visor
Windshield Wings
Windshield Wiper

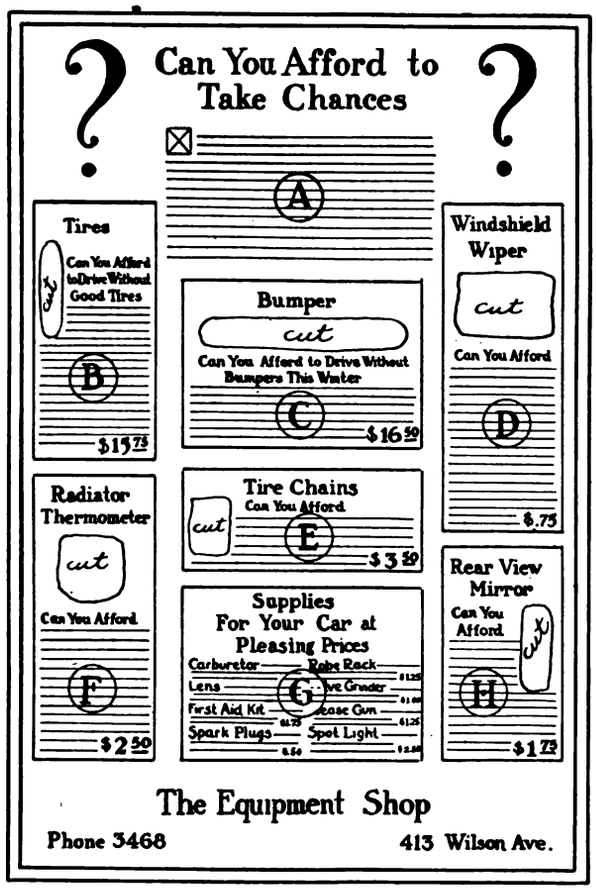
How to Make Winter Selling Displays in the Accessory Salesroom and Window

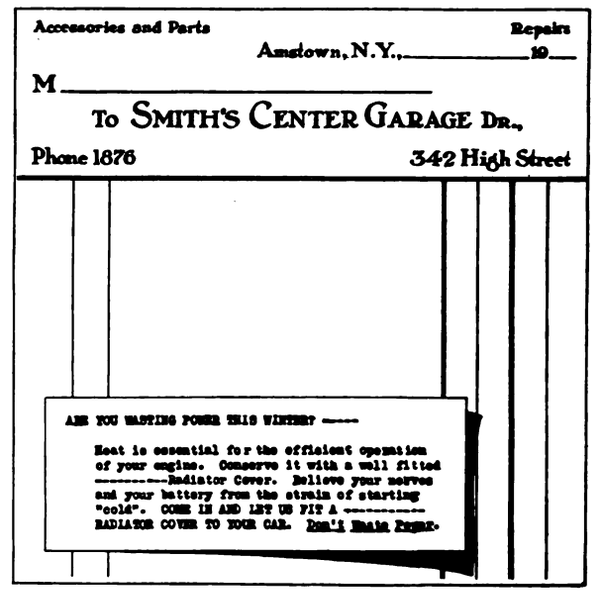
Above—An automatic windshield wiper mounted on a windshield on a display case and operated by a small motor. Other types may be displayed on the case. A cold water paint background on the glass with lettering in black or red will provide a selling sign. Right—A window featuring one winter necessity—tire chains. The idea of this picture is to suggest making one winter necessity stand out in each window display.



Above—A sign listing several winter necessities on an easel near the door will help remind customers of their needs and increase the sale of some of the more widely used accessories. Left—A table in the middle of the store near the door displaying winter necessities.

Digitized by Google

are going to make people notice them and their stores by interesting displays.



They are going to use the local newspapers and the mails to get their timely suggestions to the motor car owners of their towns. They are going to open the throttle just a few notches wider during the winter than it has been during the summer and fall and their extra effort is going to reward them in not only more sales and more profits during the winter months, but in a wider acquaintance among the motorists which is going to bring more business in the spring.

Let's make this winter's selling campaign just as timely as Michael did his shine business. Let's make it say: "Get Your Winter Equipment—Get It Here—Get it *Now*."

Here is a suggestion for an advertisement to direct attention to the need of items that make motoring safe in winter. A—A general introductory paragraph telling of the need for these items. B, C, D, E, F and H are small boxes devoted to the selling of one item. In each the question is asked: "Can you afford to drive without windshield wiper, bumper, tire chains," etc., and then a paragraph describing the particular item presented. G is a box in which half a dozen or more staple articles are presented with prices

How to Get Tire Business and Profits This Winter

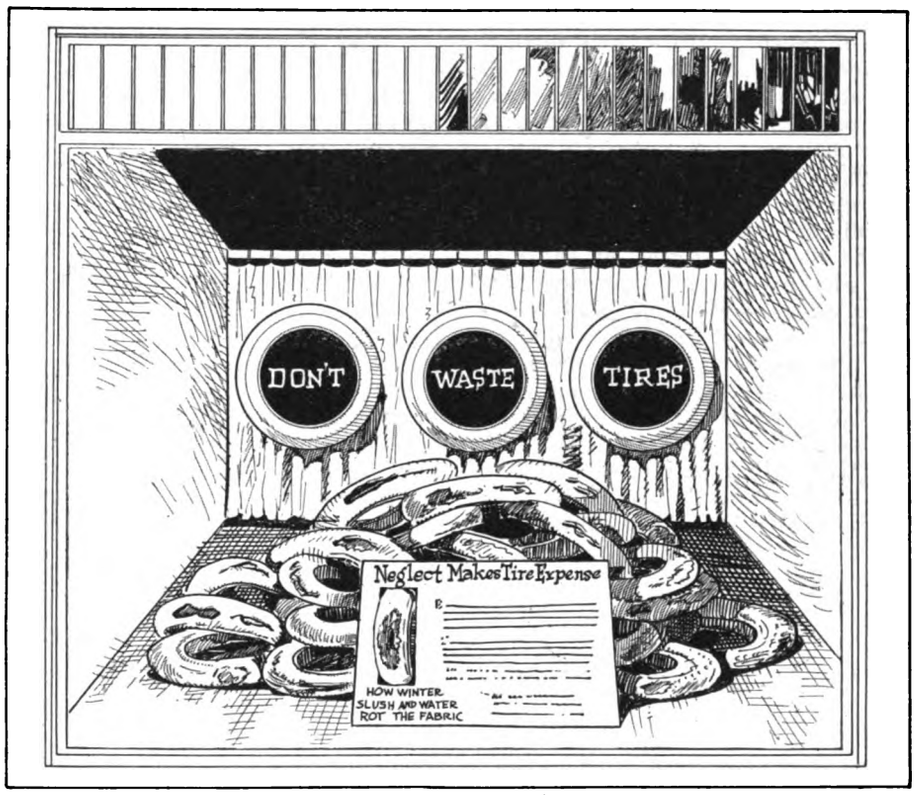
A Campaign to Lift Tire Selling Out of Price Competition and Sell Service and Satisfactory Performance

HOW can I sell tires and make a profit this winter with several others handling the same brand in my territory and some selling at prices that I can't meet and stay in business?

That is the problem that some dealers are facing this fall. The fact that many dealers are staying in business and making a profit despite the unfavorable conditions proves there is a solution to the problem.

Analysis of the merchandising plans of a number of the better class of tire dealers only serves to accentuate the importance of a definitely mapped out selling plan that has as its outstanding aim the making of permanent customers out of all buyers. A striking feature of the success of many of these dealers is that they have been able to *lift the particular brands of tires they sell out of destructive price competition* and SELL SERVICE, ECONOMICAL TIRE MILEAGE, SATISFACTORY PERFORMANCE.

FOR the dealer who is equipped to handle tire service the first step in this winter's selling campaign is to SELL THE SERVICE END OF HIS BUSINESS.



In doing this he must

1—*Tell motorists to inspect their tires frequently this winter—and tell them WHY they should do this.*

He can tell how winter's slush and rain and snow plays havoc with tires that are not in perfect condition—how the water seeps through cuts and bruises and rots the fabric and shortens the life of the tire. He can tell them how to save money by attending to the small cuts and abrasions; having them repaired and vulcanized and thus protect the fabric—the backbone of the tire.

2—Tell motorists to bring their tires to his shop periodically for inspection.

He can tell that he has organized his business to render SERVICE by carefully inspecting tires at stated intervals and patching up the small cuts and bruises, and how in purchasing tires in his store the motorist buys more than rubber—he buys not only a tire but the desire and ability of the dealer to stand behind it and see that it delivers the satisfaction the buyer expects from his investment.

This Window Sells Tires and Service

There's an educational feature to a window of this kind that could be capitalized this winter. The arrangement may be made to fit the size of the window—the idea is to get home forcibly the NEED for care of tires in winter and the dealer's desire to render tire service

In selling tires on this basis—in getting his message to the public—the tire dealer will want to use in some way most of these forms of merchandising:

a—Display
b—Advertising
c—Canvassing

The displays that get this kind of merchandising across most successfully are those of an educational nature.

How to put the educational appeal into this winter's displays:

1—*Cut some sections from old tires showing how the fabric has been rotted through the owner's neglect to have small cuts vulcanized.* Place them in the display window with neatly lettered signs explaining what caused the destruction of each tire and HOW IT COULD HAVE BEEN SAVED BY THE DEALER'S INSPECTION AND REPAIR PLAN. In the same window display a large sign worded similar to this: "Neglect Makes Tires Expensive — Neglected cuts and bruises allowed water to seep in and rot the fabric of these tires, bringing them to the junk pile hundreds of miles before they should have come. Our inspection plan prevents this wastage and PROTECTS YOUR POCKET BOOK. WE CAN SAVE TIRE MONEY FOR YOU."

2—*Make a general educational display* occasionally by showing tires in the window that have been subjected to particular abuses such as running in car tracks, stone bruises, under-inflation, over-inflation, jamming on brakes, etc. As in the other window,

Digitized by Google

attach cards explaining what caused the trouble and suggest purchasing tires from you and the use of your inspection plan as a means of discovering causes of high tire bills and eliminating them by timely attention to these evils.

How to put the educational appeal into winter advertising:

4—*Use the camera.* Take pictures of tires that have been spoiled by neglect of cuts and bruises and the rotting of fabric and use these pictures in newspaper ads and circulars, envelope stuffers, etc. By means of these pictures SELL the service feature of your business.

Some dealers have found it distinctly profitable to send a man out occasionally to inspect tires on cars parked in the business section of the city, take pictures of tires that have been neglected or have been subjected to some of the usual tire abuses and also copy the license number of the car on which they are found. The owner of the car is traced in the registration list and HE IS SENT A PICTURE OF HIS TIRE AND A LETTER TELLING WHAT CAUSED THE TIRE TO GO BAD AND HOW THIS WASTE COULD HAVE BEEN AVERTED THROUGH USE OF THE DEALER'S INSPECTION SYSTEM AND TIMELY ATTENTION TO CUTS AND BRUISES. This method has been particularly effective in making the appeal to owners of fleets of business cars where, when the business is secured, the volume is large.

How to canvass for tire business this winter:

Call on local business men, owners of one or more business vehicles, and SELL THEM on the advantages of buying tires backed by an inspection service. Business men, especially in connection with the car that they use for business purposes, are more apt to keep a close check on tire mileage and tire expenses. They, as a class, are less liable to be swayed by the lower first cost of the price cutter.

Some dealers have found it effective to use the camera idea in connection with this kind of canvassing. Pictures of neglected tires on the trucks and commercial cars of firms whom they intend to canvass are made, and when the dealer or his salesman makes his first visit he sends in, with his card, one or more pictures of THAT PARTICULAR FIRM'S TIRES. The procedure invariably gets an audience on a basis that makes it particularly easy for the salesman to SELL the big feature of his business—tire inspection and service.

With competition keen, and sometimes destructive in nature, there is stronger need for the tire dealer to do things to attract attention to himself and his business—to hold old buyers and make new ones. Dealers who have given close attention to the subject and have succeeded in selling their whole business and gaining the confidence of their customers are remaining in business and making a profit year after year while the destructive price-cutting practices of many of their competitors are making them short lived and often suicidal.

Winter conditions provide particular reasons why the tire buyers should protect their tires from unnecessary abuses and neglect and the tire dealer who is able through his various merchandising activities to accentuate this point and SELL IT STRONGLY to his customers will sell more tires and make more profits.

Two Ways to Get the Winter Appeal to the Public

A blackboard carrying a winter message on the importance of taking care of the tires in the store is effective. The message should be changed once a month or oftener. On the right is shown one way in which the tire dealer can get his message to the public—through advertising

Want to Save ?

TIRES and Dollars are Wasted every Winter by folks who neglect the small cuts and bruises.

Our Inspection Service, which is FREE with every tire purchase, SAVES MONEY FOR YOU. It detects these blemishes in the tread and enables you to have them repaired before slush and water seep in and rot the fabric.

We believe SELDOMBLOW TIRES backed by our inspection service are the best buy in town. You'll think so too.

How to

Sell Automotive Equipment to the Christmas Shopper

There Are Quick Cash Sales and Profits in a Christmas Selling Campaign—This Story Tells How to Plan One—The Time to Begin Is NOW

EVERY Christmas shopping period produces thousands of people frantically searching department stores and other shops for "something novel—something useful—something not too expensive." When they buy it is almost invariably for cash.

Why shouldn't a generous slice of this Christmas gift money find its way into the cash drawers of the automotive equipment merchants? *It will if the dealers and garagemen who sell motor car equipment PLAN NOW TO GET THAT BUSINESS.*

One person in every ten for whom shoppers are buying gifts during the Christmas shopping period owns a motor car. Why shouldn't many of the gifts they receive be for the car? *They can be if the automotive equipment merchant tunes his late November and December selling plans this year to appeal to Christmas shoppers.*

But, next December will be too late to begin thinking about selling automotive Christmas gifts. The selection of stock, the advertising, the circulars and sales letters, the displays in the windows and salesrooms should be planned NOW.

As his very first step toward a real effective Christmas merchandising effort it would be a good idea for every dealer to set aside some place in a drawer or file to collect every idea for Christmas selling that he finds. He will watch the department store and drug store and jewelry store windows and advertising and gather from them inspiration for his own display and advertising.

He will talk over his Christmas selling plans with every jobber salesman that visits him—he will write to his jobber and ask for suggestions as to what the jobber can do to help him sell Christmas gifts. Then, when the Christmas shopper swoops down "Main Street" in force during December, the automotive equipment merchant will be prepared to reap his share of the profits of this business.

One Way of Suggesting Christmas Gifts

Here is a simple and inexpensive Christmas selling idea. Buy some white cardboard and cut it in sheets about 15 x 20 in. Mount on these cards small accessories that may be sold as Christmas gifts; letter a selling message on each referring to the article it contains and hang the cards on a wire stretched above the counter. The sketch above shows the idea

It is not necessary to invest a lot of money in so-called Christmas novelties and extra stock of various kinds. The useful, inexpensive and most appreciated items of automotive equipment that can be given can be found on the shelves of most dealers to-day. *All that is necessary is to present these articles to the public as Christmas gift suggestions in an interesting way.*

One important thing to remember is that women, as a general rule, do most of the Christmas shopping for the family and if the automotive equipment dealer's Christmas selling plans are to be most profitable they must take into consideration attracting the attention and interest of women shoppers.

Women are, as a rule, more particular than men about the appearance of the places in which they buy. The automotive equipment merchant who would attract them to his store must be sure that his display windows and his store are bright, neat, clean and orderly. Courtesy is a big asset to the dealer who seeks the patronage of Christmas shoppers. Promptness in offering gift suggestions and willingness to demonstrate and explain the operation of equipment items will be appreciated.

The store, to attract women gift

shoppers, must be in harmony with the season. Your store may be a part of your garage office or a separate accessory store. Wherever it is it must be brightly lighted and must have a suggestion of Christmas in its arrangement and decorations. Here again it is not necessary to invest large sums of money in expensive decorations. A few dollars spent for holly wreaths and greens, a Christmas tree or two, some red and green crepe paper and an hour or so of tasteful arrangement of these Christmas decorations in the window and store will give it the touch of Christmas that will put it in harmony and help to mark the store as an interesting place in which to seek Christmas gifts.

Now Is the Time to Plan

Every dealer in automotive equipment can greatly increase his sales for the month of December and turn what in the past has been a "slow" month into one of quick turnover and profits by PLANNING NOW to take advantage of the opportunity of making the Christmas gift appeal with his stock.

As in every other well organized merchandizing effort the Christmas gift campaign will naturally fall into one or all of three groups of selling.

1. *Window and interior display.*
2. *Advertising, circulars and sales letters.*
3. *Canvassing.*

This story will not attempt to lay out a definite program of Christmas selling for all automotive equipment dealers. That would be impossible considering the various types of establishments from which automotive equipment are sold and the local conditions which will influence the dealer in determining the kind of a selling effort that will prove most effective. However, this article will present display, canvassing and advertising ideas that have been successfully used by some automotive equipment dealers during past Christmas shopping periods, with the thought that they may be adapted to the needs of a large number of dealers.

Following are some window and interior display ideas:

1. *Group gift displays according to price.* For years good merchandisers in other lines have recognized the fact that the Christmas buyer, as a class, is a price buyer. He has a pretty definite idea of how much he wishes to spend for each gift and it makes it easier for him to buy to present gift suggestions in price groups. The automotive equipment merchant can help the gift buyer by displaying various items on tables or on tops of display cases and counters in price groups. One way to do this is to select items that sell for $1 to $5, $5 to $10, $10 to $15 and $15 to $20 and group them with signs telling the customer that he can find in these groups "Gift Suggestions Up to $5," "Gift Suggestions Up to $10," etc.

2. *Make Specific Gift Suggestions in Window.* The Christmas shopper appreciates definite gift suggestions. An effective window display may be made by placing a Christmas tree in one corner and possibly a chair or some other article of furniture to suggest a living room on Christmas morning and grouping around the tree and the chair such items as a tire, robe, driving gloves, vacuum bottle, etc., with signs on them marked: "Merry Christmas to Dad," "Merry Christmas to Mother," etc. Another window display that carries a strong Christmas appeal has been made by carrying the price group idea into the display, showing groups of accessories that can be purchased for $1, $2.50, $5, etc.

3. *Make the automotive equipment store stand out as a gift store.* Christmas shoppers are attracted to the stores that appeal particularly to their desire to buy gifts. The store that is brightly lighted and carries the Christmas suggestion in its general appearance attracts more Christmas shoppers than the one that makes the ordinary, all year round display. Some times it is effective to have a large sign made which is hung over the entrance and windows calling attention to the fact that the store is making a special display of Christmas gift suggestions.

In other instances a couple of evergreen trees or a few lengths of evergreen rope draped around the windows and doors will be sufficient.

The Christmas Appeal

Some Christmas advertising ideas:

1. *Make specific gift suggestions in newspaper ads.* The newspaper advertising of the automotive equipment merchant can profitably make specific Christmas appeals during December. Such advertising should have a holiday appearance. This can be secured by use of cuts of Santa Claus, holly wreaths, poinsettia, Christmas trees, etc., that are usually on hand in every newspaper office. A talk with the advertising manager will secure for you a particular decorative cut or border that may be used in all advertising during the month. If the same decorative scheme is used in all ads it will have the effect of tying up the advertising campaign and helping readers to recognize your ad through repetition. The "copy" should be so written to impress the reader with the fact that the items advertised are presented as specific gift suggestions. Such lines as: "Give Him Something Useful—Something for the Car," "Every Motorist Appreciates Gifts Like These" will help get the message across.

2. *Use letters, postcards, envelope stuffers and circulars to tell every customer you sell Christmas gifts.* Early in December—the first day is not too soon—the automotive equipment merchant can begin telling his customers that his store is a Christmas gift headquarters. An effective means of doing this is to enclose in purchases, in bills and statements and in letters a printed or typewritten list of Christmas suggestions. Such circulars need not be elaborate. The idea is to lose no opportunity of spreading the news that you are actively bidding for Christmas trade and are prepared to serve. Postcards have been very profitably employed by some dealers. These are usually most effective when they contain a short paragraph suggesting a visit to the store to make Christmas gift selections and a list of specific gift suggestions, with prices.

Some Selling Ideas

Some canvassing ideas:

1. One dealer sold several hundred dollars worth of spotlights last Christmas by buying one spotlight from his jobber and taking this out for a couple of hours each morning on canvassing trips during which he visited the homes of customers and suggested it to the women of the family as a good Christmas gift.

2. Another dealer made a list of half a dozen good Christmas gifts and used the telephone to get in touch with some customers on his mailing list.

3. Still another dealer got good Christmas sales from a canvassing plan in which he employed boys to go through the main sections of his city, where cars were parked in large numbers and place on the seat of each car a pamphlet which presented a dozen items of automotive equipment as gift suggestions.

The big idea is to get your store into the picture as a logical place in which to buy Christmas gifts. Use every method available to direct attention to the fact that the accessory store is just as much a gift shop as the department store and the stationery store and the jewelry store and SELL AUTOMOTIVE EQUIPMENT FOR CHRISTMAS GIFTS THIS YEAR.

How to *Keep Your Shop Profitably Busy This Winter*

Practical Selling Suggestions for the Car, Truck and Tractor Dealer and the General and Specialty Repairman

By J. HOWARD PILE

YOU can't catch minnows in a crab net. The holes are too big and the little fish swim right through.

And you can't catch crabs in a minnow seine. The mesh is so small that the net goes through the water too slowly and the crabs get out of the way.

Just as you have to use the right kind of equipment to land the kind of sea food you want, so you have to use the right selling methods to get shop profits from repair work. Just as there are crabs and minnows in the sea, so are there large and small jobs of repair work. Some of these jobs are big enough and profitable enough to be worth spending some time getting. They are worth a personal visit or two, a telephone call and some individual letters. Others are small and to make any profit they have to be obtained in quantities through circular letters, printed circulars or advertising of one kind or another.

Classification of Repair Jobs

Classify the repair jobs you are equipped to handle into divisions and work on them accordingly.

You will find many times that big jobs develop where you only expected little ones.

Disregard for the moment the big and little classification and think of three general classes into which all repair work can be divided. These are:

1.—*Overhauling and renewing.*
2.—*Maintenance and adjustment.*
3.—*Equipment installations.*

Most of the operations in class 1 include jobs of a bigger nature—those from which the shop can expect to receive a substantial profit. It is well worth while to use some selling effort to get this kind of jobs. They are generally big enough to allow for the quotation of a flat rate that can be depended on to be on the right side and at the same time to give the car owner his money's worth. They are jobs that make nice working in the shop, particularly in winter. The mechanics as a rule prefer this class of work and will turn out good jobs. Emergency work and small jobs generally do not last long enough to get them interested.

Most of the operations in classes 2 and 3 are small but are worth going after in quantities through circular letters, printed matter in the mails, advertising and other ways. Jobs on maintenance and adjustment often develop into overhaul jobs. Equipment installations, in addition to the profit on the installation, also bring a profit on the sale of the article.

It is particularly important that steps be taken to get jobs into the shop early in the fall. Large overhaul jobs, if taken in now, can be better taken care of and if enough work of this kind is sold, the plans of the shop for the winter can be worked out to a point where the size of the mechanical force can be determined upon in advance. If allowed to go till later there may be several obstacles in the way. In the first place, snow or severe cold weather may hinder getting the car to the shop for some time and in the second place the owner may say, "Well, it's getting along in the winter now, I guess I'll let it go till spring." If you were planning on a certain amount of work for November and December and either of these things happens it will mean an overmanned shop with not sufficient work to pay expenses and the uncertainty of whether the work is going to come in at all.

Overhauling and Renewing

Sell your repair work early and make up a shop schedule that will enable you to go through the winter with all sails set.

Most cars that are two years old or more are possible prospects either for an entire car overhaul or for the overhaul of one or more of the units, such as engine, axles, clutch, etc. This depends largely on the care and attention given by the owner and in the way he drives the car. A careless driver will run a car into bad condition much sooner than two years and a careful driver will have his car in reasonably good shape at the end of three years. A complete overhaul job is generally not in a hurry and is one of the best kind of jobs to have in the shop. It gives the foreman a chance to have plenty of work for all the men and the parts can be distributed to departments or mechanics for work as the time is available.

Next in desirability to complete overhauls are partial overhauls or overhauls of one or more units.

Getting Radiator Work

Radiator repairing and overhauling is more frequently called for in winter than in summer. This is due to two things. In the first place many owners do not get an anti-freeze solution into their radiators soon enough. The result is a frozen radiator and while it is possible sometimes to have a freeze-up without damage, most frozen radiators force a seam or a tube and develop a leak somewhere in the system. In the second place the roads are, in general, harder in the winter than in the summer and the springs are a little stiffer, due to the stiffening of the grease or oil between the leaves. This is harder on the radiator and subjects it to more vibration. This vibration will in time break some delicate part of the core and a leak will result. Trucks using solid tires are more susceptible to this harder winter driving than are passenger cars.

The installation of a rental radiator service and the

Digitized by Google

proper advertising of the fact will bring in much radiator repairing. In other words, instead of the owner waiting for a day or two while you repair the radiator, you simply take his radiator off and put on a rental unit. This takes very little time. And when his radiator is finished you change back again, charge him for the job plus the rental on the radiator and make two profits. The advantages are that the car is not occupying space in your shop, you are relieved of the responsibility for the car and its contents and you do not have to do a rush job. If you are handling one or two lines of cars the proposition is very simple as you can fix up two or three old radiators for rental. For general work you can gradually add to your collection. The investment is practically nothing as you can take frozen or collision damaged radiators and repair them during spare hours.

pay a shop in any town to prepare to handle this kind of work, not only for itself, but for other shops that are not prepared to handle the work.

Painting goes along very well with top, curtain and upholstery work. When a car is in such shape that it needs repainting, it will generally need some work on the top. This applies to open cars. Upholstery will also stand some attention because in contrast to the newly painted exterior, the inside will generally appear shabby. This is a splendid opportunity to sell all of this kind of work at once. You can explain to the owner how nice and glossy the chassis parts, body and fenders will appear and then draw a contrast with the top and upholstery. It is not at all difficult to make the average owner see the necessity of making a complete job, getting new lights in the curtains, etc.

What Kind of Work Can You Get This Winter?

1—Overhauling and Renewing

General overhaul of entire car or of one or more units such as engine, clutch, steering gear, gearset, rear axle, drive shaft assembly, front wheels, radiator, body, windshield, electrical system.
Cylinder and piston overhauls—regrinding or reboring, fitting new pistons, rings and pins.
Rewiring the electrical system.
Top and curtain repairing, mending and renewing.
Painting.
Radiator repairing.
Battery overhauling.
Bringing new models up to date.

Overhauling means really rebuilding. It means not only the profit on the labor in doing the work but it means considerable additional profit on parts which are renewed. The proportion of parts to labor is much greater in this class than in simple adjusting.

2—Maintenance and Adjustment

Battery charging and minor repairs.
Winter care of batteries.
Headlamp adjustment.
Carbon removal and valve grinding.
Tuning up engine—adjust valve tappets, drain and adjust carbureter, clean and adjust spark plugs, clean and adjust breaker points, clean grease off engine, flush radiator, clean oil strainer, check charging rate, test starter, test battery, drain crankcase and refill with fresh oil, examine wiring and connections, check for water leaks, etc.
Crankcase service.
General lubrication—all oil and grease cups, engine, gearset, universal joints, clutch, rear axle, springs, steering gear, front wheels, door hinges, generator, distributor, fan pulley.
General tightening of all bolts and nuts and replacing those lost.
Clean out gasoline tank, gasoline line, strainer, carbureter and adjust.

3—Equipment Installations

Car Heater.
Primer.
Radiator shutter.
Automatic windshield wiper.
Bumpers.
Shock absorbers or rebound snubbers.
Anti-freeze solutions.
Chassis lubricating systems.
Seat and upholstery covers.
Spotlight.
Headlamp lenses.
Windshield wings.
Rear traffic signals.
Sunshades.
And others that will suggest themselves.

The selling of equipment installations also means profits in addition to labor and to facilitate sales of both labor and equipment it is often found advisable to quote a price on the article installed instead of giving separate quotations.

Painting, Top and Curtain Work

Top and curtain work and painting require special equipment and the services of mechanics who can perform the work properly. Not all shops have these advantages and as the investment in equipment is very small, it would

Bringing Old Models Up to Date

A class of repair work that has not been very well developed but which is worth going after is that of bringing older models of cars up to date. This kind of work is applicable to only the higher grade of cars and those which are seven or eight years old. There are many very fine

Digitized by Google

cars in the Pierce-Arrow, Packard, and Locomobile classes, as well as many foreign cars, that are in fine mechanical condition but which are minus equipment that we now regard as indispensable. Some have no electric lighting or starting systems. On others the windshield is not of the modern convenient variety. Many have old style carburetors which are not capable of vaporizing the gasoline of to-day. Ignition systems are not equal to modern requirements and sometimes one or more of the units such as clutch, gearset or axle have given out, leaving the rest of the car in good condition. Many of the older cars are using wheels and rims of a size and type for which tires are either no longer made or are made only by a few companies. These wheels and rims can be changed to take modern straight side tires.

Adjusting Headlamps

An important but much neglected service that can be rendered the car owner is the adjustment of headlamps. In states that have not gone scientifically into the testing of headlamps and the rigid enforcement of laws, it will be found that out of ten headlamps, about four are blinding, four do not give enough light on the road for safe driving at night and the other two are about right. States with testing equipment and a policy of rigid headlight law enforcement have cut this figure down considerably. In most states the only cases of arrest are where the headlamps are blinding. Some states like Massachusetts insist not only that the headlights be not blinding, but that they give enough road light to make driving safe. So many owners are driving with headlight handicaps that there is a splendid chance to sell headlamp adjustment.

Getting the Business for the Shop

Getting business for the shop is selling, just as much as selling cars, trucks, accessories or equipment. The particular selling of shop work might be divided into two classes:

1.—*Work which the owner knows he needs to have done but keeps putting it off due either to expense or to disinclination to have the car out of service.*

2.—*Work which should be done on the car which the owner does not know about.*

It is a little bit easier to sell the first class than it is the second because if the owner knows the work has to be done, it is only a matter of convincing him of the economy of having it done now or showing him that it will not take very long and may prevent a protracted and expensive layup later on. The trick in this kind of selling is to find out what the owner knows. This can be done by diplomatic questioning and suggestions.

Let's dramatize the questioning:

Scene 1—At the Gasoline Pump

Owner—"Five gallons, please. Are you sure there is no dirt in your gas? I've been having a lot of trouble here lately with dirty gas. Got hung up way out at Seven Oaks two nights ago with a clogged gas line."

Gas Pump Man—"We strain all our gasoline and so do most all gasoline stations but in spite of this, dirt gets into the needle valve. Many times chemical combinations form between the copper and the gasoline or moisture condenses inside the tank. I would suggest that you have your tank, gas line and carbureter cleaned out now, and about once every six months after that. It will save you a lot of trouble such as you had the other night."

Scene 2—Also at the Gasoline Pump

Gas Pump Man—"Your engine seems a little noisy, Mr. Jones. Have you had the oil in your crankcase drained recently?"

Owner—"No, not for a couple of months. Will that make the engine run better?"

Gas Pump Man—"Yes, it will sound like a different engine. And not only that, but by letting this oil get thinned out you are causing a lot of wear on your bearings, pistons and cylinders and the first thing you know you will have a shot bearing. We can do this job for you in ten minutes and you can sit right where you are."

Scene 3—In the Garage Office

Owner—"Is my battery charged yet?"

Manager—"Yes, Mr. Jones, it is all ready to put in. The bill is $1.50. We have looked up our records and find that you have had that battery in here for charging three times in the last two months. There must be something the matter with your wiring or generator to run the battery down so often. Why not allow us to give your electrical system a thorough inspection and find out what is the matter. It may be only the adjusting of the generator charging rate which will take only a few minutes to fix, or you may have a slow short circuit somewhere in the wiring or equipment."

Scene 4—At the Gasoline Pump

Gas Pump Man—"I notice you carry your spark lever half way down, Mr. Jones. Does she run better that way?"

Owner—"Yes. If I advance the spark, she knocks and pounds and as it is I can't climb hills at all on high."

Gas Pump Man—"The cause of that is carbon in the cylinders. If you will have it cleaned out and the valves ground, the car will run as well as the day you got it and you can still climb the hills on high that you used to."

Using these conversations more or less as samples, the same idea can be applied in many ways. Here is a synopsis of the repair jobs listed in the first part of this article:

1—Overhauling and Renewing

Overhauling of entire car or several units.—These jobs constitute the biggest moneymakers in the shop, therefore considerable time and effort can well be expended in getting them. There are a number of places where hints can be picked up as to cars that need some of this kind of work. The man at the gas pump is an important factor. He can quickly tell when a car drives up to the curb whether the engine is noisy, whether the brakes are holding and so on. If the customer is in a hurry or in no mood to talk repairs, a note may be made of the man's name or if that is not known the license number so that the name and address can be looked up afterwards. A regular sequence of individual letters, telephone calls and personal solicitation can be carried on until the sale of the work is made or until the man is no longer a prospect owing to somebody else having obtained the work or the car moved out of the territory. Much valuable information as to the need for overhauls can be secured when a car is left in the shop for some minor trouble, washing, storage or tire changing.

Cylinder and piston overhauls.—Go after the cars that need the work and do not waste time on those that do not need it. Practically any car over two or three years old would be a prospect for a job of this kind. Such a list could be made up from registration figures in the territory and a campaign of letters, circulars and telephone calls started. The most promising prospects are worth following up personally. It would hardly pay to canvass the whole list with personal calls. Advertising will help too.

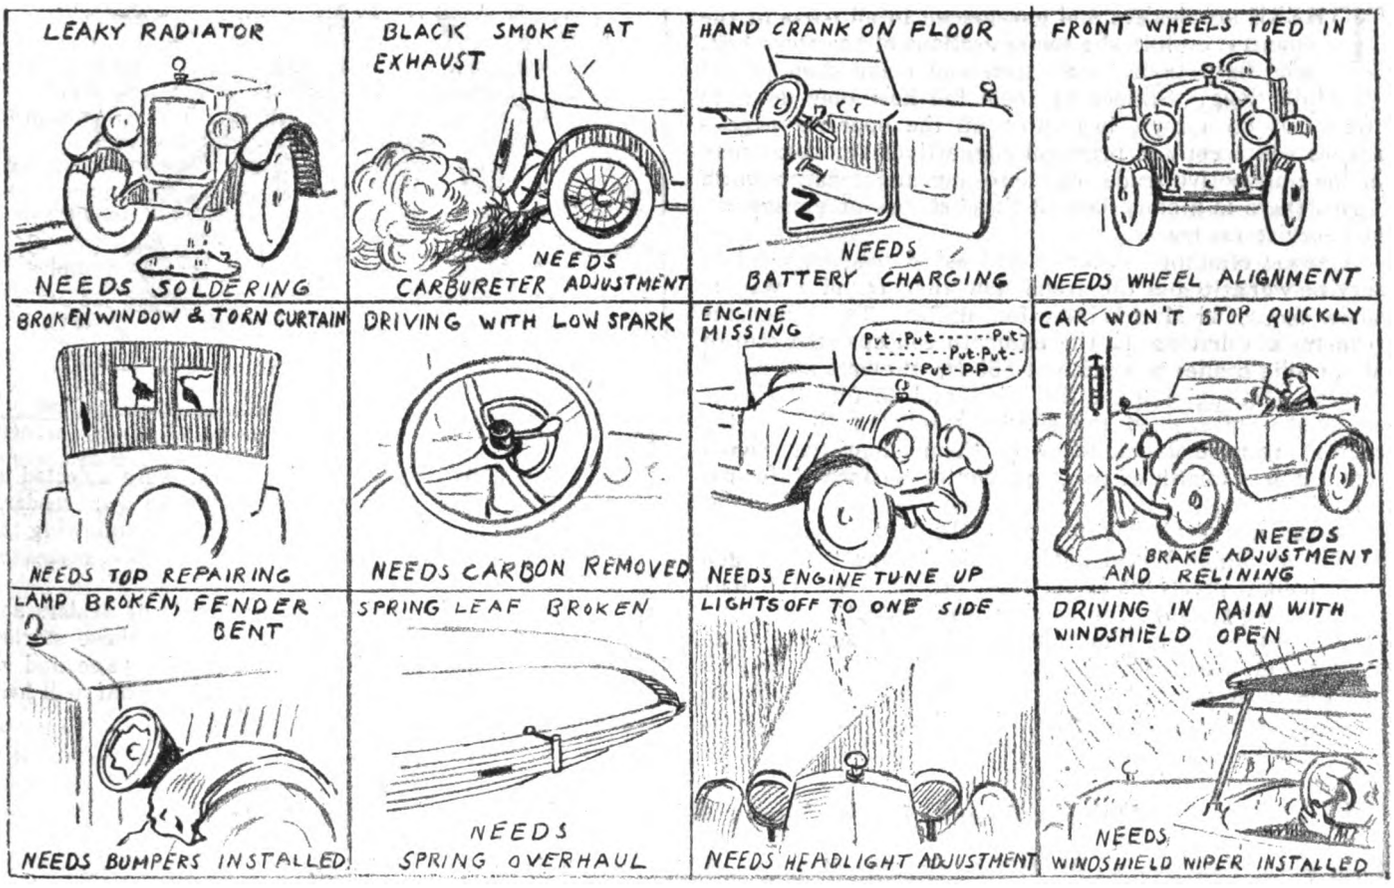
Rewiring, top and curtain work, painting and battery work.—These jobs are most economically gone after through quick inspections, observation, circular letters and advertising.

Battery overhauling.—Largely secured through free distilled water service and free hydrometer testing at which time the condition of the battery can be ascertained and the owner sold on a battery overhaul or repair if it needs it. It must be made known that you have such a service and you can let owners know by means of signs in your establishment, by advertising and by letter. This is a

Digitized by Google

service and a means of getting customers that is a little newer than in some of the other branches of repair work and some owners are a little suspicious that there is a string attached to it. Many owners buy distilled water at drug stores and attend to the filling of their own batteries. Others buy bottles of distilled water from battery shops and from garages. Without trying to discourage the sale of distilled water by garages, it would be far better to offer to fill the battery regularly than to sell the water. It can be explained very frankly to the car owner that you are rendering this free service because some time he will need some battery work done and you hope he will consider your shop. Other possibilities for selling battery recharging and repairs are through inspections for trouble with the starting switch, dim lights or no lights at all, poor contacts on the battery, ignition trouble, changing the charging rate, etc.

Another source of profit is the winter care of batteries when the car is laid up. If you have any storage business, there will be some customers who will use dead storage over winter and the proposition of keeping the battery in condition can be sold them without difficulty. There will be others not on dead storage, but who use their cars at infrequent intervals during the winter months. It is very easy to check up on these and a letter or a short talk should sell the work. There are also a number of cars laid up for the winter in private garages. It is not so easy to get a list of these but in a small town it is quite often possible to get a fairly good list by asking questions and making observations. A circular letter to all owners in your territory at this season, giving briefly the troubles to which the battery is subject, your proposed remedy and a flat rate for the winter, say till March 1, will get results. Figuring four months of care, you should receive at least $5 provided the battery needs no other attention.



Bringing new models up to date.—Probably you know some owners of the class of cars you would want to do this work on that store in your garage or deal with you. These can be taken care of personally. Other names can be secured from a registration list of cars in the territory.

2—Maintenance and Adjustment

Battery charging and winter care.—Much of the work can be brought in through the free water and hydrometer tests. Circular letters to all car owners in the territory backed up with local advertising will help.

Headlamp adjustment and practically all the other headings under No. 2, carbon removal, valve grinding, engine tuning, crankcase service, lubrication, tightening loose nuts and gas line clean up can be handled alike. A system of circular letters, folders, advertising in newspapers, by signs in the shop and by personal solicitation of those that come to the shop are the best worked out lines of getting the business.

Car Trouble Hints—Look for Them and Make Shop Profits

3—Equipment Installations

Much of this class of work will necessarily come from the department that sells the equipment. On the other hand, much of the equipment can be sold through the shop. The sales and installation are closely tied together and all departments of the business can work together on it. The shop really gets more opportunity to suggest the convenience or necessity of the various equipment and the man at the gas pump is especially valuable in this connection. It is simply carrying the "Ask 'em to buy" campaign a little further to get some shop profits from the sale as well as the actual sales profit.

How I Make Shop Profits in Winter

16 Garagemen and Service Managers Tell How They Do It—Read Their Prize-Winning Stories

THERE are dealers and garagemen in all parts of the country, even in the colder sections of the snow belt, who keep their shops open and make shop profits all winter long. Sixteen of them tell how they do it in stories of their own, beginning on the opposite page—stories which contain practical suggestions for every man in the automotive trade who does any maintenance work.

But there is a story behind these stories of garagemen and service managers.

A few weeks ago Motor World asked men engaged in service work to tell the trade how they found a way to shake down Old Man Winter for profits. To compensate readers to volunteer in the effort to collect these stories Motor World offered a prize of $50 for the best story, $25 for the next and $10 for the third, and $5 for all stories accepted. Garagemen and service managers all over the country responded and many of them submitted stories containing a wealth of practical winter business information.

It was a difficult job to select the best stories. The editors of Motor World finally decided upon three which they thought presented in the most practical way the most practical suggestions for getting work into the shop and profits out of it in the cold months. After the prize stories had been selected it was equally difficult to pick out the most practical ones from the others submitted. Finally a considerable number, describing different methods of going after winter service work, were selected as being likely to prove of greatest value to our readers. Some of them are being printed in this issue following the prize stories and others will appear in later issues of Motor World.

Motor World believes that its big family of dealers and garagemen will want to read every one of these stories. We suggest that you begin on the opposite page and go right through to the end, looking for ideas that will help make your own shop earn winter profits.

Prize Winners in the Motor World "Shop Profits" Contest:

First prize ($50)—W. M. Hinds, Service Manager, Bliss Auto Sales Co., Toledo, O.

Second prize ($25)—S. Massey, Advertising Manager, Foss-Hughes Co., Philadelphia.

Third prize ($10)—George R. Webber, President, Webber's Auto Electric Service, Augusta, Me.

Stories Winning Honorable Mention

James C. Thomas, Assistant Service Manager, The Henley-Kimball Co., Portland, Me.

T. C. Barrow, Manager, Winton Garage, Cleveland.

Ralph Denike, Aqueduct Garage, Hastings-on-Hudson, N. Y.

Art Johnson, Manager, Collinson Buick Co., Winfield, Kans.

F. C. Jones, Proprietor Jones Bros. Auto Co., Toledo, Iowa.

Henry W. Lemay, Service Manager, The Arrow Co., Springfield, Mass.

Everett E. Lamm, Mechanic, West End Garage, Missouri Valley, Iowa.

John C. Trindl, Branch Manager, Trindl Co., Milwaukee.

J. H. Becker, Proprietor, Becker Repair Co., Cleveland.

Joe Moore, Service Manager, Wildhack Co., Indianapolis.

R. R. Hall, President, R. R. Hall Cadillac Co., Denver.

George Simpson, President and Service Manager, K. R. Charlton, Inc., Holyoke, Mass.

F. W. Darnstaedt, Service Manager, Willys-Overland, Inc., Springfield, Mass.

L. K. Bridgman, Service Manager, O. L. Huntting Co., Springfield, Mass.

P. G. Little, Service Manager, Nash Sales Co., Milwaukee.

Walter Root, Service Manager, Bruening Bros., Kansas City, Mo.

Service Salesman With Book of Photographs Takes the Shop to Car Owners

First Prize Story

By W. M. HINDS,
Service Manager, Bliss Auto Sales Co., Toledo

"THERE'S plenty of service work in winter or other slack times, but you have got to go out and dig it up! Ask 'em to buy SERVICE—just as you ask 'em to buy cars! And that's the only way a shop force of about fifteen men can turn over a profit to the employing company.

We are preparing now to circularize every owner of a Hudson or Essex car in the district the first time that the regular service begins to slow up after snow flies. It has been my experience that one or two good letters will bring in some business, but if it doesn't then I open up my big guns and go right to the owner and sell him the service.

We start a service salesman out on the list. He sells them our service.

His equipment consists of a book of accurate photographs taken in our shop showing our use of special tools and the care we take in doing any particular job.

There the owner can see his car—a Hudson or Essex—just as the mechanic will work on it. He notes that we take care of his hood, use the right kind of wrenches, have the best method for grinding pistons—he *sees in advance* what we are going to do to his car if it needs anything at all.

"A service salesman, carrying a book of photographs showing how we do things in the shop, sells winter repair work for us"

Now that's the equipment for our salesman. He isn't necessarily a mechanic himself but he should be a good automotive salesman.

Next we have our tester—an expert mechanic—go over the owner's car. He makes out a list of things needed to be done and opposite them is set the labor charge for each operation. Now the salesman armed with the mechanic's facts completes the sale.

Some operations are marked essential and others just optional, and then it's up to the salesman to sell as much as he can. And the customer knows how much the work will cost except for special materials or parts needed.

Get the message to every owner, sell him on your methods and service by "taking" the shop to him; see that a fine mechanic's judgment is passed on his car, and then after the case is diagnosed sell him the service by the personal work of a good salesman.

Winter Business Calendar Helps Keep Up Broadside of Service Selling Letters

Second Prize Story

By S. MASSEY,
Advertising Manager, Foss-Hughes Co., Philadelphia

WE use a Mid-Winter Business Calendar. This is the way we keep our shop running and make it pay.

The trouble with some dealers is the fact that they will not systematize their advertising and sales or shop efforts; when really, after all, this is all one needs in the automobile industry as well as any other, simply a good old-fashioned plan of regular, hard work, and then the ability to work this plan. Customers yield to constant persuasion in this line the same as any other, for man's mental make-up simply cannot resist the persistent and overwhelming force of innumerable impressions.

Providing the service is there and the shop RIGHT, direct mail will bring results, and if possible, couple with it newspaper space and you have as good a solution as can be offered. Another thing is the fact that a great many dealers think winter should be dull and let it go at that. Their letters miss the punch; they show the writer's skepticism, as it were. As the army officer said, "If you believe it—it's so."

Here is our Winter Business Calendar:

OCTOBER

15TH

General letter on painting, upholstering, repairing of cars and trucks before fall rush.

NOVEMBER

1ST

Special letter to truck owners about thorough repairing before winter strains.

2ND

Special letter to closed car owners to have car painted, upholstered or repaired before real cold weather.

15TH

Letter to touring car owners to have car thoroughly looked over before winter. Paint, new top, etc

DECEMBER

1ST

Letter to passenger car owners about having "heaters" installed.

Digitized by Google

15TH

Another letter to truck owners calling attention to benefits of having truck thoroughly "gone over" before first snow.

EVERY DAY

Attach stickers to customers' bills, statements, letters, inspector's reports, calling attention to advantages of heaters and radiator shields and asking them to let your shop install them.

EVERY DAY

Look over inspector's reports carefully and watch for repair jobs.

JANUARY

1ST

Battery service letters, truck and passenger owners.

5TH

Letter to passenger owners to have touring car "gone over" before spring rush.

15TH

Letter to truck owners on the benefit of mid-winter repairs.

FEBRUARY

1ST

Another general letter to passenger owners on repairs, painting, etc., before spring.

15TH

General letter to truck and passenger owners asking if service is satisfactory, etc.

Timely Service and Christmas Sales Make Profits for Electric Service Station in Maine

Third Prize Story

By GEORGE R. WEBBER

President, Webber's Auto Electric Service, Augusta, Me.

OUR winters are long and very cold, snowdrifts and country roads reduce winter driving to a minimum. Ours is a battery and electric service station, and we do not attempt general overhauling. Winter is and always has been a serious thing for us, as we must keep our organization of seven employees intact and our shop open.

We made arrangements with an insurance agent whereby every battery which we took in for winter storage was covered against loss by fire, theft or freezing. We gave our customers a regular insurance policy instead of the customary winter storage receipt. We advertised this fact by a direct mail and newspaper campaign and our storage business doubled.

We sold electrical accessories at a price which included the installation and made a drive over different articles each week for fourteen weeks. We urged the purchase of electrical accessories as Christmas presents and collected for the installation at time of sale. The gift could, therefore, be hung on the tree and be put on the car later and at no expense to the recipient, thus this plan led to the sale of many articles for the car even though the car was not in use.

"Winters are long and cold in Maine, but we keep our organization of seven men intact and our shop open"

A law was passed during the winter regulating automobile headlights, effective in the late spring. We studied the law, equipped our shop for the work and advertised the fact. We urged our car owners to comply with the law in advance of its enforcement; we sold nearly 200 pairs of lenses and focused about 300 headlights before the law became effective and during the slack time.

As the laws applying to licenses were changed, and as all applications had to be signed by a notary, we applied for and received a notary public commission. This brought people to our shop to have us help them with their license application, and as old licenses expire January 1, many came in January and February. While the notary fees amounted to a very little, the contact with the car owner was valuable, and we were able in many cases to secure jobs of generator and starter overhauling, which the owner did not intend to have done until he put his car in service in the spring.

Keeps Shop Profitably Employed Overhauling Used Cars

By EVERETT E. LAMM

Mechanic, West End Garage, Missouri Valley, Iowa

WE sell new Dodge cars and trade for old ones of all makes. Winter finds us with a number of used cars on hand that we have not had time to put in shape during our busy summer months. These cars are overhauled during our spare hours, only time that we have no pay jobs in is devoted to this. They are put in first class shape, every part gone over, new parts put in where needed. When the car is put in good shape and running smoothly it is put in one corner of the show room and dressed down with emery and steel wool and then a coat of paint applied, then more emery and steel wool, another coat of paint and after having been dressed down the second time a coat of varnish is applied. During the winter several cars are gone over in this way and spring always finds a ready market for good used cars.

Then there is radiator repair work. Most all radiator work comes in the winter, as they are mostly ruined by freezing and bursting, causing leaks.

Then let us not forget the little grease wagon or gun. We carry only one brand of oil and give free crank case service. By giving free crank case service we drain the old oil from the crank case, wash the motor out with a quart of fresh oil, never kerosene, as some is bound to stay in the case and thin the new oil, so we always use new oil to wash the motor out with, letting the motor run a few minutes. The customer is charged straight quart prices for the oil, but nothing for labor. The old oil is saved and used as fuel. We sell some to farmers for hog dip, only charging enough to pay for handling and taking care of it.

Personal Letters to Owners Sell This Service Manager's "Winter Driving Inspection Plan"

By P. G. LITTLE,
Service Manager, Nash Sales Co., Milwaukee

TO insure our shop operating at near capacity during the so-called dead months we have found it necessary to plan and prepare during the fall and by using the following methods we have during the past two winters found that our business has averaged 80 per cent of our busiest months.

A personal letter is sent out to every owner who has purchased a car from us, the letter being timed to arrive between October 1st and November 1st. This invites the owner to bring in the car for our "Winter Driving Inspection" and, the letter being a real personal letter and not a form affair, we get immediate response, especially as we state that there will be no charge for the inspection. When the car is brought in, the owner is met by a service salesman who requests that the car be left all day and carefully explains that we intend to thoroughly test the car and not just casually look it over.

When the car is called for in the evening an itemized estimate together with our suggestions is handed the owner and it is very seldom that an appointment is not made right then for some repair job.

Too much stress cannot be laid on the importance of the neatly prepared estimate as it creates in the owner's mind the feeling that the car has been actually tested out. We point out to the owner that he should not be deprived of the use of the car during winter and show the importance of having the car in condition to facilitate easy starting, explaining that besides the need of certain accessories, it is vital that the carburetor, ignition, starting and generating systems be at highest efficiency. The doubt which exists regarding the ability to start easily has laid up many cars during the winter, and if the owner can be assured that he is going to be free of this annoyance we benefit twice, as we get the work of putting the car in condition for easy starting and also get the work later on resulting from the operation of the car.

Therefore we consider this of primary importance and build our fall campaign around the fact that a car should operate the year 'round and besides the letters we send out we have everyone in the organization talk about "Year 'Round Driving." If we can get the owners to come in, and keep the cars in winter operation, why should there be any question of the necessity of repair jobs. Every garage man knows of the many winter accessories which can be sold and of course we continually work on this line and later in the season work our letter system to get the owner to come in to talk about getting ready for the spring driving, which results in our getting big overhaul jobs. No longer do we dread the months that used to be dead, and our shop is kept busy—BY KEEPING THE CARS OPERATING IN WINTER.

Letters, Personal Calls and Cards Line Up Winter Jobs

By T. C. BARROW
Manager, Winton Garage, Cleveland

WE line up prospects by letter and personal solicitation and then put a first-class salesman on to sell service. Such a man more than pays his salary and turns in a good profit.

Once you get a customer into your garage for storage or service do everything in your power to make him remain there if he is in for storage and strive to give repair service that will cause him to return. This is a great business getter.

"One of our ways of advertising our service facilities is to place cards telling about them in cars parked on the streets"

The successful department stores have found it advisable to push a leader, and so have I in the winter. On a rainy day I advertise to wash Fords regardless of model, for $1.50. You ought to see them come in. I have to get extra washers.

The winter is a great season for conventions. I get the name and address of every convention delegate who makes a reservation at hotels I can make arrangements with and then I send them all cards advising them of the service I offer and stating I shall be pleased to attend to their cars. It is surprising how many delegates go to conventions in cars.

At the Hotel Statler, I have three boys stationed all the time. They get the trade of Statler patrons who drive cars. Does it pay? Five thousand cars handled since the first of May is the answer.

Work hard in the warm months and give real service and you'll always have a good nucleus for winter business.

We are supplementing our efforts in the garage and service department by circular letters, newspaper advertising and by distributing cards. Each year we place thousands of cards in machines that are parked on the streets.

Specialized in Winter Overhaul

By J. H. BECKER
Proprietor, Becker Repair Co., Cleveland

LAST winter we had more work in the shop for the three hardest months than we had in the summer. The winter before that, which was the first winter we were in business, we almost starved. Why? Well, after such a terrible lesson in 1919-1920, I looked around to see if there was some kind of work that we could specialize on that no one else was doing. I canvassed all the garages in our section of the town

Digitized by Google

and found that not one was making a specialty on partial or complete overhauls. So we made that our big trump suit. I prepared an advertisement that ran something like this:

"The first day of winter is the best time to have your car made as good as it is humanly possible to make it. Drive it into the Becker Repair Co., 1353 Chester Avenue, for a thorough overhauling by mechanics specializing in overhauling."

This advertisement was inserted in the classified sections of daily newspapers on the first bad spell of weather. The result was instantaneous. One repair job amounted to $650.

The first day there was snow and ice the following advertisement was put in:

"Can you figure out a better time in the year to put that car of yours in such shape by a general overhauling that it will never be laid up when the weather is fine and the roads are free from ice and sleet?—Becker Repair Co., 1353 Chester Avenue."

Car Salesmen Sell Service

By GEORGE SIMPSON,
President and Service Manager, K. R. Charlton, Inc., Holyoke, Mass.

LATE in the fall, when car sales slacken and work in the service department lags, we find it profitable for the time being to transfer some of the efforts of some of our salesmen from the selling of cars to the selling of service. This at times enables us to retain the services of a man we would not be justified in carrying along on the strength of sales possibilities alone. It affords, moreover, excellent experience for the salesmen. It acquaints them with a side of the business that they generally know too little about. By making regular rounds of visits to Ford owners our men are enabled to learn, better than otherwise, what sort of satisfaction they are deriving, and if they have complaints or grievances the salesmen can advise as to the means of correcting the difficulties, and holding them for future patronage. We pride ourselves on our success in holding trade year after year, selling a new car when the owner is ready to turn his old one in, but we cannot count on doing this unless the owner is satisfied with his car and the manner in which it is being serviced. That is one of the reasons why I, as the service manager, have sometimes left the inside responsibility to another and gone out among the car owners for a period. I was enabled to stimulate the repair work and at the same time make the patrons better satisfied and learn a lot about things that went on inside the garage that I did not previously know. It is worth a lot to ascertain, if a patron is not satisfied, what the base of his complaint is, and so smooth out difficulties and strengthen weak places about the establishment. While I am unable to engage in this work personally at present, I am planning to have one or two of our salesmen carry on this missionary work systematically during much of the fall, confident that the work done will yield good returns in a number of ways.

Postcards Get Cleaning Jobs

By RALPH DENIKE
Aqueduct Garage, Hastings-on-Hudson, N. Y.

AFTER October, owners of cars in our locality start laying up their cars, and discharging their chauffeurs. The car is placed in the private garage just as it was last driven in, dusty, and in need of many things to make it run good should it be needed at short notice or the start of the next season. The proprietor of the Aqueduct Garage "postal-cards" every private owner asking him if he wants his car cleaned, crankcase and rear end emptied of old used oil, and cleaned and replenished with the best grade of oil, oil cups cleaned and filled, all bolts and nuts inspected and fastened up tight, engine cleaned and transmission looked over. These things are all done at the owner's private garages by such help as would have been laid off during the winter. The tools and oils and grease are transported to the place in a car equipped for just such purposes. The work is done completely and inspected by the owner should the car be laid up for the entire winter. Jacks are placed under it, thus releasing the strain upon the tires.

Watch Cars Needing Repairs

By R. R. HALL
President, R. R. Hall Cadillac Co., Denver

WHILE we use newspaper and direct mail advertising to gain winter business in way of general overhauling and painting of cars, building new bodies, etc., I believe that the best methods used by our organization to build shop business for ourselves and at the same time impress upon Cadillac owners that we are genuinely interested in their motoring welfare is our plan to keep careful tab on when each car was in our shop for any extensive repairs, and then tactfully suggest to the owner an inspection of his car at a time likely to enable us to detect needs of moderate repairs or overhauling before they have a chance to become more serious needs calling for a bigger outlay of money because not taken care of at the right time. This diplomatic sort of personal solicitation brings us a substantial volume of business during the winter, when it is easier for car owners to feel that they can spare their cars long enough for a thorough overhauling, and helps to protect our shop from severe slackness of work due to the fact that there is less motoring and less call for minor work.

We also "Ask 'em to Buy" accessories for general and seasonable use by means of a neat showcase in our showroom and another on the main floor of our service department. This method naturally helps our shop business also.

If there is a slowing down of shop work, we shorten the hours instead of laying off men. Thus we have been able to build up a steady, loyal, permanent organization of experts. Permanent employees mean better satisfied customers.

Set Prices on Special Jobs

By L. K. BRIDGMAN,
Service Manager, O. L. Huntting Co., Springfield, Mass.

WE get repair and overhaul work in dull periods by sending out special circular letters and by personal solicitation. Sometimes we offer a reduced price for work done within a specified period, but we do not make this our strongest or most frequent appeal. We attempt to impress upon the patron the truth that good service all the year 'round is not to be had by piling up work at one season and permitting the shop to become virtually idle at other periods. We therefore invite his co-operation for our mutual advantage and profit. Generally we can get this argument across by going at the matter in a tactful manner and at opportune times.

We have an inspection job for which we make a flat rate. Our aim is to bring a car in for such inspection at the end of each 100 miles' travel. That system, if lived up to, keeps a car in good working order all the while and tends to ward off a rush of repair work at the opening of the busy season or perhaps when the season's traffic is at the peak. If a car has run 2000 miles or more we charge by the hour for whatever service the inspection and overhaul may entail, as the flat charge does not apply in such cases. Most of our patrons come to realize that regular inspections pay best.

Canvasses in Summer

BY F. C. JONES
Proprietor, Jones Bros. Auto Co., Toledo, Iowa

In the summer I start lining up my work for the winter. I go to the car owners and explain the advantages of overhauling during the winter and the service we can give them, and ask them to decide about what time would be most satisfactory to have the work done.

We have a wrecking car which we designed and built ourselves, which we find is the greatest advertiser we ever had. It has a winch which works from the engine and is equipped with 150 ft. of wire cable, which we can hook on a car in a ditch 150 ft. away and wind out with the winch. It requires only one man for pulling out cars and saves one man in carrying in cars. It has a lifting capacity of 3 tons and a carrying capacity of 1½ tons.

Free Inspection Offer Gets Jobs

By JOE MOORE
Service Manager, Wildhack Co., Indianapolis

MY company was in a very peculiar position last winter—a position that required quick thinking and hard work. We had just taken on the Reo line which was previously handled by another company. Naturally many of the customers who had purchased from the former Reo dealer and had become customers of the service station continued to take their cars to this other dealer, in spite of the fact that he had also taken on a new line. And many of the customers who had bought cars that we formerly sold continued to come to us for service, although another dealer had taken this line. We desired to vastly increase our Reo service and to cut down outside business.

We, therefore, worked out a free inspection service for Reo owners. This took the form of a letter offering the free inspection on the Reos and a free written report of the condition of the car. A multigraphed letter was sent to all owners, and there was a splendid response. The best part of it all is that 60 per cent of all the free inspections made, together with those written reports, result in orders for the needed service. All of those men are going to be regular service customers if they follow the practice of those who have patronized this service establishment before. The winter of 1922 is expected to find a full shop every week, and there will be no red ink record for this establishment when Miss Springtime 1923 makes her bow.

Service Salesman on the Job All Winter

By F. W. DARNSTAEDT,
Service Manager, Willys-Overland, Inc., Springfield, Mass.

IN my experience with the Willys-Overland branch here I have found that shop work could be greatly stimulated in winter and other dull periods through the efforts of the service salesman. I have served in that capacity myself at times, combining this function with that of service manager. The service salesman goes about with owners of the make of car for which servicing he is particularly responsible. He makes observations of a car, rides in it, and keeps his eyes, ears and other faculties open for any irregularity, advising the owner as to what, if anything, he thinks is needed. This may consist of very simple measures, or an extended overhaul, as the case may require. The service salesman, useful at all seasons, can exert himself to the special advantage of the establishment at times when business naturally lags. But my experience is that the plan is profitable only in a good sized community, or where the duties of the service salesman can be combined with service in some other capacity. It is, moreover, a plan to be applied in an agency or branch, where there is a regular clientele established through the efforts of the sales department.

Experts Get Numbers of Cars Needing Repairs

By JOHN C. TRINDL
Branch Manager, Trindl Co., Milwaukee

WE are going to post two of the best all-around mechanics at certain points of vantage on Milwaukee city streets at certain times each day—usually the dinner-time rush hour—to book the license number of cars which, to their expert eyes, appear to be in need

"We send out expert mechanics in rush hours to watch for cars that need repair. We follow them up through the registration list"

of overhauling and repairing. The name of the owners, when not known, will be secured easily from the periodical lists of registrations available to garagemen and any other person willing to subscribe for them, issued by the office of the secretary of state at Madison. Then a tactful, diplomatic letter will be addressed to each motorist, suggesting that this is a good time to bring his car to Trindl's for inspection, and incidentally describe fully our superior facilities for doing any job of overhauling and repairs, including cylinder, crankshaft and camshaft grinding; piston, piston ring and wristpin work; connecting rod bearing service—in fact, anything at all, large or small, on any or all parts and units of a motor vehicle.

If there is no response within a reasonable time, a follow-up letter will be mailed, and still others until the object is accomplished or the subject of the campaign no longer looks like a likely customer.

"It isn't what a man tells his business associates or friends about his car, it's what he tells his wife," some writer has said. By the same token, no matter how roundly a man may take his "old bus" to task to himself or before his family, he almost invariably refrains from criticism before friends; in fact, if his friends were to believe him, his car is the best in the world.

It wouldn't do at all for me to write an owner that the performance of his car on that steep hill coming out of the Menominee valley leads me to believe his car is ready for the junk-heap. We've got to make him think his rig is O.K., but like every other car, it should have an inspection periodically, and we're the boys to do it right.

Sell and Install Accessories in Winter

By JAMES C. THOMAS
Assistant Service Manager, The Henley-Kimball Co., Portland, Me.

UNTIL two years ago the idea of making our shop show a profit during the winter months was regarded as an impossibility, but it has become a reality and to-day finds us busy preparing for another profitable winter.

To obtain winter business for our shop, we have outlined several jobs, such as cleaning out carbon, grinding valves, tuning the engine, a thorough greasing and general tightening-up, using a flat-rate system of charging for the work. We also have a monthly inspection service which enables an owner to have his car thoroughly inspected for a flat charge of $5, plus the cost of oil and grease necessary. During the winter months this service is a great booster for shop profits, as an inspection often reveals items which require ten or twelve hours' additional labor.

As the service manager and myself meet all the owners, we are well posted as to the condition of their cars and are, therefore, in a position to go to their offices and advise them as to the expense necessary to put the cars in good order for the coming season.

A neat little profit can be made from the sale and installation of automatic windshield cleaners. Should the owner drop in for a short repair job on a stormy day, only a few minutes are required for a demonstration. "Ask 'em to buy."

The service man has a fine chance to be an accessory salesman also. He can easily show the owner where a front bumper would have saved a $90 radiator, or where a rear bumper would have prevented that ugly dent in the back of this new sedan body. Any owner can easily be shown why a mirror might prevent a bad accident.

Of course, when cold weather arrives, the service salesman should advise the owner what anti-freeze solution is best, also to keep the battery well charged, to drain the heavy grease from the rear unit and gearset and install a lighter grease, to use high test gasoline, etc.

Why You Should Advertise This Winter—and How

Some Timely Suggestions on Taking Advantage of Winter's Opportunity to Find Buyers and Build Good Will

THE dealer who would grasp the full opportunities of selling this winter should advertise. He should take his place among the progressive, sound merchants of his town in his home town newspapers.

Whether the product he sells is cars, trucks, tractors, automotive equipment or repairs, there are benefits from frequent representation in the columns of the home town newspaper, among the town's best businesses, that should not be ignored.

"But I can't afford to advertise," is frequently heard, especially in the winter months when business slows down.

Man—you can't afford not to advertise!

Primarily the dealer buys space in his local paper to find buyers. That is his big object and it very properly should be the final objective of his advertising effort. But the mere finding of buyers falls far short of the total benefits of local dealer advertising.

Good, consistent advertising will do three more things besides find buyers, each of which is in a way equally as important as finding buyers. These are:

1 IMPRESS the public. Who can measure the amount of genuine good will, confidence and favorable opinion that is created in the public mind by the consistent appearance of your business story among the advertisements of the dependable businesses of the town? Can any automotive dealer who has his business future at heart afford not to be present in this roll call of progressive business?

2 IMPRESS the banker. Here is a benefit of advertising that is almost totally overlooked by the dealer, yet it is a force that advertising exerts that should not be neglected. Banks prefer to lend money to progressive businesses, to businesses that are fighting for success, and among the things that they consider are the aggressiveness and progressiveness—the chances of success—that their clients exhibit. Your advertising in your local paper gives the town bankers as well as the general public the impression that you are a going concern.

You can't afford not to advertise. It opens the door to opportunity and the fraternities of progressive business.

3 HELP the morale of your own organization. Here again is a benefit of advertising that is immeasurable. Aside from the visible benefits of advertising as a means of breaking down sales resistance and fertilizing the field for the sales force, there is a strong moral force in the impression on employees of their firm's advertising. Employees take pride in the fact that they are connected with a prosperous, progressive concern. It adds confidence to their efforts and encourages them. It makes them a part of the fraternity of progressive business just as it marks your business as among the leaders.

So, can you afford *not* to advertise?

Consistent advertising does not mean the investment of large sums of money. Moderate size advertisements appearing frequently are usually more effective than sporadic flashes at long intervals that claim attention for a moment and are soon forgotten. Most good concerns appropriate two to five per cent of gross sales for advertising and find that if space is used judiciously it brings the volume of business desired. However, a mistake that is made too often is to base advertising expenditures on past sales or profits rather than on contemplated sales. Most progressive firms of today aim at a certain gross sales for a year and appropriate two to five per cent for advertising to *get the desired volume.*

Base your appropriation on a percentage of the business you think you should do. Suppose you think you should do $100,000 business this year. You can't afford to appropriate less than $2,000 for advertising to get it. The sum may look large at first, but divided into months, as you pay your advertising bill, it is only $167.

Advertising is a pay-as-you-go investment, like rent, light and heat and once the sum is set it should be paid regularly just as you pay your electric bill.

Having determined the amount, divide the year into periods when greatest business is to be had, noting the nature of the business at such periods, repairs, supplies, cars, etc., then the periods when little business is to be had and the periods of fair, normal business. This will give you a curve of natural buying and what your advertising must do is *straighten that curve* so that the "hills" are not so high and the "valleys" not so deep.

And one of the immediate jobs for your advertising is to keep this winter's sales curve from sinking.

Digitized by Google

The writing of advertising is the average dealer's job and should not be delegated except to a person of unquestioned ability. To write his own ads helps the dealer to define his business more clearly to himself as well as to the public. It helps him to establish his business platform and principles. The best ad is the one that tells the dealer's selling story in short, concise, direct sentences.

Remember that good advertising is not an expression of the dealer's desire to sell something but it is an EXPRESSION OF HIS ABILITY TO FULFILL THE DESIRE OF THE CUSTOMER.

The automotive dealer advertises to help the public solve its transportation needs and THE MOST EFFECTIVE ADVERTISING THAT CAN BE DONE THIS WINTER IS THE KIND THAT POINTS OUT THE NEED FOR MOTOR-DRIVEN VEHICLES AND ACCESSORIES AND REPAIR SERVICES AND TELLS THE PUBLIC WHY HE CAN FILL THOSE NEEDS SATISFACTORILY.

Advertise this winter! Winter conditions increase the NEED for the products and service of the automotive industry and if your advertising points out these needs and how they can be met by trading with you, if your business is organized to make good your advertising message, THERE WILL BE MORE BUSINESS AND MORE PROFITS FOR YOU THIS WINTER.

Ads That Will Help You Sell Used Cars

USED car advertising should tell why your cars are a good buy.. Not why you want to sell them.

Many dealers have found listings of used cars the most effective kind of advertising. Ads like the one at the right can be used in newspapers or in printed or typewritten bulletins mailed to prospects. The ad at the left is a confidence building ad.

A dealer who wants to make his used car advertising distinctive can have an artist draw an emblem along the order of the one suggested below. The cost of drawing and cut will be slight and it can be used for a long time.

Why Smith Used Cars Are Big Values

Jones drives his car 5,000 miles, then decides that he wants a different model. Jones has been careful of his car; it is running as well as the day he bought it. But because Jones wants to replace his car while it is still giving good service he must make a sacrifice in selling it.

Jones buys a new Leader car and we take the one he has driven and cared for so well. We do this to accommodate Jones and also to serve the man who wants to purchase a good car at less than the factory price.

We put Jones' car in first class condition and stand behind it with our guarantee that it will give satisfactory service.

Cars like Jones' are the kind of used cars we buy and sell. They are big values.

Come in and see them—now, while the selection is large.

Ads to Sell the Motor Car This Winter and

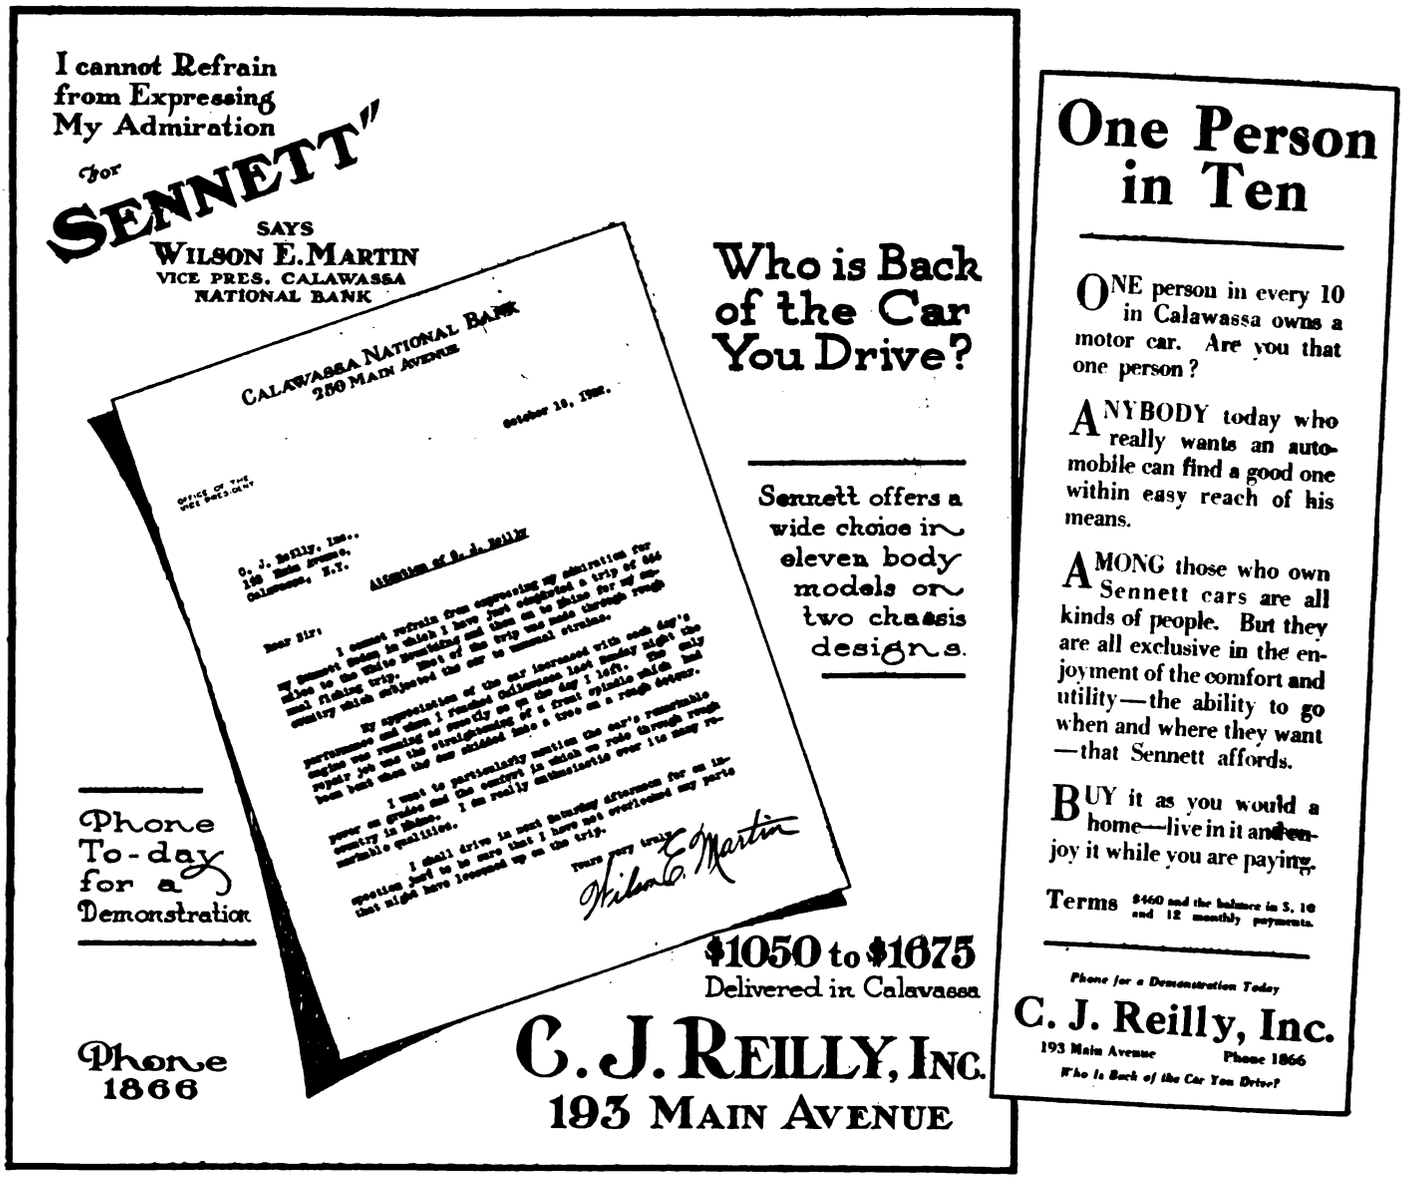
THE motor car dealer will advertise this winter to do these things:

1—Get winter business.

2—Prepare the public for his spring campaign.

The advertising that he should do this winter can be divided into two general classes. The first is the use of the factory copy in which it is necessary to insert only his name and address and possibly a few words of local interest. For this type of advertising he will choose the copy that sells the product and the factory behind it. They will be for the most part ads that tell of the serviceability and utility of the product, its power, strength, comfort, performance, etc. The second and very important phase of his advertising ought to be the copy he writes himself, which should be designed to interest the public in his business, his organization, his service facilities, and everything that he is doing to stand behind the product he sells.

In writing the ads of this type it is good to preserve in appearance, either through the style of type used or a striking merchandising slogan of the factory, the similarity of the advertisements so each ad will be tied up in the reader's mind with those that went before. This will help the dealer get the cumulative effect of his advertising.



Advertisements that tell the selling message in short, simple sentences devoid of florid literature and superlative descriptions are most impressive. The dealer who would improve his advertising copy will do these things:

1—Fix in his mind definitely the idea that he wishes to get over.

2—Get a mental picture of the kind of a man he wishes to "talk to."

3—Write his advertising copy just as he would talk to that man in his own simple, direct language.

Medium size advertisements appearing regularly usually are more effective than large advertisements appearing infrequently. "Picking up" ads from week to week saves a little time and effort for the dealer, but they lose in effectiveness many times the value of the time that it would take to rewrite them.

Above are two ad suggestions that show how a testimonial letter may be presented in a striking manner, and an interesting way of telling the public about your time payment plan. Every dealer receives some letters similar to the one used in the larger ad. His newspaper's ad man will be glad to help him with the layout of the ad. Note that the slogan: "Who is back of the car you drive?" is used in each car ad. It ties together the dealer's ads and at the same time carries the inference that he stands behind the cars he sells

Who Is Back of the Car You Drive?

The ad on the left above shows how the dealer's desire and ability to stand behind the products he sells may be sold. It features the dealer's slogan "Who is back of the car you drive?" and at the same time carries an assurance of the car's good quality. On the right is a Christmas ad suggestion

Winter Ads for the Tractor Dealer

TRACTOR dealers should continue their advertising through the winter months. It will keep the tractor before the farmers of the territory and, during the winter months, farmers have the time to read the newspapers carefully. Your advertisement will get more careful consideration during the winter season than during the planting and growing seasons.

If your salesmen are canvassing the territory, your advertisements will help them materially. They will make it easier for them to talk to the farmers.

Two specimen advertisements are given on this page. One of these emphasizes the economy and profitableness of power farming. The other shows the importance of buying a tractor for spring delivery.

If you write your own ads, do it carefully. The results you get from your advertising depend on the copy you use. If you are going to spend $15 on an advertisement, it is well worth while to take several hours planning the copy to be used. Your local newspaper will help you in this work. Your factory will furnish cuts or complete ads if you desire.

Lower Costs or Higher Prices

If it costs you 85 cents to raise a bushel of wheat and the market price is $1, you make 15 cents on a bushel. If the market price is 85 cents, you make nothing.

If it costs you 75 cents to raise a bushel of wheat and the market price is 85 cents, you make 10 cents on a bushel. If the market is $1, you make 25 cents.

You can't control market prices.

But you can control your costs. The Hardwork tractor will reduce them. We will be glad to explain and demonstrate how it can be done on your farm.

Harrison Automobile & Tractor Co.

Lynchfield, Ohio

Preparedness

Cut of Hardwork Tractor pulling two plows.

You'll be prepared for spring plowing and seed bed preparation if you order a Hardwork tractor now for spring delivery.

No one knows what kind of weather next spring will bring. It may be wet or it may be dry. But, if you have a Hardwork tractor on order for delivery March 15th, possible unfavorable weather conditions needn't cause you any worry.

The Hardwork gets the work done on time regardless of weather conditions. It does it faster and more economically than it can be done with horses.

Ask us to send a representative to explain the economies and advantages of power farming with the Hardwork.

444 MAIN STREET NEWTOWN

HERE is a suggestion for a truck dealer's winter advertising campaign. Headlines are suggested for twelve advertisements to appear weekly. This campaign can be used by itself or to supplement smaller daily advertisements. Cuts can be obtained from the factory. Complete advertisements are given for headlines 2, 3 and 8.

1—Ask These Owners About Empire Trucks.
2—There Is an Empire Truck for Every Transportation Requirement.
3—Empire Trucks Make Business More Profitable.
4—Empire Trucks Get There.
5—100,000 Miles and Still Going Strong.
6—Johnson Service Keeps Empire Trucks on the Road.
7—Body Equipment That Fits the Job.
8—Better Delivery Service.
9—Heavy Duty Hauling.
10—Empire Trucks on the Farm.
11—The Empire Bus.
12—The Empire Fast Express.

Empire Trucks Make Business More Profitable

TRANSPORTATION expense is one of the costs of doing business. By reducing this expense, the spread between income and cost is widened which means that the business is more profitable.

Empire Trucks Reduce Transportation Costs

DEPRECIATION—100,000 miles is not an unusual record for an Empire Truck. They are built for a long and profitable life. Every machine wears out but in the case of the Empire the wearing out process is so slow because of the inherently rugged construction, that the depreciation expense is minimized.

MAINTENANCE—Three things combine to reduce maintenance costs on Empire trucks:

1—A monthly inspection service that keeps the truck in top-notch condition.
2—A well-equipped shop manned by skillful mechanics which means faster and better work at lower rates.
3—Accessibility—a feature of Empire truck construction. It is easy to get at the mechanism for inspection, lubrication, adjustment and repair.

OPERATING COSTS—The engines used in Empire trucks are economical of both gasoline and oil. Consequently the gasoline and oil mileage is high.

Ask us how Empire Trucks will reduce your transportation costs

JOHNSON MOTOR TRUCK CO.

Distributors of Empire Trucks

444 Main Street Newtown

There Is an Empire Truck for Every Transportation Requirement

ECONOMY in truck transportation demands that the capacity and body equipment of a truck be suited to the requirements of the business in which it is to be used. The Empire line of motor trucks meets all ordinary capacity requirements. We can supply a body that is specially designed to fit the needs of any business.

Cut of Light Delivery Truck

THE Empire Light Delivery Truck is rated at ¾ ton but will carry 1 ton over city streets without injury. It is especially well suited to retail delivery service. It gets away fast and climbs hills better than most passenger cars. Equipment includes electric starting and lighting, pneumatic tires, front fenders and comfortable driver's seat.

Price, chassis—$1000, express—$1200, panel—$1250.

Cut of Fast Express

THE Empire Fast Express is rated at 1½-ton. It has all the get-away and hill climbing ability of the light delivery truck. Pneumatic tires and electric starting and lighting are regular equipment. Intended for high speed transportation of medium weight loads. It is widely used by farmers and makes a good bus chassis.

Price—chassis—$1500.

Cut of 3 or 5 Ton Truck

THE 3 and 5 ton sizes are rugged, powerful trucks designed for hauling heavy loads under adverse conditions. They are built for hard service and they stand up under it. They are widely used by coal and lumber dealers, and contractors. Electric lighting is regular equipment. Pneumatic tires are furnished at extra cost on the 3-ton size.

Price—3-ton, chassis, $3500. 5-ton chassis, $5000.

Ask us which of these trucks will solve your transportation problems.

Ads That Will Help Make Shop Profits in Winter

LOCAL newspaper advertising can be made to assist directly in the sale of repair work. There are two ways to advertise service, and both of them can be used, either at once or alternating. One type of advertisement features some special work for a certain price, just as department stores advertise umbrellas, aluminum griddles, etc. These ads are definite, specific and give details of exactly what is offered for sale. These services are often offered with the idea in mind of drawing new trade to the establishment or with the idea of possibly selling other services or articles than those offered in the advertisement.

The other class is good will advertising. This offers nothing specific for sale, but tells of the facilities of the organization and of its desire to assist owners in the continuous operation of their vehicles.

Effective advertising of repair work must be well made up and attractively worded. Service advertising is scarce compared with other automobile advertising copy. However, this very circumstance helps because attractive service copy will be read with greater interest.

The ads illustrated on this page are small because of the limitations of space. Your newspaper will help you with attractive type and layouts of sizes to meet the needs of your business.

YOUR SENNETT CAR
THIS WINTER

Keep It Running

The Sennett car was not built just for a summer time car. It is well built and will plow through snow just as well as it plowed through sand last summer.

But it will have to work a little harder when Jack Frost is with us. There is harder work for all parts of the car and if you would have perfect satisfaction from the winter use of your car, bring it to us for an inspection. There are some little adjustments and changes that can be made which will make the car start easier and run better.

Have these little things done by men especially trained in the service of the Sennett car.

NEWTOWN AUTOMOBILE CO.

How the Equipment and Tire Dealer Can

AUTOMOTIVE equipment and tire dealers will do more effective advertising this winter by presenting their stock to meet the need for comfort and safety and dependability in winter motoring.

Winter advertisements can be made to produce better results if some item of equipment or some service is presented as a means of getting more use and satisfaction from the motor car.

The man who sells equipment and tires will do well to study the advertising of the progressive merchants of his town.

He will note particularly how they anticipate public needs and make timely presentations of their stock through their advertising to meet those needs.

He will recognize the fact that practically every item of automotive equipment made has a comfort or safety function and that winter increases the need for comfort and safety devices. And so, in his advertising he will stress the particular advantages of the equipment and service he sells in winter weather.

He will strive particularly through his advertising to register his business in the public mind as a place to buy Christmas gifts for the motor car owner.

Following are a few suggestions for putting the winter appeal into automotive and equipment advertisements.

(Santa Claus Cut)

Give Him Something for the Car

LET us help you select useful Christmas gifts. In this store you will find gifts that will bring Christmas morning delight to every motorist. Gifts to fit every pocketbook. Come in and look around.

Heater

Cut

Car heaters are appreciated by every motorist. They make winter riding comfortable. Every car owner will appreciate such a gift.

(Continue with description of heater giving price.)

Cigar Lighter

Cut

Ever try to light up while bowling along the road? Then you know what a satisfaction a cigar lighter will be as a Christmas gift to the car owner this Christmas.

(Continue with description of lighter and price.)

Tires

Cut

Where's the motorist who doesn't appreciate a good spare tire? Why not give him one this Christmas? A tire purchased in this store is a particularly practical gift, because with the tire goes our service, which stands squarely behind every one sold.

(Continue with description of tires and prices.)

Stop Signal

Cut

Is his car equipped with a stop signal? He will surely appreciate one of these useful safety devices.

(Continue to describe signal advertised and price.)

Suggestions

(Short paragraphs describing inexpensive gift suggestions and giving prices.)

Smith's Garage

Everything for the Motor Car

442 Main Street Phone 8652

The idea behind this advertisement and all of those on this and the following pages is to present automotive equipment and tires as winter necessities and as Christmas gift suggestions. In the above ad just a few items of equipment that may be found in any store are presented. The big appeal is to give them as Christmas gifts this year. Note the interesting and timely way in which each item is sold in the small paragraphs presenting them. The effectiveness of such advertising lies in making the ad attractive in appearance and interesting to the Christmas shopper

That Sunday Trip to Greenwood Lake

Via Pompton and Midvale is 21.7 miles of excellent highways and autumn beauty.

Take it—and you'll enjoy one of the pleasantest motor trips of the year.

You can add greatly to the pleasure of the drive by filling up with gas, oil and other necessities at

SMITH'S GARAGE

Everything for the Motor Car

442 Main St., Phone 8652

Here is a novel advertising idea that may be used by the garageman, accessory dealer or tire dealer occasionally. It sells the idea of making a motor trip to some particularly interesting or pleasant spot, gives definite touring information and carries the suggestion that the motorist patronize the advertiser. Such an advertisement, if run once or twice a month, would relieve the regular line of advertising and make interesting reading that motorists would get to look for. Accessories or tires might be advertised just as effectively as gasoline and oil service is in this ad

THOSE WHO KNOW COME TO US

YOU may have a tire fixed today and it may run five thousand miles, or it may "blow" the day after you receive it from the repairman. It depends on the grade of work the repairman does.

POOR work is expensive, especially this winter when a neglected cut may allow water to seep in and rot the fabric. You can't afford anything but the best tire repair work. And it costs no more here.

THAT is why "those who know" bring their tire repair work to us. They KNOW from experience they will receive the best of work priced reasonably.

How to

Make Letters Help You Get Business This Winter

This Story Tells How to Keep Away from Red Tape and Make Your Letters Stand Out from the Flood of Mail That Prospects Receive—It Contains Ideas for Dealers and Repairmen

By E. P. CRAMER

ABOUT thirty years ago, the advertising which appeared in business papers like Motor World consisted largely of business "cards." Since then more care and study has been given until to-day the advertising appearing in a modern periodical is vastly more attractive to the reader and vastly more productive for the advertiser than it used to be.

The sales letters that are customarily used for getting business nowadays offer much the same opportunity for improvement that the advertising of thirty years ago offered.

Letters are such an economical means of getting business that they have been overworked. Prominent citizens of most communities, as well as retail dealers of most lines of business, are continually flooded with such volumes of circular or form letters that it is simply impossible for any one letter to receive much attention unless it stands out from the others. It will be the purpose of this article to suggest a few things you can do to make your selling letters stand out from the other sales letters which your customers and prospects are receiving in the same mail with yours.

The way a mailing list is customarily used often spoils what might otherwise be a profitable series of letters, and it is in the use of mailing lists that one very important opportunity for improving the effectiveness of sales letters lies.

Usually a man will make up a mailing list of his prospects and customers and then mail out the same letters to the whole list. This is all right when the letter is general enough to be of interest to everyone whose name appears on the list. Usually, however, a letter will appeal more to one part of the list than another so that a part of the letters represent either just a waste of money or actual harm done.

For instance, suppose a dealer desires to send out a series of sales letters for the purpose of stimulating his accessory sales, and suppose that he sends them to both customers and prospective customers. If he has some news to announce as, for example, some new products he has added, lower prices, a new form of guarantee, moving to a new building, or something of that kind, the letters will be of interest to old customers as well as prospective customers.

On the other hand, if he has no news to announce and the letters must, therefore, be confined to information with which his regular customers are already familiar, the mailing list ought to be confined to prospective customers. If the letters are mailed to regular customers, they will do actual harm. It is not because a customer is likely to be offended by receiving a letter which doesn't "fit" him; it is because the more letters of that kind which he receives the less attention he is likely to pay to any future letters.

The following is an open paragraph of a letter for getting new accessory business:

> You often pass our store but have you thought how convenient it would be to secure your motoring needs here?

It is easy to see that to mail such a letter to a regular customer is only to invite him to pay less attention to any further letters.

Similarly, in selling cars, there are different things that appeal to different people. In selling trucks, the nature of one prospect's business differs from another's and, consequently, the features of the truck which ought to be emphasized in the one case may vary from those which ought to be emphasized in the other. And so on.

A sales letter differs from a newspaper advertisement largely in that it may be individualized, but to make letters individual the names to which they are addressed must be classified properly on the mailing list. This is not nearly so difficult to do as it sounds. *The main thing to watch is to avoid "red tape."*

The first thing to do is to arrange the mailing list so that it is physically flexible and may be added to, subtracted from, changed or reclassified on a moment's notice. This means that each name should be placed on a small card or slip of paper, depending on whatever filing devices are available. The most common are cards kept in drawers or trays. A mailing list should never consist of rows of names one after another on large sheets of paper.

The next thing to do is to indicate on each card whether the name is that of a customer or a prospective cus-

Letters to Get Business for YOU

SOME sales letters will make sales—of merchandise or service. Others pave the way for a salesman or repairwork solicitor to talk with the prospect and get his business. Either kind of letter must be so worded that it will attract the reader's attention and interest.

On pages 71 to 75 are specimens of letters that dealers and repairmen can have typed on their own stationery and send to prospects and customers. On one or more of these pages are letters for YOUR business. Look for them and use them.

Digitized by Google

tomer. This is the one classification which will be useful most frequently. It may be done, if desired, by some system of key letters or numbers. For instance, "C" might be used to designate "customer" and "P" to designate "prospect."

The next thing to do is to indicate the products in which customer or prospect is interested. This may be carried to greater or less detail. For instance, in a departmentized business the classification might be something like this: Repairs, tires, accessories, cars. Or, where the sale of cars alone is considered, the classification might be something like this: Coupe, sedan, touring, roadster, six, four—in other words, just as the prospect file for the use of personal salesmen is classified.

The classification between customers and prospects should be invariable. As to how far to go with further classifications, we can only say in a general article like this that it depends upon the individual sales problems of the individual business. But here is a rule which you may follow and which will always work. After getting your customers and prospects on cards, go through them one at a time. Try to call each individual person to mind. Try to imagine what you know would appeal to that person if you were to *talk* to him. Then turn to the next and ask yourself if the same thing would appeal to him. As soon as you strike one whom you know to be radically different, put that card on a separate file.

If you already have your customers and prospects classified for other sales purposes, you will find that the same classification is what you should have for sales letters. At any rate the work of classifying the mailing list will not be difficult if you can visualize the flesh-and-blood man which each name on the list represents.

When you get them you will have no less than two classifications—customers and prospects—and perhaps four, six, eight or more. And in mailing out letters you will have two, four, six, eight or more *different* letters to reach each name once. Theoretically it may seem that this will increase the cost of using sales letters. It *may*, if you have them multigraphed. But in the first place you will find, in actual practice, that you will not often have letters to send to all the classifications at the same time. In fact when you have a letter to mail to a single one of your classifications you may be surprised when you realize the money you would have wasted through mailing it to people who shouldn't get it, but would get it if you had not classified your list. In the second place, each letter, by reason of its being more individual, is more effective.

It goes without saying that no matter how the names are arranged a letter of general interest to all may always be sent. Also as special business-getting ideas occur to you, it is always entirely practical to go through the cards and arrange them under temporary classifications, from which they may be returned to the original or permanent classifications after the special letters have been sent. All these things are easier to do, the smaller your list is. In other words, the smaller the business the more personal it is practicable to be in letters as in actual contact. But in any case it is through intelligent arrangement of the mailing list that sales letters may be vastly improved in effectiveness. This is particularly true right now because so few users of sales letters either in the automotive field, or in any other, treat their mailing lists as anything more than a mass of names.

Another important improvement that may be made in sales letters is in their processing. It has been customary for a long time to send out sales letters spasmodically rather than regularly, and usually in so-called multigraphed or mimeographed form designed to imitate typewriting. Under the plan of sending a series of letters, each the same to the entire list, it was only natural to seek some method of producing the effect of typewriting at less cost. Such processed letters have advantages but they have served to obscure the fact that a genuine typewritten letter is better than an imitation.

Where one or more typists are employed anyway, it usually is practicable, by means of a reasonable amount of planning, to have them type sales letters during what otherwise would be spare time. If this plan is followed regularly the sales letters will cost even less than they would if multigraphed or mimeographed.

This also will make it possible, by a simple expedient, to make each letter different, thoroughly individual, and one which the recipient will realize could not possibly be a form letter.

In soliciting a man to buy an automobile, sooner or later, there is bound to be considerable discussion about the mechanical features, and whenever the discussion progresses to this point the automobile salesman has the same story to tell to every prospective buyer. But it is not often possible for an automobile salesman to begin there. He first has to figure out some way to attract the prospect's attention and interest. To do that he will find out how large a family the prospect has, whether he has considerable wealth or is in moderate circumstances, whether he would use a car for business, for his family or both. These and other details will give him an idea of the size and model of car which will be most useful and be most likely to appeal.

In other words, in selling a car it is usually necessary to begin the solicitation in a variety of ways, depending upon the variety of prospective buyers whom the salesman has on his list and in that way lead up to the demonstration of the car itself. It is the same in sales letters.

Everything an automotive dealer has to sell can be demonstrated or presented in about the same way to every prospective buyer, but it has to be introduced in a variety of ways, depend-

Digitized by Google

ing on the variety of people on the prospect list.

Consequently a very practical way to individualize sales letters, without going to the labor of writing each one separately, is to use letters which are complete except for the opening paragraph, and then write the opening paragraphs individually.

Individualizing Letters

TO illustrate, let us take the first letter appearing on the opposite page and remove the first paragraph. Next let us assume that you have on cards the names of all your immediate prospects for that car. The first man on the list is the one who never has owned a car. He has always objected that prices have been too high and quality too low since the war. He is on the list because he has "nibbled" once or twice during the last year. The following would introduce the letter to him:

> Remembering what you told me last summer, when we were talking about the automobile subject, I think it would pay you to drop in and see the Sennett sedan. You know, of course, that prices are now away down and, while I can't say definitely, I have certain reasons for believing that this particular car at this price is not going to be obtainable indefinitely.

The next on the list is a man who has a car, but ought to own a newer and larger one, not only because the older one is pretty well worn out, but also because he has a larger family than when he bought the old one. The first paragraph in the letter to send him, might be like this:

> Pretty soon John Junior is going to need a seat all his own when you go driving. So, sooner or later, you will want a car with a roomier body, and I want to extend you and your wife an invitation to come in and see the Sennett sedan.

Next appears a man who already has a large car for the use of his family but who is a prospect for a small car also for knockabout use. An opening paragraph for him would be:

> Your Sennett sedan is exactly what you need for general use, but have you considered how convenient it would be to have available for short errands a light yet substantial car like the Sennett roadster?

Write as You Would Talk

AND so you can go through the whole list. What would you say in opening a conversation with these various people? Say the same thing in opening a letter to them.

You will find, once you get the knack of it, that you can sit down with 50 or 75 of your prospect cards, and in an hour's time give to your stenographer an opening paragraph for a letter to each one. Then she can write the complete letters as time permits and you can sign them with the rest of your mail.

If you do not employ a stenographer but do employ a typist, a good plan to follow is to number each of the various sales letters (minus the opening paragraph). It is a convenience to have them filed in a loose-leaf binder.

Then go through the prospect cards one at a time and attach a small sheet of paper to each one with a paper clip. On the sheet of paper write down the number corresponding with the letter you want to send. Above the number write down in longhand the opening paragraph. The typist can then write the complete letters. Where you do this frequently it will be a convenience to have two sets of letters, one for your own use and one for the typist's.

There are a good many advantages in a sales letter plan of this kind, aside from the fact that each one is a real, typewritten, personal letter.

One advantage is that it can be made to fit right in with the regular operations of your business and can be handled continuously. Sales letters are exactly like everything else that can be used to promote sales in the respect that they are always most effective when they are sent out persistently.

System in Letter Campaign

NEWSPAPER advertising nowadays is usually carried with a fair degree of persistency but sales letters are too often considered as a "stunt" to be indulged in only on special occasions. When they are prepared as form letters it is necessary to make up lists and send them to some one who is equipped to process them all at one time. After that it is then necessary to sign, seal, stamp and mail them all at one time. This brings a lot of work in a short space of time and naturally discourages their regular use.

No one would think of doing personal sales solicitation just on special occasions or, to make the comparison still more absurd, no one would think of having his place of business open only on special occasions. Every means of getting business that has proved its value ought to be utilized every day.

Another advantage of the sales letter plan, as we have outlined it, is that it enables you to keep your lists alive automatically. As you go through the cards you will frequently come upon names of people who have recently died, moved away, or for other reasons ceased to be of value on the list. Any "system" for keeping the list alive is likely to involve more "red tape" than it is worth. Using the list regularly is the best way.

Letters to New Prospects

IT is a good idea to have a series of letters on hand ready to mail out to a new prospect as his name is secured. People who have just moved to town, who have just married, who have been promoted—from whatever source you are now securing names for your new prospect list—can be reached with apt, timely letters copied off on the typewriter and their business won in cases where other contact would be impracticable.

The circumstances under which such letters may be profitably used are so many and varied that we could hardly begin to enumerate all of them. Whatever plan you are following now to secure the names of new, prospective customers will fit right into this plan.

NOW!

Do You Need Some Letters?

THE story ending on this page tells how men in the automotive trade can keep away from red tape in sales letter writing and make their letters bring in winter business.

It does not tell how to write letters, leaving information along that line to winter business letters themselves, to a fine collection of sales letters for all branches of the trade, which suggest what to say in letters better than any kind of story could suggest. The first letters of this collection appear on the opposite page and there are others on the pages following.

How many of these winter business letters will help you? Study them and use those that fit your business.

Digitized by Google

36 Sales Letters That Will Help You Get More Business This Winter

How to Put a Seasonal Appeal Into the Direct Mail Campaign of Dealers, Service Managers and Garagemen

ON the following pages are presented thirty-six sales letters for the car, truck and tractor dealer, the automotive equipment and tire dealer, the garageman and the service manager. They are designed to suggest ways of making a strong winter appeal and selling more automotive products and service. Read them. Use them as they stand or take from them ideas that may be used in your own letters.

Six Letters That Sell the Car with a Seasonal Appeal

Letter No. 1—STRESSING SALIENT POINTS

(See the reference to this letter in the story on the opposite page)

Perhaps you have noticed the large number of Sennett sedans on the streets of Calawassa this winter. Many people have, and they have asked us how we have managed to make this model so popular and what there is about the car that has interested so many motorists and made them owners of Sennett sedans.

The Sennett is winning on its merits and its best boosters are its owners. Of course, we are proud of our ability to insure the satisfactory performance of these cars in our exceptionally well equipped service station.

Have you ever compared this model, point by point, with the other cars that sell at about the same price?

Do you know that the Sennett sedan has—

- Complete instrument mounting on the dash,
- Real leather upholstery,
- Body finish produced by 24 separate paint and varnish operations,
- Cord tires as standard equipment,
- An approved steering wheel lock,
- Windshield visor,
- Detachable engine head,
- Remarkable reserve power, insuring quick acceleration, and
- Hot spot intake manifold?

Phone to-day for a demonstration. It places you under no obligation.

Letter No. 2—
THE CHRISTMAS GIFT SUGGESTION

Have you a pencil?

Then, turn this letter over and use the back of it for a little quick calculation.

How much are you going to spend this Christmas for gifts right in your own family? Make a list of your probable expenditures and find the total. Quite a tidy little sum, isn't it—yet the chances are you'll spend more than that before you have all the gifts bought.

Why not bulk the gifts this year in a motor car for the whole family?

Do you know that for $750 you can have a brand new, shining Sennett sedan at your door Christmas morning? And do you know that you can pay the balance in six monthly payments of $125 each?

Bulk your Christmas gifts and buy a car and make this the family's happiest Christmas.

Phone to-day for a demonstration.

WOULD YOU DO THIS
FOR A FRIEND?

Some of your friends are going to buy new cars next spring. Among them, no doubt, there are a few who have ridden in your Sennett and have been impressed with its many fine qualities. You'd like to see them own a Sennett, we're sure.

We like to feel that all of our customers are friends and that's why we are going to ask you to help us widen our circle of Sennett owners by writing their names on the attached postcard and dropping it in the mail.

Would you do that much for a friend? Thank you.

C. J. REILLY INC.

C. J. REILLY, INC.:

The following persons may be interested in buying a Sennett car:

Name	Address	Phone	Make of Car Now Owned

Signature.....

Here is a return postal idea that may be used to solicit spring and winter prospects from owners. It is a double postcard. On the back of the top card is space for addressing it to owners. On the back of the lower card, which may be detached along the dotted line, is printed the return address of the dealer

Letter No. 3—WINTER COMFORT APPEAL

There will be very few, if any, days this winter when you cannot drive in comfort in a Sennett sedan. Your community realized some time ago that it was a mistake to allow snow and ice to interfere with traffic and the street department now keeps all the main arteries of travel open all winter.

Then why stand on a street corner until you're chilled through—your feet damp and numb—waiting for one of those long over-due street cars? Don't cuss your luck and look with longing and wistful eyes at the snug, cosy motorists as they rush by you in their warm, dry, comfortable cars.

The closed car is becoming more popular every year. The Sennett sedan, with large windows that lower full length, cowl ventilator, comfortable upholstery and dependable,

Digitized by Google

sweet running engine, will be just as comfortable next summer as it is this winter.

Why wait until spring to buy a new car?

Letter No. 4—SELLING THE DEALER

In the old days in Calawassa, when folks rode behind horses instead of in automobiles and Hank Wilson ran his carriage and blacksmith shop down on Main Street, it wasn't necessary to write a letter like this.

Business didn't move as fast as it has since the coming of the automobile and 'most everybody had time to sit and chat with Hank. 'Most everybody knew him.

But things have changed. People don't seem to have time to sit and chat with the business men they patronize as they did in the old days, and they don't get to know them so well as they knew Hank.

For instance. You may have thought that this institution is an automobile salesroom. Yet, if we could get better acquainted, you would learn that the sales department of this establishment is only one of the departments that exist here for the service of the automobile owner. And this is important to everyone who is in the market for an automobile.

The performance of any car depends upon the dealer who sells the car. Every owner has different individual requirements. It is the business of the dealer to see that the car harmonizes with the requirements of the man who bought it.

It is for these reasons that we maintain an establishment very much larger than would be required merely to sell automobiles. We have everything here to keep the cars we sell running satisfactorily.

Come in and visit our large modern service station. See our extensive stock of parts so vital for the prompt repair of our cars. Come in and get acquainted with those extensive departments of our institution that exist to serve our customers AFTER A SALE IS MADE.

Come in and satisfy yourself that C. J. Reilly, Inc., is not only selling automobiles but is equipped to guarantee its customers the full performance of the cars we sell.

Letter No. 5—

ASKING OWNERS FOR PROSPECTS

Some of your friends are going to buy new cars next spring. We would like to have a chance to tell them about C. J. Reilly, Inc., and the Sennett line.

Perhaps many of your friends have ridden with you in your Sennett sedan. They no doubt have been impressed as you have been with its many fine qualities.

If you will write on the inclosed card the names of any persons you believe to be in the market for an automobile, we will appreciate it. Every new car in this market like yours adds to the resale value of the car you own.

Please fill out the card and mail it to-day.

Letter No. 6—TO DOCTORS

How would you like to own an automobile especially built to meet every requirement of the professional man? The new Sennett coupe is that sort of a car. Just as the instruments that you use and the furniture in your office are designed to help you discharge your professional duties more efficiently, so the new Sennett coupe is built to meet your every requirement.

The Sennett coupe is a single seated car with room for two or three people. There is ample floor space and the driver's seat is particularly accessible. Special interior design, which we would be pleased to explain in detail and demonstrate if you will phone or write, makes it an ideal car for the professional man. It is fitted with glass windows and doors which raise and lower, thus affording the comfort and protection which is so welcome on cold, rainy, disagreeable days and during night driving.

Of particular importance to you as a Sennett coupe owner would be the fact that physicians' cars have the right of way in our service station at all times.

Won't you phone and make an appointment soon to drive one of our coupes on one of your morning trips?

Letters That Help Sell Used Cars!

Four Letters to a Prospect or Group of Prospects

Send them out a week apart

Letter No. 1 To Inspire Confidence in Your Used Cars

One of the best known business men in town bought a car from us six months ago. He was mighty proud of it, as he had a right to be of such a car, and between trips in town and around the countryside he gave it wonderful care. It was just about as good as new—he insisted it was entirely as good—when he drove it in the other day, telling us that he would have to trade it in; he needed a bigger car.

We took the car, but not at a new car price, or anywhere near that. Because it is a used car custom decreed that the owner must let it go at much less than its actual worth in miles of transportation. And because it is a used car we can sell it, to you or someone else looking for big value in an automobile, at a price which gives you a lot of automobile for a little money.

Our used cars were all turned in on new ones for reasons just as sound as this.

We do not deal in worn out, mechanically unfit cars.

You will find in our used car salesroom none but cars which we have thoroughly inspected and are willing to stand back of as cars which will give satisfactory service.

We have a fine selection of open and closed models at prices to fit all kinds of pocketbooks.

It will pay you to come in and look them over.

Letter No. 2 To Emphasize the Low Cost With High Value of Your Used Cars

Did you ever stop to think that the value of anything you buy is not measured by what you pay for it but by the service it gives you?

You want an automobile to carry you and your family and friends quickly, surely and comfortably wherever you want to go. If it does that, and is a car whose appearance and performance you can be proud of, it is of high value to you. But its cost need not be high.

Let us explain:

Our used cars are accepted from owners in part payment upon new cars. Every one of them has many thousands of miles of good service in it, service that will give you much more in happiness and health than you pay for in money. Why? Because the mere fact that the car is changing ownership enables us to obtain it and offer it to you at a figure far below what we would have to ask for a new car with the same ability to meet your needs.

Just now we have an unusually fine display of first class used cars. The range of prices is equally attractive. And we put our reputation as merchants behind every one of these cars.

Come in and see them—now while the selection is large.

Letter No. 3 To Emphasize the Dependability of Your Used Cars

There are more than ten million automobiles in use in the United States. Less than two million of them were built within the past year. This gives you some idea of the dependability of these cars. It also sets you thinking, doesn't it? about the millions of used cars which are giving their owners satisfactory service, because all these ten million automobiles, except a few which are fresh from salesrooms, are used cars.

The used cars which we are offering our customers are cars which have been well treated by their former owners. More than that, we have carefully inspected them and re-conditioned them when necessary. We are so confident of their ability to give satisfaction—complete satisfaction—that we guarantee it.

Come in, see these cars, get a pleasant shock at their low prices and let us tell you how we put the name and reputation of our firm behind every one that leaves the salesroom.

Letter No. 4 To Counteract Prejudice Against Used Cars

Can you stand on the curb and spot the used cars that go by? That is, can you tell whether a car is being driven by its first, second, third or even a later owner, unless, of course, it's a brand new car on its way from the salesroom?

There is no way of telling the difference between a car bought as a used car and one bought as a new car. But there is a difference and in this difference is the reason why many far-sighted, thrifty people are becoming owners of good used cars. The difference is in the price. The used car buyer gets the miles of service in his car for much less per mile than the new car buyer gets his.

Some men are willing to pay for the satisfaction of driving a car its first few thousand miles—a price that the used car owner thinks is high. These same men, when they have driven their cars these few thousand miles, are willing to dispose of them at low figures so that they can again sit at the wheel of a new car. These are the men from whom we obtain our used cars, good cars which we inspect and put in first class condition and offer to these thrifty used car buyers who are looking first, last and all the time for their money's worth in automobile performance.

You will be able to find the car you want—one that looks right and is right—in our present selection of used automobiles. The price, will be right, too, much lower, we think, than you imagine.

Come in now while our selection is large.

Three Seasonal Used Car Letters to People Who Don't Own Cars

Letter No. 1—Fall

It's pretty hard these crisp fall days to resist the call of the hills and woods. You don't have to resist it, you can have a fine time yielding to it if you have a good car to pack your family in and start for the open road.

If just now you don't want to pay the price of a new car of the kind you prefer, you are likely to find just the car you are looking for in our fine selection of used cars. You will find them in open and closed models, in large cars and small, with a surprisingly low range of prices.

Why not satisfy that yearning for the open country? Why not make yourself and your family happy with one of our high value, low price used cars?

Come in and ask for a demonstration.

Digitized by Google

Letter No. 2—Mid-winter

Are you tired of walking in slushy streets, riding in crowded street cars?

Do you wish you could "chuck it all" and travel in an automobile—your automobile?

Is the cost the reason you don't do it?

If you will visit our used car department you are quite likely to find that the cost isn't any reason at all.

You can have an automobile, and a mighty good one, at a surprisingly low figure. You can be sure that it will give satisfactory service because we put every used car we sell in first class condition and stand back of it as a good car.

Why not get out of the slush and the crowded street cars—now?

Come in, look over our cars, ride in them. Our demonstrators are always at your service.

Letter No. 3—Just Before Spring

Spring will be here soon—green trees and leaves, blossoms and blue sky. Wonderful weather for motoring. Everybody who has a car will be stepping on the gas and getting out into the country.

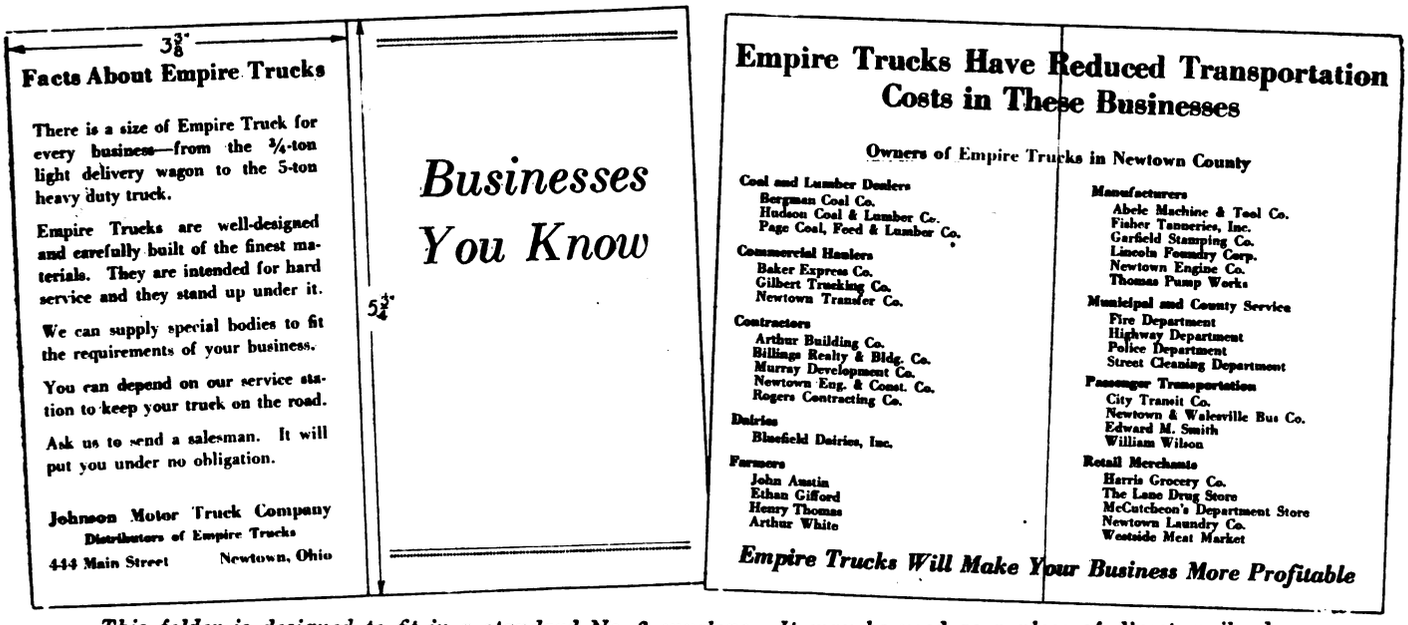
Will you?

A good many people who thought they wouldn't have changed their minds since they discovered the low prices placed on our line of high class used cars. They will be among the first to respond to the springtime call of the open road.

We put our used cars in first class condition. We put our reputation behind their ability to give satisfaction. They are good cars, but we can sell them at low prices because that is the way we buy them.

Join the ranks of the motorists this spring. Call at our used car department and find your car. We shall be glad to give you a demonstration.

A Letter to Sell a Used Car for Business Purposes



Are you hesitating about getting that car you need in your business because you hate to put a new automobile out in the slush and mud of winter?

Why not get a used car? It will provide the transportation your business should not be without from now until spring, and the investment will be small.

You will find in our used car department a good selection of cars thoroughly capable of delivering the dependable service you require. We think the prices will command your attention as a business man.

It will pay you to come in and see these cars or, if you prefer, we will send a demonstrator around to your office.

Making a Vocational Appeal in Truck Letters

This folder is designed to fit in a standard No. 6 envelope. It may be used as a piece of direct mail advertising by itself or as an envelope stuffer. Successful dealers find that the results obtained by satisfied owners are their best sales arguments

Series of Four Letters Illustrating Vocational Direct-by-Mail Advertising

The Plumbing Business Is Used as an Example

Letter No. 1

Townsend Plumbing Co.,
Newtown, Ohio.

Attention Mr. H. H. Brown

Dear Mr. Brown:

Out to Mrs. Welling's new house with some fixtures, then down to the railroad yards for a shipment of pipe—long hauls, short hauls, heavy loads and light loads—but you know the kind of service a plumber's truck gets. It is service that requires a dependable, economical and speedy truck.

The Empire Speed Truck is such a truck.

There is no better evidence of the suitability of this truck to the plumbing business than the fact that it is used by large numbers of plumbers all over the country. Right here in Newtown, it is being used with satisfaction by the Dalton Plumbing and Heating Co. and in the Fisher Bros'. plumbing business.

May we send our representative with records of what the Empire Speed Truck has done in the plumbing business.

Letter No. 2

Dear Mr. Brown:

Your costs for transporting material will be decreased if you do the work with an Empire Speed Truck. The three major expenses of truck operation are Depreciation, Maintenance and Gasoline, Oil and Tires. We have records to prove that these items are comparatively small on Empire trucks.

We would like very much to send our representative to your office to tell you what this truck can do in your business. We are confident that the Empire Speed Truck can make your business more profitable by decreasing your transportation costs.

When will it be convenient for you to see our representative?

Letter No. 3

Dear Mr. Brown:

Your business needs a dependable truck—one that is ready every day to do its daily work. The Empire Speed Truck has the dependability you need.

We stand back of this dependable truck with dependable service. Our inspectors go over every Empire truck we have sold once each month. These inspections are made in the owner's garage, on the road or in our service station. Copies of inspection reports are sent to the truck owner. These reports indicate what should be done to keep the truck in top-notch condition.

Our service station is equipped to handle all maintenance and repair jobs on Empire Trucks. Skilled mechanics insure good workmanship. Special tools make good work at low rates possible. Lubrication, adjustment and repair work are done with a minimum of interference with the work of the truck.

May our representative call next Thursday morning to talk over your hauling methods and costs?

Letter No. 4

Dear Mr. Brown:

Thank you very much for the time you gave our Mr. Jones to tell you about the

Digitized by Google

usefulness of the Empire Speed Truck. We appreciate your courtesy a great deal.

Mr. Jones tells me he left a list of Empire owners in this vicinity with you. Many of the people on this list are personal friends of yours. We would like very much to have you call any of them up to ask them what they think of Empire trucks and of our treatment of them.

We would especially like you to call up Empire owners in the plumbing business. Their problems are the same as yours and they can tell you from personal experience just how well the Empire Speed Truck solves these problems.

Selling Winter Service with Sales Letters

A Series of Three Letters to Owners on Winter Care

Letter No. 1. Cold Weather Precautions

Freezing weather can be expected almost any time now. Some slight attention and expense on your part now will save you considerable inconvenience and greater expense later.

Your cooling system should be drained and an anti-freezing mixture put in. You can use alcohol or any one of a number of anti-freeze compounds.

Your battery should be fully charged. A fully charged battery will not freeze, but if your battery is partly discharged it will be liable to freeze, in which case the jars would burst, the plates buckle and the battery would be ruined almost beyond hope of repair.

The oil in your engine should be changed to a lighter grade. Summer oil is too heavy. It will not flow fast enough to lubricate the cylinder walls and bearings and may result in scored cylinders or burned bearings. It will also be too thick to allow the starter to turn the engine over, thus straining both the battery and the starter.

If you are not in a position to attend to these necessary details yourself, we can look after all these things at a very slight cost. Bring your car in now, before freezing weather comes along.

Letter No. 2. Better Cold Weather Performance

Did you receive our letter suggesting some precautions for cold weather? Our intention was to save you money. If you have lost it, we will gladly make another copy. The letter contained much valuable informationn.

May we also suggest at this time that there are some little attentions to the car that will make for easier starting and better running in cold weather. For one thing, you should have the cold air shutter on the carbureter intake either entirely closed or with a very small slit in it. The needle valve of the carbureter, if of the adjustable type, should be slightly opened to obtain better cold weather running. Some types of carbureters require a slight change in the air valve.

It is harder to start the engine in cold weather. The gasoline vaporizes with difficulty and the cold oil makes it hard for the parts to slide and revolve. It is necessary therefore that all other things be in pink of condition. Ignition breaker points and spark plug electrodes should be clean and in correct adjustment to provide the maximum of spark to fire the somewhat imperfect mixture used in starting. Valves should be tight and piston rings should hold compression.

We will gladly make an inspection of your car free and will make any minor adjustments without cost. A slight outlay of money in getting things in good shape for the winter will pay dividends in a sweet running car.

Letter No. 3. Changing the Oil

The oil in your engine should be changed every 500 miles in winter. The difficulty of completely vaporizing low grade gasoline at freezing temperatures and the extended use of the choke while starting are responsible for a considerable amount of liquid gasoline and kerosene slipping past the piston rings and into the crankcase. This rapidly thins out the oil to a point where it is no longer a lubricant. Burned bearings and scored cylinders will result from the continued use of oil after the five hundred mile period. If you bought your car a number of years ago and have an old instruction book with directions to change the oil every one or two thousand miles, write for the latest instructions.

We are specializing in crankcase service and will do this oil changing for you in ten minutes. There is no cost except for the new oil and you will avoid the necessity of getting down in the muck to drain the crankcase.

A Letter on Carbon Removal and Valve Grinding

Do you remember the feeling of satisfaction you had when your new car pulled up City Line hill on high gear? Will she do it now? If not, you have doubtless thought that the engine was losing its pep and the car getting old and worn out.

But this is generally not true. In most cases the cause of the lack of hill climbing power is the accumulation of carbon in the cylinders and the leakage of the compression past the valves. Both these troubles are easily remedied and then your car will behave as well as it did when you first got it.

We are able to quote a flat rate on the operations of carbon removal and valve grinding at $2 per cyclinder. This includes a thorough cleaning of the piston head inside of the combustion chamber and valve passages. The valves are ground and trued and the tappet clearance adjusted correctly to eliminate noise and give the greatest amount of power. We also check and adjust the spark plugs and adjust the carbureter.

If you will call for a service appointment we will arrange to have your car finished the same day you leave it.

Letter on General Lubrication

There is practically no limit to the life of a car which is properly and periodically lubricated. But filling grease cups under the chassis and getting oil and grease in your hair and ears often deters you from fulfilling your lubrication duties, and the life of the car is thereby shortened.

We have installed a special lubrication service to save you inconvenience and extend the life of your car. The cost is much less than the saving in wear on the car. This service consists of oiling and greasing every part of the car from one end to the other, using the right grade of lubricant in every case. A special spray is used on springs, fenders and other places that are liable to squeak.

We have established a flat rate of $5 for this operation and suggest that it be done once a month. The only lubrication you will have to attend to in the meantime is to look after the engine oil, unless, of course you intend to cover abnormal mileage during a month.

We believe that we can save you from $100 to $300 for this expenditure of $60 per year.

Drive in and ask us about it.

A Letter from the Electrical Service Man

Once upon a time the blacksmith and the general machinist were called upon to do automobile repairing and, to do them justice, they kept the wheels moving. The advancement of automobile design and construction have called for a specialist who knows automobile details better than the man with the more general machine knowledge.

The great strides made in recent years in the electrical equipment of the automobile have made necessary a still further specialization in automobile repairing.

This organization does electrical repair work and nothing else. We have made a careful study of magneto and battery ignition systems, starting and lighting and battery work and have machines and equipment specially designed for the work.

If your trouble is electrical, let us remedy it.

A Battery Service Letter

Cold weather is a good deal harder on batteries than warm weather. The engine oil, when cold, is gummy and a great deal of current is necessary to turn the starting motor over. A battery that is in rather poor condition, nearly discharged, while it might have given you satisfaction in summer, will give you trouble this winter due to the more severe current drains on the starter and the longer use of lights.

It will cost you nothing to call at our shop to have water added and a test made of the battery to determine whether it is in good shape to see you through the winter. Perhaps a small amount of necessary work done now will save you annoyance and greater expense later on.

If you are going to lay your car up for the winter ask us to send you our special booklet on the winter care of the battery. This is free and will give you much valuable information that you will appreciate when spring weather comes around.

Tractor Letters That Get Business

A Letter on Speeding Up Farm Work With a Tractor

Getting things done on time is an important feature of successful farming. In the spring it means getting the fields planted in time to get the maximum crops. Delays at this stage mean material losses in yield.

Speed is one of the great advantages of farming with the Hardwork. Last spring weather conditions interfered seriously with spring work on farms in this section. Yet Hardwork owners got their crops in on time despite these unfavorable conditions.

In the Hardwork tractor a farmer gets speed with economy. The cost of farming with the Hardwork is less than it is with horses. And in addition to these advantages, it makes farming easier.

Our salesman, Mr. Robert Jones, will call on you in the near future. Ask him to show you some records of what other farmers have accomplished with their Hardwork tractors.

Digitized by Google

A Letter on Bigger Crops and Profits Made Possible by Using a Tractor

You can grow bigger crops at lower costs on your farm.

Other farmers on similar farms are doing it. They are doing it because the Hardwork tractor is pulling the heavy loads on their farms. The tractor enables them to make a better seed bed and to get the seed planted on time, both of which mean heavier crops.

The cost of producing the crops is reduced because the Hardwork tractor does the work at less expense than it can be done with horses. We can prove with actual records of operating costs that farming with power is the economical way.

You can depend on the Hardwork tractor to be ready for service when you want to use it. It is built by a reliable company with a reputation for producing a high grade product.

Our salesman will call on you in the near future. Ask him to tell you how the Hardwork tractor will enable you to grow bigger crops at bigger profits.

Letter to a Tractor Prospect Before a Canvass Call

What new machinery will you need to handle next season's crops?

Plowing time is not far off. Following that comes planting, cultivating and harvesting. All of these operations can be done faster and more economically with modern machinery. Perhaps some of your machinery is worn out, or it may be profitable to replace some of it with more modern equipment.

Our Mr. Thompson will call on you on Thursday, Jan. 11. Ask him to go over your implements and machinery with you. He will advise you honestly what repairs your machinery needs, what implements should be replaced and what additions you should make to your equipment.

He'll also be glad to tell you about the economies the Hardwork tractor can effect on your farm. We are enclosing a circular describing this dependable farm tractor, which also tells about the results other farmers are getting with it.

Letter to a Tractor Prospect After a Canvass Call

Thank you for your courteous reception of our Mr. Thompson when he called on you on the 11th. His report shows that your equipment on the whole is in unusually good shape and ready for hard work.

I notice, however, that a few of your machines need some replacement parts. May we order these parts now for you so that, when it comes time to use the machines, they will be ready?

Mr. Thompson tells me that you are interested in the Hardwork tractor but that you are not sure that it would be a profitable investment for you. The best answer to this is that the Hardwork has shown itself to be a profitable investment on farms that are very similar to yours.

We are enclosing a folder which tells about the reliability and simplicity of operation and maintenance of this tractor. Look it over when you have a few spare moments. Mr. Thompson will be glad to answer any questions when he calls again.

A Letter Suggesting Livestock Profits Made Possible by Power Farming

Many farmers are finding livestock a source of profits. They are raising pure-bred stock as a sideline to their regular farming operations. They have discovered that the more time they can devote to this part of their work the greater are their profits from it.

By using Hardwork tractors they have speeded up their regular farming operations so much that they have the time required to take care of their live stock properly. They are producing their crops with less hours of labor and at less cost, and they are using the time saved to grow livestock, from which they derive additional income and profits.

Are you interested in obtaining more definite information on this subject? We have collected considerable data that we would be glad to show you. When you are in town, stop in at our store or ask us to send a representative to talk it over with you.

Winter Accessory and Tire Letters

Three Letters Making a Seasonal Appeal to Sell Accessories

Letter No. 1—SAFETY DEVICES

It's better to be sure than sorry—and it is cheaper.

Can you afford to take chances this year by driving your car without having it properly equipped with good safety devices?

Wet and icy pavements, ruts and partly obscured vision cause many of winter's motoring accidents. Most of them could have been prevented by equipping the cars with:

Bumpers,
Windshield wiper,
Tire chains,
Rear view mirror,
Spotlight.

Any one of these items will pay for itself many times this winter in the protection it gives.

We are specializing this winter in the installation of safety appliances of all kinds. You can have them attached while you wait.

Letter No. 2—SUGGESTING CHRISTMAS GIFTS

Every year there are some gifts that we just seem to put off until the last moment because we don't want to buy the ordinary things—socks, neckties, etc.

"If I could only think of something nice—something practical—something that he will use and appreciate," we say.

Does he drive a car? Then he will appreciate best or all one of those extra equipment articles that makes every car more comfortable or nicer to look at.

Here are a few suggestions:

Cigar lighter,
Ash receiver,
Flashlight,
Driving gloves,
Robe,
Radiator thermometer,
Vacuum bottle,
Tire lock,
Spare tube,
Spare tire,
Spotlight,
Rear view mirror.

Solve your Christmas gift worries by giving your motorist friends the things motorists like to receive.

Put Smith's Auto Supply Shop on your shopping list to-day.

Letter No. 3—SELLING A SINGLE ITEM

There are many reasons why you should enjoy comfort and safety while driving your car this winter.

One very good reason is an automatic windshield wiper.

In heavy traffic on slippery city streets or along the ice-rutted country roads you need both hands and a clear view of the road. But when rain and snow and sleet beat upon your windshield you need both hands and a clear view tenfold.

An automatic windshield wiper works silently and efficiently. It allows you to give all your attention to the car and the road. It takes but a few minutes to install and will pay you its value a hundred times this winter in the comfort and safety it brings.

Drop in to-morrow and see how it works.

Three Tire Letters to Get Winter Business

Letter No. 1—TO DOCTORS

In how many instances that you can recall has the very life of a patient depended on your ability to reach him in the quickest possible time?

You make your professional calls in an automobile, and one of its essential parts is its tires. You realize, even more fully than we can perhaps, what it means to you to have your car on tires that are at all times dependable. It is serious, isn't it, when a puncture or blowout delays you, especially on an emergency call.

We sell Seldomblow tires and tubes. But what we believe may be equally as interesting as the name of this popular brand to you is that we render a service to purchasers of these tires that practically eliminates the danger of delay through tire failure. We refer to our MONTHLY INSPECTION PLAN.

This plan entitles you to free inspection by experts who detect cuts, bruises and other weaknesses and remedy them before they develop to a stage where they may produce a blowout. Our repair department is organized to give prompt service, and prices are extremely reasonable.

Letter No. 2—SELLING TIRE REPAIR SERVICE

If reading this letter helps you to save some money this winter, that's fair enough, isn't it?

Then, without further delay, let's get to the point.

Next to quality of product the most important consideration in the purchase of tires is quality of service. These winter months tires are submitted to extra heavy wear. Ice and stones on hard pavements cut the tread and expose the fabric. Water seeps in and rots the fabric.

Frequent inspection by competent tire men will disclose these blemishes and very often a repair job that takes but a few minutes and costs but a few cents will add hundreds of miles to the life of a tire.

Our customers get just that kind of service free.

We can save money for you this winter. Drop in for a free inspection next time you are in our vicinity and let's get acquainted.

Letter No. 3—
SELLING TIRE AS CHRISTMAS GIFT

Merry Christmas!

Why not say it with Seldomblow tires this year and give your motorist friends 8000 miles of joy.

Phone your order to-day and we will deliver it on Christmas eve appropriately wrapped and tagged, anywhere in Calawassa.

Seldomblow tires are made to fit all cars.

With every tire purchased here goes our guarantee of satisfactory wear. Our plan entitles the owner of a Seldomblow tire purchased here to free inspection by experts.

A Seldomblow tire as a Christmas gift is an investment in comfort and happiness.

Our phone number is 888.

1923 Cars Have Best Quality Yet Produced

Manufacturers Have Made Progress in Durability, Accessibility and Comfort—No Radical Changes, but Important Refinements Described in This Story That Every Dealer Will Want to Read

By J. EDWARD SCHIPPER

WHILE there are still several new car announcements to come before the close of 1922, there have been a sufficient number of new models brought out so far and there is sufficient information available about the changes to be made in those which are still to come, to draw an accurate picture of engineering progress in 1922. When the history of the automobile industry is written, we will look back on 1922 as the year of many important detail refinements. These detail refinements have, as a net result, produced a car which is more comfortable for the user, more durable and more accessible, thereby reducing the owner's repair bill. The 1923 cars also are economical to manufacture, and, at the same time, have the best quality of any cars so far produced.

A survey of the bodies offered this year shows that the manufacturers have probably come closer to the bullseye than ever before in designing bodies to fulfill the owner's needs. The low priced closed car, for the man who wants closed car comfort at open car price; the sport model for those who like a dash of originality in their cars, and the touring sedan for those who want to combine the roominess and luggage carrying capacity of the open car with the comforts of the closed car on long trips, have been the body styles which seem to have struck most closely to the mark.

There have been many interesting detail refinements mechanically this year, which, taken in the aggregate, present a marvelous array of improvements. Probably the majority of these improvements are for the purpose of silence and life. The two go hand in hand, as it is axiomatic that whatever is silent mechanically is generally long lived. Better roadability of the vehicle through improvements in acceleration and in spring suspension rank second, with accessibility a close third.

Changes in Pistons

If we were to look into the vitals of engine design, for instance, during the year, we would find that in the aluminum piston field some important recruits have been gained. The Hudson company, while using this type of piston in the Essex for a considerable time, has now adopted it for the super-six, which has hitherto always been equipped with iron pistons. The piston selected for the Hudson is much along the same design as that which has been used for the Essex. It is a diagonally split type. This same type of piston is used in the Maxwell.

Another tendency which may be noted in piston design is a little greater care in proportioning the length. On the Buick car, for instance, in the six-cylinder engine, the pistons have been lengthened ½ in. above the wrist pin. The connecting rods have been lengthened 1-3/16 in., raising the entire block by 1-11/16 in., so that, although the compression remains the same with the longer piston and connecting rod, piston slap and wear on the cylinder walls is not nearly so apt to occur.

In redesigning the Stutz, just the opposite procedure was followed. The pistons were made shorter. On the other hand, the pistons on the older models were notably of extremely heavy type and a considerable increase of power output has been obtained, which is directly traceable to the lighter pistons.

Connecting Rod Changes

While the Buick company is the only one which has made any changes in connecting rod length, a number of makers have altered connecting rod shapes during the year so as to give a better distribution of load over the lower rod bearings. An interesting point in connection with connecting rod practice is the increased adoption of aluminum. This is now used on the Franklin, and other concerns have put these rods out on cars which have been shipped to dealers with the idea of closely watching their performance and seeing if there are any come-backs on their use. To date there has been practically no record of any failures in the cars sent out into service with these rods.

Heavier crankshafts still continue to be the trend, and in connection with their manufacture, there is a growing tendency for makers to put every shaft through a dynamic balancing machine before assembly. The result of this is that there has been a remarkable improvement all along the line in engine balance. Vibration periods have been practically eliminated in cars which have carefully gone into the manufacturing possibilities of good balancing machines. Dealers should appreciate that this is a remarkable accomplishment when it is considered that not so very long ago a dynamic balancing machine was regarded as a laboratory proposition and nothing to be used in a commercial way. It sometimes requires an hour to put a shaft in balance on one of these machines and the fact that manufacturers are willing to spend the large sums of money necessary to install a sufficient number of these machines to balance every crankshaft that comes through, is one of the outstanding examples of the determination of automobile manufacturers to produce the best possible automobiles.

Another development phase which has been instrumental in making cars more quiet has been the increased study which has been given to the front end drive. This is the drive which takes care of the camshaft and the auxiliaries such as the generator, water pump, etc. The drift toward chain drive may be noted from the fact that during the past year its use has increased from 16 to 25 per cent.

Digitized by Google

In other words, ¼ of all models produced employ this type of drive. Formerly, chain drive has been most popular on high priced cars, but its use on lower priced cars is increasing. New recruits to the chain drive this year include such concerns as Hudson, Haynes, Rickenbacker, Star and several manufacturers of assembled cars using Continental engines. There are two other cars not yet announced which will be fitted with this type of drive during the year. The new Duesenberg stock engine has a chain front end drive, as has also the Weidely, and in addition to these, a number of stock engines are now being made with the timing gear so arranged that it may be adapted either to chain or helical gear drive.

Chains and Gears Improved

One of the main reasons for the adoption of the chain drive is because of the superior methods of adjustment. On some of the Link-Belt installations, an automatic idler is provided which, by means of a spring tension, keeps the timing chain tight at all times. On other installations, a simple method of swinging the generator has been evolved so as to give a rapid adjustment of the timing chain. In the helical gear drive, there has been a gradual tendency toward increase in the face width of the gears.

Another radical change in practice has been the use of forged aluminum gears such as those employed on some of the Continental engines. The forged aluminum or duralumin gear has worked out successfully and with notable absence of resonance.

Another feature of engine design which has been the subject of material improvements almost universally is in the better layout of the intake manifold. Year by year, improvements in intake manifold designs have been made, with the result that the distribution in engines for 1923 is better than ever before. The quality of the fuel supplied cannot be said to have dropped any during the past year. In fact, various reports indicate that the fuel we are getting to-day is possibly somewhat better than a year ago. At the same time, inlet manifolds have been materially improved. On the redesigned Stutz the inlet manifold is designed to create an eddy in a circular chamber. The liquid particles are broken up as they come in contact with hot, internal fins. These fins are heated by exhaust gas drawn through a tube running directly across the engine between the central cylinders. This tube is in a dead air pocket, which tends to decrease radiation from the tube itself and permit a maximum amount of heat to be carried over to the heated fins. The heated fins of the intake are placed at an elbow so as to trap the liquid particles in the intake without adding much heat to the air. The intake has been designed with the passages sloping away from the cylinder, so that all drainage is back toward the carbureter and the manifolding is cast in aluminum to take advantage of the good heat conduction properties of this metal. The intake manifold is attached to the engine by means of an aluminum flange intended to transfer heat from the engine to the intake system. About one-fourth of the exhaust is used to heat the inlet, the arrangement being such as to prevent undue back pressure on the exhaust.

Progress in Silence

From the standpoint of silence, one of the most interesting things which has been done during the year is on the Buick engine, which is an overhead valve type. The long push rods employed to operate the valve rockers have been made partially of aluminum and partially of steel, so that the expansion on the push rods will be equal to the expansion on the cylinder. This has enabled the valve adjustment to be given a lash of .006 in. as compared with .010 in. formerly. This naturally provides a much more quiet engine.

From the foregoing, it will be seen that while there have not been any radical changes in engine design, there has been a marked attention to detail. There is not space here to enumerate all of the little improvements which have been made in various cars through the year, but not a single unit can be mentioned that has not been changed in one or more details.

Developments in other units of the chassis have not been as marked as those in the engine, although there has been a gradual cleaning up following along the same lines as have been noted from year to year. The clutch development has not been altered materially, although there have been some tendencies, particularly in reducing the stresses on the engaging surfaces by increasing the area and rendering the clutch oversize to such an extent that adjustment will be seldom or ever necessary. A newcomer in the clutch field is the Long clutch, which has been adopted on Jewett, Paige and will probably be seen on other cars before or at the next New York show. This is a plate clutch which is featured by extremely light rotating parts facilitating easy gear shifting.

There is a growing tendency toward so arranging the forward universal joint that it may be oiled from the gearset.

A rather clever arrangement to take care of this is used on the Gray car, one of the newcomers of the year. In this unit, the clutch, gearset and front universal are all parts of the engine oil circulating system. This takes away all responsibility from the owner except keeping the level in the crankcase up to what it should be and changing the oil in accordance with the usual requirements.

Frames, Wheels and Springs

A tendency toward stiffer chassis frames still continues and throughout the revised cars for 1923, a great number of added cross-members or heavier frame sections will be noted. This has resulted in less distortion of bodies and a greater elimination of rattles. A tendency in steering gears which may be noted in passing is the recent trend toward greater gear reduction. While all the way from 6 to 1 to 9 to 1 was considered good practice formerly, some of the car manufacturers are insisting on a 12 to 1 reduction from the steering gear manufacturers. This tendency is possibly one which may be criticised, as the 12 to 1 reduction makes a vehicle which is not at all pleasant to handle in traffic. It would seem that easier steering could be secured by more care in the manufacture of the parts which tend to bind on the steering mechanism. This is one of the problems which may well be attacked during the coming year, as it probably can still be regarded as a weak spot.

Another interesting feature is the possibility of the use of 20-in. wheels. This is still a long ways off, but can be clearly seen above the horizon of development. The 20-in. wheel employs such tire sizes as 30 by 5; 32 by 6, or 34 by 7. Engineers do not unanimously favor such a wheel, however, on account of the difficulty of securing clearance for the brake drum.

From the standpoint of spring suspension, the biggest change of the year has been the adoption of the semi-elliptic by Peerless. This concern has always clung to the platform type of suspension, and when it changed over to the semi-elliptic the sole survivor in the platform field was the Cadillac. Buick has made some alterations in its spring suspension, also, this year. The offset of the cantilever spring on the six-cylinder Buick has been increased 4 in., making the forward end of the spring 14 in. longer than the rear. This has resulted not only in lowering the car, but also in reducing rebound and eliminating side-sway. The rebound is reduced materially by the fact that greater advantage is taken of the interfriction.

Editorial Notes

This Issue

MOTOR WORLD presents its seventh annual Winter Business Number with the hope that many men in the automotive trade may find in these pages suggestions that will help them to profit by the business possibilities of the winter months. In this number are many ideas, particularly along the lines of advertising and display, which can be used just as they are. They will fit businesses of various sizes.

Only a few of the many automotive establishments in the country have advertisement writers, letter writers and men to create merchandising displays. It is natural that work of this sort should seem to men burdened with the cares of managing a business as out of their line. Yet almost any man, if he will apply himself, can do these things which play so important a part in successful selling. It is hoped that some of the suggestions in this issue may prompt readers to put their own ingenuity to work a little harder than they may have done in past seasons.

This issue will be followed from week to week with others also containing ideas for the building of winter business. Winter business will be the target the trade is shooting at for several months, and it is the ambition of Motor World to help the trade hit the mark.

Shows

WITH the approach of cold weather the trade naturally begins to think of automobile shows. There are early indications that more than the usual number of shows will be held this winter. This suggests that the trade has a keen appreciation of the promotional possibilities of the show and that there is no inclination to rest on the assumption that the public is fully sold on motor transportation and needs no propaganda such as the show affords.

It has come to be the custom for dealers in large communities to hold an annual show. The idea has been spreading during the past two or three years through smaller cities and towns, but it can well go much further. It is possible for a group of dealers in many a small community to hold a show without going down into their pockets, except temporarily, to finance it. A well managed show will at least pay for itself, and in many cases will return a profit to the participating dealers. It is even possible for a single dealer to hold a salesroom show and to get enough business out of it so that it will be little more expensive than other forms of advertising which he takes as a matter of course.

In Michigan last winter a way was found to take the show idea to a number of small cities which had never been able to benefit by this form of promotion. The State dealers' association arranged and conducted a show circuit plan. It might be possible in some territories, where there is no association available to do the work, for a number of distributors to band together to help their dealers hold shows in strategic points in their territories.

The show season naturally starts with the New York exposition shortly after the New Year. It continues well into early spring. Between now and the end of the year there is ample opportunity for dealers to canvass the show possibilities of their communities, to secure advice from show managers in nearby large cities and to plan a show for their towns if there is a reasonable chance of its success.

Christmas

LETTERS which have been coming in to the editors of Motor World indicate that the trade is taking considerably more interest this year than in former years in the possibilities of profit in gift merchandise. There have always been a few dealers who have sold cars, accessories and tires as Christmas gifts, but this year, according to indications, much greater attention will be paid, particularly in the automotive equipment field, to securing the business of Christmas gift buyers.

In this issue several pages are devoted to suggestions for cashing in on the gift giving season. It is an opportunity for the trade which should not be overlooked. Everyone knows how the average man or woman is stumped trying to think of gifts for certain members of the family and friends. In despair these gift givers turn from one line of merchandise to another until finally they buy "any old thing" in order to get the job off their hands.

If the automotive trade would try persistently and energetically this year to get accessories and tires prominently in the minds of gift givers they would obtain a substantial November and December business with accompanying profits.

Radio

QUITE a number of accessory dealers and garagemen and some automobile dealers have found it profitable to develop radio merchandising as a side line of their business. Their success suggests that other men in the trade who have not thought seriously about the possibilities of getting into the radio field might might do well to investigate it. It seems fairly well established that a business primarily engaged in some other line can undertake radio merchandising with reasonable promise of success if there is a man in

Digitized by Google

the organization with some ability along that line who can give it special attention. It is not an activity to be rushed into but the dealer or garageman who feels that he might be able to develop winter profits through selling radio will find it possible to get good advice from his automotive equipment jobber or perhaps from a special radio jobber in his vicinity.

What About a Contest?

THE automotive business man who is looking for a means of injecting new life into his organization in the winter months should not overlook the possibilities of contests. The contest idea, which is a development of the spirit of competition on which all activities of mankind are based, can be applied in many ways to any organization. It is possible during the late fall or winter months, when interest is likely to lag, to create enthusiasm by pitting employees against each other in contests leading to rewards for excellence. Many a sales organization, even a small one with only half a dozen men, has been rejuvenated by a contest which has spurred men to work not merely for the reward but for the satisfaction of proving their individual ability to do their jobs well. In a sales organization it is possible to hold contests not only for actual sales but for such things as suggestions for increasing business, displays, publicity stunts, sales letters and many other things that might be mentioned. Many a dealer who has racked his brains for new ideas for letters to prospects, for instance, has obtained a wealth of just the material he desired by offering awards to people in his entire organization for the best sales letters turned in during a given contest period.

In every normal man or woman there is a latent desire to be a leader. This desire can be capitalized into that kind of effort which, for want of a better word, we often call "pep."

Shop Equipment

THERE is no time so favorable as late fall and winter for a dealer or garageman to take stock of his facilities for serving his trade. Fall and winter ought to be the time when men in the trade will set themselves to the task of thoroughly examining their shop equipment. The summer time rush of work is over and the shop proprietor or manager has an opportunity to go carefully over his equipment, sizing up its capabilities or lack of capabilities for doing the work his shop must do to hold and build business.

It is doubtful if the trade has ever fully realized how much of the complaining of car and truck owners about poor work and high prices is due to inadequate shop equipment. This applies not only to the larger and more costly tools which come under the classification of machinery but also to the hand tools of various classes.

The car owner who gets a bill for three hours' work for a job which he knows, or feels, should be done in half an hour, is not likely to go back to that shop again, nor to buy another car from the dealer involved if such is the case. In addition he may take the trouble to tell a good many of his friends of his dissatisfaction. The same sort of aftermath is likely in cases of work poorly done or not finished at a certain promised time. Often lack of proper tools is the real cause of the trouble.

Any dealer with a service station or any garageman with a shop which caters to the motor vehicle driving public can add to his immediate profits and insure his business future by providing himself with thoroughly adequate equipment. This is just as essential as competent men and fair charges.

The automotive equipment and machine tool industries have brought out within the past few years many devices which will pay for themselves over and over again in an automotive repair shop. Dealers and garagemen owe it to themselves to learn the profit-making and customer-satisfying possibilities of these machines and tools. They will always find manufacturers' and jobbers' salesmen ready to help them in their quest for information.

Recently a group of automotive shop equipment manufacturers have been advertising the slogan, "the well equipped shop gets the business." Every man in the automotive trade who has any knowledge of maintenance work knows that this is true. Every man in the trade should look over his shop this fall and winter and see to it that, for the class and volume of business he may reasonably expect to get, it is well equipped.

DOUGLAS FAIRBANKS, practicing archery on a New York hotel roof, missed his target and sent an arrow into the shoulder of a business man who happened to be standing by a window in his office half a block away. "Doug" got bigger game than he was shooting at. The clerk or garage boy accommodating a customer who wants a spark plug or a quart of oil may think he needn't bother much about courtesy for such small fry. But the spark plug or oil customer may buy a car or a big repair job next—who knows?

Which would you rather find in your Christmas "stocking," a mirror to shave by or a rear view mirror for your car? We thought that's what you would say. There are hundreds, maybe thousands of men owning cars in your town who would feel just the same way about it. Will some of them get rear view mirrors, and will they be bought from you?

How many people failed to "come again" to your gas pump because you scratched the paint on their fenders with the hose nozzle?

How often do you have to charge a repair customer for a boy's time chasing downtown for a part that you've just run out of? And how many customers who never came back suspected that was one of the reasons their bill was high?

You say you don't like to "pester" customers to buy accessories? Do you "pester" a man when you induce him to provide clear vision in storms by installing an automatic windshield wiper?

In California almost nobody will drive an open car without windshield wings. They have a lot of good ideas out in California.

Dealer Suggests Cost of Business Survey

Thinks It Would Center Attention on Manufacturers Problem of Assuring Retailers Reasonable Expectations of Prosperity

SEVERAL weeks ago a Western automobile dealer, retailing two makes of cars, one medium priced and one low priced, wrote to Motor World urging that manufacturers take a hand in lightening the trade's used car burdens. He advocated elimination of trading from the new car business. Incidentally, he touched on the necessity, as he saw it, of longer retail discounts if capital is going to retain an interest in the automobile business as a good field of investment. This same dealer has written us again, dwelling more at length on the need of a longer discount and urging a survey of the cost of operating an automobile business as a means of attracting factory attention to the dealer's plight. His letter follows:

EDITOR, Motor World:—On the subject of profits in the automobile business, isn't the manufacturer a little inclined to be a hog? He has always insisted on 10 per cent net on gross sales, and most of the prominent ones are doing that this year. A department store rarely ever makes more than six per cent net on gross sales. Automobile dealers rarely ever make more than four per cent net on gross sales.

Now it has been my idea for almost a year that a survey of costs would so open up the whole subject that manufacturers would have their attention distracted from the selfish little world in which they live—and it is little and it is selfish—to some of the real problems that confront them. No set of men ever had a bigger problem to deal with than to keep the automobile retailer prosperous. Why? Because the automobile retailer has the hardest merchandise problem to solve that there is right now.

The automobile dealer has been working on such a very narrow margin from the beginning that his business will not permit any mark down in used cars. Yet there is no merchant who does not mark down some of his goods. To get by without a mark down would be perfection, and there is no such thing as perfection in merchandising, automobiles or anything else. What we want to know is what sort of a mark down must be expected and then stay with it. The department store manager knows that because he knows costs and deals with his problem in an exact way.

Second, any increase in discount possible will not demoralize the situation, because the men who are demoralizing the situation could not succeed on this market if they got 60 per cent discount. The chances are that most of these fellows are so tied up right now that they don't know which way to turn. That is what has happened here to some extent, and I presume the same is true everywhere. It's time to strike for more pay, as the union leader says, but not for the same reason.

The small dealer is an important factor in the industry, and he must succeed or the industry one of these days will be like the old "honker" goose that had his wings clipped and couldn't fly.

As a matter of fact, it's no one's business what I do with my money. Have the manufacturers been such good and perfect business men that they have not wasted millions foolishly? How about the foolish engineering mistakes, the misguided men that have called themselves sales promoters and all of the rest of the procession of misfits that have taken toll from factory executives? Perhaps if the truth were known, the dealer has not been so bad as some would make him out.—Western Dealer.

Write to Motor World About It

This page every week is devoted to discussions of topics of the trade by Motor World readers. Have you a suggestion to overcome a difficulty or improve some condition within the industry? Write to Motor World about it.

The Instrument Board

Editor Motor World:—Permit me to comment on the article, "Too Many Contraptions on the Auto," printed in a recent magazine.

The writer of that article condemns what he calls "the multiplication of instruments on the dash of the current automobile," which he likens to "the control board of a central power station, an overcrowded pawnshop window or an instrument maker's laboratory," and especially ridicules such useful appliances as a clock and an electric cigar lighter.

Isn't this absurd? I don't know what particular aversion that writer has to a clock, but I will venture the opinion that he neither smokes himself nor approves of those who do, when he refers contemptuously to the use of the electric cigar lighter, a device which has been adopted as standard equipment by the manufacturers of many well known cars, and evidently only after satisfying themselves that such a device is necessary to the comfort of the motoring public who smoke.

It is often a genuine hardship to a smoker not to be able to "light up" when he wants to, and I know of some motorists who would rather w-a-l-k than ride in a car without a smoke. Why, then, ridicule the use of this convenient instrument which permits the motorist to avail himself of a quick, sure light that would be impossible by any other method and which at the same time prevents damage, accidents and burns to himself and his car through the use of matches? Rather the use of matches, always a menace while driving, should be condemned.

As for a clock on a motor car, is it not as useful there as anywhere else, and possibly more so? The element of time is quite often as important while motoring as while otherwise engaged, and is frequently very important in enabling the motor car driver to regulate his speed for the purpose of reaching a certain place at a definite time. It is true he may have another timepiece in his pocket, but a clock in plain sight on the instrument board makes it unnecessary for him to remove his hands from the wheel to fish for his watch, the doing of which would encourage accidents and endanger lives.

I believe in instruments on the instrument board, and plenty of them of any kind, so long as they bring added contentment and pleasure to those who use them.

I am sure expressions by other readers would be greatly appreciated.—Anselm B. Hance, Meriden, Conn.

A Winter Business Idea

Editor Motor World:—I plan to keep my men busy during every winter, and last winter, by cultivating the demand for more power on the older model cars I developed, using standard Delco parts, an ignition system that could be used in conjunction with the standard magneto system, thereby giving two sparks to every cylinder.

We sent a letter out to every owner and this brought very gratifying results, inasmuch as it sold not only ignition systems, but the repairing and relining of brakes, grinding of valves, and, in fact, all kinds of repair work that we probably would not have secured had it not been for the interest manifested in this ignition system. The increase in business amounted to thousands of dollars and every owner seemed very well satisfied.—Henry W. Lemay, Service Manager, the Arrow Co., Springfield, Mass.

Repairman Liable for Damage Due to Poor Work

Car Owner Justified in Suing for Compensation When Careless Work Causes Him Loss or Injury

EDITOR Motor World:—Will you tell us just what responsibility we incur if one of our workmen does a job in an improper manner—that is, instead of making a first class job out of some repair work he fails to tighten up something right or puts a machine together wrong so that a car is damaged and the owner of it has to have it repaired again after paying us for the work we have done?—Subscriber, New York, N. Y.

Answer:—Repairmen are under a legal obligation to do their work in a proper and workmanlike manner and if they fail they are responsible for any damages caused by their incompetence or the incompetence or carelessness of their employees.

If a car owner finds that damages are caused to him as a result of improper or careless repair work he is justified in suing the repairman and if he can prove his case he will be allowed a recover of damages to compensate him for his loss.

In a case of this kind a car owner may have no doubt but that an accident is a direct and proximate result of inferior repair work or carelessness oftentimes he is unable to furnish legal proof of that fact as it is a difficult thing to prove.

The principle holds good, however, that when a man offers to do something for hire and then does it in such a negligent manner that loss is caused to the person who paid him he must make good the damages sustained by the person to whom he caused the loss.

If One Dealer Talks About Another

Editor Motor World:—Can you give us some information on the following point? Suppose that one dealer makes remarks about another one? Can the one about whom the remarks are made stop the other dealer from continuing? Suppose the remarks are true? If they are true is that libel? Subscriber, Chicago, Illinois.

Answer.—Libel is always a written defamation. What you have in mind is slander. Whether or not one dealer would be justified in making disparaging remarks about another dealer to his customers would depend to a great extent on the nature of the remarks made, aside from the fact that such a course of conduct is universally considered poor business policy.

If dealer Smith tells his customers that he thinks dealer Brown's car is not nearly as good as his own Brown may have a right to feel aggrieved but as Smith is entitled to have an opinion Brown will probably have no recourse even if Brown's car happens to be better than Smith's.

If on the other hand Smith should tell his customers that Brown is a crook and steals everything that isn't fastened to cars left in his care Brown would have a perfect right to sue Smith for slander and a good chance to recover damages, whether the remarks were true or not and could get a judgment unless Smith were able to show that the remarks were true or if they were not true that he did not act maliciously and had made every proper effort to ascertain the truth.

Even then Smith would have a difficult time and would in all likelihood find himself paying out heavy damages to his competitor before the matter was ended.

Can You?

PERHAPS you are thinking of selling your garage. Can you

1—Be held to an agreement never to engage in the garage business again?

2—Assign your lease without the consent of your landlord?

3—Be held responsible for the loss or damage of customer's car after you have sold out your business?

Or, suppose you sell your garage business and a broker comes along and claims a commission, proving that he sent the purchaser to you. Should you pay him a commission.

Questions like these and many others are answered weekly on this page.

Are there any legal questions you would like answered?

Write to the legal editor.

Should Get Owners' Consent to Repairs

Editor Motor World:—Some time ago a car which had been in a collision was brought in to us to be fixed up. We repaired it but let it go out of our garage before we were paid, as we knew the man it belonged to, and he is financially O.K. and the repairing was ordered by his brother, who we know is in the habit of running the car. Now it seems the owner did not know it was repaired as the accident happened while he was on his vacation and his brother never told him about it or that he had it fixed up. We can't collect from the brother who had the repairs made as he has nothing and we wonder if we can force collection in a case like this from the owner if he gets sore and refuses to pay. A. K. Albany, New York.

Answer.—Of course you lost your right of lien by not getting authority from the owner himself to make the repairs. If as you think the brother on his own responsibility had the repairs made and you had no express authority or implied authority from the owner to do the work he is not legally bound to pay your bill even though he may have benefited by reason of your labor, etc. Morally he perhaps ought to pay but legally he is not bound to do so.

Oil Companies Can Control Rented Pumps

That it is not "unfair trade" for gasoline distributors to compel retailers to sign an agreement that they will use gasoline pumps rented to them for a nominal sum only for the product of such distributors when the pumps bear the distributors trade marks, was the decision of the Circuit Court of Appeals in the recent case of Stand... l Oil Co. vs. Federal Trade Commission, 273 Fed. Rep. pg. 478, 17 L. R. A. 389.

The court held that such practice was not unfair trade either at common law or under the Clayton Act but pointed out that it might tend in the future to develop into a monopoly.

Should Attach Lien

Editor Motor World:—I would like to know what I can do with this car. A party came to my garage about eighteen months ago and had work and supplies to the amount of $223.75.

He asked me the price of regular storage and left his car here and has not paid one cent on the bill. He has never taken the car out of the garage since the car was brought in and the work was done. Can I sell it for the bill and what procedure will I have to follow?—S. G., Durango, Cal.

Answer:—Mechanics have liens for repairs in your State. Let your local attorney collect this bill for you. You need his help.

2,000,000 Year Expected in 1922

MAY EXCEED RECORD ESTABLISHED IN 1920

To Reach That Year This Quarter Must Produce 403,000 Cars and Trucks

NEW YORK, Oct. 15.—The automotive industry has entered the final quarter of the year with assurances that no matter what may happen to retard progress during this period the total production of cars and trucks for the twelve months will surpass the 1921 aggregate and from all indications will forge ahead of the record established in 1920, the banner year in the industry.

What the industry has accomplished in production so far this year is evident from a comparison of the totals for the last two years and for the first three quarters of 1922.

2,276,000 Output in 1920

In 1920 there were produced 2,276,000 cars and trucks of which 1,928,000 were built in the first nine months, the slump which affected all lines of business seriously hitting the industry in the last quarter. The total output in 1921 was 1,668,550 and in the first nine months of 1922, 1,873,000. To reach the production record of 1920 the industry must produce 403,000 cars and trucks in the next three months, which is less than 60,000 under the total of the third quarter of 1920 when the industry was suffering its most severe setback, and only 68,000 more than for the third quarter of last year, which was not an exceptional period.

There is little question but that this figure will be reached and that 1922 will be another 2,000,000 year. Ford, which reduced its total in September through the closing of its plants, has come back with a 5,000 daily production schedule and the majority of other plants are working on high production programs. Reports of parts makers that orders are being placed well in advance indicate the purpose of the car manufacturers to keep output at a high mark.

Pre-Show Season Started

So far, October has shown no signs of more than a slight falling off in sections widely separated. Interest has been sustained until the industry has started on its pre-show season when scattered closed car exhibits are having a stimulating effect on sales.

The problem confronting the industry in Detroit of securing its steel supply, due to the diversion of rail equipment for the shipment of coal, particularly to lake ports, and the transportation of farm produce, will probably be solved by the employment of motor trucks between Pittsburgh, the principal source of supply, and that city. This condition is expected to continue until the closing of lake navigation. The success of the plan will remove one of the chief obstacles in the way of sustaining production at a high figure. Materials are reaching Detroit with only slight interruption, not great enough to prove a serious deterrent.

Light duty trucks continue to gain in demand, due directly to the coal situation and the apportioning of supplies to householders in small quantities. These vehicles are showing a stronger growth than is noticeable in the heavier trucks, which, however, are more than holding their own.

FARMERS IN ALABAMA RETURNING TO NORMAL

BIRMINGHAM, ALA., Oct. 14—Prospects for the sale of automobiles in the country districts of Alabama are looking better every day. Farmers are paying debts that they have owed for the last three years, according to F. O. Hooten, supervisor of this bureau of markets of the State department of agriculture, who recently made a trip through the central section of the State.

This tendency to liquidate debts of long standing is noted throughout the South.

In Chattanooga the bankers are reporting that payrolls, which have been way down, are now near normal and prospects for a good year in every industry are bright.

SWEET NAMED HEAD OF KLAXON COMPANY

NEW YORK, Oct. 16—Alfred P. Sloan, Jr., vice-president in charge of operations of the General Motors Corp., has announced the appointment of William M. Sweet as general manager of the Klaxon Co., with headquarters at Bloomfield, N. J. Sweet, who has been a director and vice-president of the Klaxon Company for several years, relinquished his other duties with General Motors last October to devote his entire attention to Klaxon interests.

Sweet was for years general manager of the Motor and Accessory Manufacturers Association, going from there to United Motors, where he filled a high executive office. When United Motors was taken over by General Motors Sweet went with it as assistant to the then president of the accessory division of G. M. C., A. P. Sloan, Jr.

TRUCKS MAY DELIVER STEEL TO FACTORIES

Railroad Facilities Are Diverted to Coal and Farm Produce Shipments

DETROIT, Oct. 17.—Under the rush of coal shipping to lake ports before the closing of navigation on the lakes and the diversion of rail equipment to the transportation of farm products from western states, service to automobile manufacturing companies in the Detroit district is approaching a point where it may be necessary to employ motor trucks for hauling material to keep factories operating.

The use of trucks up to this time has been limited to the hauling of material around congested transportation centers to points where it may be loaded for delivery either by rail or boat to Detroit. Steel is being hauled out of Pittsburgh by truck to railroad yards where freight cars are available to avoid the delays experienced in getting cars in and out of the immediate Pittsburgh districts.

Embargoes by Railroads

Rail shipments direct from Pittsburgh are requiring 10 days and upward to make the normal three day trip to Detroit.

Embargoes by railroads in the eastern districts and in some sections of the Middle West and South are interfering with both deliveries and shipments to and from automobile factories. For the most part, however, these are intermittent and occasion only temporary delays. It has been necessary at several points to resort to trucks to haul material to points where rail service was still open but factories are avoiding the additional truck costs by waiting wherever possible.

Plants to Go to Limit

Production schedules are being interfered with somewhat by difficulty in obtaining material and departments in some plants have been compelled to close for short periods, owing to holdups. There has been no cessation of operations in any plants, however, due to material shortages and factories will go to any limits necessary to maintain production at a point required by sales.

Traffic and purchasing departments do not look for any relief from the rail difficulties until the coal requirements of the Northwest and other regions served by lake shipping are met. This is expected to require a month or more and until that time, deliveries and shipping schedules will be upset. Driveaways are continuing to be the rule on deliveries within 1000 miles.

CHALMERS EXPANSION LIKELY TO COME NOW

Note Holders Consent to Plan by Which Company Becomes Part of Maxwell

DETROIT, Oct. 12.—The consent of Chalmers note holders to the plan by which the company will become an integral part of the Maxwell Motor Corp. properties, marks the first development in the reorganization movement, President W. R. Wilson of Maxwell said yesterday. Several more weeks will be required to work out the final plans, he said, and when these are complete the company will announce its plan for the development of the Chalmers line.

Production of Chalmers for the past six months has been on a limited scale owing to the determination of Wilson to hold its operations to a basis in keeping with its financial position. This scale of operations was lower than sales requirements and was not extensive enough to meet its financial obligations, though sufficient to meet ordinary operating expenses and yield profit. Under this operating plan the large stock of materials on hand when the plant came under Wilson control has been practically cleared out.

New Models to Be Added

Some time ago Maxwell officials outlined a plan for the operation of Chalmers should their organization arrangements be approved. This was not disclosed but is understood to follow the plan used in the development of Maxwell whereby this car came in for unusual demand and became one of the big money makers of the industry almost over night. This was accomplished largely by the popularity of its models. It is understood a number of new models will be added to the Chalmers line.

The impression that the Chalmers plant in Detroit might be discontinued with the vesting of title rights in the Maxwell organization has been denied on several occasions by executives. Recently a bid was entered by Maxwell for the Chrysler plant at Elizabeth, N. J., and it was regarded as indicating Maxwell's desire to locate an eastern plant for the manufacture of both cars, with the Maxwell plant in Detroit to make both cars for Middle West and Western business. Wilson at that time said Maxwell wanted the Chrysler plant because it was regarded a good buy at a certain figure.

Olds Proportions Output

LANSING, Oct. 14—The Olds Motor Works, as a result of recent price reductions, reports business to be running in excess of production and as a result, is compelled to distribute its output on a proportionate basis among distributors. Demand for cars is reported to be especially brisk on the west coast where good business is expected to develop as the resort season progresses. Two trainloads of cars will be shipped to the Coast as soon as officials feel that this number can be allotted to any one section.

Passenger Car Specifications

READERS will notice that the passenger car specifications in this week's Motor World—pages 95 and 96—occupy two pages instead of one, as formerly. Additional items have been put into the specifications, covering virtually all points of essentiality in the construction and design of the car.

The change was decided upon after the editors had obtained and analyzed the opinions of a great many readers of Motor World. The specifications as they now stand represent the indicated desires of the readers. It is hoped that they will enhance the practical value of this feature of many years' standing in the pages of Motor World.

URGE TIRE DEALERS TO USE CASH BASIS

CHICAGO, Oct. 17—Better times ahead for tire manufacturers in the midwestern group were predicted by W. W. Wuchter, president of the Midwest Rubber Manufacturers Association, at the association's monthly meeting here. He declared that within six months those companies which are able to continue operation will see improved conditions under which they will be able to make money.

The association voted to hold its November meeting in St. Louis, the place to be announced later.

Manufacturers were urged to advise their dealers to operate on a cash basis only by Dr. R. P. Shepard, economist, representing the Chicago Association of Commerce. "The retailer who extends credit to his customers ceases to be a merchant and becomes a banker," he said. "It is not fair for the customers to ask the retailer to loan them a part of his capital. They should borrow the money at the bank and pay cash for their purchases."

MONTREAL CAR SHOW MEETS EXPECTATIONS

MONTREAL, CANADA, Oct. 14—The good judgment of the directors of the Montreal Automobile Trade Association in holding a closed car show at this season of the year was amply vindicated by the complete success attending the display.

The many advantages of the closed car were placed strongly before the public, and the results of the show will be permanent. It was the first closed car exhibit to be held in Montreal. The interest taken in the show by the general public was demonstrated by the continuously substantial attendance.

ELECTRIC SERVICE SURVEY UNDERTAKEN

Aim Is to Show That Members of Association Can Render Best Service

DETROIT, Oct. 11.—The Automotive Electric Service Association is making a complete survey of the extent and resources of this branch of the automotive industry as part of its campaign to place electrical service before the industry in its proper perspective. Questionnaires are being sent to all authorized service agents of all electrical equipment manufacturers from the offices of D. W. Burke, secretary of the association in Detroit which will give the information regarded as necessary to promote the best interests of this service group.

The questionnaire lists the names of the electrical manufacturers represented, number of employees in each department and names of officers, the total investment in buildings equipment, shop tools and fixtures, stock of parts and the gross volume of business in 1920, 1921 and 1922, approximately. The information in the individual questionnaires will be held in confidence, the summary of them all being the only feature which will be laid before the manufacturers.

Say Stocks Can Be Reduced

With the aid of this date it is proposed to present to electrical equipment makers, and through them the car makers, the general capacity for service of the association and to recommend that the electrical requirements of all car dealers throughout the country can be met better through the Electrical Service Association than through the service departments of the car maker. By making use of the facilities of the association members, it will be shown that stocks of electrical parts can be greatly reduced or dispensed with in the automobile factory or the car dealers' room.

Where dealers are equipped to do electrical service work they can obtain their supplies as they need them from the association members, and where this equipment is not available, the association members will be prepared both to furnish parts and make necessary installations and repairs. The possibilities of this service will be especially urged as effective in smaller communities and in overcoming difficulties involved where car dealerships are subject to change.

Association Gains Strength

The Automotive Electric Service Association now includes over 250 members and is rapidly gaining in strength. Practically all of the larger service agents are now included and it is hoped to bring in most of the others before the annual meeting in Chicago, Jan. 29 to 31 inclusive. This will be held in the Florentine room of the Congress and is during the week of the Chicago automobile show. Joint sessions will be hold with the Automotive Electric Association.

FORD CUTS PRICES; PHAETON NOW $298

Reduction Is $50 on Each Model Except Four-Door Sedan and Tractor

NEW YORK, Oct. 17—Ford Motor Co. announced to-day that it has reduced prices on all models, except the new four door sedan and the tractor. The cut is $50 on each model and brings the Ford to the lowest price level in its history.

The following table shows the old and new prices:

	Old Price	New Price	New Price with demountable rims and starter
2-pass. ...	$319	$269	$364
5-pass. ...	348	298	364
Coupe	580	530	530
Sedan ...	645	595	595
Truck	430	380	450

Of the Ford models, only the coupe and the sedan are equipped with demountable rims and self-starter without extra charge.

In 1916 the five-passenger Ford listed at $360 without starter and demountable rims. This stood until 1917, when it was advanced to $365. Another advance to $450 was made February, 1918, and in August, the same year, it went to $525. March, 1920, this model was listed at $575, the peak. From that time on it has been reduced at different times, going to $440 in January, 1921; to $415 in June, 1921; to $355, September, 1921; to $348, January, 1922, and to $298 in October, 1922.

These price reductions, so far as can be learned to-day, will have no effect on others in the low priced field. General Motors was interested, but felt that the Chevrolet is not included among Ford competitors, and no change can be expected in this quarter.

It had been expected that Durant might have something to say as to Star prices, but no statement is forthcoming from that quarter at present. Whether or not Durant will meet the Ford cut has not been settled.

HUPP NOW PRODUCING NEW PHAETON MODEL

DETROIT, Oct. 14—Hupp Motor Car Co. is now in production of a special phaeton model which will embody sport line features and sell at $1,250, f.o.b. Detroit. A roadster of similar type will be started in production in the near future. The car has nickeled radiator, rails, lights, etc., aluminum steps, disk wheels and a genuine Burbank top.

Elgin Continues Operation

CHICAGO, Oct. 13—An involuntary petition in bankruptcy against the Elgin Motor Car Corp. of Argo, Ill., a suburb of Chicago, was filed in Federal court here yesterday by three bank creditors. Fred E. Hummel was appointed receiver.

It is stated that the plant will be continued in operation and that efforts to effect a reorganization will be continued. The petitioners claim the company's liabilities are more than $1,000,000. Counsel for the company asserts that liabilities are only $600,000 and that assets are more than $900,000.

HAWAII ASKS DEALER HELP IN ROAD WORK

LOS ANGELES, Oct. 15—Automotive interests in Hawaii have appealed to the factories, dealers and clubs in the United States to exert their influences in behalf of Hawaii's claims to recognition in the dispensation of Government aid for road building. Hawaii's roads are a commercial asset to the island, not so much from the touring standpoint as in the transportation of produce.

The famous Pali road, which penetrates the pineapple fields and leads from the opposite side of the island to Honolulu, is the most celebrated thoroughfare in the island and thousands of tons are hauled over it annually by truck. There are other roads of equal importance, and the construction and maintenance of these highways is said to be proving too severe a drain on the small percentage of the population that contributes to extension and maintenance.

PRICE FLUCTUATIONS DISTURBING BANKERS

DETROIT, Oct. 17.—Fluctuations in automobile prices are being viewed with considerable disquiet in banking circles according to a factory executive of one of the largest companies in Detroit, and difficulty may be experienced in financing dealer shipments during the fall and winter unless some sort of guarantees are given that further revisions are not contemplated. This condition applies particularly in the East where this executive has been in touch with banking officials.

New prices and new models have practically wiped out used car valuations, he said and many dealers are liquidating used car stocks at prices which must be made up on new car profits. Too little consideration has been given the condition of dealers' stocks in bringing out new models and cutting prices. In no case where price cuts are made, he said, should they exceed the amount of dealer discount leaving always some margin of profit on sales.

Vulcanizer in Receivership

INDIANAPOLIS, Oct. 14—As a result of an action brought by local creditors, the Haywood Tire & Equipment Co. has been thrown into the hands of Victor L. Wright, receiver. The Hayward company has been a considerable factor in the manufacture and sale of vulcanizing outfits.

FORD WILL NOT BUY ADDITIONAL PLANTS

In Interview Also Says He Knows Nothing of Plans for Developing New Car

DETROIT, Oct. 16—Henry Ford denies emphatically, in an interview with AUTOMOTIVE INDUSTRIES, that he proposes to buy any additional plants.

"We've got enough to do now and are not going to buy any more cars or factories. That applies to the Wills car and the Wills plant. Why should we try to get any company out of the field? They all make business for us, and we make business for them."

When asked if he could tell anything about his plans for a new car, Ford said: "What new car? I hadn't heard of any. We can't build enough of the one we are making now. We're trying to get our production up to 5300 a day."

"It is reported, Mr. Ford, that you contemplate some additions to your tractor line."

"We shall make no more tractor models, but will stick to the one we have," he replied.

Answers Road Question

Ford declared his company would use no more aluminum in its products until it produced the metal itself. This may be done at Muscle Shoals, if his offer is accepted by the Government.

In a discussion of highway questions, Ford said:

"The best way to get good roads is to load trucks to their full capacity. When the roads won't stand up under these loads, the people will realize they must build heavier highways to carry the traffic. One of the best ways to kill foolish opposition to spending money for better roads is for a few of the old fogies who are standing out against it to die off. This applies not only to good roads, but to most forward looking projects."

Ford was asked what he expects will happen with the constant increase in the number of motor vehicles in use now that highways in some places seem to be carrying about all they'll hold.

"We'll have to build more roads," he said. "Of course, there will have to be two lines, one for traffic in each direction."

Shoals Fight Not Begun

Ford asserted that he had not yet begun to fight for Muscle Shoals, and he seemed confident that his offer for them will be accepted. If it is, he will use all the power developed and expects to employ one man for every horsepower. There are approximately 1,000,000 in sight. He has not worked out in detail what he will do to utilize the energy developed and says he will be unable to do so until he gets at it.

Ford is intensely interested in the development of water power projects in all parts of the country and will devote much of his attention to this subject in the future.

UNDERWRITERS FIGHT PENNSYLVANIA PLAN

Object to Proposal That Car Owners Take Out Insurance with State

PHILADELPHIA, Oct. 17.—At a meeting held here of the Underwriters Association of the Middle Department attended by nearly 200 representative insurance men and executives, a movement was launched to combat proposed legislation which would make a compulsory State automobile insurance fund and force all motor vehicle owners to purchase their insurance from the State.

While the movement is as yet local it is thought that it may spread to other States as made evident by John T. Hutchinson, secretary of the Insurance Federation of America, coming here from Detroit to throw the weight of the national organization against the proposed legislation.

Hutchinson stated that it was a serious matter for the insurance companies and declared that if this piece of legislation went through it would be the forerunner of others which would be the taking over of fire, life and other insurance lines by the State and eventually the socialization of all business.

According to an editorial read at the meeting, the proposed legislation would permit motor vehicle owners to secure insurance at cost and make it mandatory for all owners to insure in the State fund.

KELLY TIRE 6 MONTHS' EARNINGS, $1,500,000

NEW YORK, Oct. 12—Net profits for the first six months of the year for the Kelly-Springfield Tire Co. are estimated to be in excess of $1,500,000.

The company is producing more than 6000 casings a day. Akron is running at capacity, while Cumberland is operating full with the available force, finding it hard to get skilled tire builders.

NEW YORK REPORTS 5103 REGISTRATIONS

NEW YORK, Oct. 12—The seasonal decline in the metropolitan district is apparent in the registration figures for September as compiled by Sherlock & Arnold, publisher of the Automobile Sales Analysis, for the ten counties in and around New York City. Total registrations for the month were 5103 as compared with 6438 in August and 8494 in July. For the first nine months of the year, registrations aggregated 59,613 as against 39,366 for the same period a year ago.

Four makes lead in the low and medium priced class field, with five falling not far behind and showing sales substantially greater than the remainder of this class. Ten cars in the high priced class are well ahead in the field.

A summary of registrations for the first nine months in the high, medium and low priced classes is as follows:

	High Price	Medium and Low Price
January	283	2016
February	273	2231
March	632	6354
April	862	8428
May	961	8470
June	866	8203
July	678	7816
August	516	5922
September	511	4592

A. E. A. Sticker

A new sales promotion plan being used by the merchandising department of the Automotive Equipment Association is the distribution of attractive and well-worded stickers to manufacturing and jobber members to be pasted on correspondence with dealers. About 400,000 of the first sticker have been distributed

EQUIPMENT MAKERS DRAFT CONSTITUTION

CHICAGO, Oct. 14—A draft of a new constitution and by-laws for the Association of Automotive Equipment Manufacturers has been approved by the Board of Directors and will be submitted to the membership at the annual meeting about Nov. 20. The constitution will provide for complete control of the association by the membership. Provision will be made for divisional meetings in the larger cities, including Boston, New York, Cleveland and St. Louis.

Gordon Lee, chief of the automotive division of the Department of Commerce, has accepted an invitation to address the association Nov. 3 in Chicago.

Correction

In the Sept. 27 issue of Motor World the prices of the Oakland sedan and coupe were unfortunately interchanged. The correct prices are coupe, $1,445; sedan, $1,545. The illustration No. 5 on page 13 of the same issue should have read "Oakland 5 passenger coupe."

RITCHIE WILL HEAD CHICAGO MOTOR BUS

Green to Be Associated with Him—Yellow Cab Subsidiary to Make Vehicles

CHICAGO, Oct. 14—Announcement that motor buses are to be built on an extensive scale by a subsidiary of the Yellow Cab Manufacturing Co., maker of Yellow taxicabs, was made by John Hertz, president of the cab company and also head of a syndicate which recently purchased the Chicago Motor Bus Co. Bus production will start, as soon as manufacturing preparations are completed, on an order of 300 cars for the Chicago bus company. The buses, however, will be sold throughout the United States under a plan similar to that for the widespread sale of Yellow cabs.

Two former officials of the Fifth Avenue Coach Co., of New York, will be in active charge of the Chicago Motorbus Co., under the new ownership, and also will be actively connected with the designing and production of the buses. They are J. A. Ritchie, president, and Col. George A. Green, chief engineer, of the Fifth Avenue company. Ritchie will be president and Green, vice-president of both the Chicago bus company and the manufacturing subsidiary.

A line of single and double deck buses will be built. They probably will be modeled after the Fifth Avenue vehicles. With the completion of manufacturing facilities here it is expected that large scale production will be started.

ANOTHER EQUIPMENT SHOW FOR CHICAGO

CHICAGO, Oct. 16—"There is absolutely no connection between the Association of Automotive Equipment Manufacturers and a privately managed show of automotive equipment, scheduled to be held in the Chicago Armory, the week of Nov. 13," declared George Fritz, manager of the Association of Automotive Equipment Manufacturers, to-day.

The privately managed show is being promoted by Charles P. Hughes, former secretary of committees of the Automotive Equipment Association. Its dates coincide with those of the Automotive Equipment Association's show, exclusively for its members, to be held at the Chicago Coliseum.

Fritz declared that the association of which he is manager has no desire to interfere in any way with the success of the A. E. A. show and will not in any way encourage or participate in the privately managed show.

A. E. A. Exhibitors Number 212

CHICAGO, Oct. 12—Spaces to the number of 265 have been allotted to 212 exhibitors for the annual show of the Automotive Equipment Association, which will be held here Nov. 13 to 18.

WEST EXPERIENCES VARIED CONDITIONS

Prospects in Eastern Nebraska Bright—Texas Outlook Excellent

ST. LOUIS, Oct. 12.—"I have just returned from a four weeks' trip through sections of the West and Southwest, and I never felt quite so enthusiastic as I do right now," said N. E. McDarby, advertising manager of the Moon Motor Car Co., discussing the business outlook.

In Kansas City McDarby found conditions fairly good in the automotive industry — "exceptionally good for some lines," he said. He found crop conditions splendid throughout Kansas and predicts that dealers in small towns should enjoy wonderful business this fall.

Conditions were somewhat different in Omaha. Only one or two lines were enjoying good business. That was before the settlement of the coal and railway strikes and he has been informed since that considerable improvement has become apparent.

In Lincoln, Neb., conditions were exceptionally good. "Eastern Nebraska," he said, "from all appearances is in for wonderful business this fall. Crops are fine. The farmers are going to make some money and they are going to buy automobiles. They certainly need them —they haven't gotten a new automobile for practically two or three years, and if they don't secure new transportation equipment soon, they will have to go back to walking."

Conditions in western Nebraska, around Hastings, were not so good. Crops are not good and have not been good for two or three years, and there is not going to be much surplus money.

Business was going along nicely in Denver for dealers handling a good product and properly financed.

The outlook in Texas was excellent. The majority of dealers were said to be clamoring for cars, many being far behind with deliveries. Closed cars were not as much in demand there as in northern States. Business was good in New Orleans. Memphis, hard hit by the depression of 1920, started to come back a few weeks ago, but then the price of cotton declined and prospects are not now so bright.

Pan Motor Receivers

ST. CLOUD, MINN., Oct. 16—Edward E. Clark and R. E. Gale have been appointed receivers for the Pan Motor Co., following the filing of a suit for $30,000 against the concern. Assets, apart from deferred capital stock and good will, are given as $2,633,385, with liabilities of $506,061.

Harroun Bankrupt

DETROIT, Oct. 16—The Harroun Motor Car Co. of Wayne, Mich., has been adjudged bankrupt by Judge Little in the Federal Court. Although the creditors petitioned to have the concern declared bankrupt some years ago, court proceedings have been delayed until now because the directors believed that they could put the concern on its feet if granted time.

SHOP KEEPERS OBJECT TO PARALLEL PARKING

BERKELEY, CAL., Oct. 14—Ten days' trial of parallel parking in the business district of the city of 65,000 inhabitants brought so many protests from virtually all the merchants along the main business streets that it has been abandoned and diagonal parking substituted. The merchants stated that parallel parking virtually closed the streets to women coming in their cars to do shopping from 9 a. m. to 5 p. m. every day, and that their businesses would be ruined if the rule was maintained.

EDITORS OF BUSINESS PAPERS HOLD MEETING

NEW YORK, Oct. 16—The National Conference of Business Paper Editors has held its annual meeting in this city in a joint session with the Associated Business Papers. Both organizations are national in scope and include in their membership all of the prominent business papers, among them Motor World.

The convention attracted international attention, England sending over five of her publishers and editors who were guests of the A. B. P. The visitors included F. E. Hamer of Benn Bros. Ltd., London; R. Child Bayley of Iliffe & Sons, Ltd., London; Roland E. Dangerfield of Temple Press, London; Alfred Dawson of Percival Marshall & Co., London and James Selkirk Allan of *Engineering*, of London.

At the banquet of the A. B. P., international friendship was cemented when congratulatory letters were read from A. J. Balfour, Lord Riddle and half a dozen other British publishers.

Neal G. Adair, editor of Motor World was elected a member of the executive board of the National Conference.

KELLY TRUCK OUTPUT WILL BE INCREASED

SPRINGFIELD, OHIO, Oct. 17—Production is to be increased at the plant of the Kelly-Springfield Motor Truck Co. The average lately has been 50 motor trucks a month.

T. J. Saunders, branch manager of Kelly-Springfield at Kansas City, has been conferring with factory representatives. Prospects are good in his section, Saunders stated.

During the past few days the average driveaways have been about 35 trucks a day, it is stated by representatives of the International Harvester Co.

ALL DURANT PRODUCTS ON DISPLAY TOGETHER

A. H. Sarver, Formerly of Scripps, Named Michigan Distributor for Star

DETROIT, Oct. 14—The first showing of Star cars in Detroit was made this week by the Star Motor Co. of Michigan, together with Durant fours, and sixes, Locomobile and the Mason light truck, the event marking the first complete showing of Durant products anywhere. Notices issued by Durant officials calls attention to the record Durant has made in the assemblage of such a complete line in 18 months.

In connection with the showing of Stars, announcement was made of the selection of A. H. Sarver, former president of the Scripps-Booth Corp. of Michigan, as general manager of the Star Motor Co. of Michigan, which takes over the distribution of this car in this State. Sarver also is a director of the Durant Motor Co., Inc.

The Star headquarters in Detroit are on Grand Boulevard, two blocks west of General Motors building and facing the Henry Ford hospital. There is a commodious sales room facing on two streets, and two floors of offices. Distribution territory will be opened in the State as rapidly as production can be obtained.

Under the Durant plan of merchandising, the Star will be handled in conjunction with the other Durant products and in most cases, dealers will represent the entire line.

BARNUM BECOMES NEW PRESIDENT OF MERCER

TRENTON, N. J., Oct. 14—A change in the personnel of the Mercer Motors Co. was made at a directors' meeting by which R. W. Barnum has been made president, succeeding George P. Smith, who becomes chairman of the board. W. A. Smith, elected acting vice-president at a previous meeting, becomes the permanent vice-president and will continue as general sales manager. D. F. Fogg, formerly assistant secretary, has been elected secretary-treasurer. R. W. Barnum and W. A. Smith also have been elected directors.

Under the new order Barnum will look after production and finance, and W. A. Smith will handle sales. Barnum, for several years has been at the head of the Mercer's body plant at New Haven, while Smith has been in the Mercer service for the past 12 years.

Starts Salesmanship Course

SYRACUSE, Oct. 16—The Overland-Knight Motors of this city has established an automobile salesmanship course at its place of business, in charge of C. S. Culp.

The registration at the opening exceeded the limit set by the company. The course is free.

CHANGES IN THE TRADE

Stewart Motor Co., Ogden, Utah, has secured the agency for the Star.

Motor Sales Corp., Birmingham, Ala., has acquired the Hupmobile franchise.

Hoffman Brothers, Hartford, Conn., have taken on the Gray for that section of the state.

Krisor Bros. Garage, Kenosha, Wis., has been appointed local dealer in the Durant and Star.

A. P. Sullivan & Co. will be the distributor for the Peerless car in the Houston, Texas, territory.

Hipp Chevrolet Co. has been organized at Charlotte, N. C., to handle Chevrolet cars and trucks in that territory.

L. A. Bell, Jr., has joined the sales force of the **Courier Motors Co.** of Sandusky and will travel in the south for Courier.

R. A. Brower has been appointed sales manager for the Covey-Ballard Motor Co., Salt Lake City, distributor of the Ford and Lincoln cars.

Union Motor Company has been organized at Monroe, N. C., by **Philo Alcott** and **R. B. Redwine, Jr.**, to handle Studebaker and Dodge Brothers cars.

A. M. Harger has been appointed sales manager of the **Frint Motor Car Co.**, Milwaukee, distributor of the Oldsmobile in Wisconsin and Upper Michigan.

Fletcher Motor Sales Co. has been organized at East St. Louis, Ill., by **Harry Fletcher** to distribute the Star and Durant cars in the Madison County territory.

Galbraith Motor Co., Rock Island, Ill., has been appointed agents for the Oldsmobile in Rock Island, Mercer and Henry counties, Illinois, and Scott County, Iowa.

Moon Motor Sales Co., Madison, Wis., has been organized by **A. G. Brandel, C. H. Pierce** and **W. H. Ryde** to deal in the Moon. **A. L. Kvanig** has been appointed sales manager.

Richard Horn has resigned as district sales representative at Portland for the Cleveland **Tractor Co.** to represent **Bear Tractors, Inc.**, as district sales manager on the Pacific Coast.

Charles Bohrman, sales manager of the **Badger State Motors Corp.**, Milwaukee, has resigned to become associated with the **Wm. F. Sims Motor Co.**, Milwaukee, distributor of the Lincoln.

C. E. Booze, Jr., Port Arthur, Texas, has been appointed Jordan dealer and distributor in Orange and Jefferson counties. Headquarters are maintained at Port Arthur with branch houses at Beaumont and Orange.

Alfred B. Brady and **W. C.** and **L. O'Dell**, all of Salisbury, N. C., have organized and incorporated the O'Dell Auto Equipment Co., to carry on a business at Salisbury as accessory and equipment dealers.

P. H. Palmer Co. has been organized and incorporated at Jacksonville, Fla., and will establish a business as automobile accessory dealers. **P. H. Palmer** of Jacksonville is president and **F. C. Dey** secretary.

Howard Thielen, for years auditor of the Apperson branch in Philadelphia, has been promoted to the position of manager of the Apperson factory branch for the State of Vermont, with headquarters at Burlington.

Texas Chevrolet Co., Dallas, has appointed two new dealers. They are **Rose Motor Co.**, distributor of the Chandler, and **Superior Chevrolet Co.**, headed by **Ray Sheldon** and **W. M. Perry**, both experienced automobile men.

W. T. Jennings, recently of the **Jennings-Sullivan Tire & Rubber Co.**, East St. Louis, has been appointed distributor for Illinois and Missouri by the **National Body Corp.** of Cincinnati. He will shortly open a sales agency in East St. Louis.

James R. Findlater, vice-president and Pacific Coast manager of Earl Motors, has been compelled to take an indefinite leave of absence to secure a much-needed rest and regain his health, and has severed all connections with business activities.

Howard D. Graves, formerly of **Taber Rodgers, Inc.**, Hartford, Conn., has joined the firm of **Russell P. Taber, Inc.**, Reo and Peerless distributor, and will devote his time to Peerless. Graves has also acquired an interest in the Taber organization.

Miller Motor Co. has been formed in Dallas to distribute the Peerless. **Byron Miller** is president and **C. C. Tippins** is vice-president and general manager. Salesmen will be employed immediately and arrangements made for agents in various towns of the territory.

B. W. Burkle, formerly of the **Welty Buick Co.**, and **H. J. Hoffman** have purchased the **Wheeling Nash Co.**, Wheeling, W. Va. **W. E. Earle**, formerly in charge of the branch, resumes his duties as district manager for the **Nash Motors Co.**, with headquarters in Wheeling.

Otis R. Cook, vice-president and general sales director of the **Howe Rubber Corp.** announces that **Harry Hayden's** connection with the company as advertising manager has been severed. All advertising matters in future will be cared for by **F. M. Griffin**, Cleveland.

Onondaga Auto Supply Co. of Syracuse has established a branch store at Watertown to care for its northern New York trade. **Fred Heald** has been appointed manager of the branch, which will be formally opened Oct. 14. The firm deals exclusively in wholesale accessories.

Blanchard-Wing Co. has been organized and incorporated in Atlanta as wholesalers in the southeastern territory of automobile accessories. **F. R. Wing** and **A. A. Hall**, both of whom have been in the accessory business in Atlanta several years, are the incorporators.

San Juan Auto Storage Co. has been organized and incorporated at San Juan, Fla., and in addition to operating a large garage will handle power farming machinery and automobile parts. Incorporators are **L. B. Fort**, who is named president, **W. D. Rogers** and **George Fields.**

Signal Truck Corp. has opened a direct factory branch in Indianapolis under the management of **J. T. Crossland**, who has served as district manager for a long time. Complete sales and service equipment has been installed to care for the increased business in that territory.

George W. Noble, a veteran in the distributor and dealer trade of Wisconsin, has become associated with the **Downer Garage & Sales Co.**, Milwaukee, as manager of sales of the H. C. S. division, the Downer company being distributor of the H. C. S. in Wisconsin and Upper Michigan.

Strickland & Rodgers, Inc., have been appointed Brooklyn distributors of Franklin cars. The new concern will operate directly under factory supervision instead of under a New York corporation. Rodgers was branch manager of the Brooklyn Franklin agency when it was under control of Glen Tisdale.

Modern Tire Co., Houston, Texas, has added a line of batteries to its business. The company is discontinuing its battery road service and will extend its efforts to maintaining the road service for tires in this section of the state. The battery and battery charging department is in charge of **M. J. Pottinger.**

Harry L. Olive Co. of Spokane, Wash., is being formed by **Harry L. Olive** to take over the Willys-Knight and Overland. A large staff of department heads, salesmen and mechanics has been engaged. Olive introduced the Willys-Knight and Overland lines in that region eleven years ago and sold out to the factory in 1916.

Charles B. Dunbar of Milwaukee has been appointed manager of tire sales of the Milwaukee branch of the **Brunswick-Balke-Collender Co.** He formerly was branch manager of the **Ajax Tire & Rubber Co.** and more recently general manager of the United Consumers Corp., dealing in automotive equipment, supplies, etc.

William W. Lewis, after serving for five years as assistant general sales manager of an automobile manufacturing company, has been appointed central district manager for Cadillac Motor Car Co. Previous to his work as assistant general sales manager Lewis was identified for six years in field work, most of the time as district manager.

G. G. Gardner has been awarded the Star and Durant distribution for Oshkosh and Winnebago counties in Wisconsin. Headquarter salesroom has been opened in Oshkosh under the name **Standard Motor Sales Co.** Branch salesrooms will be established in Neenah and Appleton. Gardner was formerly a salesman for the Beckly-Ralston Co., Chicago, and is well known to the trade.

Warren-Given, Inc., Minneapolis and St. Paul, among the oldest electric car distributors in the Northwest, has been granted an associate franchise for the Buick in those two cities. They will continue to distribute Rauch & Lang electrics and Milburn electrics in addition to the Buick. **H. N. Gilman** operates as branch manager for the company in Minneapolis, while **H. E. Warren** and **H. F. Given** are actively in charge of the St. Paul organization.

Peerless Motor Car Co., in addition to opening two direct factory branches, one in Washington, D. C., and the other in Detroit, has appointed the following distributors: **Lifsey Smith Hill Co.**, Atlanta; **Miller Motor Car Co.**, Dallas; **Colorado Motor Sales Co.**, Denver; **A. P. Sullivan & Co.**, Houston; **Robbinson Motor Co.**, Jacksonville, Fla.; **Harold Johnson**, Louisville; **Greenville Peerless Co.**, Greenville, S. C. and **Ledoux Jannings, Ltd.**, of Montreal.

Rickenbacker-Philadelphia Co., distributer of Rickenbacker cars in Philadelphia, has purchased the Winton factory branch in that city and become distributor for the Winton in addition to the Rickenbacker. This is the first time the Winton has been represented in this territory by a distributor, the factory having maintained a branch here, only. The officers of the Philadelphia-Rickenbacker Co., are: **C. H. Steer**, president; **Bob R. Ramey**, vice-president, and **William F. Steer**, secretary and treasurer. Ramey will continue as manager of sales for the Rickenbacker line and **George R. Eastburn**, formerly manager of the Winton branch, will be in charge of the Winton department of the business.

ASSOCIATION ACTIVITIES

Goldman Elected in Houston

Houston, Tex., Oct. 17.—H. H. Goldman of the Mosehart-Keller Auto Co., was elected president of the Houston Automotive Trades Association at the annual meeting. The organization is composed of the various local associations. Vice-presidents were named from the different associations as follows: Frank Bradley, dealers, first vice-president; William H. Still, electrical, second vice-president; T. C. Morrow, repairmen, third vice-president, and J. H. Glass, tires and accessories, fourth vice-president. J. H. Shelor was elected treasurer. The board of directors follows: R. E. Houser, E. P. Maynard, Thomas A. P. Pendarvis, W. N. Kuntz and C. W. Manford. F. W. Mozart was chosen secretary-manager.

In his inaugural address President Goldman said co-operation would be the keynote of the association's activities for the next year, and that that meant co-operation with each other and with automobile owners.

One of the features of the work for the coming year will be that of the publicity department. This department, the new president said, will endeavor to tell the car owners how to care for their cars and tires.

Service Managers Meeting

NEW YORK, Oct. 16—The National Automobile Chamber of Commerce has practically completed arrangements for the semi-annual convention of factory service managers. Tentative dates of Nov. 14 and 15 have been set and the place selected is Chicago. The first day of the convention will be given over to discussions and papers concerning factory service problems. The second day will be devoted entirely to the subject of service associations, a phase of service in which the N. A. C. C. has taken much interest. An invitation has been extended to all service and trade associations to send delegates. The detailed program will be completed in a week or two.

Salesmanagers' Body Begins Work

PHILADELPHIA, Oct. 14.—Representatives of the N. A. D. A. have conferred with Charles C. Bulkley, secretary of the Salesmanagers' Division of the Philadelphia Automobile Trade Association on the aim and objects of the new organization. It was explained to the visitors that one of the first functions that the division contemplates is strict co-operation with the local association's used car plans, which have been so improved that, if adhered to, it is believed will solve this problem of the trade in the Quaker City.

At a meeting of the division, which included the representatives of about half the dealers in the city, it was decided to compile complete records of all employees of dealers represented in the division and to keep these records on file at the office of the trade association for any dealer desiring information regarding an applicant for employment. A questionnaire will be sent out immediately to the dealers, asking for this information, showing what position the employee holds, how long he has been with them and any other data concerning him. This information also will be filed in the bureau.

A representative of the salesmanagers last week addressed the Wilmington Automobile Dealers Trade Association, explaining the used car plan and the objects of the Salesmanagers' Division. Plans are under way for a representative of the Philadelphia Automobile Trade Association to visit the automobile trade associations throughout the State to enlist their interest and support in the used car plan so that it may be made 100 per cent operative throughout the Philadelphia territory.

Service Men See Films

NEW YORK, Oct. 14—The October meeting of the Automotive Service Association of New York was held in the large auditorium of the Automobile Club of American and over one hundred attended, this being one of the largest meetings in the history of the organization.

The Paige-Detroit dealer film and the "Shop Profits" film of the Automotive Equipment Association were shown. The latter film has the Black & Decker addition, which added considerably to the value of the showing. J. Howard Pile, Technical Editor of Motor World, gave a short talk on the subject of shop profits to introduce the film. After the pictures were shown short addresses were made by Alfred Reeves, general manager of the National Automobile Chamber of Commerce; G. W. Brogan of the Black & Decker Manufacturing Co., Ralph C. Rognon and J. Willard Lord.

Springfield Hears Shaw

Springfield, Ill., Oct. 16.—Springfield Automobile Dealers' Association at the October meeting heard L. M. Shaw, St. Louis, assistant general manager of the National Automobile Dealers' Association, discuss trade conditions. Sales methods, relationship between buyer and seller and the general association program were topics. It was a largely attended meeting.

Battle Creek, Mich.....Oct. 23-28

RACES

Los Angeles.....Nov. 30

San Diego.....January

LAST QUARTER BEST IN NASH PRODUCTION

KENOSHA, WIS., Oct. 14—Last quarter's production of Nash automobiles was the largest of any quarter in the history of the Nash Motors Co., it was announced here by C. B. Voorhis, vice-president and director of sales. Indications are that the production this month will be the largest of any October in the company's history, Voorhis said. The output is running between 192 and 200 sixes and fours daily.

Sales are continuing good, Voorhis said, with the farm districts buying in greater quantity than he had expected. The demand for closed models is increasing rapidly, and the company is doubling the capacity of its body plant in Milwaukee, where closed bodies are made.

New Stutz Financing

NEW YORK, Oct. 16—New financing of the Stutz Motor Car Co. of America, Inc., is proposed to furnish money for a campaign of development and improvement in the company's business. In order to secure the new capital, a meeting of stockholders has been called for Nov. 1 to authorize an issue of $1,500,000 face value of the 15 year 7½ per cent convertible sinking fund gold debenture bonds of the company, of which it is intended to issue $1,000,000 face value at present.

BUSINESS IN TRUCKS SHOWS GAIN IN OHIO

COLUMBUS, Oct. 16—There is a decided improvement in the demand for commercial vehicles and motor trucks in Columbus and central Ohio territory. Dealers in all sizes of trucks report a good increase in the number of inquiries and sales, and apparently the slump is now a thing of the past. This applies more particularly to the light delivery wagon, which is selling extremely well.

The heavier trucks, those ranging from 3 to 5 tons, are also in better demand, despite the fact that retail coal business is unsettled. Dealers are not selling coal to speak of, although it is the time of the year for such business, and even if their motor equipment needs replacing, they are not inclined to come into the market until the public shows a disposition to place orders for coal deliveries.

ROUGE PLANT MAKES MOST FORD BODIES

DETROIT, Oct. 18—The Ford Motor Co. now is building all of its bodies for models on which it has the heaviest production and sale at the River Rouge plant. With the termination of contracts with the O. J. Beaudette Co., Pontiac, Mich., which formerly built roadster bodies, the Rouge plant now is building 800 of these daily. The Beaudette plant recently has been taken over by the Fisher Body Co.

Phaeton bodies and the all-steel two-door sedan bodies of the conventional Ford sedan also are being built at the River Rouge, exclusively. The phaeton body production has run as high as 3015 daily and averages about 2550. Sedan body production at the Rouge plant approximates 900 daily.

Bodies for the Ford coupe and for the new Ford four-door sedan are being made by the Briggs Manufacturing Co., these being the only bodies not built by the company itself. Production of these is lower than on the other models and rounds out the daily schedule of approximately 5000 cars daily which the Ford Motor Co. has been maintaining.

Chandler Has What Dealers Want

DEALERS know what sells cars—and what cars sell.

No dealer anywhere needs to be told the reasons for Chandler Six success this year.

If a dealer can make a profit selling cars of restricted appeal, what couldn't such a dealer do with Chandler Six?

How do you know your territory is permanently closed? Find out.

$1495 TO $2375

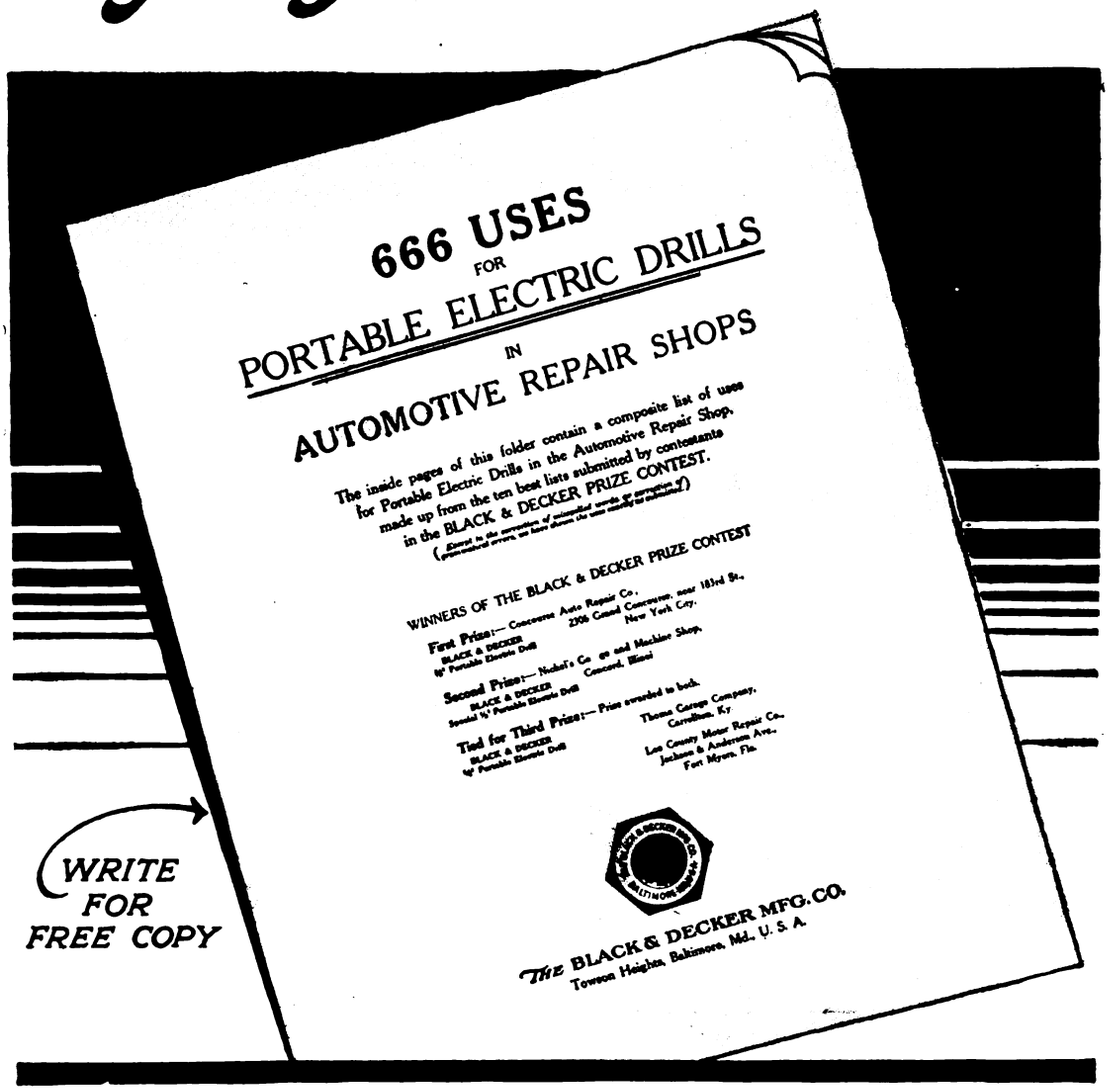
Dependable
Champions
For Every Engine Everywhere

The average car owner gets a lot of satisfaction out of the appearance and completeness of his car, and he is glad to have suggestions that will add to his comfort and pleasure. He wants you to suggest equipment that will save him time and trouble. When a motorist stops at your gas pump, or comes into your store or garage, the profit on the goods he asks for is already made, and he is a live prospect for any automobile equipment that is not on his car.

Through suggestion, you can induce many customers to leave a profit of several extra dollars' worth of other things instead of only 25 cents profit on five gallons of gasoline. CHAMPIONS are the equipment that every automobile must have, because no engine can run long without dependable spark plugs. Every motorist who has had to travel any distance with a "missing" cylinder or take out a spark plug and clean it while on the road, will welcome your suggestion that he put a couple of extra CHAMPIONS in his tool box.

The object of the "ASK 'EM TO BUY" campaign is to make it easy for all your customers to buy what they need in reliable auto equipment. In other words, it means SELLING THEM WHAT THEY NEED AS WELL AS WHAT THEY COME TO BUY. This is easily done, with little extra effort, by practical suggestions to every car driver.

Now is the time to suggest CHAMPION PRIMING PLUGS to your Ford and Fordson customers and those who have Farm and Stationary Engines, for with these plugs, starting a cold motor is positive because the gasoline must go right where the spark is—at the firing point—and less gas is needed.



Sudden changes in temperature, damp or cold weather will cause you no delay after you have your engine equipped with CHAMPION PRIMING PLUGS.

"ASK 'EM TO BUY" *Full Sets.*

Pick 'Em Up Bodily

You Can Do It With HOLMES AUTO WRECKER

Stretch the cable from one boom across the road to a tree or post. Lower the telescoping feet. Hook on and lift your wreck onto the road. No need to drag it, further injuring it.

There's no strain on the service car.

There are two big reasons for using the Holmes Auto Wrecker. You do the work more easily, neatly and thoroughly. You don't have to pay such high depreciation on your equipment.

When you get your wreck on the road, hook the Holmes V tow-bar on anywhere (it's adjustable) and you can take it away at high speed in safety.

There's a remarkable profit in such work as this. We'll gladly tell you how to get it. Send now for our illustrated literature.

Holmes equipment can now be purchased through jobbers. Ask yours for complete details.

He's Got the Ball! Get Right After Him!

Digitized by Google

The Time to Plan for Winter Business and Profits Is— NOW!

Let's Prepare NOW to Avert a Winter Slump by Planning to Sell Automotive Transportation As a Winter Necessity

INSIDE the plate glass front of a large New York store demonstrators are showing the advantages of a new idea in winter overcoat design. The popular periodicals are carrying the advertisements of furnace makers, electrical heating devices, etc. The last issue of Motor World carried Christmas advertisements.

Is the merchant who sells automotive products going to wait until the snow plows are scurrying through his community before getting his selling plans into shape to make a winter appeal?

Whether the coming winter returns a profit will depend as much upon how the dealer thinks and plans now as it will on how he works after snow begins to fly. *This is winter planning time.*

FOR the motor car dealer it means getting enough sales at the front door and enough repair work at the back door to insure a return on his effort and his investment. It means checking up each department to detect leaks and reduce overhead to a figure favorably proportionate to earnings. For many dealers it means either getting more business or cutting down operating cost.

Most dealers are planning NOW to increase selling pressure this winter by making it aggressive and timely —by fitting their products and their service into the winter thoughts of the public. This is the most healthful way to minimize the downward winter trend of automotive business because it preserves the organization and keeps it fit for early application of the big spring selling effort.

Winter Business an Established Fact

Winter business is an established fact to-day among the more progressive dealers, jobbers and garagemen. They have hitched their winter selling efforts to the idea that *motor transportation is a definite winter need* and have worked out means of helping to supply that need. Dealers, jobbers and garagemen in many parts of the country, during the last two or three winters, have been selling cars and trucks and accessories and service as winter necessities.

They have used the spare moments that the winter lull has produced to check carefully back over the prospect lists, discard the dead wood, revive those that give promise of spring purchases and keep up the contact with them over the winter period. They have used the winter months to establish strong contact with their owners either through service inspection or salesmen's calls and have used this contact to get new winter and spring prospects.

The big thought that aggressive dealers have gotten out of their winter selling efforts of the past two or three years is that *winter is a time for increased rather than decreased application and work and that there are profits to be made in winter and important preparations to be made for spring selling.*

Winter offers particularly good opportunities for timely selling efforts.

For instance. The fall hunting season is just swinging into activity. A display of the car in a hunting scene will be particularly timely and attractive. Such a display may be as elaborate or as simple as the dealer desires. A very simple display consists of placing the car in the window, covering the floor and walls, or screens, behind the car with autumn foliage and placing a small tent at one side. A camp fire, made by burning the ends of several sticks and placing them on the floor in cone shape with a red electric bulb throwing its light through them, may be shown in the foreground. A couple of guns leaning against the tent or the car, a hunting jacket hung on a tent rope and a few other hunting articles on the running board of the car or near the tent will complete the picture.

A more elaborate application of the hunting idea in automobile display is made by dressing the floor salesmen each day in hunting togs and having them spend some time in the window reading, cleaning the shooting irons or doing some other thing that makes them a part of the picture.

Among the other opportunities for timely display offered during the next few weeks is Thanksgiving. A rustic background can be used in these displays also, and in the car may be a few figures dressed in winter togs. A sign, "To Grandma's for Thanksgiving Dinner," might be used.

Make the Winter Effort Timely

It is not the purpose of this article to suggest particular window displays for this fall so much as it is to urge that something be done to get the timely appeal working—to make the motor car salesroom stand out and tell a seasonable selling message during the fall and winter months. Such displays must not be judged by the actual sales of cars directly traceable to them—these may be few. The value of them lies in the impressions that they make—impressions that will imprint the dealer's name and his product on the public mind. And, maybe the memory of your Thanksgiving window will bring a man into the salesroom next spring, a brand new buyer with no trade-in dangling after him. Who knows?

Another idea that has been particularly successful at

Digitized by Google

this time of the year lining up work for the service station is the winter inspection. Some dealers are announcing now that they will inspect, free, every car of the make they sell in their towns. Owners are urged to call, phone or write for inspection appointments. As contacts are made and cars inspected the owner is given a report with specific recommendation concerning the repairs that are needed to put the car in shape for satisfactory winter operation.

This is the time the accessory merchant must begin to get a winter appeal into his selling, also. In this the accessory merchant is particularly fortunate because a large number of the items on his shelves to-day—items that he has sold in good quantities through the spring and summer—may be sold with a winter appeal.

Nearly all accessories are built to enhance the comfort, safety or convenience of motor transportation. Comfort, safety and convenience are the things that make winter motoring pleasant. The item that provides comfort or safety for summer driving very often does the same thing for winter driving—but some dealers have not recognized the fact that *they can sell more accessories as winter necessities if they will but offer them to the public as such.* It merely is a matter of presenting the product with a timely, seasonal appeal.

In order to present certain items of equipment this winter as winter necessities some dealers are selecting a group of articles that are particularly useful in winter driving and featuring these in displays, advertising, etc.

One idea that has sold many thousands of dollars worth of equipment is that of placing a table in the middle of the store floor, a few feet inside the door, upon which is displayed one or more winter necessities. One or more of the same items used in the table display are featured in display windows. The windows and tables make the suggestion to the motorist and at the same time make it easy for them to buy.

Now Is the Time to Plan Winter Selling

Besides the things that the dealer and the garageman must do to get more winter business now, there is planning for future selling efforts to be done.

The car dealer, if he has not already done so, can use his time advantageously now in planning and writing his mid-winter advertisements, Christmas letters and cards to owners and prospects, his holiday window displays and possibly the details of his winter sales contest.

These are busy planning days for the accessory and tire dealer. He should be thinking of his advertising, letters and displays to present automotive equipment as Christmas gift suggestions, checking up with his jobber salesmen on the equipment that will sell this Christmas and placing his orders, printing of Christmas cards, letters, etc., getting quotations on wrapping paper, ribbon, etc., for Christmas sales and the planning of all special merchandising efforts for the winter months.

Let's discard the idea now, to-day, that winter is a time when business must just naturally sleep and salesmen can do nothing more helpful than hang around the salesroom and swap yarns.

Let's discard the idea now that selling effort is useless in winter because the amount of business to be gotten is not enough to warrant a heavy expenditure of time and effort. Every winter more and more automobiles are being depended upon for business and recreational transportation. Every winter automobile and truck owners are demanding and getting better work in their communities in keeping the highways open for all winter travel. Every winter more and more cars and more and more equipment for them are being sold.

Winter is full of opportunities.

Opportunities for studying, planning and perfecting merchandising activities.

Opportunities for observing and improving one's organization and methods.

Opportunities for canvassing and soliciting owners and calling on spring prospects.

Making the Fall Display Timely

This window display recently made by the Eldridge-Buick Co., Seattle, is a fine example of how car dealers may make a striking and timely display and with a very small expense. Autumn foliage may be used for the background and a figure dressed in a hunting costume often may be borrowed from a local dry goods or sporting goods store

Opportunities for seeking out and seizing winter business and profits.

Opportunities for doing many of the detail jobs that have been neglected or glossed over in the rush of spring and fall business or in the short handed summer period when vacations and week-end absences cut the man power and shorten the time that can be devoted to detail efforts.

Winter is a time when catalogs may be carefully read and used for the valuable information they contain. It is a time when the trade papers, carrying the stories of the developments in automotive merchandising and successful ideas of others, may be given a definite place in the reading of the dealer during the long evenings. It is a time when the advertising in them may be profitably studied for suggestions that will make profitable items for the dealer to sell and equipment for his shop.

The progressive merchants do not hibernate in winter—they study, and plan and sell—they WORK.

Let's begin now to plan to make this winter yield more business and more profits than any previous winter and prepare for an early, aggressive, efficient spring selling campaign.

A Registration Plan That Gets Electrical Service Business

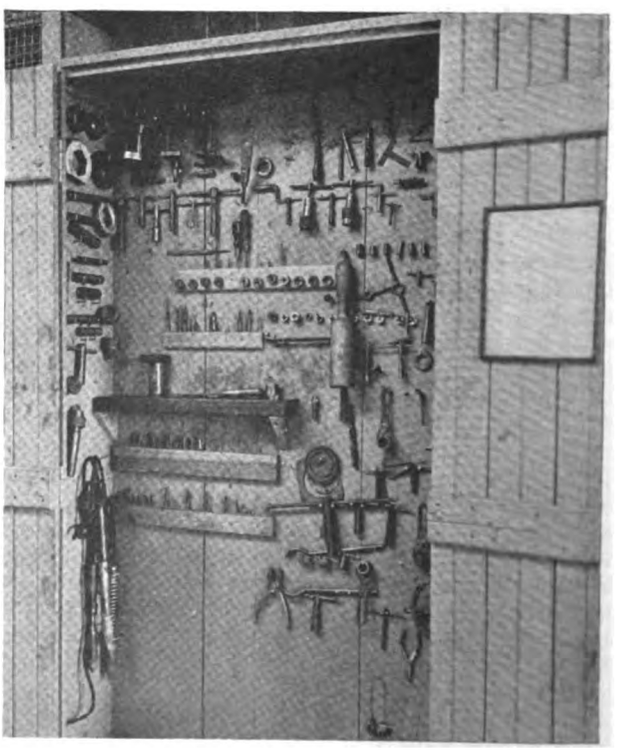
How a New Jersey Station Insures Contact with Owners of Cars Carrying Its Equipment Through Authorized Dealers

By DONALD D. BLANCHARD

IT is stated in the guarantee of every car manufacturer that he is not responsible for equipment and accessories not of his own manufacture, inasmuch as they are guaranteed individually by their makers. The electrical system is included in this category.

The manufacturers of electrical equipment stand back of their products through authorized service stations. For their own protection, however, most manufacturers make a proviso in their guarantee that the equipment must be registered with the authorized service station within five days of delivery of the new car to its purchaser.

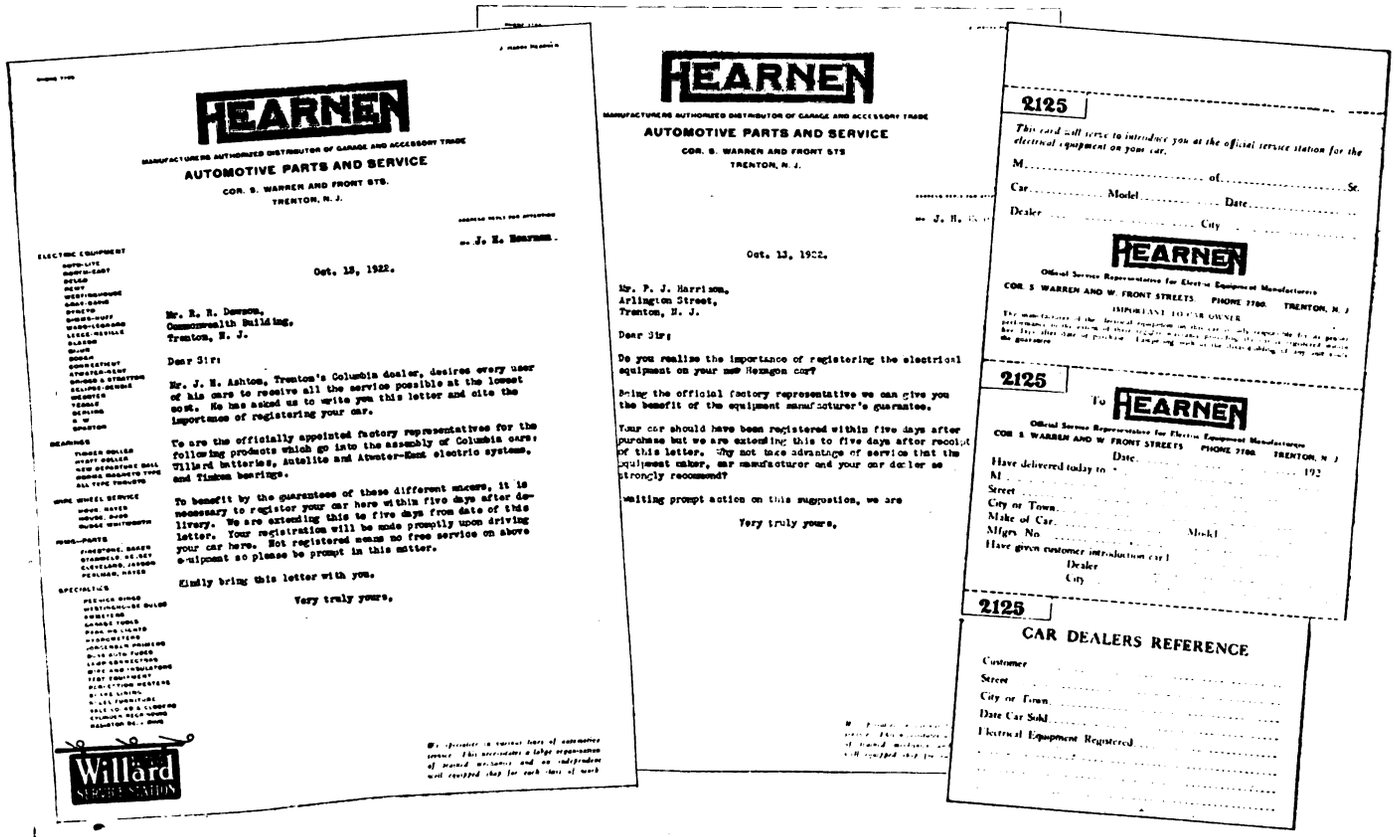
THE car owner, the car dealer and the electrical service station all have a definite interest in having this registration made. The car owner is entitled to the protection of the guarantee and he has a right to expect that the use and enjoyment of his car will not be interfered with by electric troubles. Technically, the car dealer is not responsible for service on electrical equipment, but he has a real interest in its performance as it is essential to his business that customers be satisfied with the performance of their cars. The electrical service station is interested because it is in business to sell electrical service after the warranty period to both the car dealer and the car owner.



Many car owners do not register the electrical equipment on their cars with the electrical service station. Very few car dealers make any effort to encourage registrations. Yet it is very much to the interest of both to do so.

J. Harry Hearnen of Trenton, N. J., is the authorized service representative for practically all makes of starting, lighting and ignition equipment and the Willard Storage Battery. He has sold the dealers of that city on the importance, to them and to their customers, of registering the electrical equipment on new cars with him as the authorized representative of the manufacturers of this equipment. In so doing, he has secured much profitable work for his own shop and has helped the car dealers make satisfied owners of their customers.

All but two dealers in the city are co-



Upper left—A view of Hearnen's salesroom. The merchandise is neatly arranged and there are numerous special displays to catch the customer's interest. Lower left—An attractive battery window dressed with the assistance of a screen background. Right—A place for everything and everything in its place speeds up service work. Digitized by Google

operating with Hearnen in this work of equipment registration. These two dealers operate their own electrical shops. The dealers who are working with Hearnen are giving him 100 per cent co-operation. They furnish him with the name of the owner of every new car they deliver and they give every car owner a card of introduction to the electrical service station.

To facilitate the work of the car dealer in getting the customer to register the

The registration form which Hearnen supplies to the car dealers is shown at the right. All three sections are filled out by the car dealer. The upper section is given to the owner who uses it as a card of introduction at Hearnen's service station. The second section is mailed to Hearnen by the car dealer. The third section is retained by the dealer as his record. The two letters are used by Hearnen to follow up new owners who do not register promptly

electrical equipment on his car, Hearnen provides a form for the purpose. This form is printed on card stock and is in three sections. The forms are numbered so that these numbers will not divulge any information as to the number of sales a dealer has made. It may start with 250 and run through to 266, then jump to 311 and extend to 339, etc.

The three sections of the form are filled in by the car dealer. The upper section is the customer's card of introduction to the electrical service station. The dealer mails the second section, which is postcard size, to Hearnen. Hearnen has his name and address printed on the back of this section to which he has affixed a one-cent stamp, so that the dealer may use it.

The lower section of the form is for the dealer's own record. This card is 3 x 5 in., so that the dealer may use it in a standard 3 x 5 cord filing tray. Most dealers are using these cards as their owner file index.

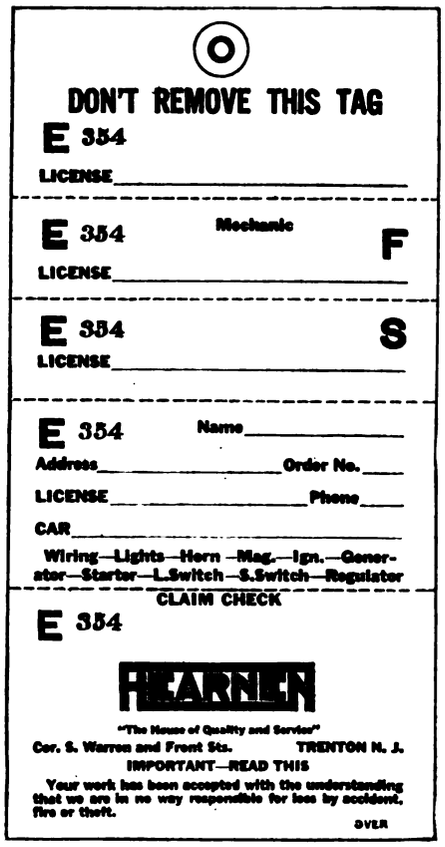
Without further solicitation on the part of Hearnen or the car dealers, 90 per cent of the new car buyers come in to have the electrical equipment registered. Those who do not come in, receive a mail follow-up. Hearnen has two standard letters which he uses for this purpose. One of these makes use of the car dealer's name.

From the standpoint of the electrical service station, this system has numerous advantages. It secures the registration of the electrical equipment on practically all the new cars sold in the territory. It gives the service station an opportunity to inspect and adjust the equipment, and to advise the owner as to its use. This preventive service is extremely valuable as a builder of good-will. When the owner drives his car in, a flickering ammeter hand may show a loose connection that in a few minutes can be corrected. This often saves the electric equipment manufacturer the price of an armature at least. With this saving goes hours of time by the car being tied up for generator repairs.

The registration provides an entering wedge for future business. Hearnen gets acquainted with the new car owner. He gets his name and address. The car owner likewise gets acquainted with Hearnen and learns that here is the place to go if he has any electrical troubles. Furthermore, owners that do not come in for service without further solicitation can be followed from the file of registrations either by mail, telephone or personal visit. The car owner gets better performance from the electrical equipment on his car and the electrical service station gets more business as a result of the registration plan.

Not all service stations could work this system out to the extent that Hearnen does as few stations represent so many lines. Hearnen is the representative of all of the better known makes of electrical equipment. This circumstance has made it possible for him to solicit the co-operation of every car dealer in the territory. A service station not representing so many lines could, however, ask the co-operation of dealers handling makes of cars on which the equipment it represents is standard.

The record concerning the electrical equipment on a car that has come in for registration is made on the back of the upper portion of the form which the customer uses as an introduction card. These forms are filed alphabetically under car name in a card file as a permanent record. At the time registration data are secured, the employee doing the work compares the condition of the tires with the speedometer reading to make sure that the speedometer has not been set back in an effort to show that the car is new.



Hearnen has worked out an interesting tag form which simplifies the clerical work in connection with his electrical repair work. This tag is in five sections. These sections all bear the same number which corresponds to the detailed repair order covering the work. The

Digitized by Google

lower section is given to the customer as a claim check. The second section remains in the office. One of the words at the bottom of this section is checked to indicate the nature of the repair. When the mechanic removes the unit to be repaired, he takes the third section of the tag, with the unit, to the shop. This identifies the unit while it is in the shop. When the work is finished, the fourth section is removed and placed in the envelope containing the repair order. This envelope then goes to the office. The fifth section remains on the car until it is delivered as evidence that the work has been completed.

The shop endeavors to operate on a cash basis. It sometimes happens that a repair will cost more than a customer expected and he will not have sufficient money to pay the bill. This means one of the two things—either he is unable to get his car or his name must be put on the books. If the customer is a responsible person, but not having a charge account, Hearnen will let him have the car, but instead of putting his name on the books, he makes the customer a personal loan for the amount short. Hearnen has found that the average man is more particular about paying a personal loan promptly than he is about a bill he has contracted with a business establishment.

A regrinding department is another feature of Hearnen's business. Although he doesn't do general repairing he will contract for a complete overhaul job which includes regrinding. The disassembly, general repair operations and reassembly are all done by a service station usually specializing on the make of the car sent them. Hearnen does only the regrinding work in his own shop. He does not make a profit on the work done outside but, on the other hand, he insures his shop of doing the regrinding work.

OVER

An interesting form used in Hearnen's shop

Most of the regrinding business naturally comes from automotive repairshops. Hearnen has a salesman calling on the trade to sell this service. To provide an effective demonstration that will help one of his salesmen to feature how satisfactory a regrinding job is, he is now rebuilding a 1915 Cadillac 8. The cylinders are being reground and new pistons and pins fitted. New bearings are being installed throughout. The overhaul will not cost more than an owner often spends on a car of this age. When it is finished it will run as quietly as a new car. The salesman using the car will call on his trade with it and point out to them that they can secure similar results for customers with old cars by selling them a regrinding job.

Much of Hearnen's success is undoubtedly due to his genial personality and to the spirit of loyalty he has built up among the members of his organization. Everywhere about his building, the fine morale that exists among the employees is evident. Seven or eight times a year the entire organization get together for dinner at a downtown hotel. Several times during the summer Hearnen goes out with his men on fishing trips which range anywhere from 50 to 70 miles from home. With arrangements having been made for boats, bait and skippers, the crowd have a regular family affair.

Making the Shop Yield Winter Profits

By WALTER ROOT

Service Manager, Bruening Bros., Kansas City

WE make our shop profitable in winter as well as summer by our system of monthly inspections. The system is simply this. We have a card index of every Buick and Cadillac owner in our territory with the model, motor and frame numbers and in most instances the ownerships through which it has passed. On the same day each month we mail a postal card to the owner advising him that a certain day in the near future (and we specify the day, date and hour) is his inspection day and to please have his car at our service station as near the time specified as possible. We allot six or seven cars for each working day of the month. A majority of the owners so notified bring in their cars. We change the oil in the engine, grease the car thoroughly, lubricate the springs, fill the battery and radiator and the gas tank if nearly empty and in going over the car in the process of greasing we look for loose nuts, rattles and squeaks and anything else that may need attention. The owner will usually mention any minor things that need attention and will always have our shop do his larger jobs. This inspection enables us to determine when his valves need grinding, brakes relining, bearings taken up or any of the several things that a car may need and when these things are brought to his attention he will either have them done at once or will arrange to bring the car back at our convenience to have the work done. This method brings the work to our shop in such order that we can take care of it and it is unusual, except in cases of complete overhaul jobs, for a car to remain in our shop overnight. It also keeps our mechanics busy every day and we seldom have any rush days and no dull ones. The charges for this service are the regular time and material charges of our shop and in most instances run from $4 to $5 where no gasoline is put in or materials other than grease and oils are used.

The system gets the owner in the habit of coming to us for everything he needs for his car and gives us an opportunity to sell him and put on a tire without taking up his time or coming at an inopportune time for us.

By ART JOHNSON

Manager, Collinson Buick Co., Winfield, Kan.

I KNOW every car on our list, what has been the matter with it, if anything, what was not fixed up the last time the car was in and what the owner ought to have done to it. I call these owners up on the telephone myself, one after the other, and can talk specifically of his car and its troubles. Telephone calls of this nature cannot well be made by clerks or stenographers. They should be made by the manager, one whom the customers know by name and whom they know has charge of the whole works.

Owners have not invested as much as usual the past summer in car upkeep, and there are many suggestions that I am able to make about work that should be done.

In addition to the telephone calls, circulars are sent out to owners advising them as to the care of batteries and so forth, and the telephone calls pick up these subjects again, concentrating the subject of the circular on the particular owner's car.

Two Birds With One Stone!

Satisfactory Service and Always a Busy and Profitable Shop

By J. B. IRVING

President, S. B. I. Motor Sales Co., Hupmobile distributor, Denver

J. B. Irving

TO every business man falls the lot of solving problems. As long as there is industry there will be unknown quantities involved. But not in the history of business have there ever been greater problems than those faced by the men engaged in the automotive business. When one considers how this industry has grown in the past decade, this is not difficult to understand.

So when we were asked by Motor World "What important problem in your business have you solved?"—we threw up our hands and slumped in our chair.

Merchants in every other line have been at solving their problems for centuries. So there is little wonder for our being flabbergasted when we were asked to which of our problems we could append "Q. E. D."

Satisfaction First

Frankly, not one of our many problems have been actually solved. True, many are nearing solution, and the one which has given us our greatest concern and has most nearly approached the point towards which we have been striving is—Service.

Service is to the automobile business what safety-vaults are to the banker. Both are essential to the security of the business.

The first consideration that must be given to service is the degree of satisfaction which the customer receives from it. For upon the degree of his satisfaction is based his faith in the integrity of the house and the product it sells. Whether profitable or unprofitable, service must give satisfaction—and satisfaction is a will-o'-the-wisp.

We soon realized that we could not please all of the people all of the time, but that there was some way to satisfy most of the people all of the time.

Now, if you want to thoroughly understand a subject, you must study it from all of its angles. And since the human angle is the base angle of service satisfaction, assuming, of course, that the service is good service, we applied ourselves to studying the human phase of the subject.

Our conclusion—we eliminated the personal factor from our service.

At first glance this may seem startling, but let us go on. We realized that our men out in the shop are good mechanics but poor psychologists. So we established our system on the theory of the law of averages; knowing that if everyone received identically the same degree of efficiency and the same degree of courtesy the majority would be satisfied.

Every person who drives a Hupmobile into our shop, be he rich or poor, white or black, receives the same solicitous treatment from an efficient supervisor. The work order is tabulated and he is then and there informed of the hour at which his car will be delivered to him. This is step No. 1—Courtesy.

The shop superintendent specifies the time for the work to begin, and the car is placed in its proper stall by a helper who arranges the tools necessary for the job and does the preparatory work for the mechanic. This is step No. 2—Promptness.

The foreman having received the inspector's report, details men especially qualified for the particular work at hand. This is step No. 3—Efficiency.

The last step, no less important than the other three, is to deliver the car at exactly the time for which it was promised. This is punctuality. Now when you combine promptness, punctuality and efficiency there is but one sequence—the least possible cost.

Here then, is where the personal element enters. The customer having received the greatest possible good in the shortest period of time for the least expenditure of money—is satisfied, and our problem of service is nearing its solution. That our theories must carry some worth, is evidenced by the fact that the service end of our business has increased about 400 per cent within the past two years as a result of our efforts.

Creating Good Will

Consider for one moment what this means. It means first of all, that our service problem has evolved itself into a lucrative one. That our winter months, formerly dull and consumed with the laying off of men and the plodding through with very little to sustain us but the hopes of an early spring, are now filled with work, a full force and a good income. But far more reaching than all of these, is the confidence and trust that has been created for our house through our service. Many purchases are traced directly to the good-will created in our shop.

Like the skipper of a bark we are constantly on the alert; ready to add to our service those factors which we feel will propitiate it, and to take away those things which may detract from it.

A new feature which we have recently added, is our free brake inspection service. This, considering the mountainous nature of our territory has proved a great boon to our drivers, and already we are noticing remunerative results.

And so it goes. Never completed, but ever unfinished, our problems will not be solved so long as the sea is restless.

Selling Trucks to the Farmers

A Remarkably Interesting and Intensely Practical Presentation of the Problem from the Viewpoint of the Man on the Firing Line

By A MAN WHO SELLS TO FARMERS

TRUCK dealers, to get the farm business, must turn the calendar back and get in step with Mr. Farmer where he fell out of line a couple of years ago. Don't think for a minute that his shortage of funds constitutes the chief reason why he is not buying trucks to-day. Nor don't mislead yourself into believing that every farmer who purchased a truck between 1917 and 1920 bought it entirely for its efficiency instead of luxury. Even a truck can be a luxury.

The farmer has been swamped with a flood of city cousin advice on farm equipment. Men who never curried off a horse have revolutionized the farm for him on paper. The soft-collared boys with the college stripe neckties sat behind their $35 per week desks and purred softly into the farmer's ear about farming with factory methods, and in their pleasant dreams of idealisms have had the farmers keeping plumbers' hours.

Tons and tons of printer's ink have been spilled on the subject. The advertising and promotion departments have built up a wonderful case for the motor truck, and to read the literature one would be almost lead to think that the only thing that is holding back farm sales is the delay in the farmer's recovery from the depression. I want to tell you that if farming was on its best feet to-day that there is still a big job ahead of us.

I DON'T want to discourage motor truck dealers; neither do I want to falsely encourage them. But I do want to point out that farming is one of the most diversified of our industries—that there is no other industry in the world where the operations in a small way so closely resemble operations on a big scale—and that the farmer at no stage is an easy man to sell anything to.

I want to meet this situation right on the nose; better that we face the facts as they exist on the farms than the theories as they appear at the end of some desk-hound's pencil. If we don't analyze this situation, truck dealers will waste a lot of time, energy, gasoline and postage on certain farmers and they'll never get it back.

It must be remembered in the first place that hard as it is to do it, trucks can (never should) be sold to people who cannot use them profitably. Good salesmanship will do it—that is if you want to concede salesmanship good that exaggerates. Furthermore, not every farmer who bought a truck between 1917 and 1920 did so to his entire advantage.

I have no doubt but what every farmer would like a truck—like it the same way his wife hopes some day to have an extra set of dishes for best—but whether every farmer can use a motor truck in addition to the horses that he must maintain, and pay for that truck out of savings or additional earnings is another matter.

A great many farmers bought trucks during abnormal times merely as a farm luxury. They had the extra money to spend. The farmer got his truck and mother got her extra set of dishes.

A farmer operating a small farm is not a good prospect for a motor truck unless it is a dairy or fruit farm or a truck garden—a frank statement but a fact. No use fooling ourselves; it costs too much to sell goods to-day to waste our ammunition. Except in abnormal times there is no big money to be made on a small farm.

Personal Solicitation

Therefore truck dealers will do well to canvass their territory and make a good personal survey of the situation. The profit on one sale will pay for it and there is at least one farmer who needs a truck and can make it pay for itself. There are very few dealers, if any, who have territories where there is no farmer who needs or can use a truck profitably.

What I am pleading for and working toward is the necessity of personal solicitation. The farm business is too varied and there are too many farmers who can get along without a truck to make an expensive mailing campaign pay. On the other hand there are enough prospects to make putting a man out with a demonstrator pay. You cannot get along without some direct-by-mail effort but you can't rely upon it solely.

Any two grocery stores are more nearly alike than two farms, so personal knowledge of your prospect's requirement is more necessary in selling farmers than in selling merchants, and you can't get this knowledge mailing him circular letters.

You have to get right out on the road and show the farmer.

Of all the people you sell trucks to, he has more mechanical knowledge than any of them. He knows construction. You know it to be a fact that a good farmer boy around a garage is handier than a factory mechanic. Why? Because to repair machinery is born in him.

So don't scatter your shot on farmers. CONCENTRATE, SOLICIT AND DEMONSTRATE.

Trucks will not sell themselves—some salesman must do it.

Even if farmers were suddenly returned to the conditions that prevailed between 1917 and 1920 we would have to go back to our original methods.

I am afraid that so much has been heralded about every farm needing a truck that when the farmer does get squared away financially the truck dealers expecting a flock of orders to enter themselves will be caught napping.

Remember thousands of farmers are not sold on the truck idea at all and no amount of printed matter will sell them, but in hundreds of cases personal solicitation will.

Selling farmers has never been easy even in the most prosperous times so when they get back in the market don't hope for too easy sledding.

In a number of cases you will be doing the farmer a good turn if you don't sell

Digitized by Google

him a truck, but in a great many other cases you are not only doing the farmer a good turn to induce him to buy but are also rendering the whole community a good service.

Vendors of time and labor saving devices have a great obligation to perform—a great duty they owe to humanity. Any dealer who is fortunate enough to be handling a good truck is only doing his part to hold back civilization if he does not push it.

To us gasoline is only one of the many commodities. We buy it without ever thinking that the distribution involved a lot of pioneer work and that the big organizations who now handle the bulk of this business got where they are today by going after the business when gasoline had to be sold instead of measured out to buyers as they stand in line.

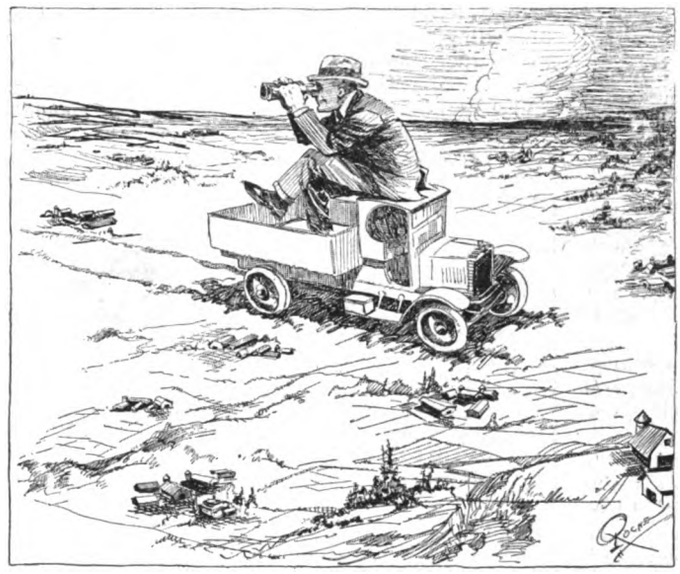
The first cash registers were not shipped out on the frantic request of storekeepers who felt the pressing need for some place to put their money.

Nearly every large business concern uses cash registers, adding machines, typewriters and letter printing machines, but you can gamble your last dollar that the first of them was sold by the ingenuity, the persuasiveness and the persistence of some good salesman instead of leaving it up to Uncle Sam. The rural mail carrier is not selling the farmer much merchandise nowadays.

The fact I am driving home is that the pioneer work of motorizing farms is far from being completed. Selling motor trucks to the farmer who specializes in raising hogs differs as much from selling trucks to the dairy farmer, or the truck gardener, or to the ranch man who wants to haul coal and fence posts to a ranch 40 miles from a railroad, as selling jewelry differs from selling white flannel pants.

Selling on the Ground

The only way to sell trucks is to get right on the ground where they are to be used. And the real truck salesman is the fellow who can drive and demonstrate and who is willing to put on a pair of overalls and haul a cow to town or help bring in a load of produce before sunrise. He must demonstrate that the truck will haul more bushels of oats between the threshing machine and the elevator than three teams can haul in the same time.



The reason why a farmer doesn't buy a truck is either because he hasn't the money or that he is not sure it will pay. There are hundreds of farms that a truck salesman should know instantly are not cut out for motor trucks. Instead of wasting his time and energy and the boss' money he should pass them right up and concentrate on the farmer who actually needs a truck.

It's a truck salesman's duty to show a farmer where the truck will save or make him money; but it is a crime to induce one who can not use the truck profitably to buy it.

A dealer who has sold hundreds of trucks to farmers and knows what he is talking about because he has the profits in the bank to back up his statement recently gave me his slant on farm sales.

The problem of the truck salesman is to show his customer that the truck he is selling will not only haul his crops to market faster than his horses, but also to show him that the truck he is selling represents transportation expressed in ton miles per hour or bushels of wheat per given distance per day. This is what he told me:

"As a wholesale distributor of trucks over a large territory it has always been our desire to market these trucks through local dealers. Our difficulty has been to get these dealers to recognize the potential demand. If a customer comes in and wants to buy a truck they recognize that fact without having it diagramed, but the less obvious, although equally certain, fact is that there are fifty fellows in their territory who would make money by owning trucks who do not, that could be sold if their utility was demonstrated.

This is much more difficult to bring to the comprehension of the dealer and for this reason we have set out to do what the average retail dealer is not willing to do.

We have employed regular truck salesmen who sell nothing but trucks. They go out with a truck and systematically cover the territory from farm to farm and it has proved to us that we have only started to develop the possibility of the farm business.

Our farm sales have not been up to the standard the last two years, but we have it in black and white who the farmers are that should get a truck when they have the money to buy, and which farmers not to bother because they do not need a truck at any price.

When I say "need" I mean have enough work to keep it busy a reasonable length of time; or in other words keep it busy enough every day so that its earnings will amount to more than the depreciation.

The Big Opportunity

Truck sales follow road improvements and just as railroads open up new territory and create commerce so do improved roads. Good roads go hand in hand with consolidated schools which are big truck consumers. After roads are built they must be kept up.

The tardiness with which consolidated school boards placed their orders for buses this year is indicative of the farmers' attitude toward spending money. They waited right up to the last minute before placing their orders and in many cases the opening of school was delayed.

The farmer has been putting it off and putting it off for so long that it is second nature. Country dealers and city distributors should be making preparation from now on to get this delayed business.

If the dealer in a farm community will connect to the right kind of a truck line and will go out among his customers and show them how many bushels of wheat or how much hops or how many tons of coal can be hauled a given number of miles in a certain time, he can secure big results, and he can build up a business more profitable and more permanent than the passenger car business.

"If any distributor who has a lot of dealers who cannot see this until they are shown will put a little nerve and a little intelligence into his merchandising system, and if he will spend a little money working up a truck business, he will show wonderful results," says my friend.

A distributor owes this education to the local dealer in the same way the dealer owes it to the farmer to teach him the truck idea. A distributor more often than not makes as much on a retail sale as the salesman who closes the deal. If distributors expect to hold their territory they must expect to do something to earn this margin.

It is impossible to build up a business with a poor truck because the expense of pioneering is too high and it requires a high grade truck turned out by reputable manufacturers to get the repeat orders.

Don't try to build a farm truck business with a poor truck, but if you want to make some real clean profit find a good truck and get set for the farm business that is coming.

Signs point that 1923 is going to be the best year of the '20s.

To bring the truck and the farmer together requires high grade salesmanship under intelligent supervision—salesmen who are not afraid to work and bosses who can make the other fellow do the work.

It takes country dealers to sell farmers because they are closer to them,

Digitized by Google

but a great many country dealers are like the small town railway station agent. He is the baggageman, operator, mailman, freight agent, express man and janitor, and the country dealer should either get in or get out of the automobile business.

He should either get in or get out of the repair business. He can't repair cars, mend tires, keep books, sell gasoline and handle sales. He hasn't enough eyes, hours or hands.

Good Salesmen

The sooner country dealers learn to hire and supervise men the quicker they will get results. They must not hesitate to let a salesman earn $3,000 or up in a year. It looks like a lot of money, but just see how much he is making for the boss.

Too many country dealers in hiring salesmen think they should engage a man who knows every Tom, Dick and Harry in the county. He is not always the best man. Usually this kind of man pre-judges the prospect. Get an outsider and put him to work. He will look at the territory in a new light. Poor salesmen are the most expensive. A good truck salesman can sell a farmer a truck if he needs it and will refuse to sell him if he don't need it.

The farmers are beginning to realize whether they need trucks or not and 1923 is going to be a big farm truck year.

A farmer working a hundred acres uses a side delivery rake that costs him nearly a hundred dollars about three days. If he raises a crop of beans he can use it two or three days more and if he lives in the alfalfa section and raises three crops he can use it nearly a dozen days more. He pays approximately $300 for a self binder and uses it four or five days. His cultivator will cost him around $50 and he will use it less than 5 per cent of the time.

He will use a motor truck probably every day in the year. In fact it is not too much to say that the motor truck is the most used piece of machinery on the farm and for the use he gets out of it, it costs him less per hour the first year than any of his implements.

The farmer knows his costs better today than ever before; he is a comprehensive buyer.

Since he, like the manufacturer, has been assessed with an income tax he has been obliged to put farming on a cost sheet basis.

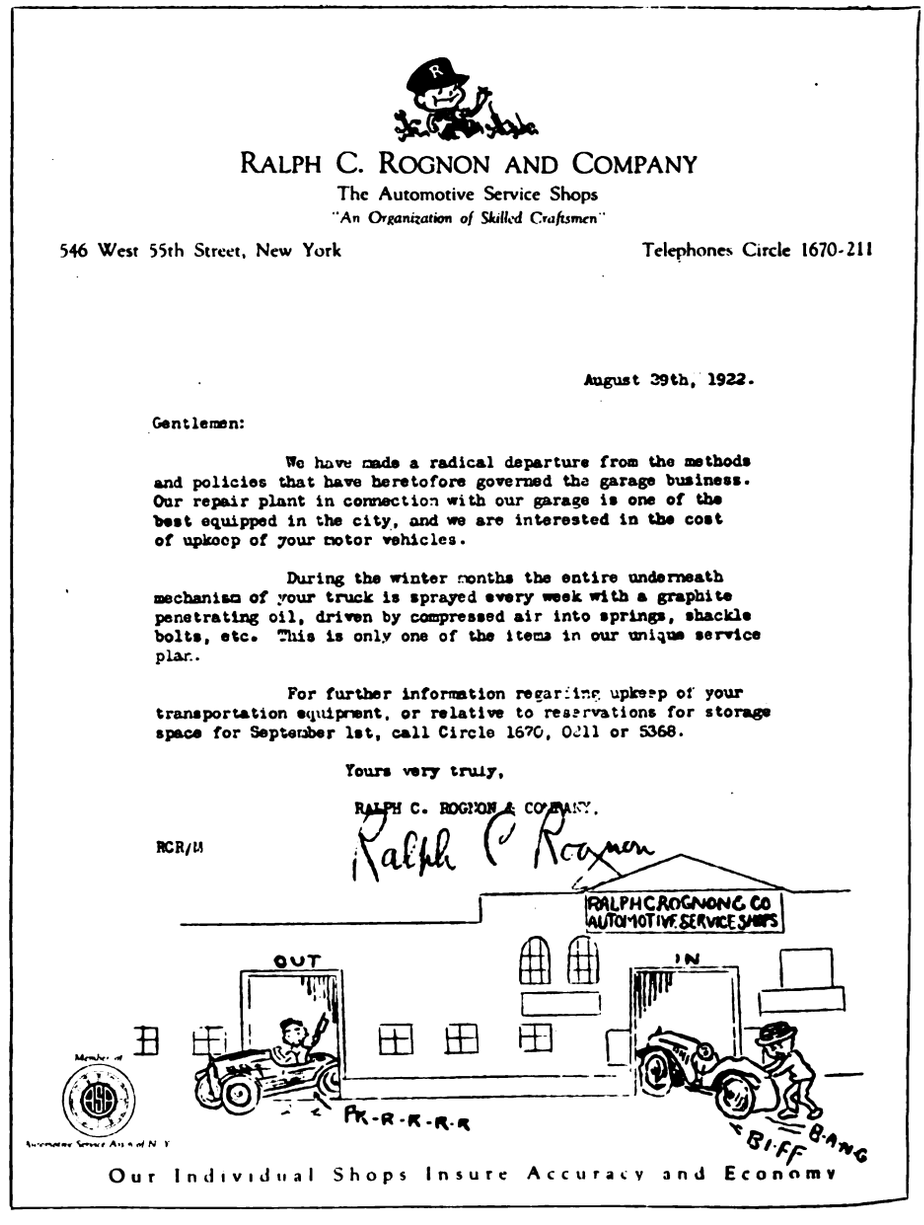
He knows now, where he guessed before, what it costs to run machinery.

Be careful how you talk to him and above all don't talk crops unless you understand farming.

Survey your territory, sort out your prospects and call on the logical buyers personally.

An Accessory Idea

DOCTORS are, perhaps, the most consistent and constant users of good automobiles. Doctors, too, are in a particularly favorable position to judge what are really essential extra equipment—accessories that contribute most to the comfort, safety and convenience of motor car transportation. Because they can afford to buy, their cars usually are equipped with accessories that they find most useful. A very convincing advertisement might be written which tells all about the accessories that doctors buy and why they buy them. The fact that an equipment merchant is selling such accessories to doctors would make a fine recommendation as to the place to purchase such items.



Do Your Letters Get Attention?

YOU remember, don't you, a few years ago when the Lincoln pennies first came out, how everybody watched for them and kept them aside. That was because they were new and unusual. Now there are more Lincoln pennies than the other kind and nobody bothers about them.

Since letter-writing first became a part of selling, writers have been thinking and experimenting to make their letters attractive both as to appearance and contents. So many circular letters are used to-day that the conventional letter gets scarcely any more attention than a Lincoln penny.

So to get real attention there must be something new and catchy about the letter.

Ralph C. Rognon & Co., in getting out a circular letter to prospects for repair work, are using a novel sketch showing a car going into the shop full of biffs and bangs and coming out with a gentle purr. In addition to this feature the contents of the letter are somewhat "different." The fact that a garage has made a radical departure in its policies is put right up at the front, followed by some detail of the facilities available.

RALPH C. ROGNON AND COMPANY
The Automotive Service Shops
"An Organization of Skilled Craftsmen"

546 West 55th Street, New York — Telephones Circle 1670-211

August 29th, 1922.

Gentlemen:

We have made a radical departure from the methods and policies that have heretofore governed the garage business. Our repair plant in connection with our garage is one of the best equipped in the city, and we are interested in the cost of upkeep of your motor vehicles.

During the winter months the entire underneath mechanism of your truck is sprayed every week with a graphite penetrating oil, driven by compressed air into springs, shackle bolts, etc. This is only one of the items in our unique service plan.

For further information regarding upkeep of your transportation equipment, or relative to reservations for storage space for September 1st, call Circle 1670, 0211 or 5368.

Yours very truly,

RALPH C. ROGNON & COMPANY.

Hardware Men Show Keen Interest In Automotive Equipment

Talk About Hardware Stores' Advantages and Disadvantages as Competitors of Automobile Dealers and Accessory Men—Manufacturers' Exhibit at Convention

By NEAL G. ADAIR

Atlantic City, October 20, 1922.

THERE is a growing interest among hardware jobbers and dealers in the profit-making possibilities of automotive equipment merchandising. The hardware men, who are now handling a considerable volume of this business, would like to get more, and they are casting about for means of obtaining some of the trade that is now going to the automobile dealer and garageman and the exclusive accessory merchant. These facts were brought out at the annual meeting here this week of the Automobile Accessories Branch of the National Hardware Association. The convention consisted of representatives of automotive equipment manufacturing and hardware jobbing companies, together with two official representatives of the National Retail Hardware Association. The proceedings, while arranged for hardware men, carried interest also for wholesalers and retailers in the automotive equipment field.

Two claims set forth by speakers in the ranks of the hardware jobbers deserve the consideration of wholesalers and retailers in the automobile field. These claims were that the hardware dealer, taken on the average, is a better merchant and better credit risk than the automotive man who sells accessories. On the other hand, the speakers stated that hardware retailers in general exhibit three striking faults in the handling of accessories. They lack the mechanical knowledge essential to the selling of many items of automotive equipment; they fail in many cases to carry complete lines, and a good many of them carry automotive products merely as a side line or an accommodation for their hardware customers and sell them without the full profit, which keeps them only half-heartedly interested in the business and also has a disturbing effect on the market, because of price-cutting prices.

Discussion at the convention carried two important suggestions to retailers in the automobile field, first, that if they are not up to the standard of the hardware men as merchants and credit risks, they should use every possible means of bringing themselves up, and, second, that the men in the automobile field should use to the full the advantage they have in mechanical knowledge necessary to install, and of assistance in selling, many lines of equipment.

The convention had very little discussion of one decided advantage of the automobile men in the accessory field, that is, his natural contact with the purchasers of equipment. The automobile dealer and garageman are constantly in touch with motor car and truck owners, who come to them for service and advice. The exclusive accessory merchant is the only retailer in the automobile field who must overcome an advantage similar to the hardware man in going out after equipment customers.

THE growing interest among hardware jobbers and dealers in automotive equipment merchandising might be accepted as a warning. Men in the automobile industry who sell accessories, to retain control of their products, must be sure their stores and selling policies are up to the standard of hardware men and use the full advantage of their mechanical knowledge and installation facilities.

It is only natural that at a hardware convention the preponderance of opinion should regard the hardware man as the logical merchandiser of any commodity which he wants to sell, but the frankness with which the hardware men admitted their faults and sought for means of correcting them gives plenty of indication of their intention of keeping up the process of working into automotive equipment merchandising. The automobile man, of course, will get no more of this business than he deserves, and there were plenty of hints in the hardware meeting that the automobile man needs to employ and develop the advantages which he has, as well as to overcome such handicaps as inexperience in merchandising and inadequacy of credits, which have been overcome to a considerable extent in the many years' duration of the hardware business.

C. H. Casey, of Jordan, Minn., president of the National Retail Hardware Association, criticized hardware jobbers for failure to instruct their salesmen sufficiently in the use and methods of selling automotive equipment. Still he did not agree with the manufacturers who advocated that hardware jobbers should have specialty salesmen to handle automotive equipment lines.

Several hardware jobbers, reporting on their automotive equipment business, credited hardware retailers with only a small portion of it. One jobber said that less than 10 per cent of the hardware men in his territory were selling accessories, but others placed the figure considerably higher. A. D. Williams, sales manager of the X Laboratories, New York, gave a summary of a canvass of jobbers in several sections of the country, showing that 48 per cent of their automotive equipment business was taken by garagemen, 19 per cent by accessory dealers, 17 per cent by car dealers, 15 per cent by hardware dealers and less than one per cent by department stores. Williams subscribed to the opinion that, while the hardware dealer in a good many cases is a better merchant and a better credit risk than the automotive man, he is not the best customer of the automotive equipment manufacturer and jobber, because of his lack of mechanical automotive knowledge.

The convention was presided over by George W. Ellis of the Supplee-Biddle Hardware Co., Philadelphia. Automotive equipment manufacturers among the speakers included Frank T. Chase of the Frank Mossberg Co., Attleboro, Mass.; M. H. Tisne of the A. Schrader's Sons, Inc., Brooklyn, N. Y.; Harry Stone of the Automotive Products Corp., Hazleton, Pa.; H. D. Laidley of the Federal Miniature Lamp Division of the General Electric Co., Chicago; B. M. Asch of Asch & Co., manufacturers' sales agent, New York, and John E. Lambert of the Pratt & Lambert Manufacturing Co., Detroit.

The convention preceded that of the National Hardware Association. In connection with the convention approximately 50 manufacturers of automotive equipment had exhibits of their products in the Ambassador Hotel. The attendance of the hardware jobbers at these exhibits between convention sessions was large and quite a bit of business was booked. The exhibits were kept open throughout the week.

Editorial Notes

Wanted: More Closed Cars

IN a little Connecticut city a few days ago an automobile dealer reared up on his hind legs, as the homely saying has it, and howled because he hadn't any closed cars. He had orders for seven or eight which he couldn't fill. That was bad enough, but the thing that stuck in his crop was that all he had to put in his space at the closed car show opening the next day was a set of pictures of closed cars of the line he represents.

An exaggerated case? Go up and down the Row in a dozen cities or several dozen of them, and ask how many dealers have adequate stocks of closed cars or much prospect of getting them before the peak of the closed car market has been passed. When you are all through you can forget about used cars for a few moments, if you can forget about them, and put your mind on another thing that ails the automobile business.

There are a few dealers in most towns and perhaps in a few towns all the dealers, because of one circumstance or another, who have enough closed cars, but take the country generally and the best selling lines in particular and it will be found that automobile merchants are watching profits go a-glimmering every day in the week because they can't get coupes and sedans in sufficient numbers to meet demand. More closed cars have been made this year than in previous years, but more people want them and the industry has not found a way yet to make supply meet demand at the peak of the season. And, of course, freight embargoes have made the shortage still more acute this fall.

Better informed men in the trade as well as in manufacturing circles understand, of course, that the closed body facilities of the country are not adequate to meet demand in the months just preceding winter, when demand is naturally at its height. It would not be possible to bring production facilities up to demand at this period without having idle buildings, equipment and men in the closed body manufacturing field at other seasons of the year. But is it not possible to spread production throughout the year, storing closed cars in summer as open cars are stored in winter, so that the fall demand can be met? Is it quite fair to dealers for manufacturers to bring out new closed models in the early fall, present them at shows and advertise them widely, and then tell dealers that they can't get these models into quantity production until late fall or early winter? With prices at present low levels and discounts, to say the least, not exorbitant, the dealer's profit per car is so low that he needs every possible sale. Particularly he needs to sell the higher priced closed cars and he ought to have them to sell when they will sell best.

No thinking person would accuse the manufacturers of negligence in failing to provide adequate closed car stocks. They want to increase production just as dealers want to build up sales. The car manufacturers cannot be blamed because closed body manufacturing facilities, many of which they do not control, have been unable to keep pace with the rapid gain in closed-car popularity. But it is apparent that the industry must have greater production facilities in this line, or, at least, more manufacturing must be done at other periods of the year to build up stocks for fall. George Washington said something about preparing for war in time of peace, which suggests that last spring was the time for thinking and planning to insure this fall's closed car supply. But as most nations prepare for war when the enemy is marching toward their frontiers, so most people decline to become excited about distantly possible emergencies. The emergency of a closed car shortage which is limiting profits of manufacturers and curtailing the sorely needed revenue of dealers is upon us. Will it start some thinking and planning, which will be continued until another fall rolls around, to eliminate next year's otherwise inevitable closed car shortage?

Can all manufacturers instead of just a few get their new closed car bodies designed early enough to insure quantity production and shipments in September and October? Should manufacturers and some dealers warehouse closed cars in summer to be ready for the fall demand just as they store open cars in winter for the spring rush? These and other questions that are vital to much desired stability in the automobile business are worth consideration.

What do you say to the service customer who talks about laying up his car for the winter? Isn't there a way to put winter business for you and winter convenience and pleasure for him into one story?

"Can't get any closed cars, but we're still selling open jobs," a dealer said the other day, and there were echoes all over the country. Looks as though the last rows of summer are the automobile rows.

A man walks into your salesroom and looks over your display, but says your car costs more than he wants to pay. Do you call a man in overalls to "show this guy some of our used cars?"

Have you tried to figure out a way to assure your salesmen a year 'round income?

Gets dark about 5 o'clock these days. How do your display windows look after five?

Does your good-bye to your service customer suggest, "Come again," or, "Well, we got that guy's money"?

Who's running for office in your territory this fall? And after he is elected is he likely to want a new car?

The Woman as a Factor in Motor Car Sales

Her Tastes and Mechanical Knowledge Will Be Closer to Men's in 1923 This Dealer Says

EDITOR Motor World:
Have salesmen got the woman buyer's view of motor cars?

Let's pick the situation to pieces and see if most of us have not blinded ourselves for the last two or three years to the actual part women have played in the selection of cars.

While it may be that we must not deny that she has been a powerful equation in the purchasing of automobiles, yet as a factor in the sale of the sedan, coupe, touring car and roadster she may have been over-rated. If not, possibly misjudged or—let us say—considered from the wrong angle.

Doubtless we have discredited her knowledge of quality.

The successful salesman from now on must know, instead of taking it for granted, what passes through a woman's mind when she says yes or no to her husband when the final minute arrives for signing some salesman's order.

And isn't it a fact that the woman more often emphatically says yes than emphatically no to her husband's judgment on important matters, and still more often merely remains confidently content?

We must start with the known fact that the average woman allows her husband to take the lead in matters involving as much money as in the purchase of a car. This is fundamental—natural.

What percentage of wives stamp their foot, storm around and kick up such a fuss that the husband switches to some other make? Very small, I am sure.

Or what percentage of women exercise what has been called woman's prerogative and positively override their husbands' choice of cars and force them, in order to keep peace in the family, to buy a car of lesser quality than their own preference? Take it in your own case or in the case of your friends' families.

Often have we heard it said that no man buys a car that does not suit his wife. In the next breath we hear dealers asking for longer discounts to make longer allowances possible on used cars on the claim that said allowance is the deciding factor. Which is right?

Some of those who make these statements—and both are quite universal—are willing to qualify them by adding "all other things being equal." But all other things cannot be equal in this business because there are too many variations in price, quality, appearance, trade-in allowance, maker's reputation, dealer's reputation and service.

The first thought that flashes across most salesmen's minds is that women demand artistic cars. Maybe you have never used the word artistic in that sense before, but I use it to define folderols, gingerbread and nick-nacks that are used to doll up cars, otherwise termed fineries.

It next follows, then, to ask:—does woman's desire for these override her husband's demand for quality in preference to them? Also:—are men less swayed by the trimmings and appointments than women?

The fact is that to-day the demands of both man and wife are more in common with each other.

Write to Motor World About It

This page every week is devoted to discussions of topics of the trade by Motor World readers. Have you a suggestion to overcome a difficulty or improve some condition within the industry? Write to Motor World about it.

In 1920 leather upholstery was positively scorned by women for closed cars, and taking the cue men also learned to oppose it. The arguments against it were that it put a shine on dark clothing—that although it gave the car a cold, barren aspect, too much like a taxicab, it became excessively hot under the scorching rays of the sun—and that it hid dirt and grease.

To-day salesmen tell us that there seems to be an increasing demand for that same leather, because textiles hold dirt and grease—are hard to slide over—and retain moisture after exposure to rain and snow. The report is that men are beginning to call for leather, and women are falling in with the notion, gradually.

There is every reason to believe that the same talking points that interest men will likewise interest women and vice-versa.

More women are driving cars than ever before, and they are traveling greater distances without male escorts; men, on the other hand, seem to be more particular about appearances than ever before, both about themselves and their cars.

Women know; and the fact that their demands are more in common with men is going to make it much easier for salesmen in 1923 to get husband and wife together, whether or not the wife has been as much the controlling factor in buying as has heretofore been alleged.

Women know; they want to know, at least, about mechanical differences. Words like transmission, clutch, carburetor and bearings no longer awe them. They are seeking knowledge, and the salesman who has the gift to explain the points of mechanical excellence so they can understand it is the one who will succeed.

Women know; they are better mechanics than salesmen are giving them credit.

The 1923 woman lives in an atmosphere of mechanics. She has her electric vacuum sweeper, her electrically equipped kitchen and her power driven washing machine and ironer. Salesmen who are selling her these mechanical house devices are telling her about their construction, their accessibility and their low cost of repairs. Mechanical language is no longer an unknown tongue.

Salesmen no longer need fear they are talking over her head when they delve into mechanical discussions, if they will hold it to the elementary and do so by comparison. It will flatter her to be given the credit for knowing, and she will retain what is told her.

Where is the woman that can't understand that a three-bearing crankshaft is better than a two, and a four better than a three, if you use the homely comparison of the rafters in the ceiling of her house.

Or where is the woman who won't listen instantly to an argument about heat treating if you explain to her that in heat treating the texture of metals is changed in the same way that potatoes vary when they are baked, boiled or French-fried?

Salesmanship will be much more interesting to the salesman and less dull to the prospect if we can relate some interesting processes in the factory that improve the product.

Women can be sold engineering by quoting examples and making comparisons, and they will stay sold. If women exhibit fickleness about motor cars, we can only blame ourselves. We have been handing them fickle chatter.

In 1923 passenger car salesmen must get the 1923 woman's viewpoint on motor cars. She has advanced much further than we have given her credit for and she craves to be treated with the same consideration as her husband.

As between folderols without quality and quality without folderols, don't fool yourself about which she will select from now on. I mean the average woman: I have nothing to say about the spendthrift kind that knows nothing about the value of a dollar—the butterfly-on-the-wheel kind—the pampered variety. I mean the staple type of American woman that makes up the vast majority by far.

Is the woman as a factor to be considered in making a sale overrated, or have we underrated her intelligence?

To increase your sales, increase your own knowledge—then spread it.—Midwestern Dealer.

Mercer Brings Out a Six; Retains the Four

The New Model Retains the Main Characteristics of the Four But Has Many Changes Including a Unit Power Plant, Stiffer Frame and Three-Quarter Floating Rear Axle

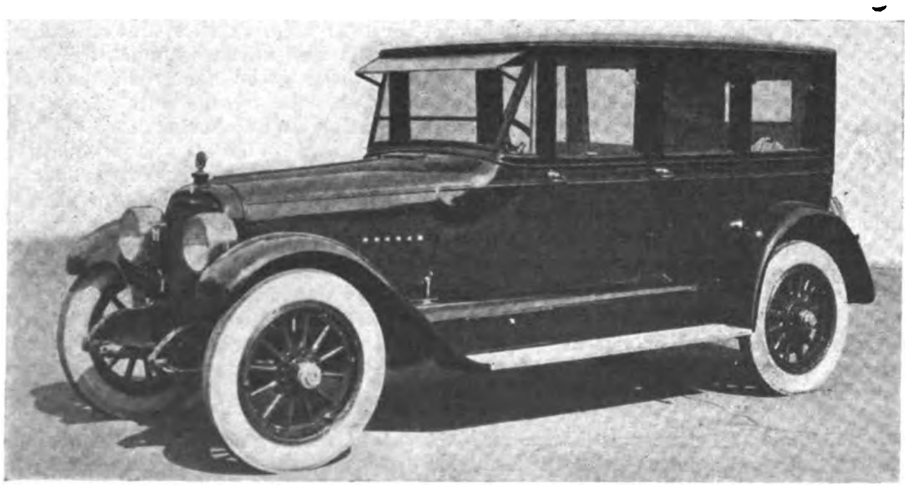
A NEW chassis with a six-cylinder engine has just been added to the line of the Mercer Motor Co. which heretofore has built only four-cylinder models. For some time past Mercer cars have been marketed chiefly for use where traffic is light and speed is desired, but the increase of traffic even on suburban and country roads has made it desirable to now add a chassis capable of a very wide speed range on high gear. The result is a car which handles well on high gear in traffic and has at the same time requisite power for high speed when conditions admit.

Six standard body models are offered. The open models include a four-passenger roadster, six-passenger phaeton and four-passenger sport model. The closed bodies include a sedan and a touring limousine, each seating six, and a four-passenger coupe. Body lines are similar to those which have characterized the Mercer cars in the past. The bodies are low hung and the passengers sit well down in the body, following European practice in this respect.

The open models will sell at $3,750 and closed cars for $5,000. These prices include, among other items, the following equipment: Six 32 x 4½ in. cord tires and five Rudge Whitworth wire wheels on open models, artillery type wood wheels with 33 x 5 in. cord tires and two extra rims on closed models, Waltham clock and speedometer, Moto-Meter, Alemite lubricating system on chassis parts and a special form of finger operated dimmer switch arranged just under the steering wheel rim where it can be operated without taking the hand off the wheel.

The open models in the six cylinder chassis are a little under the price of the four. The new coupe is $150 more than the four and the new sedan is $250 less than the four.

The chassis of the six is not entirely new, but most of its major units are either new or have undergone more or less change in design to accommodate them to a symmetrical whole. At the same time certain features which have been characteristic of Mercer cars, such, for example, as the propeller shaft service brake, are retained. Other unconventional parts, such as the four-speed gearset, are no longer required with an engine of six cylinders, while the use of a unit power plant has made it desirable to employ three instead of four-point mounting.



Outside the powerplant, the chief change is the substitution of a new rear axle and the use of additional and stiffer transverse frame members made necessary by the change in engine mounting. The steering gear and front axle as well as the radiator are practically the same as those used in the four-cylinder model. The mounting of the last mentioned unit is on spherical trunnions with surface kept in contact by a helical spring. The wheelbase of both the four and the six is 132 in.

Specifications of the Mercer Six

Prices:

Roadster	$3,750
Phaeton	3,750
Coupé	5,000
Sedan	5,000

Engine—6 cylinders, 3¾ x 5.
Ignition—Eisemann.
Clutch—Disk.
Gearset—3-speed.
Tires—32 x 4½ in.
Wheelbase—132 in.
Rear Axle—¾ floating.

The Mercer Six coupe, $5,000

The new engine is of the overhead valve type, with the cylinders cast in a single block from a hard gray iron. The block is narrow and has an unusually clean exterior. It is recessed to inclose the pushrods and is provided with spark-plug openings at each side, one set of which are plugged unless two plug ignition, which is not standard, is desired. The cylinder head casting is perfectly flat on its under surface. Consequently the combustion chamber has a true cylindrical form and all its surfaces are machined all over. The head is attached to the cylinder block by nickel steel studs.

The valves are vertical and seat directly in the head. The inlet and exhaust valves are identical and are made of tungsten steel. The clear opening is 1 9-16 in. Care has been taken to see that there is sufficient space between each pair of valves to avoid their seating on a common wall, thus preventing seat warpage which might otherwise occur. The upper surface of the cylinder head is provided with carriers for positioning the two hollow rocker shafts. The rocker arms are quite short and are made as light as practicable in order to reduce the inertia forces. The adjustable screws which contact with the upper end of the push rods are carefully fitted and the rockers are split diagonally and provided with tangent bolts which securely lock the adjusting screw once it is properly set. The lower end of the adjusting screws are hemispherical and contact with the cup shape upper end of the push rod, the cup being kept full of oil which lubricates these parts and provides a cushion which helps to maintain a quiet mechanism. Oil is fed under pressure to the hollow rocker shafts and issues through holes drilled in the shaft and thence through passages in the rocker arms, whence it enters the cups on the upper end of the push rods and overflows running down the rods to the base chamber, lubricating the tappets and cams in so doing.

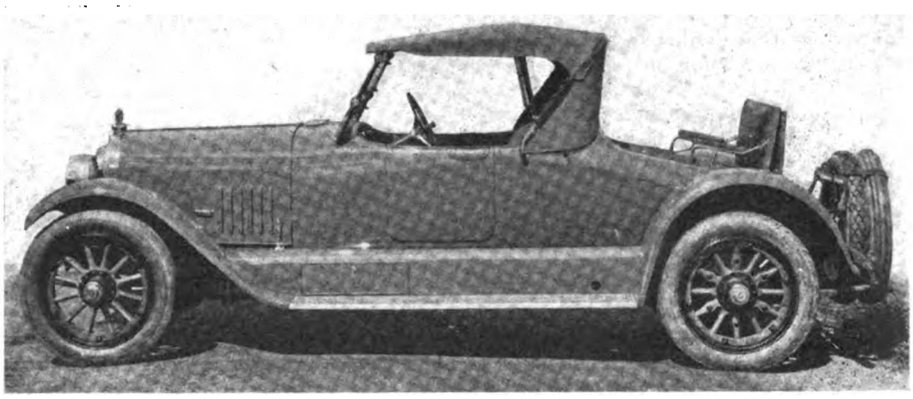
The push rods are made of steel tubing, the inserted ends being welded in place. The cam followers are mushroom type.

Digitized by Google

The cast aluminum cover used to inclose the valve mechanism is well ribbed and securely bolted to the head by eight cap screws. This insures an oil tight joint and obviates any drumming noise.

The cylinder block is bolted to an aluminum crankcase which is quite conventional in its general construction. The upper half of the case carries the main bearings while the lower half serves chiefly as an oil reservoir. The main bearing caps are of aluminum, with drop forged steel reinforcements. These bearings are bronze backed babbitt lined 2¼ in. in diameter. The front and center main bearings are 2½ in. and the rear main bearings 3½ in. long. The camshaft bearings are die cast babbitt and are pressed into the crankcase. The gear type oil pump is driven by a vertical shaft, its driving gear meshing directly with another gear forged integrally with the camshaft. The latter is a nickel steel forging case hardened and ground to close limits.

Helically cut timing gears are used. The pinions on the crankshaft and pumpshaft are steel forgings, while the intermediate gear is of Micarta. The gearcase cover is a heavily ribbed casting which forms the front support for the engine. The pumpshaft, which carries the fan driving pulley on its forward end is provided with oil slingers and a coarse pitch thread which effectively prevents oil leakage. The centrifugal water pump is provided with a stainless steel shaft to insure freedom from corrosion. The lighting generator is driven off the rear end of the pump shaft while the rear end of the generator shaft is used to drive the Eisemann magneto. Special care has been taken to securely lock to the respective shafts the flexible couplings which are used to drive the units in this train. The fan has four cast aluminum blades and is driven by a flat belt.

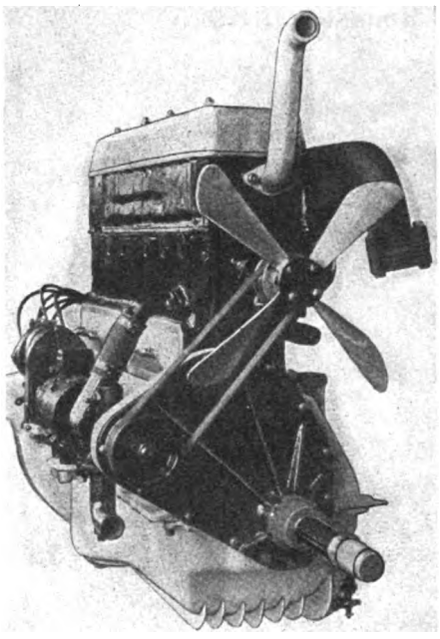


The lower crankcase is provided with external ribs to assist in cooling the lubricant and to stiffen the case. The oil drain cock is provided with a long vertical stem terminating in a handle at a point above the sheeting which is inserted between the engine and frame, the arrangement being such as to make it unnecessary to reach under the chassis to drain off spent lubricant.

The Lynite pistons are constant clearance type and are provided with three rings above the pin. No scraper ring is employed. The piston pin is of hollow tapered section and is fastened in the rod.

Connecting rods are drop forged, high carbon steel of H-section and measure 10 in. center to center. The bronze back, babbitt lined, big end bearing measures 2¼ in. in diameter by 2½ in. long. The rods are machined on the outside edges and the web is drilled to reduce weight. Two nickel steel bolts are used to secure the big end bearing.

The crankshaft has crescent shape throws, oil being fed through the shaft and around these throws by external pipe placed circumferentially in order that centrifugal force may not interfere with the flow of oil through the pipes.



Oil pressure varies from about 5 to about 40 lb. per sq. in. as the speed increases.

The Mercer Six roadster, $3,750

The engine has 3¾ in. bore and 5 in. stroke giving a piston displacement of 331.3 cu. in. It develops its maximum of 82 to 84 horsepower at about 2600 r.p.m.

A 1½ in. Model OC 3 Stromberg carbureter of the side outlet type is employed. The air is pre-heated by contact with the exhaust manifold and the charge is afterward heated in the cylinder block by contact with the water jacketed walls

The new overhead valve engine used on the Mercer Six

and in the valve pockets where some of the walls are common between inlet and exhaust.

Fuel is fed by a vacuum tank from a large tank suspended from three points on the rear cross-member. The tank is equipped with a Rochester gasoline gage fitted into the casting which forms the filler spout. The gage is visible from the right side of the car even when a trunk rack is employed.

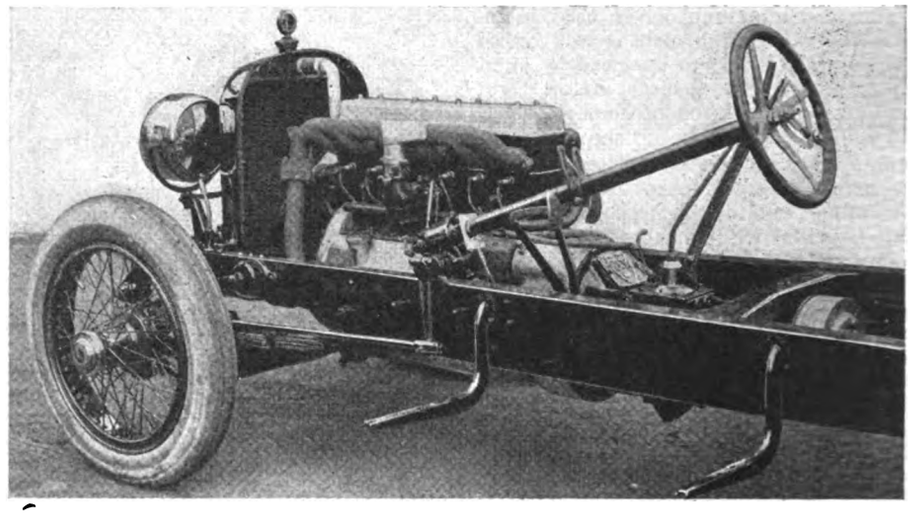
The exhaust manifold is provided with a front outlet which makes it possible to carry the exhaust pipe well below the floor of the car and prevent heat from entering the driver's compartment.

The front end of the engine is mounted in a spherical trunnion which is concentric with the crankshaft while the two rear supporting arms of the engine are bolted solidly to the frame. In this case, as with other parts bolted to the frame, rather thick shims are employed to give the desired alignment. This makes it possible to interchange engines in the same chassis without changing the drilling, and still assure correct alignment.

Uses a Three-Speed Gearset

The new three-speed gearset which in common with the new multiple disk clutch is of conventional type is supported on a bell housing bolted to the crankcase. The use of this gearset did not admit of a satisfactory mounting for the same propeller shaft brake which has long been a characteristic feature of Mercer cars. It was consequently mounted as an independent unit. The bracket employed is an aluminum casting which carries the brake shaft in two ball bearings. This casting is bolted up to the center cross member of the frame and thus serves as a rigid anchorage for the brake. The brake itself is similar to that employed in the four cylinder chassis. The brake shaft is connected to the gearset by a short shaft and a flexible coupling similar to that formerly employed between engine and gearset. From the brake shaft the power is transmitted to the rear axle by a propeller shaft with two Spicer universal joints. The drive is the Hotchkiss type with the springs taking torque as well as pushing the car. This arrangement has long been used on Mercer cars.

The new rear axle is three-quarter floating type. It is provided with a one-piece pressed steel housing which has a single welded joint. The spiral bevel gears give a reduction of 4.08 to 1 in case of closed car chassis and 3.77 to 1 in chassis fitted with open bodies. The ring gear is provided with serrations which fit the splined differential housing and take torsional strains, so that the rivets serve only to hold the two parts together. All bearings in the rear axle are of the taper roller type. The hand operated internal expanding brakes on the rear axle are carried in flanged drums of 16 in. diameter and are completely enclosed.



Both front and rear springs are semi-

Digitized by Google

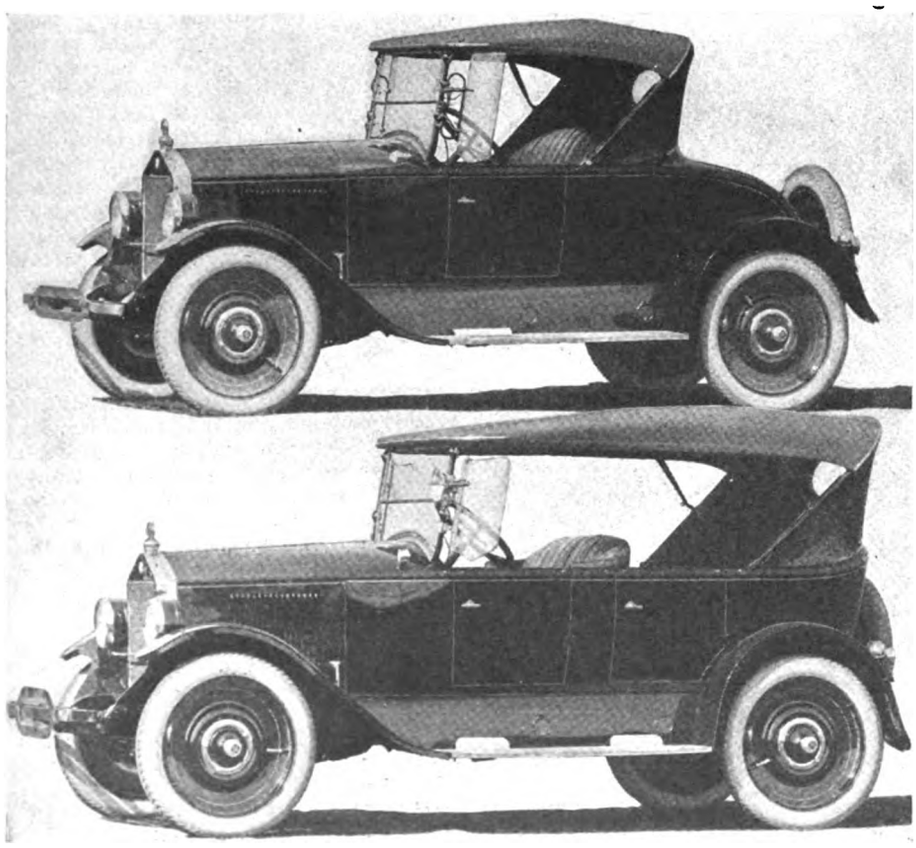
elliptic and are the same length as those employed in four-cylinder chassis. The front springs are 39 in. long and the rear springs being 59 in. Both sets are 2½ in. wide. The rear springs are underslung and are directly beneath the side rail of the frame. They are bolted to the axle by U-shape clips which pass around the axle housing.

New Type Spring Shackle

An interesting feature of the spring suspension is the type of shackle employed. The side links of the shackle are forged separately and are then machined with a taper hole in each end. The shackle bolts are necked at both ends and the reduced diameters are threaded through a part of their length to receive nuts. The necked portions do not fit directly into the shackle links but split collars, tapered on their outer surface to fit the tapered hole in the link are interposed. Thin washers are placed between the nuts and the collars, after which the nuts are drawn up tight. This forces the tapered collars into the tapered holes at the same time causing them to contract on the necked portions of the bolt, thus making the bolt a tight and rigid fit in the link. The thin washers are then bent over in such a way as to lock the nuts securely in place. The shoulders on the bolt space the links the desired distance apart, this distance being equal to the length of the bushing pressed into the spring eye, so that there is no side shake. With this construction the two bolts and two links become, in effect, a single piece which is exceptionally rigid. The bolts are made hollow to receive Alemite grease fitting and are so grooved on the bearing surface as to permit the grease to reach the whole bearing surface.

The front of the Mercer Six chassis.

The use of a unit power plant with three point support has necessitated some changes in the frame as compared to that employed in the four. The side rails are practically unaltered, but there is a new and rigid cross member to support the front end of the engine and a wider and stiffer rear cross member above the gasoline tank. The central cross member is provided with wider flanges than were formerly used. The tubular cross members one of which was in front of the radiator and one near the rear of the frame are now eliminated. The battery carrier is attached to the right side member of the frame, under the front seat, while the muffler and exhaust pipe are now on the left side.



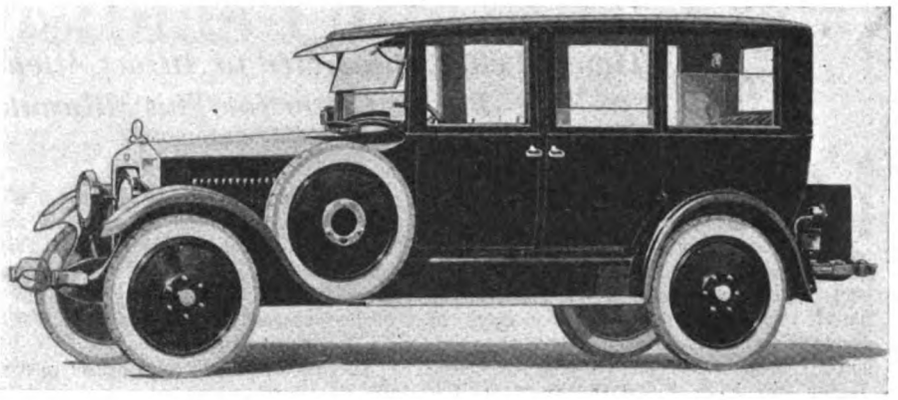
The front axle, made complete in the Mercer plant, is substantially identical with that used and found highly satisfactory for several years. It is of conventional inverted Elliott type and is forged from nickel steel. The steering knuckles and arms are made of heat-treated chrome nickel steel. The steering pivots have ball thrusts and are given a 2½ deg. rake to the rear.

The Gemmer steering gear which has been used on the four is used also in the six cylinder chassis. This is a worm and gear type. The steering post is slung on an adjustable bracket which permits of its being raised or lowered to suit drivers of different stature.

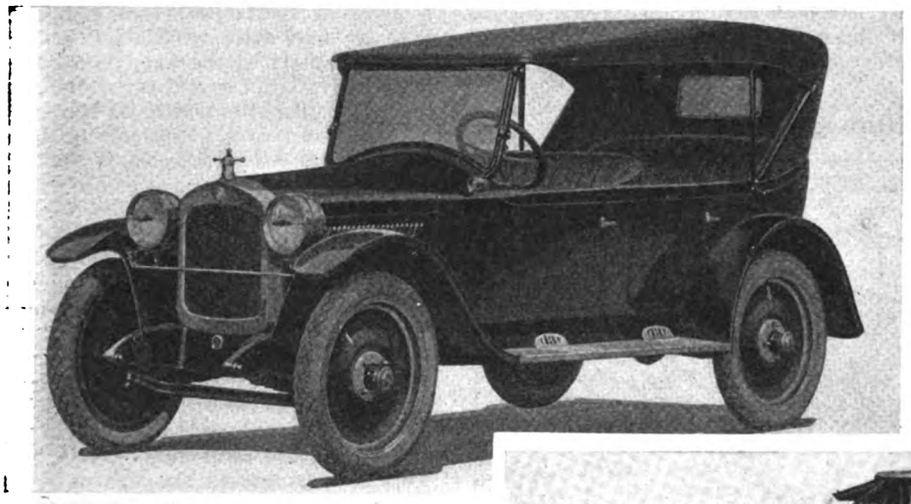
The appearance of the front end of the car has been slightly altered by removing the tubular frame member in front of the radiator and changing the shape of the splash pan. The front horns of the frame are now provided with fore and aft bolt holes for bumper mounting, and carry a new design of lamp bracket. This is triangular in side elevation and has at its upper end a socket in which forked lamp supports of various sizes can be attached.

The weight of the six-passenger phaeton is 3900 lbs. ready for the road including two extra tires. The complete car with closed body weighs about 4300 lbs.

New Dort Phaeton and Roadster, $1,015



The Dort Motor Car Co. has added two new sport models, a phaeton and a roadster, to their line. Both of these are mounted on the standard Dort chassis. Both cars list at $1,015 and are trimmed in accordance with sport fashion. The cars are finished in maroon with aluminum stripe, the upholstery being genuine leather with a mottled hand finish. The top and side curtains are khaki. The rear windows are of rock crystal glass ⅛ in. thick. In the equipment furnished with this car, nickel plating is used for the drum type headlamps, cowl light, spot light, combination spot and tail light, as well as bumpers. Moto-Meter with lock and windshield wings are standard.

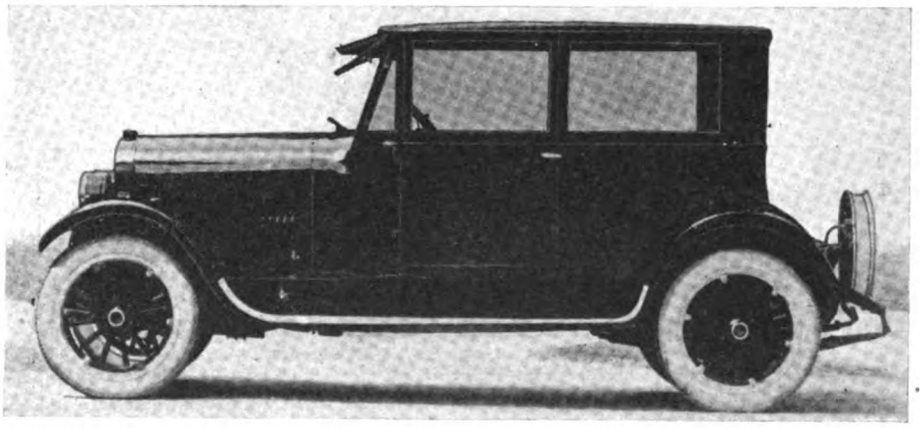


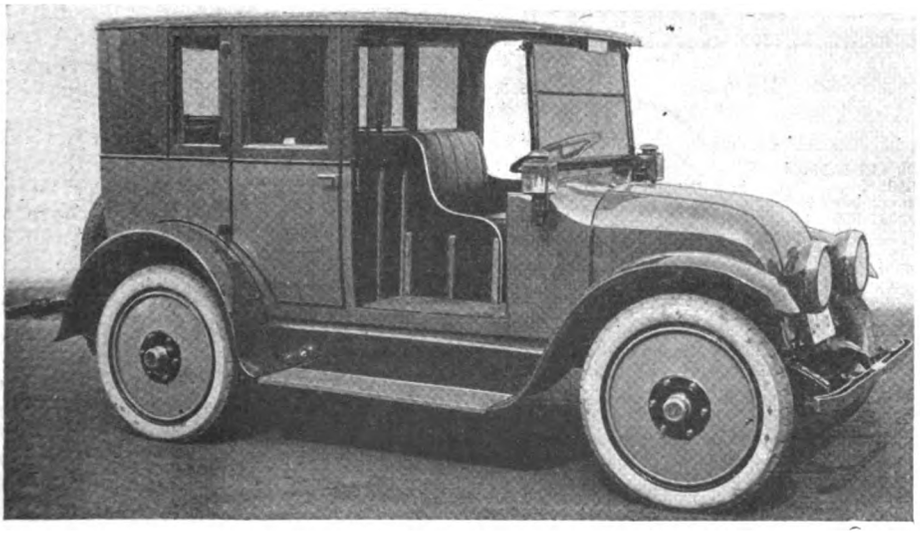
Digitized by Google

Makers Announce New Body Models

Studebaker Big-Six Sedan (Special), $2,650

Priced somewhat higher than the regular sedan mounted on this chassis, the Big-Six sedan (special) includes many items of equipment not included on the regular model. Included in the additions are nickel plated bumpers in front and rear, trunk with dust proof cover, two extra disk wheels complete with tires mounted on the front fenders, automatic windshield cleaner, Moto-Meter, ornamental radiator cap and rear view mirror. The radiator shell is nickel plated





Hupmobile Special Phaeton, $1,250

This new addition to the Hupmobile line embodies the sport line features as announced in the last issue of Motor World. The radiator shell is nickel plated and so are the rails, lights, etc. Aluminum steps, disk wheels and a Burbank top are part of the regular equipment on this model. The chassis is the regular Hupmobile standard without change. A roadster of similar type will be in production later

Lexington Royal Coach, $2,145

An addition to the Lexington line is the Royal Coach at $2,145. It is a five-passenger body with ample room for three on the rear seat and with two individual Pullman type chairs in front. The body is of the two-door type, the vision being extremely wide by reason of the large glass area and the design of the slanting windshield with its glassed triangle

Rauch & Lang Electric Taxicab

A fleet of electric taxicabs similar to this one is being put in operation in New York City. Under ordinary driving conditions, it is said that the cab will make 60 miles on one charge. The battery is easily removable and it is intended that two batteries will be used with each cab, one battery being charged while the other is in service. The upholstery is gray leather with dull finish aluminum trimmings. The wheelbase is 102 in., the tires 32 x 4¼ in. and the weight about 3700 lbs.

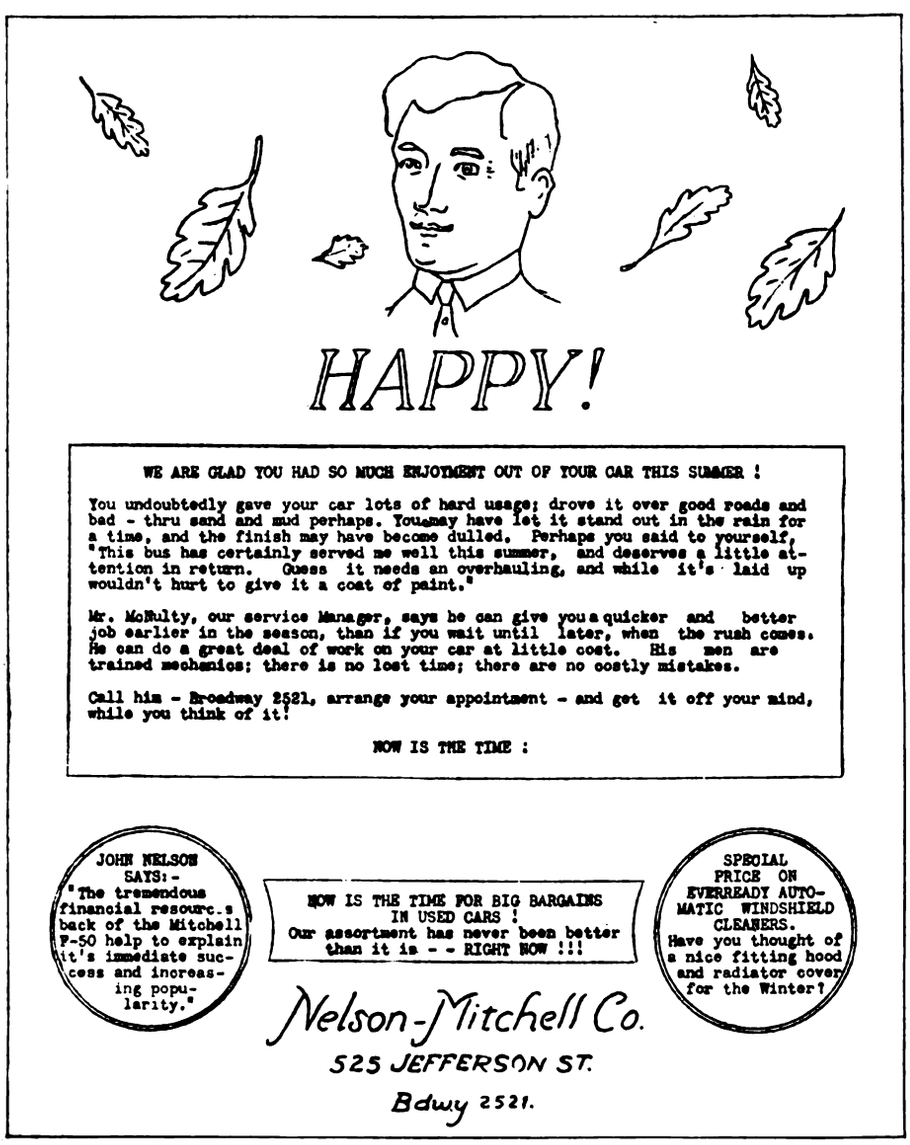
Making the Mimeographed Letter Attractive



Timely Letter, Illustrated to Attract Attention, Proved a Shop Profits Getter for This Milwaukee Dealer

ONE of the most compelling pieces of literature that has yet been issued by a Milwaukee dealer for the purpose of soliciting fall and winter repairshop business to offset the usual lull following the busy days of summer, is that distributed by the Nelson-Mitchell Co., Milwaukee, Mitchell dealer and district distributor to its list of about 500 Mitchell owners in Milwaukee, Waukesha, Ozaukee and Washington counties.

The circular is worked out on a mimeographing machine, combining the ordinary machine typewriting with simple but artistic handwork which gets the circular, as a whole, away from the more or less stereotyped forms of business solicitation literature.

In this respect it is similar to a series of circulars which the Nelson-Mitchell Co. has been sending to its mailing list at intervals throughout the past year, which is its first year in the local trade.

Brightening Up the Mimeograph Letter

Here is the way a Milwaukee dealer is using mimeographed letters to boost fall business in sales and repairs. The letters are made attractive by simple drawings and a novel arrangement of the reading material

This circular was mailed to reach Mitchell owners on Oct. 7 and 9, and it happened to strike at a time when an unusually warm spell was broken by a cold wave, with a drizzling rain lasting about 24 hours putting the recipient into a receptive mood.

Besides soliciting overhauling jobs, the circular, like those preceding it, made a point of special offers of equipment, such as automatic windshield cleaners. It also introduced the happy thought of hood and radiator covers for winter driving, and called attention to the company's stock of used cars. Incidentally it also contained an effective boost for the new F-50 Mitchell.

Selling Facts in Ads

THE Abshier-Bryan Motor Co. Fayetteville, Ark., made an announcement in the home town paper to the effect that August had the largest number of deliveries ever made by the firm in one month, 38 new Fords and trucks having been sold and delivered in that month. Of the total number sold, there were 25 touring cars, six runabouts, four coupes and three trucks. Accompanying this announcement was a copy of the August report sent to the State Highway Commissioner in Little Rock, the State capital, as required by law. Names and addresses of customers to whom cars had been sold were published, together with information relative to the type of car bought, date delivered, etc.

The firm realized that people would be interested in reading the names of buyers of cars.

The whole made a very effective advertisement.

Used Car Ad Appeals to Special Groups

IN selling used cars it is a worth-while idea to use some advertising copy reading about like this:

"TO LOCAL MECHANICS:

"This ad isn't addressed to the average man who wants a motor car. It is addressed specifically to you because you will appreciate the good condition of the engine and entire mechanical equipment of our used car No. 124A. Come and look this car over. We believe it to be in the best possible condition and would like to get your opinion of it."

This sort of an ad would, of course, attract the attention of folks other than mechanics and would, undoubtedly, help a lot in selling used cars to such people as well as to mechanics.—Indiana Dealer.

3 Ways to Sell Accessories as Christmas Gifts

How to Make Your Store Attract the Shopper Who Has Money to Spend for Presents for Motorists

IS there any better Christmas gift for a motorist than an accessory for his car or a pair of gloves for himself or a robe which will help to keep him and his friends warm riding through the snowy, blowy, wintry streets? The answer is—NO!

And the more the automotive equipment dealer hammers home this thought to the folks in his city during the weeks between now and Christmas, the more Christmas business he will do and the more money he will make.

Also, the more attractive he makes his accessories for Christmas gifts the more Christmas business he will do.

So, with this thought in mind, dealers and garagemen will find it profitable this fall to put into practice some of the following suggestions:

SUGGESTION NO. 1—Everybody who gives a Christmas gift wants it to look festive and Christmasy. Nobody cares much about giving an inner tube in its original package with only store paper wrapping around it. Nobody cares much, either, for handing a friend or relative a spark plug done up in the conventional package and all bound round with an ordinary piece of wrapping paper and a bit of white string.

But—do up your inner tube in the holly paper which is obtainable in any stationery store, tie it with red or green baby ribbon, stick a sprig of holly in the package and attach a card to the package reading like this:

"May you always ride as easily over life's rough spots as your car will with this tube is the wish of ————."

And when you do this you turn your inner tube package from a thing that doesn't appeal to anyone as being a good Christmas gift to something that makes a hit with everyone and that increases your Christmas business in inner tubes immensely.

Christmas Wrapping

It's really the easiest thing in the world to make accessories attractive as Christmas gifts by this simple procedure of wrapping them in holiday paper, tying them with appropriate ribbons, sticking in a piece of holly or mistletoe and attaching to them appropriate Christmas cards which will link up in some clever way with the article and which would express a cheerful Christmas spirit.

Of course the time to prepare your accessories in this way would be three or four weeks before Christmas. And it wouldn't be sufficient simply to "doll them up" in this fashion. You would also have to advertise that you had done the dolling up. This fact you could tell to the public by means of attractive window displays in which you would show the completed packages and by means of newspaper advertising.

Go after Christmas business in this fashion this year. It won't cost much—only a small outlay for paper, ribbons, etc., and a little time and trouble spent in tying up the packages.

SUGGESTION NO. 2—Christmas cards, as a usual thing, run along well established lines. The cards of this year will be much like the cards of last year. This, too, in spite of the fact that there is a tremendous demand from the general public for cards that are real novelties.

So, if you will have cards printed which hook up with your accessories in an attractive, clever, unusual manner you will have a decided booster for more business.

Some of the sentiments you might have printed on your cards might be:

"Amid the heat of summertime
Or in the depth of winter snows,
As constant as this sparking plug
Our spark of friendship glows.
"Merry Christmas from ————."

For a spotlight you might have this sentiment:

"However dark the year may be,
With this a spot of light you'll see,
And here's my dearest wish for you,
May this light shine the whole year through.
Merry Christmas from————."

For a rear "Stop" signal you might have a card printed bearing this sort of a sentiment:

"'STOP' dear friend, I wish to say:—
'A gladsome Christmas for you today.'"

The cards bearing these sentiments need not be particularly elaborate.

All this would be helpful to you in getting folks to "say it with accessories" this year.

SUGGESTION NO. 3—A good percentage of all the motorists in your city would, undoubtedly, prefer accessories for Christmas gifts to anything else that might be given to them. But, because the general public hasn't yet gotten into the habit of looking at accessories as suitable for Christmas gifts, there is public education needed to get folks to buy accessories from you for Christmas gifts in the quantities you'd like to have them buy.

Consequently anything that can be done to hammer home to the general public the fact that so many of the city's motorists want accessories for presents this year will help sell more accessories at Christmas time.

Christmas Advertising

One way of doing this is by advertising alleged interviews with motorists as to what accessories they'd like to have for Christmas gifts. Such an ad might say:

"IS THERE A MOTORIST IN YOUR FAMILY?

"If there is he'd probably rather have an automobile accessory for a Christmas gift this year than anything else.

"Perhaps the motorist in whom YOU are interested is included among those who have told us what they want for Christmas:

"Mr. A. ——, 'I'd rather have a robe for my car for Christmas than anything else.'

"Mr. B——, 'My notion of the right sort of a Christmas present to give me is a spotlight for my car.'

"The greatest pleasure in giving Christmas presents is in giving things that are really wanted.

"Find out what accessory the motorist in whom you are interested wants, and then get it for him at this store. You'll find our accessories all charmingly wrapped in Christmas packages and that we have provided clever Christmas cards for you to send them with your accessory Christmas gifts."

This would make many people consider accessories for Christmas gifts.

Let's go after Christmas accessory business this way and—GET IT.

When the Garageman Delivers a Car

He Is Responsible for Accidents Unless Driver Is Compensated by the Owner

EDITOR Motor World:—We have a man here in town who is willing and anxious to store his car with us at our garage, but has not done so because we have always refused to let our mechanics drive customers' cars between their homes and the garage. As we understand it, if we did and somebody was hurt, we would very likely be held responsible and have to pay damages. How can we get this man's business and still not be held responsible if something happens.—Subscriber, Atlantic City, N. J.

Answer:—Whether a dealer or the customer is liable when a person is run down and injured in a case of this kind depends entirely on who has control of the driver when the accident happens.

If the driver of the car is acting as the employee or servant of the dealer at the time of the accident, the dealer is responsible; on the other hand, the driver, if acting as employee or servant of the owner of the car at the time of the accident, the owner is responsible. I realize that it is often desirable and necessary to furnish a driver to a good customer when he requests that a car be delivered to his home or be called for at his home to be taken to the garage.

It must be borne in mind, however, that every time the dealer accommodates a customer in this way, he assumes a heavy responsibility.

One single accident may cost him a great deal more than he has ever profited by having such a customer or may ever reasonably expect to profit.

If the dealer has it distinctly understood that he will not furnish any drivers, but that he will procure a driver who shall be compensated by the owner, according to agreement; that the dealer has no interest in the matter of compensation, then the matter assumes a different aspect and the responsibility is not assumed by the dealer.

If the car and the passengers in it were injured through fault of the driver, the garageman would undoubtedly be held responsible if the customer were able to prove that the dealer controlled the driver.

Better to Have a Lawyer Do These Jobs

Editor Motor World:—Please advise us on the collection laws in the State of Florida for collecting bad accounts on automobile repairs, and what course is advisable to follow to get our money for such work? Also what does a mechanic's lien cover?

We ask you for all this information as all the garagemen and machine shops in our town are going on a cash basis.—L. V. S., Bradentown, Fla.

Answer.—Sec. 3502 of the Rev. Laws of Florida provides that:—

"Liens prior in dignity to all others accruing thereafter shall exist in favor of the following persons upon the following described personal property under the circumstances hereinafter set forth."

Section 3508 provides:—

"In favor of any person who shall manufacture, alter or repair any article or thing of value upon such article or thing."

Under this law the property may be retained three months. If not paid, you should turn the matter over to your local attorney so that he can enforce your lien by court action before the expiration of the three month period.

I do not just understand what you want to know about the collection laws. Turn the claims over to a local lawyer and let him collect them for you.

Facts Alone Determine Liability in Garage Fire

Editor Motor World:—What is our responsibility for the loss of cars by fire which are left with us on temporary storage? How can we limit our responsibility? B. S. H., Wilmington, Delaware.

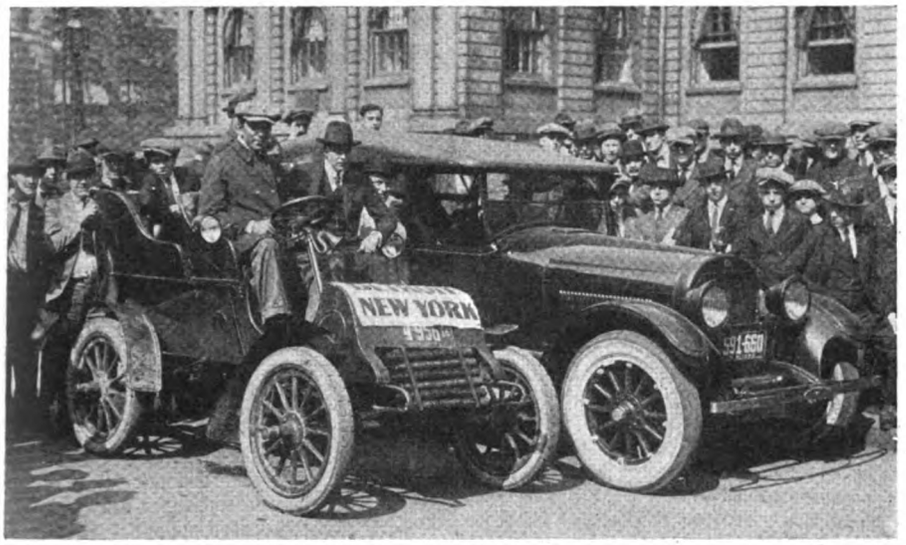
Answer.—A garageman is not an insurer of cars left with him on storage but is bound by law to use reasonable care to protect the property from loss, that is, the same degree of care a reasonably prudent man would use toward his own property. Each case where a fire occurs in a garage must be determined according to its own peculiar facts. So if you have had a fire, before it can be determined whether or not you were negligent in such a degree as to cause you to be held liable for loss to customer's cars you will have to find out what caused the fire and whether you could have prevented it or saved the property by the use of ordinary common care.

The general rule is that a bailee for hire cannot limit his liability for loss caused by his negligence.

Judgment Includes Seller in This Case

That where the buyer of an automobile was sued for the possession of the car by a person who claimed title to it and notified the person who had sold it to him, who then assisted with the defense and appeared at the trial by counsel, and made suggestions, the seller waived his right to have exclusive control of the defense, and the judgment rendered against the buyer was conclusive against the seller in a subsequent action started by the buyer against the seller for damages for breach of warranty in the sale of the car to him, was the decision of the Supreme Court of Alabama in the recently decided case of Southern Motor Co. vs. Gayle Motor Co., reported in 92 Southern Reporter at page 784.

May Cross Sidewalks



Another recent case involving gasoline stations is the case of Standard Oil Company vs. Kearing, wherein it was decided by the court, that a city cannot under the general welfare provision of its charter, forbid the operation of gasoline stations and filling stations, between designated points on its principal streets, even though the automobiles must cross the sidewalks to reach the stations. 184 Northwestern Reporter, page 109 (Nebraska).

Owner May Recover Tank

That a company which lends a gasoline tank to the owner of a garage to aid in the handling of gasoline may recover it from the purchaser of the real estate who has notice of the ownership of the tank, although it is buried in the ground to guard against injury and to lessen the fire hazard, was the decision in the recently decided case of Standard Oil Co. vs. Dolgin, reported in 115 Atlantic Reporter at page 235.

The Stitch That Saves Nine

A Standardized Inspection System for Franklin Cars That Has Been Developed by the Factory with the Assistance of Field Service Men and Adopted by Franklin Dealers and Service Stations

A MONTHLY inspection system was started several years ago by some Franklin dealers with the idea in mind that if automobiles received periodic oiling, greasing, tightening and adjusting, many expensive overhaul bills would be eliminated or would be necessary only after greater mileage and longer service. The maintenance cost of the car would be reduced, and the owner would experience practically no discomfort while owning the car. This monthly inspection service as originated by the dealers has been standardized by the Franklin factory service department and has been adopted by Franklin dealers and service stations.

Three monthly inspections at no charge are furnished the owner after the purchase of a new car. To insure against unintentional overlooking of any of the operations, a printed report is followed and filled in by the mechanics as the inspection proceeds. Comments on the operations are made where necessary, and a copy of the report, signed by the mechanic and tester, is given the owner.

Inspection Operations

The following digested operations apply to both the Series 9 and Series 10 Franklin cars, excepting where it is otherwise designated:

Oil and grease. The amount of oil and grease should be inspected at all places as designated and replenished where necessary.

1. *Align Front Wheels.* Align front wheels between limits of "straight-in-line" to ¼ in. toe-in.

2. *Front Wheel Bearings.* Grease and adjust front wheel bearings. Screw adjusting nut up tight and then back it off two castles.

3. *Front Axle Yoke Pins and Bushings.* Check the wear in both front axle yoke pins and bushings.

4. *Front Springs.* Tighten spring clips and spring chair bolts and adjust pivot bolts.

5. *Steering Connections.* Adjust all steering connections, check steering device to engine rail bolts and cowl board. Check for back lash and end play in bearings. Tighten lock nuts or clamps on drag link and knuckle connecting rod.

6. *Rear Axle Shaft.* Tighten hubs on tapers of rear axle shafts, check for end play in rear axle drive shaft. There should be no perceptible end play. On wire wheels see that all wheels are tight on hubs and hub caps properly locked.

7. *Brakes.* Adjust service brake; brake should be fully on when pedal is 2 in. from the floor board. Adjust emergency brake; brake should be fully on when hand lever is vertical. Adjust each brake so that it grips the wheel with the same tension. See that brakes do not drag when released.

8. *Rear Spring.* Tighten spring clips and spring chair bolts and adjust pivot bolts.

9. *Drive Shaft Universal Joints.* Check universal joints for wear in bushings and looseness of flanges on tapers.

10. *Clutch* (Series 10). Adjust clutch. There should be 1/16 in. clearance between clutch puller yoke and clutch throw out bearing. There should be ⅛ in. clearance between clutch brake and clutch shaft sleeve nut face.

(Series 9.) Adjust clutch. There should be 1/32 in. to 1/16 in. clearance between the trunnion and the flange of the universal joint with the multiple disc clutch, and 3/16 in. clearance between the forward face of the trunnion and the hooks on the puller rods with the dry plate clutch.

11. *Battery.* Test battery. Add water, if necessary, and note after each cell its condition. The minimum hydrometer reading should be 1150, this indicates a discharged battery. If anything in particular is noted, it should be called to owner's attention.

12. *Clean Engine.* Clean off engine base, between cylinders, cylinder flanges and engine pans.

13. *Engine Rail Bolts.* Tighten engine rail to sill angle iron bolts and engine rail to crankcase nuts.

14. *Steering Device.* Tighten steering device to engine rail bolts and cowl board. Check for back lash and end play in bearings.

15. *Cylinder Hold Down Nuts.* Tighten cylinder hold down nuts.

16. *Walking Beam Tube Yoke Nuts.* Tighten valve walking beam tube yoke nuts and tube lock nuts.

17. *Carbureter and Vacuum Tank.* (Series 10.) Examine flow of gasoline. Clean out strainer screen. Check and adjust if necessary the auxiliary air valve spring. Test primer. Test primer valve for leakage by noting if the engine will run with needle valve closed.

Fuel System

(Series 9.) Examine flow of gasoline, clean out carbureter strainer if necessary. When dash lever is on "cold," see that carbureter air control valve is not half on "hot" and half on "cold" due to cable stretching. Check and adjust if necessary auxiliary air valve spring. Test master primer. Test master primer valve for leakage by noting if engine will run with throttle valve closed.

18. *Ignition System.* (Series 10.) Bear in mind that any change in adjustment of breaker gap will change the location of spark. Therefore check location of spark on flywheel or fanwheel after you have finished adjusting the Atwater Kent. In adjusting proceed in the following order:

1. Push spark control button way in.
2. Smooth breaker points if pitted or corroded.
3. Set breaker gap at .015 in. (use thickness gage furnished with equipment).
4. Check spark setting on flywheel or fanwheel. It should be from 1 in. to 1¼ in. before upper dead center. The triangular mark on the rim of fanwheel is center-line mark for 1 and 6 cylinders. To check setting put ignition switch to "On," pull out high tension wire from center of distributor cap and hold it ⅛ in. from any metal part of engine. Turn engine over slowly by hand, stopping instant spark occurs at the end of the high tension wire. This is the point at which the ignition spark occurs and should be from 1 in. to 1¼ in. before upper dead center as measured on the flywheel or fanwheel.

(Series 9 late.) Bear in mind that any change in adjustment of breaker gap will change the location of spark. Therefore check location of spark on flywheel after you have finished adjusting the Atwater Kent. In adjusting proceed in the following order:

1. Smooth breaker points if pitted or corroded.
2. Set breaker gap at .008 in. (use thickness gage furnished with equipment).
3. Check spark setting on flywheel. It should be from 1 in. to 1½ in. before upper dead center.

To check setting, put starter switch in neutral position—pull out high tension wire from center of distributor cap and hold it ⅛ in. from any metal part of

Readers are invited to ask this department for suggestions to work out mechanical difficulties. When asking for information, please state whether you maintain a permanent file of Motor World, as many inquiries are answered by reference to previous isues.

Digitized by Google

engine. Turn engine over slowly by hand, stopping the instant a spark occurs at the end of the high tension wire. This is the point at which ignition spark occurs and should be from 1 in. to 1⅛ in. ahead of upper dead center as measured on the flywheel.

Contact Points

(Series 9 early.) Inspect lifter for wear, replace if worn—put slight amount of light grease or vaseline on notched shaft. Adjust contact points. Gaps should be .019 in. Check ignition setting. It should be 1⅛ in. ahead of upper dead center as measured on the flywheel.

19. *Spark Plugs.* Clean spark plugs and adjust gaps .031 in. using equipment gage.

20. *Valves.* Time valves .010 in. with engine cold or .15 in. hot with engine running. While valve covers are off, oil walking beams and lifter rods; saturate felt pads (Late 9-B and Series 10) in an equal mixture of engine oil and kerosene and squeeze out all excess mixture.

21. *Compression.* Test compression. Note weak cylinders. Fire each cylinder separately. Compression should be fairly even on all cylinders.

22. *Starter.* (Series 10.) Inspect commutator; smooth off with sandpaper if oily and dirty.

(Series 9.) Inspect commutator; smooth off with sandpaper if oily and dirty. Check chain tension by rocking tire pump clutch end of armature shaft with pliers. Movement of ⅛ in. at end of pliers is normal.

23. *Generator.* (Series 10.) Inspect commutator; smooth off with sandpaper if oily or dirty. Check chain tension through inspection hole.

24. *Tire Pump.* (Series 10.) Start pump and see that it is in perfect operating condition.

(Series 9.) Oil pump. Start and see that it is in perfect operating condition. Inspect tire pump clutch for wear and alignment. Tighten pump to bracket and test.

25. *Engine Base Oil.* Note condition of oil and if changed at time of inspection state so, following instructions according to oiling chart. Remove plug from bottom of flywheel bell housing to see if engine leaks oil.

26. *Oiling System.* Check system for leaks. Engine should be kept clean. Connections should be sufficiently tight to prevent any appreciable amount of oil leaking when car is standing. Same applies to gearset and differential.

27. *Hood.* (Series 9.) Check fit of hood. Give particular attention to fit of wings on inside of hood to the engine jacket. (Unless properly fitted cooling system is vitally affected.) There should be ⅛ in. clearance between the dash and the rear edge of the hood on 9-A and early 9-B and also same amount between hood hinge and hood hinge spring.

28. *Electric Wiring Terminals.* Check and tighten all loose wire terminals under cowl.

29. *Lighting System.* Check lighting fuses on junction board and all lamps.

NOTE: By bringing your car in regularly each month and by carefully studying this report, you will greatly aid us in securing for you better service from your Franklin car

The monthly inspection report used with the Franklin inspection system

Look for corroded fuses. Check headlights and bulbs, dim and bright.

30. *Horn.* Oil horn and test for tone. Adjust if necessary.

31. *Tires.* (Series 10.) Check tires for proper pressure. Tighten rim clamps.

(Series 9.) Check tires for proper pressure.

32. *Road Test.* Test car. Note operation and noises, such as pinking, bearing knocks, throttling ability, etc. Check muffler for back pressure; if any evidence of lack of power or heating, look for plugged muffler.

What Horsepower Will Shafting Transmit?

The power that shafting will transmit varies according to a number of conditions such as speed, distance between shafting hangers, weight of pulleys and gears, width of belts, etc. For average line shafts where the hangers are 8 ft. or less center to center and the loads inexcessive, the following ratings are applicable:

Shaft Diameter	Revolutions Per Minute 200	225	250	275	300	325	350
1 1/16	12	13	15	16	18	19	21
1 1/8	18	20	22	24	27	29	31
2 3/16	25	28	31	35	38	41	44
2 7/16	34	39	43	47	52	56	60
2 11/16	46	52	58	64	69	75	81
2 15/16	60	67	75	82	90	97	105
3 3/16	76	85	95	104	114	123	133
3 7/16	95	107	119	131	143	155	167
3 11/16	117	132	146	162	176	190	205

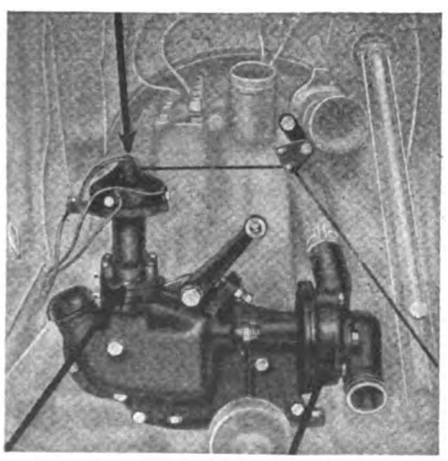
Equipment to Sell

New Devices for the Car and Truck

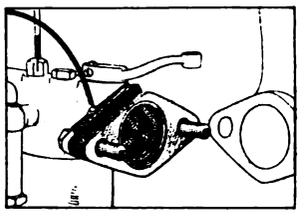
Auto Top Wardrobe Carrier



Auto Top Wardrobe Carrier Co.,
4154 Moneta Avenue, Los Angeles, Cal.
$12 for touring car size; $9.50 for roadster size.

A carrier for clothes, coats, wraps, etc., made in two sizes, one for touring cars and the other for roadsters. Both sizes are adjustable. The larger berth is made in three designs, the smaller in two. In the illustration the compartments marked "A" are for carrying coats and wraps. When the compartment is closed, it is dustproof. The compartment marked "B" is for hats and will carry four. Two pockets "C," 10 x 12 in., are for carrying small articles. "D" is a single hat carrier. "E" are two pockets for convenience of front seat occupants. "F" are snap buttons to hold pockets and compartments closed.

3 in 1 for Fords



Hexagon Specialty Mfg. Co.,
3630 South Grand Avenue, St. Louis, Mo.
Price $31.

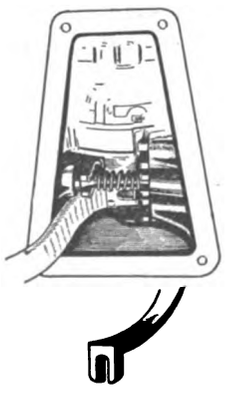
The device combines a circulating water pump, gear type force feed oil pump and elevated timer for Fords. The timer is an oil-less wipe contact raised to a convenient position away from the oil. Models equipped with Bosch battery ignition systems have the standard Bosch distributor head on top of the unit. The oil pump is a force feed gear pump, with copper tube from oil pump to a special connection at lower petcock. The water circulating pump is a gear driven impeller. The price, with manual battery ignition system is $53; with compensating battery ignition system $55.

Hot Prong Carburizer

Hot Prong Carburizer Co., Portland, Ind.
Price $5.

The device is of gasket type to be inserted between the carbureter and the intake manifold and has a wire gauze across the opening and three metal prongs which are heated by the electric current when the dash switch is turned on. It is claimed that the electricity used in heating the prongs is not greater than that required to light the headlamps.

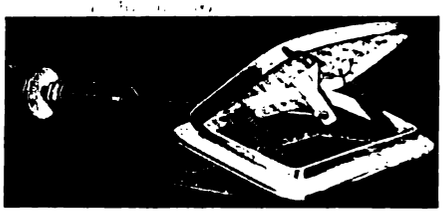
Spee-Dee Cleanser in Collapsible Tube



States Chemical Co.,
656 W. Austin Avenue,
Chicago.

The Spee-Dee hand cleanser previously supplied in cans is now put up in collapsible containers. Each tube holds enough for three dozen washes.

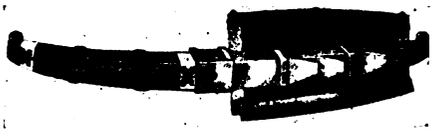
Amtex Band Linings for Fords



American Textile Banding Co., Inc.,
Germantown, Philadelphia
Price $2.50 per set

The linings are so constructed that once installed it is only necessary to remove the transmission cover plate, slip out the worn linings and slip in the new ones. The first installation, of course, requires the removal of the transmission cover to get the original bands out. The linings are woven of cotton yarn, impregnated.

Calkins Cowl Ventilator



Calkins Mfg. Co.,
36 West Randolph Street, Chicago.
Price $3 for small size, $3.95 for large size.

The ventilator is provided with springs to hold the cover in place to eliminate rattling. The hinges are concealed inside the cover. The handle on the dash or instrument board is easily turned and allows rapid adjustment. A cork gasket is furnished to assure a tight fit. The ventilator is made of cast aluminum in two sizes, the small size for Fords and lighter cars, and the large size for larger cars. Both sizes can be had in black enamel or polished aluminum. The ventilator conforms to the shape of a cowl and the aluminum castings are soft enough to make them follow the curves of the cowl if they depart from the more common lines.

Red Tip Lubricating Spring Covers

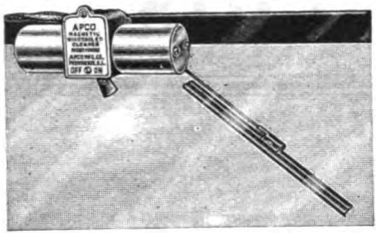
Snappee Co., 1-11 Broadway,
Chelsea, Mass.

Prices:
$2 per section in Snappee material
$3 per section in leather
All 8 section cars, $16
All 10 section cars, $20

Ford set, $5; Chevrolet FB, $12; Chevrolet 490, $8; Overland 4, $8; Dodge, $16; Franklin, $24.

The spring covers are made either of leather or imitation leather. The ends are fitted with a felt grease retainer and the red tips have a bolt and nut fastener. The lacing in between gives additional protection. The hook eyes are covered so that grease cannot come through.

Suction Cup Tire Chain

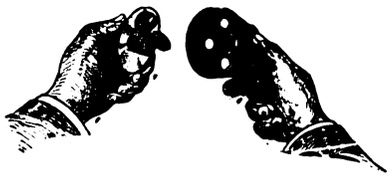


I. V. Benoit, 1004 Bergen Street
Brooklyn, N. Y.
Price $7.50 per set of two.

The cross chains have three case-hardened steel cups welded in. The cup surface grips the road and the flat surface goes against the tire. The links of the cross chain, being above the contact surfaces of the cups, do not take any road wear. Replacement cross chains are 15 cents per section.

Digitized by Google

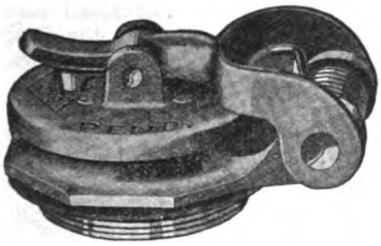
Apco Magnetic Windshield Cleaner



Apco Manufacturing Co., Providence, R. I.
Price $5.

The windshield cleaner uses magnets to operate instead of a motor. It has a uniform high speed which does not vary with the speed of the car and it operates noiselessly. The current used is about 3 amperes and installation can be made on any car by drilling three holes in the windshield frame.

Baltimore Commutator for Fords



The Baltimore Commutator Co.,
Key Highway and Webster Street,
Baltimore, Md.
Price $5.

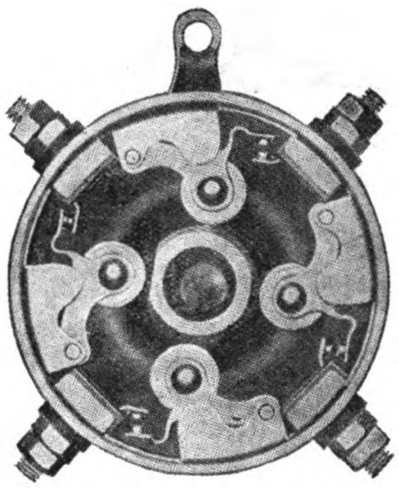
The commutator is made of Condensite with brass contacts ⅛ in. in diameter. The brush is of carbon ⅛ in. in diameter. The connections are made under a Condensite cover and the wire assembly goes out through the top in an elevated position so that the wires are not in contact with oil or water. A retaining spring extends from the stud on the breather pipe to hold the cap in place. An oil retarding disk is provided for the shaft.

Neaco Safety Gas Tank Cap

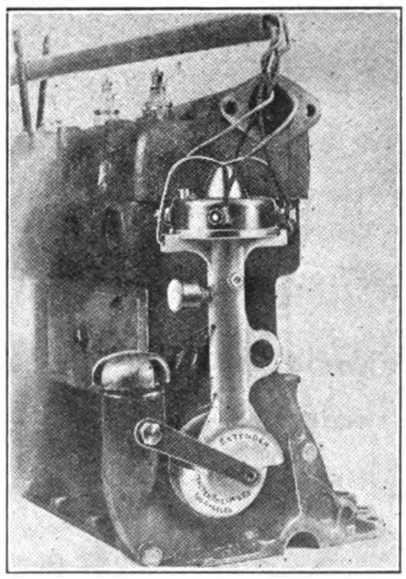
Non-Explosive Appliance Co.,
Fort Wayne, Ind.
Price $3 for Buick, Studebaker, Dodge and Chevrolet FB; $2.50 for Chevrolet Superior and Ford.

The Neaco cap is screwed into the gas tank and thereafter when it is desired to open the tank the cap is raised on its hinge. In filling, the lid is lifted and a nozzle or funnel inserted and when they are withdrawn the cap automatically snaps back into position. The necessary air hole is provided but special gaskets prevent leakage or splashing in rough driving. Claims are made that in case of fire in the gasoline tank the snapping of the cap shut will extinguish the fire.

Swartz Pistons



Swartz Mfg. Co., Freeport, Ill.



The pistons are made of gray iron, light in weight. There is a circular rib used in the construction and a spiral oil groove is used in the piston pin hole. Made for practically every make of passenger car, truck and tractor.

Master Timer and Timer Extender

Master Timer Mfg. Co.,
110 East Washington Street,
Los Angeles, Cal.
Price: Timer $3.50; Timer Extender $5.75.

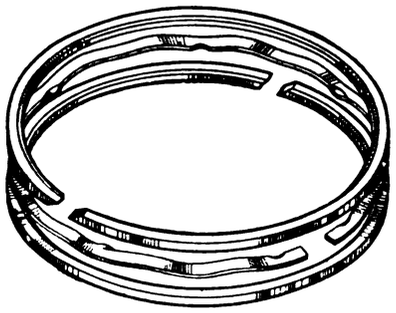
The timer is of the make and break type using tungsten points and is very much the same as the distributor used on other makes of cars. There is no track to arc or get rigged. Contact is made between two tungsten points and not through the roller. the timer is self-lubricating. The shell is copperized steel. The timer extender removes the timer from the oil, dirt and water setting it in an upright position. The device is a die casting and can be installed without any machine work.

Bulldog Tire Chain

The Chain Products Co., Cleveland, Ohio.
Prices $6.75 to $18.75 per set; 30 x 3½-in. $7.25 per set.

The chain links duplicate in general appearance, form and physical characteristics the welded cross links but are made of an alloy steel which is tough and has great tensile strength. The chains are equipped with Bull Dog cross links which are finished in a natural color showing the temper of the steel and are constructed with Luminized side chains and fitted with easy opening fasteners. The fastener provides for 1¼ in. take up.

Loadacar Shock Absorber



Fike Drop Forge Co., 953 Harrison Street,
Indianapolis, Ind.
Price $5 per set of four.

The device takes the place of the load giving the same spring action and eliminating rebound. It is claimed to give an easy rocking-chair motion while driving over rough roads. It acts to give a full load on the springs when the car is empty.

M. & H. Piston Ring

M. & H. Piston Ring Co.,
342-4-6 Hobart Street, Oakland, Cal.

This is a two piece piston ring with a flat spring between the two halves. The spring is of mild steel and crimped so that it cannot ride out to touch the cylinder wall. The inside of each ring half is beveled to engage the crimp. In operation, the spring acts to keep the two halves of the ring in contact with the shoulders of the piston grooves to prevent oil passing back of the rings. This construction prevents play from starting to keep the rings practically free from wear. The rings move laterally in the groove with some resistance and there is a tension in the groove but not a wall tension.

Repairshop Shortcuts

Will Rogers and the Bankers

WILL ROGERS, famous comedian, entertaining the Bankers' Convention, said he had listened with much interest to Mr. Lamont's speech. He said that he thought it was the best speech Mr. Lamont ever made and the best speech Mr. Morgan ever wrote. They laughed. Will Rogers' business is making people laugh and he knows his business. Of course Mr. Morgan did not write that speech. He never wrote a speech in his life and probably never could write a speech that would be the equal of one of Lamont's. But Lamont is a power in the great Morgan institution and Morgan has a great influence in Lamont's life and activities.

Make your speech through Motor World's Repairshop Shortcut page. We pay a dollar for each one accepted, and we will accept those that are new and practical.

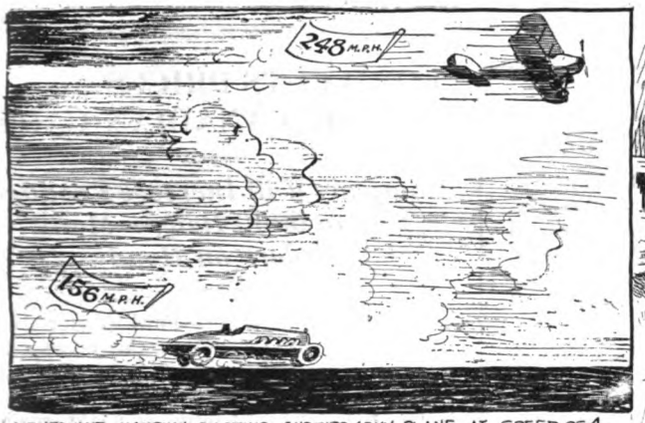
No. 3419—Pick-up Tool for Small Parts—A tool for picking up small screws and washers from a generator or other close places is made from three hack saw blades, which are ground, drilled and riveted together, as shown.—Glenn Earles, J. L. Horney-Roberts Battery Co., Clinton, Ind.

No. 3420—Combined Welding Truck and Stand—A combination truck and stand is fitted with casters and a block of wood, and on the back is mounted an oil can, fire extinguisher and other accessories necessary to welding work.—T. Smith, superintendent, Simplex Auto Co., Long Island City, N. Y.

No. 3421—Removing Screws from Delco Switches—When the screws on Delco switches are hard to unscrew without breaking the slot, the screw may be turned out by inserting a screw driver in the chuck of a lathe and turning the belt by hand. The rear of the switch is center punched to fit the dead center.—C. H. Webb, J. L. Horney-Roberts Battery Co., Clinton, Ind.

No. 3422—A Faucet for the Garage Hose—A faucet is put on the end of the washing hose to prevent waste of water and also to assist in keeping the hose from fraying out. A regular garden hose connection is clamped on and the faucet attached.—John St. Hornow, New York City.

No. 3423—Tweezers for Contact Point Screws—A pair of small tweezers is formed at the end to fit small screws and nuts which are used in the distributor. The tool will hold the screws so that the contact point wrench can be used to adjust the opening.—Robert D. Peebles, Blue Ribbon Garage, Inc., Bridgeport, Conn.



No. 3424—A Brush for Small Spaces—A brush for small spaces like radiator cores, etc., is made from a piece of iron wire, doubled back on itself, the space being filled with bristles from an old paint brush and the wire then twisted.—Robert D. Peebles, Blue Ribbon Garage, Inc., Bridgeport, Conn.

No. 3425—Steering Wheel Puller—A steering wheel puller is made up from a conventional wheel puller with the addition of a chain which goes around the hub of the steering wheel spider. The arms are reversed to catch the chain.—Edward Ruesch, Buffalo, N. Y.

Washington to Aid in Snow Removal

WILL OFFER STATES HIGHWAY EQUIPMENT

Prevented by Law from Giving Financial Assistance—Survey Being Made

WASHINGTON, Oct. 24 — Winter travel by automobile in the central and northern states, heretofore hampered by snow covered roads, will be made possible in the future, if plans of the Bureau of Public Roads of the Department of Agriculture can be consummated.

Through the co-operation of the state highway commissions the bureau hopes to utilize surplus war equipment, such as tractors and grading plows, to be employed in the removal of snow and sleet from the main arteries of the public highways to the end that automobiles may have the use of the roads through the greater part, if not all, of the winter.

A canvass of the situation is now being made by the bureau with the state highway commissioners. Under the Federal laws none of the funds appropriated by Congress for Federal aid roads can be employed in maintenance of highways—this being solely up to the state. Once a road is built it is obligatory upon the state to keep it in repair, under a penalty of having all Federal funds withdrawn.

Co-operation Possible

So under the law, while it will not be possible for the Federal Government to aid financially in the snow removal program, the emergency can be met, it is believed, by donating gratis to the states the necessary equipment. It is expected that the states will furnish the labor for the operation of the equipment, and if this can be arranged with the state highway commissions, it is certain that at least a great many of the northern states will be able to maintain automotive highway transportation service, which has heretofore suffered because of the snow-ladened roads.

The bureau of roads already has sufficient equipment of war-surplus material to supply the states for this purpose, provided the states themselves will man and operate it.

The work of making the survey is being carried on under the supervision of H. K. Bishop, Chief of the Division of Construction of the bureau.

Crabtree Succeeds Tisdale

NEW YORK, Oct. 23—William O. Crabtree, formerly representing the Bethlehem and Republic trucks in this city, has succeeded Glen A. Tisdale as New York dealer for Franklin, covering Manhattan and the Bronx. He has been identified with the automobile business for fifteen years, selling passenger cars and trucks in New York, Philadelphia, Red Bank and Princeton, N. J.

Crabtree previously was a director of the Automobile Merchants Association of New York. Recently he has been engaged in the distribution in the United States of American made trucks reimported from the European war zones.

N. A. D. A. WILL HELP IN TAX REPEAL MOVE

ST. LOUIS, Oct. 23—The National Automobile Dealers Association has joined with the National Automobile Chamber of Commerce in an effort to have the discriminatory war excise tax of 1918 and 1921 repealed.

Since Congress recognized in the 1922 revenue bill that taxes upon transportation were unwise by repealing the tax upon railroad transportation, it is thought that the same fair treatment should be accorded the automotive industry.

The N. A. D. A. has issued a letter to all its members urging that they give their united support to the Association and take a definite stand with the next Congress.

The letter asks that each dealer write to his Congressman, Senator and even Congressional candidates urging that the discriminatory taxes be removed. Copies of all letters and replies are asked for by the association, and from information garnered from these sources a campaign of action will be mapped out.

DU PONT WILL BUILD CARS IN WILMINGTON

WILMINGTON, DEL., Oct. 24—Originally established in Wilmington, Du Pont Motors, Inc., now located at Moore, Pa., near Philadelphia, is to be moved back to Wilmington. E. Paul du Pont of this city is president and chief owner of the company, which manufactures the du Pont car. The company expects to occupy a group of buildings, formerly occupied by E. I. du Pont de Nemours & Co., for the company's advertising division. The Moore plant will be gradually moved to Wilmington.

The company was formed by du Pont several years ago to produce high-grade high-speed cars, ranging in price from $3,000 to $4,000. The company is making slight changes in the models of its cars, and production on a normal scale will not be started until these changes have been completed.

FORD CUTS PRICES OF CANADIAN CARS

Company Will Increase Production to 6000 Daily—Many Orders on Hand

DETROIT, Oct. 18—Ford Motor Co. of Canada, Ltd., followed the price cut of the United States company with a reduction ranging from $50 to $85 on all models. The phaeton is $445; roadster, $405; coupe, $695; and sedan, $785. There is a price differential of $85 for self-starter and demountable rim equipment. The truck is $495 and chassis $345. The new prices are the lowest the Canadian car ever has sold for.

Orders covering several months operation were on hand when the new prices on American models were put into effect, according to Ford officials. Production has been running in excess of 5000 cars daily, but this was several hundred daily under retail sales at the former price. With the increased demand expected as a result of the reductions, the company will build production up to 6000 daily.

Edsel Ford Assigns Reasons

DETROIT, Oct. 17—Reductions of $50 on each model of the Ford Motor Co.'s line, effective to-day, are made possible by increased production and the acquisition and operation by the company of many of its supply sources, according to a statement by Edsel B. Ford, president. The new prices represent a cut of almost one-half from prices prevailing in March, 1920.

Ford said:

The revision in prices is the result of the increased volume of business which our company has enjoyed during the present year and also to the fact that we now own and operate many of our own sources of raw material, which enables us to continue increasing the quality of our product and at the same time keep the price so low that Ford cars are within the reach of everyone.

Our production for 1922 already is in excess of 1,000,000, which has been an important factor in bringing down costs, our present daily output is averaging better than 5000 cars and trucks, which means a complete Ford every 5½ seconds of each working day. It is in anticipation of this continued demand that price adjustments are being made in order to keep in effect the policy of selling Ford products at the lowest price consistent with quality.

Quality will continue to be the prime consideration in the building of Ford cars. As our business has increased we have constantly increased our equipment and manufacturing facilities, so that this price reduction merely reflects the progressive methods which come as a result of increased volume.

This reduction is the sixth since March,

SAYS GARAGE RENTS RETARD CAR SALES

Colin Campbell in Address to Chevrolet Dealers Cites New York as Example

DETROIT, Oct. 20—Lack of garage space was declared by Colin Campbell, general manager of sales of Chevrolet Motor Co., to be a serious menace to the sale of low priced cars in congested Eastern cities, and said this condition was holding back the immediate sale of 100,000 cars in New York City alone. Persons, normally low priced car buyers, cannot afford to pay the $40 and $50 a month garage rent being asked in some places, he said, but they do want cars.

Architects and engineers and civic authorities must begin to take the needs of automobile owners more into consideration in drawing plans for apartment buildings, office buildings, civic structures and highways, he said. Modern apartment buildings should have three to four sub-cellars with ramps to provide for automobile storage if they are to meet tenant requirements. Multiple deck streets are already a crying need in many cities to provide adequately for traffic and car parking, he insisted.

No Saturation Point Near

Campbell remarks on traffic and garage conditions were in refutation of the possibility of a saturation point on automobiles being anywhere near in sight. He addressed Chevrolet dealers of zone No. 1 (Michigan, Indiana and Ohio) at a sales meeting in the Hotel Statler, in which he outlined the business possibilities of the new Chevrolet line. Dealers must awake to their opportunities, he said, and where conditions such as outlined were retarding sales, they must take active part in correcting them.

Bankers attending the meeting with dealer clients were addressed directly by Campbell in a demand for fair treatment for the industry. Armed with statistics from Government bureaus, he showed that the business of the country as represented by bank clearings, had trebled since the inception of the automobile in twenty years, compared to the former fifty-three years. In a like period, he said, American business since 1900 would show an increase of 1000 per cent.

Dealers Must Inspire Confidence

Dealers must justify the confidence of bankers by setting their business in order, he said. Where they have not sufficient capitalization to conduct their business as it should be, they must prepare immediately to right this. Chevrolet demands the representation of the best type of business men in every section of the country, and with such representation there will be no difficulty with finances or in getting a proper share of business.

Three hundred retail sales were made at the week's showing of the Superior models in Detroit, he said, nearly all of which were without exception trade-ins. On trade-ins Campbell urged his dealers to be careful and to make certain they permitted of ready sale. "Remember you are selling, not buying," he said, "make all your sales on that basis. No good dealer will permit himself to be enticed into an unfavorable deal."

The policy of the Chevrolet company will be to conduct all sales through retail dealers, he said, and in this connection it is proceeding to discontinue the last of its factory stores. Seven now remain of the 47 opened under the former regime, and only those in Detroit and New York will be continued. These are in General Motors Buildings and will be more showrooms than salesrooms, he said.

1000 Cars by Nov. 1

K. T. Keller, general manager of production, said the company would be building 1000 cars a day by Nov. 1, and with the completion of new factories in March would be in position to double this. New Fisher body plants will build closed cars exclusively for Chevrolet, he said, assuring dealers of ample quantities in these models. Closed body production the year past totaled 42,000, 28,000 sedans, 5000 coupes and 9000 utility coupes.

Morgan Douglas, sales manager at Flint factory, told of plans the company has for improving dealers' salesrooms and putting them on an efficient basis, especially those in smaller cities. Electric signs, good show windows and attractive surroundings were important aids to business he said, and the company is prepared to show dealers how they may effect these economically. Sixty-two dealer headquarters in different parts of the country have been improved under this plan in the past year alone.

George Frank Lord, advertising manager of the company, said an extensive plan of dealer co-operative and national advertising had been worked out to aid dealers in their sales effort. Just how extensive this is depends on the dealers, he said.

REPLACES TROLLEY CARS WITH BUSES

NEWBURGH, N. Y., Oct. 23—The Orange County Traction Co., of which B. B. Odell, former governor of New York, is the head, has put motor buses into service on two of its branches, replacing six trolley cars with seven buses.

The main line, which runs 12 miles to Walden, still uses trolleys, but on the branches the buses act as feeders to the main line. The new system has been in operation three weeks and has proved a success. The buses are of the type used by the Fifth Avenue Coach Co. of New York, only smaller.

IMPLEMENTS DEMAND GOOD MERCHANDISING

Dealers Show Inclination to Adopt Car Selling Methods to Expedite Recovery

CHICAGO, Oct. 23—After 50 years during which the goods they made were taken away from them without effort, because agriculture was growing and needed the tools wherewith to develop, the implement industry is at last getting some glimmerings of the truth that henceforth farm implements must be merchandised.

This was revealed at the twin conventions held in Chicago last week. One of the two gatherings was the annual convention of the National Association of Farm Equipment Manufacturers, composed of the farm implement manufacturers of the country; the other was the annual convention of the National Federation of Implement Dealers' Associations, composed of delegates from the organized retail implement dealers of the country.

Hall Presents Facts

Guy H. Hall, who is director of the Institute of Progressive Farming, in his address before the manufacturers' convention, not only effectively, but dramatically, presented the facts he had gathered from all elements in the country having to do with influencing the farmer to better methods and with merchandis ing him the wherewithal to improve his methods and left the inescapable inference that all that was needed at the present time or in the immediate future to develop the farmer market was merely to apply up-to-date merchandising methods.

The inklings of the truth that seeped through into the minds of the retailers, as indicated by their resolutions addressed to the manufacturers, and the incontrovertible facts presented by Hall, which must have a profound effect upon both manufacturers and retailers, are the very best augury that the implement industry is waking up, and that by following in the footsteps of the automobile industry it will begin to acquire some new merchandising ideas.

The manufacturers elected J. B. Bartholomew of the Avery Co., Peoria, Ill., president for the coming year, and made Floyd R. Todd, vice-president of Deere & Co., Moline, Ill., chairman of the executive committee for 1923.

The federation elected S. M. Sellers of the Ohio association president for the coming year and gave the vice-presidency to T. M. Whitten of the Mississippi Valley association.

Nash Busy at Milwaukee

MILWAUKEE, Oct. 23—Operating at capacity and with night shifts, the Milwaukee plant of Nash Motors Co. is turning out 75 cars a day, employing more than 1000 men.

AUTOCAR COMPLETES TWENTY-FIFTH YEAR

Fourth Company in Industry to Round Out Quarter of Century in Manufacturing

NEW YORK, Oct. 23—On Saturday the Autocar Co. of Ardmore, Pa., completed its twenty-fifth year as a producer of motor vehicles, thus becoming the fourth concern in the industry to round out a quarter century of manufacturing. On this honor roll of pioneers are found the names of Haynes, starting in 1895, and Winton, Stanley and Autocar, which began operations 25 years ago and which still are engaged in automobile manufacturing.

There are eleven other concerns which, the records show, have been in business 20 years or more and which include Locomobile, 1899; Stearns, 1899; Packard, 1900; National, 1900; Oldsmobile, 1901; Peerless, 1902; Nash (formerly the Rambler and Jeffery), 1902; Franklin, 1902; Cadillac, 1902; Jackson, 1902, and White, 1902. The present Packard started as the Ohio Auto Co. of Warren, Ohio, in 1899 and became the Packard company in 1903.

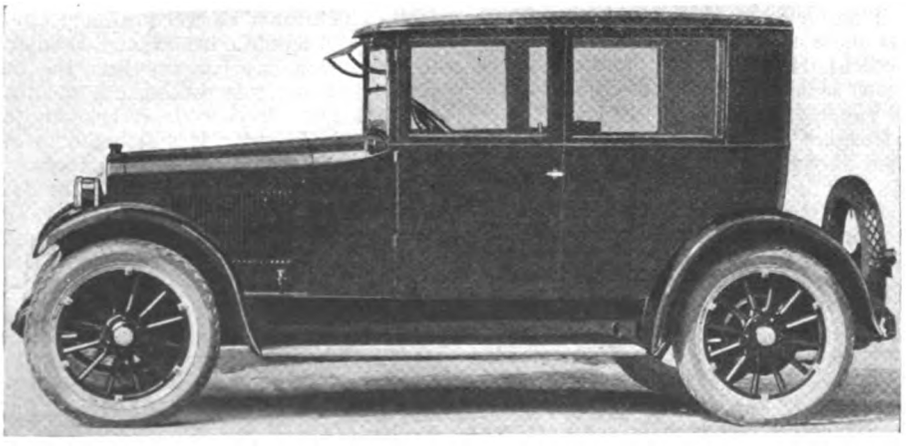
Within gunshot of the 20 year class are the Apperson, which started in 1903, following the split-up of the Haynes-Apperson company; the Auburn, 1903; Buick, 1903; Mitchell, 1903; Reo, 1905, and Studebaker, 1904.

Louis S. Clarke founded the Autocar Co. and still is active as vice-president. He first experimented with electric vehicles in 1890 at Pittsburgh, beginning his experiments with the gasoline engine in 1895 and in 1897 combining with William Morgan, also of Pittsburgh, which marked the beginning of the Autocar Co. The concern was incorporated under its present name in 1899, and was moved from Pittsburgh to Ardmore.

Making passenger cars at the start, it featured a two cylinder runabout which was one of the most advanced types of the pioneer days. In 1902 it exhibited at the New York show what is claimed to have been the first shaft driven car built in America. In 1908 the company took up the manufacture of trucks, abandoning the passenger cars. To-day the principal stockholders are the same who started the business, and 90 per cent of the common stockholders are employees.

GARAGEMEN IN WEST HAULING LIVE STOCK

Omaha, Oct. 21—The garage men of the small towns within 100 miles of Omaha are branching out into a larger branch of the industry.



A few of them have installed a small fleet of trucks and with the motto, "From Your Farm to the So. Omaha Market without the Railway," they are doing a good business in live stock hauling.

A record in truck transportation of live stock to the market is being broken every day and it has been said that by the first of the new year, hundreds of garage men in this territory will be hauling live stock to the market.

Pierce-Arrow Moves Up

BUFFALO, Oct. 23—Fall sales of Pierce-Arrow passenger cars are continuing their upward curve, according to announcement made by Myron E. Forbes, vice-president of the Pierce-Arrow Motor Car Co.

Cleveland Brings Out a Two-Door Sedan and Makes Changes in Prices and Equipment

A new two door sedan is added to the Cleveland Six line, the price being $1,295. This replaces the coupe. It carries five passengers and has a trunk platform and barrel type headlamps. The color scheme is gray and the individual front seats tip forward. In addition to this new model, changes have been made in the prices and equipment of the phaeton and four door sedan. The phaeton is now $995 instead of $1,095 and the four door sedan is $1,495 instead of $1,585. In both cases the reduction has been accomplished by a reduction in the amount of additional equipment which may still be had at the former price. All these bodies are Fisher built

ENTHUSIASM FACTOR IN CLOSED CAR WEEK

Brooklyn Shows What Can Be Done—Public Is Educated to Idea

BROOKLYN, Oct. 21—Brooklyn's autumn show, held individually in the salesrooms of dealers as a sequel to closed car week of the past two years, closed to-night with a good record of business done and prospects obtained. The Brooklyn Motor Vehicle Dealers Association, under the direction of Ralph Ebbert, executive secretary, conducted a vigorous promotion campaign for the show, with the result that dealers in virtually all lines reported attendance in their salesrooms considerably ahead of the past two years. Actual sales were held down somewhat by inability of dealers in a good many cases, to promise prompt deliveries.

Salesrooms all along the row, both of members and non-members of the association, were decorated with autumn foliage.

Brooklyn's experience with the individual salesroom show idea indicates that its success or failure depends largely on the enthusiasm which association members put into it. This being Brooklyn's third year with the plan, though it carried a different name in previous years, the public has become pretty well educated to shopping around from salesroom to salesroom on such a special occasion.

This year the association spent between $3,000 and $4,000 advertising the week.

TWO BATTERY MAKERS JOIN ASSOCIATION

CLEVELAND, Oct. 23—The Philadelphia Storage Battery Co. and Vesta Battery Corp. have become members of the Automotive Electric Association.

Philadelphia will be represented in the association by James M. Skinner, vice-president, and W. S. Cranmer, sales manager. Vesta will be represented by F. S. Armstrong, secretary and sales manager.

The storage battery division of the association is making a careful study of battery distribution and service, with the hope of being able to raise the quality of service with consequent benefit to the car owner.

The Cadillac Flat Rates

In Motor World issues of Oct. 4 and Oct. 11 there were some three hundred flat rate operations on the Cadillac car. In the introductory paragraph it was stated that these had been developed by the Cadillac factory. This was an error. The rates were worked out by the Detroit branch of the Cadillac Motor Car Co., the factory not having adopted them, although it is engaged in the formulation of such a list.

INTEREST BIG ITEM AT DETROIT EXHIBIT

Sales Another Feature of Best Closed Car Show Dealers Have Held

DETROIT, Oct. 23—Automobile interest in Detroit last week centered in the closed car show, held in the Exposition Hall of General Motors Building, under the auspices of the Detroit Automobile Dealers Association.

The attendance ran to capacity each day, the paid admissions approximating 30,000 for the five day show. As an interest producer the show held first rank of any closed car show the association ever held.

While the exhibits were mostly standard production cars, there was a sprinkling of special models to compete for attention. It was in every sense a dress-up show, the cars vying in pretentiousness with the general atmosphere of distinction lent by the industry's most majestic office structure. Decorations in the main were tinted muslins for background with torchiers marking the aisles and spaces between the booths.

Booths Crowded Somewhat

The exhibits were somewhat crowded because of the proportions of the exposition hall, which is 500 ft. long by 60 ft. wide. One space was allowed for each make of car, and there were 36 makes with as many as six models in some lines. Open cars with permanent closed tops were permitted. There was a large sprinkling of cars of the coach and business coupe type, a Chalmers coach at $1,585 being shown for the first time.

Sales at the show were spread over many lines. A Rolls-Royce limousine, which was to have been a special show attraction by the Thompson Auto Co., Detroit distributor, was sold in the dealer's showroom the afternoon before the opening of the show, and as immediate delivery was asked, the feature was lost. Sales in other high priced lines were reported, though most of the buying was in medium and low priced cars. In a large number of cases, sales were to buyers who had not been listed as prospects.

No Cut-away Jobs Shown

There were no cut-away jobs of any description at the show, which was essentially a body display. Colors were mostly standard blacks, blues and maroons. There was no ruling on price tags, but many of the cars carried delivery prices, with a lesser number showing the price at the factory. Whole flocks of salesmen were in attendance so that everyone would be certain of attention and no sales possibilities passed up. In connection with the show many of the dealers featured closed cars in their salesrooms with windows masked.

The manifestation of interest represented by paid admissions gave dealers the most satisfaction, aside from the actual business that was accomplished. When so many persons would pay 50 cents, the established admission price, it was regarded as an indication that there was a large field for closed car sales.

Tickets issued by the association to dealers at half price for distribution to prospective buyers represented only a small percentage of the admission tickets taken in. Practically all admissions were at the full price, and the show will yield a substantial return for the association. There is a likelihood that the decorations will be taken over by the Michigan Automotive Trade Association for use in connection with its circuit shows in the spring.

The question of accepting trade-ins is an acute one for many Detroit dealers at this time, according to H. H. Shuart, manager of the dealers' association, but there are others who have succeeded in keeping stocks low who can afford to do considerable trading. The general used car situation as affecting association members is fairly good, he said, but the recent price cuts and new models in low priced lines make it seem probable that many used cars ranging about $300 will have to be junked.

BUS LINES AND ELECTRIC SYSTEM MAKE OWN APPEALS TO OWNERS OF PROPERTY

Springfield, Mass., Oct. 20.

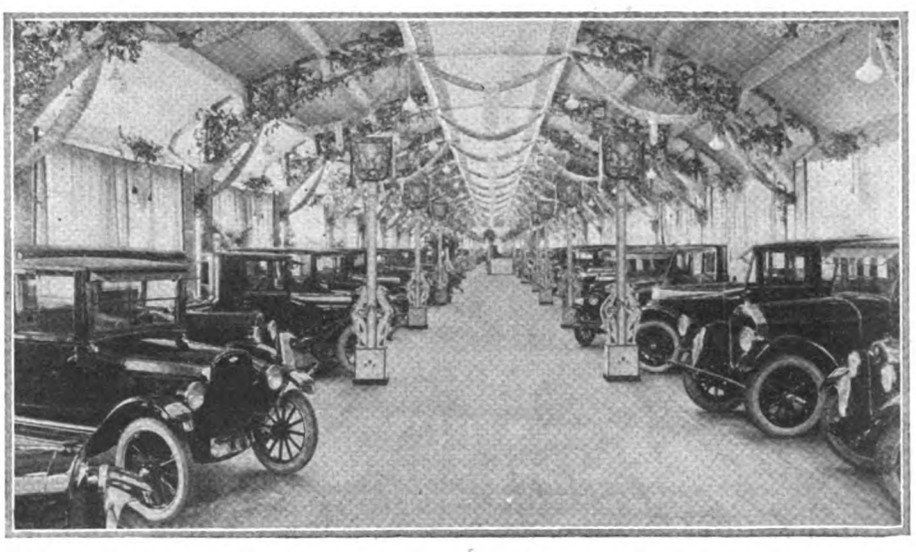
OWING to the institution of a number of motor bus lines running out of this city, serving suburban territory and linking up other cities, a spirited contest between the street railways and the buses has developed.

A few days ago the street railway company displayed this placard in its cars:

> **Would you build near a jitney line? Think of the increase in value of property near an electric line and what the electric car means to you every day.**

Bus operators have countered by displaying this sign on their vehicles:

> **Don't rent or purchase a home where you are forced to rely entirely on street railway transportation. The motor bus, regulated and controlled by ordinance, offers a service devoid of many of the objectionable features of trolley transportation.**



HOLDS FASHION SHOW IN DISPLAYING CAR

CINCINNATI, OHIO, Oct. 21 — Charles Schiller has been appointed by the E. S. Gahagan Co., Cincinnati distributor of Rolls-Royce and Studebaker cars, to have charge of the sale of the Rolls-Royce. The sales agency for this car has just been obtained by the Gahagan company, which held a private showing for its present and prospective customers. A fashion show, staged in conjunction with a Cincinnati apparel company, and nightly band concerts, were features of the event, for which the Gahagan company's showrooms were specially decorated.

The Star automobile has just arrived in Cincinnati and is now on exhibit at the salesrooms of the Cincinnati branch of the Star Motor Car Co. of Ohio, of which Edgar Menderson is manager.

The Lexington Automobile Co., Cincinnati, wholesale distributor of the Lexington in that city, has moved into larger offices in a downtown office building. Offices of the retail distributing company continue at 1002 Gilbert Avenue.

Distinction Lent to Detroit Show

Some of the decorations that were one of the features of this closed car exhibit will probably be used by the Michigan Automotive Trades Association in its show circuit of the State

CRISP WEATHER HELPS NEW YORK BUSINESS

Closed Cars Form Bulk of Demand—Truck Market Shows Steady Recovery

NEW YORK, Oct. 21—Crisp fall weather has helped passenger car sales in the metropolitan territory to keep going at a high level for this time of the year. The bulk of the demand, naturally, is for closed cars, but owing to the fact that most dealers are short of these models there is better than a normal demand for open cars at this time of the year.

Only dealers in a few lines are getting closed cars in sufficient volume to make immediate deliveries. Railroad embargoes and delays which are in effect throughout the eastern section of the country are aggravating closed car shortage conditions, due to lack of production facilities, and dealers in some of the more popular lines are having to accept orders with delivery dates weeks and in some cases months off.

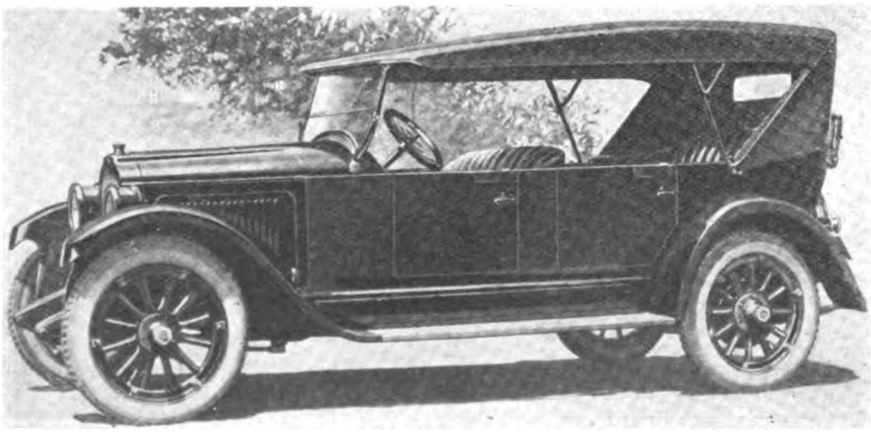
The used car market has kept pace with that for new cars. Only a minority of dealers hereabouts are overstocked with used cars. As might be expected, the demand for closed used cars is brisk, and there are practically no accumulations of stock in this class.

The truck market is showing gradual but steady recovery. Dealers in the more popular makes report sales running 50 to 100 per cent of what they were a year ago.

Amorous Goes to New York

NEW YORK, Oct. 24—Clinton B. Amorous, manager of the Locomobile Co. of America's Boston branch, and in charge of its New England distribution, has been made manager of the New York Locomobile branch, 16 West 61st Street. Amorous relieves E. A. Travis, general sales manager of the Locomobile company, of the detail of responsibility of the New York branch. Travis lately has been in charge of the New York branch in connection with his duties as general sales manager of the company, with headquarters at the works in Bridgeport, Conn.

Under the new arrangement, Travis will be able to devote his entire time to the duties of general sales manager of the recently reorganized company. W. S. Porter, Chicago branch manager of the Locomobile interests, succeeds Amorous in Boston. Porter, in turn, is succeeded in Chicago by J. Murray Page, who lately has been representing Marmon interests in Chicago and the West.



HORSE IS NO LONGER AGRICULTURE SYMBOL

WASHINGTON, Oct. 24—Tradition, which constitutes a large part of official and commercial Washington, has been broken after thirty years.

The purchase of an automobile for the official use of the Secretary of Agriculture is announced. Since the establishment of the Department, it has been an unbroken rule that the Secretary and the assistant secretaries shall use horse-drawn equipment.

Agriculture, it was figured, has heretofore always been linked with the horse, and as a symbol of his office the Secretary of Agriculture has always ridden about Washington in a one or two horse drawn vehicle. For years ten automobiles and a horse-drawn vehicle—all bearing the insignia of their respective Federal departments — have stood about the Executive Mansion on cabinet days.

Willys-Knight Seven Passenger Phaeton, $1,435

Another seven passenger model has been added to the Willys-Knight line, this being a phaeton. This follows closely on the heels of the seven passenger sedan announcement. The phaeton, like the sedan, is known as Model 27 and its chassis characteristics are similar to the five passenger but the wheelbase is 6 in. longer. The tonneau is roomy and the auxiliary seats unfold from a closed compartment in the rear of the driving seats

USED CARS SUFFER BY DEMAND FOR NEW

Milwaukee Reports Problem of Trades Is More Serious—Allowances Small

MILWAUKEE, Oct. 23—Within the memory of the oldest established dealers in Milwaukee there has scarcely been a time when retail sales have been so active as in the month of October, comparing the period with corresponding seasons in the past. In some respects trade is more active than it was in July and August. Dealers in the interior report that they are selling more cars now than during the summer.

The relative briskness of trade is making more serious the problem of used cars. Demand for new cars is predicted just as much upon exchanges as before, and at the same time the disposition of used cars is much more difficult, despite the fact that resale prices are extremely low. Allowances being made by dealers are the smallest on record, and they are offering these cars at commensurately low prices. New car prices appear to be much too attractive to turn the desires of prospective buyers to used cars.

The $50 reduction in Ford prices was pretty well discounted in advance, although surprise was caused by the extent of the cut. Sales since the reduction was announced have increased in a gratifying manner, but hardly at the rate that might be expected with so drastic a reduction. The fact is that people have been buying Ford cars freely and few have been holding off to await the cut. The situation of Ford dealers on this reduction was much better than on the occasion of past cuts, with respect to the stock of cars on hand.

TIME SALE INCREASE REPORTED IN CHICAGO

CHICAGO, Oct. 25—Increase of more than 100 per cent in the volume of business handled by the members of the Central Automobile Financing Association in the first 10 months of this year as compared with the corresponding period last year was shown by the annual report submitted at the association's annual meeting.

In the first 10 months of last year the number of motor vehicles financed was 17,591 and in the first 10 months of this year the number was 39,308, an increase of 21,717. The association now has records of 99,000 motor vehicles financed by firms which are members of the association.

At the annual election Walter E. Heller of Walter E. Heller & Co. was re-elected president, and C. L. Wolf of the Hamilton Investment Co. was re-elected secretary. Other officers chosen were: First vice-president, H. M. Hurst of Monroe Trust Co., Chicago; second vice-president, A. D. Barnes of American Banking Co., Springfield, Ill.; and treasurer, J. D. Purlee of Commercial Acceptance Trust.

EQUIPMENT BUSINESS MOUNTING IN INDIANA

September Excellent Month, According to Reports of Several Wholesale Houses

INDIANAPOLIS, Oct. 24—Wholesale accessory and equipment trade for Indiana seem to have hit record marks during September, according to several of the large houses of this city.

One concern that operates through Indiana and the whole central region says that September is by far the best month of the year, and that October appears bent on exceeding it. Indiana business generally is well up to the unusual marks established by other territories covered by this house.

Another concern with business largely centered in Indiana says that September is well in advance as a sales producer, and that the records of September, 1921, which was a banner month for last year, have been beaten by at least 20 per cent.

These two reports are indicative of conditions found in all of the important accessory and equipment houses of the wholesale trade in this city. The early part of the season started slowly, but gained in volume as the season advanced until now the accessory trade is well up with the sale of cars, which advanced more than 20 per cent over last year and 40 per cent over car sales in Indiana during 1920.

Some of these wholesale houses report that they are putting on more men in order to handle the new business and to avail themselves of the apparent increasing demand for accessories and equipment in all parts of the State. Vigorous sales campaigns put on earlier in the season by some of the local jobbers have panned out well.

NEW SPORT COUPELET PART OF HAYNES LINE

KOKOMO, IND., Oct. 23—A new Model 55 sport coupelet has been added to the Haynes 1923 line. The price is $2,095. It carries three passengers, has complete sport equipment and is finished in Haynes coach blue. The equipment includes six disk wheels with six cord tires, a trunk on a trunk rack at the rear, nickel plated radiator and headlamps, Moto-Meter, sun visor, etc.

The seat is upholstered in black long grain leather while the remainder of the interior above the belt line is in fabric. There is a compartment at the rear of the seat and a luggage space in the rear deck. A gasoline gage is on the dash and a stop light is part of the regular equipment.

G. M. Parts Taken Over

DETROIT, Oct. 23—The Central Products Co. and the Central Gear Co. of the inter-company parts group of General Motors Corp. have been taken over by the Chevrolet Motor Co.

100 CARS WEEKLY STOLEN IN TEXAS

DALLAS, TEXAS, Oct. 23.—There has been a decided increase in automobile thefts in Texas during the past thirty days, according to reports from insurance companies and theft bureaus.

It appears that cars are being stolen at the rate of more than 100 per week. The majority are sold either at "fences" in two Texas cities or are driven to Juarez, Mexico, and disposed of.

FORD CUTS PRICES OF CANADIAN CARS

(*Continued from page* 36)

1920, and brings the price of the Ford phaeton from $575 to the present low level of $298. Corresponding reductions have been made on all other types. The Ford reduction has been expected in manufacturing circles for some time. Both Chevrolet and Overland in the low priced groups have recently made reductions and the Ford reduction complete the revisions in the former low priced group. The recent Ford financial statement and declaration of price policy by Henry Ford indicated reductions would be forthcoming.

Moon Model Cut in Price

ST. LOUIS, Oct. 21—A reduction of $100 on the six-40 phaeton is announced by the Moon Motor Car Co., effective immediately. The drop was from $1,295 to $1,195. This model is the only one of the line affected.

Twin City Truck Reduced

MINNEAPOLIS, Oct. 23—Minneapolis Steel & Machinery Co. announces the following reductions in the price of Twin City motor trucks:

	Old Price	New Price
2-ton model	$2,750	$2,400
3½-ton model	3,950	3,500

ONLY ONE EQUIPMENT EXHIBIT FOR CHICAGO

CHICAGO, Oct. 23—The open show of automotive equipment which was scheduled to be held at the Chicago Armory the week of Nov. 13, simultaneously with the Automotive Equipment Association's show for its members, has been called off, it was announced to-day by Charles P. Hughes, promoter of the enterprise.

Hughes, formerly secretary of committee of the Automotive Equipment Association, said that lack of support by manufacturers was responsible for his decision to call off the show. A great many jobbers, he said, were very much in favor of such a show as had been planned by Hughes.

CAR VALUE LOOMS BIG, OLDS SERVICEMEN TOLD

A. B. C. Hardy Predicts Startling Improvement in Automobile in Next Five Years

LANSING, Oct. 24—A prediction that the automobile will in the near future be considered a necessity in the life of the people of our country and rank next after food, clothing, housing and the telephone in its importance, was voiced by A. B. C. Hardy, president and general manager of Olds Motor Works, Lansing, Mich., in an address at the annual banquet of service managers, held in connection with the week's convention of these men from all sections of the country.

More than 50 service managers, representing distributors from coast to coast, heard Hardy predict that in the next five years startling developments would take place in the automobile world, due principally to research work now being carried on at the General Motors Laboratories in Dayton, Ohio.

Hardy said:

There is little doubt but that the principal mode of transportation in the future will be the automobile and while to-day it is far more popular than the railroads, in certain respects, the next few years will see an even greater growth in its business.

Speaking of the automobiles of the future, it is impossible for any man to predict just what they will be like but it is safe to say they will be greatly changed due to experiments now being carried on and I feel sure they will be more economical, lighter in weight and more powerful, as well as cheaper.

NEW NASH ROADSTER TAKES PLACE OF OLD

KENOSHA, WIS., Oct. 23—A new Nash roadster on the six-cylinder chassis takes the place of the previous roadster. The price is $1,210, the same as on the old model. The top is ecru silk mohair, and the upholstery is dark gray Spanish leather. The wheels are finished in bright vermillion. A new type ventilator is used on the cowl, the windshield being of the one-piece type. Other refinements include a new steering mechanism, Oil Kip equipment, new barrel type headlamp and parking lamps. Across the front of the chassis side members is a bar to prevent weaving of the frame.

Change Made in Packard

DETROIT, Oct. 25—A change made in the Packard single six coupe permits the carrying of a golf bag and sticks without projecting from the luggage compartment or interfering with passengers. An opening has been cut through to the compartment under the driver's seat. The golf bag slips into this space and extends back into the rear luggage compartment. Cars with this change incorporated are promised for the latter part of October.

BARLEY MOTOR NAMES TERRITORIAL HEADS

In Addition to District Managers Company Has Representatives at Branches

KALAMAZOO, MICH., Oct. 24—William Elliott Phelps, general sales manager of the Barley Motor Car Co., builder of the Roamer and Barley, is waging a strenuous campaign to secure representatives throughout the United States and Canada.

Ralph E. Meacom, for 15 years identified with the industry, one-time secretary of the Bay State Automobile Association and later serving with the Chandler-Cleveland Motor Car Co. of New England, has been appointed representative of the company in the northeast territory and upper New York State.

Cassius F. Baker, popularly known as "Cash" Baker, and recently with the National Automobile Co., has been named to handle Ohio and Western Pennsylvania.

C. E. Thompson, formerly district manager for the Haynes Automobile Co. and lately of the Packard Motor Car Co. of Kansas City, will represent Barley in the Northeast, traveling Wisconsin, Minnesota, Iowa, Nebraska and Kansas.

G. S. Velie, for the last five years assistant sales director with the Maxwell-Chalmers Corp., will cover Texas and southern States below the Tennessee line.

G. L. Bennett has been named district manager in the metropolitan district of New York City and has jurisdiction over sales in New Jersey and Eastern Pennsylvania.

These district managers work directly under orders from the factory. In addition, the company employs wholesale men in the following branches: New York, Philadelphia, Baltimore, Chicago and San Francisco.

Ernest Burwell

His leadership in Ford circles which placed Spartanburg County (S. C.) in the first place for five consecutive months brought the Ford dealers of the district to Spartanburg for their convention

Booth Heads Bearings Sales

DETROIT, Oct. 24—F. E. Booth has been named sales manager of the motor bearings division of the Hyatt Roller Bearing Co.

FORD DEALERS PLAN CAMPAIGN IN SOUTH

Outline Program for 100 Per Cent Increase in Sales at Carolina Meeting

SPARTANBURG, S. C., Oct. 24—Forty Ford dealers from Western North Carolina and South Carolina met in this city to discuss plans for an intensive sales campaign for the fall and winter season. The meeting was presided over by J. W. Holt, manager of the Charlotte (N. C.) branch.

The convention was brought to Spartanburg by Ernest Burwell, local Ford distributor, who, since coming to this city last March, has led the State of South Carolina in the sale of Ford cars, placing Spartanburg County in the lead by a wide margin.

Holt stated to the convention that the goal for this section would be 3300 Fords for the next six months. This is 100 per cent above the former goal. The increase, he stated, is based on better business conditions and on the fact that during the summer countless orders piled up while the Ford plants were closed for a time on account of coal shortage.

Among those who addressed the convention were J. R. Williamson, chief territory supervisor of the Charlotte branch, the central distributing point for the Carolinas. In the afternoon moving pictures of the three-day Fordson tractor show staged in Charleston in September were shown.

Both States Represented

Among those attending the meeting were:

From North Carolina—J. W. Holt and J. R. Williamson, Charlotte; F. S Wetmur, Hendersonville; W. F. Duckworth, Charlotte; C. H. Klyppelberg, Brevard; A. C. King, Gastonia; W. A. Dixon, Belmont; C. L. Eskridge, Shelby; S. R. Felmet, Canton; J. S. Higdon, Silver; Mr. Mauney, Kings Mountain; R. A. Bolter, Asheville; Mr. Rogers, Hot Springs, Mr. Swift, Waynesville; Mr. Warlick, Rutherfordton.

South Carolina—Ernest Burwell, Spartanburg; W. M. Beatty, Donalds; J. F. Bigbee, Williamston; Mr. Webster, Cowpens; M. Cox, Belton; Mr. Hurlong, Gaffney; Mr. Hatchette, Chesnee; Mr. Jones, Blacksburg; A. R. Meadows, Fountain Inn; Mr. Odell, Liberty; Mr. Herron, Pendleton; Mr. Busick, Greenville; Mr. Carter, Walhalla; Mr. Saddler, Iva; Mr. Neal, Seneca; Mr. Sitton, Pickens; Mr. Smith, Easley; Mr. Thompson, Greenville; Mr. Todd, Anderson; Mr. Wiles, Honea Path.

It was agreed among the Ford men assembled that business conditions in this section are generally better, and that prospects are best in several years for a good fall and winter business.

"Nash Times" Issued

KENOSHA, WIS., Oct. 14—Nash Motors Co. has commenced the publication of a monthly house organ for its dealers, known as the "Nash Times."

135,000 OWNERS ADOPT CARS TO SAVE PAYING HIGH HOUSE RENTALS IN CITY

NEW YORK, Oct. 23—Compiling statistics on the uses to which the motor car is put by its purchasers for the forthcoming conference of the Highway Education Board at Washington, Oct. 26-28, the National Automobile Chamber of Commerce has discovered that in 135,000 instances in 60 cities throughout the country the motor car has been used as a vehicle of relief from high city rentals, the owners of this number of automobiles having moved from the city to the suburbs and depending solely upon their cars for transportation between their offices and homes.

Thus far the investigation is incomplete. The 60 cities from which reports have been received include only three of the chief cities of the country, Baltimore, Detroit and Cleveland. The figures do not include New York, Boston, Philadelphia, Chicago, San Francisco, St. Louis, Los Angeles or other cities of approximately their population. The combined population of the 60 reporting cities is about 8,000,000. If the same ratio is maintained throughout the rest of the United States, not fewer than 500,000 automobiles have been used during the past three years in the fight against high rents.

Baltimore and Detroit are tied for first place in the number of motor cars used primarily to carry workers to and from their work each day. In each case the number is approximately 25,000. Louisville is rated next, in returns compiled thus far, with 20,000. Oak Park, Ill., and Cleveland are rated at 5000 cars each; Toledo at 3500; Tampa, Fla., Dayton, Ohio, Pasadena, Cal., and Casper, Wyo., at 3000 each. Eight cities—Danville, Ill., Waterloo, Iowa, Nashville, Tenn., Winston-Salem, N. C., Tulsa, Okla., Houston, Tex., Richmond, Va., and Bellingham, Wash.—are reported to the Chamber as having 2000 cars each which have been devoted to this purpose.

DETROIT MAY HALT INTERURBAN SERVICE

If Plan Goes Through, Deliveries Handled by Service Will Be Hampered

DETROIT, Oct. 24—Traffic problems in a number of factories here will be greatly accentuated if the plan of the Detroit Street Railway Commission to bar interurban cars from city streets is carried through. By using the interurban freight service, factories have been able to ship material from branch factories in the district and from northern Ohio on overnight schedule. By railroad the same deliveries would take three or four days.

The railway freight service has also been used to a large extent by factory service departments in making deliveries throughout the area covered by interurban trolley service.

Elimination of the railway service will result in a boost for the truck business, but manufacturers who have been served by the trolleys are loath to give them up. Whole fleets of trucks would have to be bought to replace the cars, and the possibilities of trucks equaling the service are not regarded favorably.

In ruling the interurban cars from Detroit owned lines, the city commission has taken the position that the heavier type car used in interurban service is too heavy for the city rails. The wheels designed for open rail travel are also declared destructive to the type of rail necessary in the city. Furthermore, it has been declared that much of the freight brought over the Detroit rails is shipped from out of the city to destinations outside the city, such as Toledo to Flint, and that city taxpayers should not support such service.

APPROVE PROPOSAL TO SELL LOCOMOBILE

BRIDGEPORT, CONN., Oct. 24—At a hearing before Referee John Keogh, creditors of the Locomobile Co. of America gave unanimous consent to the receiver's proposal to sell the plant and assets of the company at a private sale. Approval of the court is now the only step necessary to wind up the company's affairs.

Elmer Havens, the receiver, has indicated that W. C. Durant's offer of $1,750,000 would be accepted.

Buick Better Than September

DETROIT, Oct. 24—Buick sales for October will exceed the total of 16,842 set up in September, according to President H. H. Bassett. The September total, which includes the output of the Canadian plant, averaged 748 daily. The daily high production mark for the Detroit and Flint plants combined, was set Oct. 12 at 775.

Sales reports from Leishman & Co., Mexican distributor for Buick, show 43 cars delivered at retail within 25 days. Business is continuing to grow, the report adds, and an increased distribution in October is looked for.

WOMEN AS DRIVERS SHOWN AT CHICAGO

CHICAGO, Oct. 24—An automobile driving contest for women was held in connection with the closed car show of the Chicago Automobile Trade Association. Each dealer participating in the show was entitled to select two women drivers of his cars to enter the contest. Each contestant drove a closed car of the 1922 model.

An object of the contest was to demonstrate to the public that the modern automobile can be driven with safety and comfort by the average woman. There were four events in the contest, as follows: a drive around the boulevard system, obeying all city, State and park traffic rules; road control, determined by bringing the car to a line at 25 miles an hour and stopping with the front wheels as nearly as possible on another line 75 feet away; parking at the curb in a space only one and one-half times the length of the car's wheelbase, and backing into a space in a public garage.

New Chevrolet Superior Arrangement of Control Lever

The placing of the emergency brake lever directly in back of the gear lever has resulted in more foot room in the front compartment. The levers are so shaped that they do not interfere with each other or with the instrument board

EASTERN FIRM FORMED FOR THOMART TRUCKS

Will Handle Distribution for New England and Seven Other States

NEWARK, N. J., Oct. 20—Distribution of the Thomart speed truck for the entire eastern portion of the United States has been taken over by Eastern Thomart, Inc., this city.

The new company is headed by William G. Toland, former vice-president of sales for Hare's Motors. Toland has taken with him several of his former Hare's Motors and Packard associates. W. S. Hill, vice-president, was formerly special representative for the Hare organization. William J. Foster, secretary and treasurer, served as transportation engineer for both Hare's Motors and the Packard Motor Car Co. of New York. William Carl Chapman, advertising and sales production manager, was former advertising manager for Hare's Motors and previous to that was advertising manager for the Packard Motors Export Corp.

The new company controls the distribution of the Thomart in all New England, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia and West Virginia.

Dealers have been established at New York, Syracuse, Rochester, Hornell, Newburgh, New York; Newark, Bridgeton, South Amboy, Jersey City, Bayonne and West New York, New Jersey; Hartford, Conn.; and Philadelphia, Erie, Sharon and Beaver Falls, Pa.

This includes the Newark retail branch under the management of W. J. Foster, where a large parts depot is maintained.

An extensive sales and advertising campaign is planned for the near future.

WILMINGTON FACTORY SECURED BY TREXLER

PHILADELPHIA, Oct. 23—Trexler Co. of America, manufacturer of automobile accessories, has taken on more capital, secured a new plant at Wilmington, Del., and will add several new accessories to its line. The capital stock has been increased from $200,000 to $1,500,000, underwritten by George A. Huhn & Son, members of the New York Stock Exchange.

At the same meeting, at which the financial plan was announced, an election of officers took place, resulting as follows: President, H. J. Adair; vice-president, E. J. Flannery; vice-president and director of sales, Walter P. Coghlan; vice-president in charge of manufacturing, W. G. Penfield; secretary, E. J. Flannery, and treasurer, Edward S. Perot, Jr.

The new plant is located in South Wilmington, on the outskirts of the city proper, and during the war was occupied by the Artillery Fuse & Standard Arms Co., making fuses.

TWO STATES HOLD ANNUAL MEETINGS

CALIFORNIA TO DROP NON-PAYING MEMBERS

H. S. Mason Elected President —Neighborhood Service Station Rapidly Growing

SANTA BARBARA, CAL., Oct. 24—Reorganization through the adoption of a strict policy of better quality in membership even at the expense of quantity was accomplished by the California Automobile Trade Association in its annual convention at the Arlington Hotel here. The by-laws adopted will eliminate automatically the member who fails to pay his dues.

Of a membership of 3000 it was shown that only 1000 are paid up in their dues and the 75 delegates from as many locals voted to drop all who fail to pay.

Officers were elected to serve for one year as follows: H. S. Mason, Los Angeles, president, succeeding George Haberfelde, Bakersfield; vice-presidents for north, Walter Fawcett and George Murphy, and for the south, George Dunton and U. S. Grant.

Robert W. Martland was re-elected secretary-treasurer and manager. The election was made unanimous.

Ray Sherman was made an honorary member of the association by a resolution. Honorary membership also was tendered to Gordon Lee provided he is in a position to accept it without coming into conflict with the wishes of Secretary Hoover.

One of the interesting features brought out by the reports of the various crafts was that the neighborhood service station is rapidly taking the lead in this line throughout California and is taking the service business away from the larger garages and from the dealers.

It was voted unanimously to devote the energies of the association to the checking of fraudulent garage and repair men, to drop instantly any member convicted of fraud in any form and to work at all times to establish confidence in the mind of the public in the members of the association.

September Best With Moon

ST. LOUIS, Oct. 28—Moon Motor Car Co. reports that last month was the most successful September in the company's history and that more cars were sold in that period than in the last five months of 1921. The production schedule for October calls for 1025 cars, and unless there is a hold up on material deliveries it is expected that this schedule will be completed.

Production at the present time is divided equally between closed and open models, but it is stated that if it were possible to secure deliveries on closed car models, production would be 75 per cent closed cars and 25 per cent open.

MISSISSIPPI TOWN WILL HOLD EXHIBIT

CLARKSDALE, MISS., Oct. 21—Plans are being formulated for an extensive automobile show, to be given here on Nov. 2, 3 and 4 in the quarters of the Alcazar garage.

Practically every automobile dealer in Clarksdale will take part in the show, which will be under the auspices of the Clarksdale Associated Retailers and will be the first one of its kind ever given in this section of Mississippi. A parade will precede the opening, and prizes will be given for the best decorated cars.

PORTLAND TAKES LEAD IN ORGANIZING STATE

PORTLAND, ORE., Oct. 24—A. S. Robinson of the Robinson-Smith Co., one of the nine authorized Ford dealers of the city of Portland, was elected president of the Portland Automobile Dealers Association at the annual session of the body held this week. C. L. Boss, head of the C. L. Boss Automobile Co., Hudson and Essex distributor, was elected vice-president. Robinson replaced A. H. Brown, who has served as president during the past year, while Boss succeeds A. C. Stevens.

Other members to serve on the board of directors of the association for the coming year, along with the president and vice-president, are as follows: A. B. Graham, of Braley, Graham & Childs; J. C. Crittenden of the Covey Motor Car Co.; C. G. Irwin, Wentworth & Irwin; H. J. Casey, Talbot & Casey; L. R.

COMMERCIAL CREDIT GETS CONTINENTAL

NEW YORK, Oct. 20—The proposal whereby the Commercial Credit Co. of Baltimore was to acquire control of the Continental Guaranty Corp of New York, has been ratified by the stockholders and the exchange of stock will take place in Baltimore on Oct. 25. While both concerns will retain their identity, after Nov. 1 they will operate under the control of the Baltimore company.

These two finance organizations have been prominent in the handling of automobile credits, and the New York corporation numbers John N. Willys and J. D. Dort among its directors.

HELMICK IS ELECTED WEST VIRGINIA HEAD

Dealers of State Have Shown Greater Co-operation During Past Year

CLARKSBURG, W. VA., Oct. 24—Seventy-five delegates from all parts of the state attended the third annual convention of the West Virginia Automobile Dealers Association, which concluded its sessions here with a banquet at the Waldo Hotel, served the visitors by local dealers.

R. C. Helmick of Clarksburg was elected president, and a vice-president was elected for each congressional district as follows: T. L. Cordray, Fairmont; Wade Garrett, Clarksburg; C. A. Middleburg, Charleston; S. J. Kell, Bluefield; Sherman Dills, Parkersburg, and Bruce Perry, Huntington. George M. Ford of Wheeling was re-elected secretary-treasurer, and the following were elected directors: E. J. McDermott, Wheeling; O. R. Cuppett, Clarksburg; S. J. Kell, Bluefield; Charles A. Middleburg, Charleston.

Among the achievements of the past year, it was pointed out by officers, was the elimination of the "curbstone dealer" from the automobile selling business of the state and the establishment of a practice which makes it mandatory for a dealer to have a recognized place of business.

Business on Higher Plane

Another achievement was the development of a better spirit of co-operation among automobile dealers of the state to the end that the business has been established on a higher plane.

A. R. Kroh, of Chicago, representing the National Automobile Dealers Association, told of organizations and the benefits which accrue to dealers through association and co-operation with other dealers in working out trade problems, suppressing unfair competition and securing equitable legislation which fosters the development of the automobile business.

The association went on record as indorsing suggestions for changes in the automobile laws of West Virginia.

The next meeting will be held in Wheeling the fourth Monday in March, and the next annual meeting in Bluefield the second Monday in December of next year.

Pickens Tuscora Sales Head

DOVER, OHIO, Oct. 23—B. F. Pickens, formerly connected with the Amazon Rubber Co., has been appointed sales manager of the Tuscora Rubber Co. of this city.

Digitized by Google

CHANGES IN THE TRADE

H. W. Alexander has the distribution of the Star in Holyoke, Mass.

Miller Rubber Co.'s branch in Iowa is to be moved from Cedar Rapids to Des Moines.

Orr Motor Co., Springfield, Mass., has acquired the Bliss Street Garage as a Nash service station.

Autrey-Gordon Motor Co. of Florence has been appointed dealers for the Star in that portion of Alabama.

D. A. Heindel of Youngstown, Ohio, formerly a Dort dealer, has taken on a Dort distributing contract.

Herbert A. Clark, formerly of the Clark & Breck Co., Springfield, Mass., has joined the organization of R. M. Sauers, Marmon distributor.

State Street Garage, Springfield, Mass., has been taken over by Hampden Motors, Inc., as sales and service quarters for the Gray car.

A. C. Behringer has been appointed as assistant manager and Arthur S. Goodall, advertising manager of the Dorris Motor Car Co., St. Louis.

Detroit Electric Car Co., 2416 Michigan Avenue, Chicago, has been awarded the distributors' franchise in that territory of the Duesenberg company.

Ora P. Stewart, Jackson, Mich.; Daniel Mulconey, Hartford, Conn., and Boulevard East Garage, Guttenberg, N. J., have been appointed Dort dealers.

Bremer-Tully Manufacturing Co., 532 South Canal Street, Chicago, has been incorporated to manufacture and deal in radio and automotive supplies.

Rahr-Nash Co., Manitowoc, Wis., has been organized by William Rahr, W. S. Schroeder and Niels Rahr to act as Nash and LaFayette dealer in Manitowoc county.

Paul Seeds, formerly service manager for the Charles Zimmerman Sons Co., Columbus, has opened an independent Dodge service station in connection with the Civic Center Garage.

W. H. Leach of the Buick factory sales department has resigned to become assistant sales manager of the Pence Automobile Co., Buick distributor for Minneapolis and the northwest.

J. B. Bray, who for a number of years has been service manager of the Grant Motor Car Corp., has resigned and will join the sales force of the Cleveland branch of the Autocar Co.

George E. Adams, who early in the year purchased an interest in the H. K. Smith Co., Ford distributor, Springfield, Mass., has acquired Smith's interest and assumes full control of the business.

Velie & Dort Garage, Kewanee, Ill., W. R. Scott proprietor, and the Fred Martin Garage, have been consolidated. In addition to the Velie and Dort cars, the agency will handle the Packard.

Nichols Auto Repair & Paint Shop, Rhinelander, Wis., has changed its name to Nichols Regrinding Co. It has installed considerable new equipment and henceforth will specialize in gas engine repair.

J. C. Agnew, for several years sales manager for Frank H. Sanders, former Chcago dealer for the Franklin has been appointed assistant sales manager of the Detroit Air Cooled Car Co., Detroit.

Frank Nanscawen and Ed. T. Rippey of Hartford, Wis., have formed a partnership to act as Gray dealer. Rippey is owner of the Rippey Garage and this will be headquarters of the new firm.

James E. Duffell, formerly retail sales manager for the Hanson Motor Co., Atlanta, has established a new Studebaker agency in that city. A new building is to be constructed for the company in West Atlanta.

Kimberly Park Garage, Springfield, Mass., has been bought by T. F. Selzam and placed under the management of Warren McGrannis, for the past six years the service manager at the Sumner Garage in that city.

Roth Co. has been organized in St. Paul to sell tractors and other agricultural implements. Hardware specialties will also be carried. A. H. Roth of Minneapolis, twenty-five years with the trade, is organizer.

H. J. Strack has secured the franchise for the distribution of the Columbia cars in central Iowa. The new firm will be known as the Strack Motor Sales Co. Frank K. Taylor will be associated with the new firm as sales manager.

Anton Koberstein, proprietor of the Gem City Garage, Baraboo, Wis., has admitted as partners Carroll Hackett of Eau Claire and Schuyler Mather of Baraboo. The name of the firm has been changed to Gem City Garage and Filling Station.

Timken Roller Bearing Service & Sales Co. has been chartered in Canton, Ohio, to sell roller bearings and other accessories and also to give service. Incorporators are H. H. Timken, Heman Ely, J. G. Obermier, J. F. Strought and Austin Lynch.

C. G. McDonough, formerly of the Templar Motors Co. in charge of eastern sales and previous to that with the Clydesdale Motor Truck Co. as district sales manager, is now with the Willys-Overland Co. in charge of the taxicab and commercial car sales.

Porter-Minehan Co. has been organized in Atlanta to handle at retail in the Atlanta territory the Hudson and Essex. The company is controlled by Samuel C. Porter, general manager of the J. W. Goldsmith, Jr., Grant Co., and Ralph Minehan of the same company.

St. John Motor Car Co., Appleton, Wis., has been incorporated by W. H. St. John, Geneva St. John and Clarence St. John, to operate a new garage and service station. The same interests have conducted a sales and service business in Green Bay, Wis., for several years.

Thorpe & Knight is the name of a new company organized in Atlanta as state distributor for the Gray Motor Corp. Under the same name the company operated for the past ten years at Miami, Fla., as automotive distributor in Florida, this business having been disposed of.

Joe R. Cook Automobile Co., Davenport, Iowa, has been awarded the agency for Mack trucks in the tri-city territory. J. C. Koeneke, Des Moines, Iowa, representative for the Mack trucks, indicated that the agency will make Davenport the distributing point eventually for its southeastern Iowa and part of western Illinois territory.

Volney S. Beardsley has been appointed eastern district sales manager of the United Motors Products Co. of Grand Rapids, Mich., which is actively in production now of its new one-ton speed model, the Highway Special. Beardsley's headquarters are in Los Angeles. Appointments will be made immediately of dealers in coast cities not already closed, as Beardsley will act only as the factory representative, controlling no retail outlets himself.

Sam C. Mitchell, formerly branch manager of the Cleveland Tractor Co., at St. Louis, has joined the Dort Motor Car Co. as assistant sales manager. Another addition to the Dort sales personnel is William Hufstader, former manager of the convention bureau and the publicity manager of the Flint Chamber of Commerce. W. Harold Kingsley, a newspaper man of long experience, has taken charge of the Dort publicity department. Kingsley returned last month from Paris where he was on the European staff of the Chicago Tribune.

INDIA AND SEIBERLING EXPAND TRUCK LINES

AKRON, Oct. 24—A new double oversize extra-ply flat tread cord truck tire is announced by the India Tire & Rubber Co. The tread has been designed for conformity to road surfaces. The broad, flat face which comes in contact with the road wears very slowly and evenly, and gives greater traction and non-skid qualities. Heavy ribs on both sides of the tread afford additional protection against rut and curbstone wear.

The tread stock has been brought well down over the sidewalls, giving added strength to the carcass. The bead has been extra-heavily reinforced. A special cushion and breaker strip construction is incorporated, which distributes road shocks to all parts of the tire rather than allowing the shocks to be absorbed by just those portions which are struck.

Seiberling Pneumatic

AKRON, Oct. 23—Seiberling Rubber Co. announces a new pneumatic truck tire which is called the All-Tread and which now is in production in the following sizes: 30 x 3½, 32 x 4½, 34 x 4½, 33 x 5, 34 x 5, 35 x 5, 36 x 6, 38 x 7 and 40 x 8. The 30 x 3½ is 3.85 dimension, six ply, for Ford delivery trucks and for use on Ford passenger cars where road conditions are severe.

The feature of this new model is that the tread design is extended down the side walls, the heavy bars running almost to the bead. The tread rubber goes from bead to bead and is extra heavy, of about 4200 lb. per sq. in. tensile strength. There is an extra wide breaker strip, a double thick cushion of rubber between the last few piles, double chafers and double flipper strips, and the carcass is built of long staple Egyptian and Arizona cotton only. The new model is full 10 per cent oversize on the nominal dimension.

William T. Bush Resigns

DETROIT, Oct. 23—William T. Bush, for several years a sales executive of Studebaker and Packard factories and more recently director of sales of the Gray-Dort factory, Canada, has resigned from the latter position, and has returned to Detroit to reside. He has not announced his future plans.

ASSOCIATION ACTIVITIES

Quincy Drive for Members

QUINCY, ILL., Oct. 23—The Quincy Automobile Trades Association plans an intensive membership drive through Adams, Pike and Hancock counties to add 150 new members to the central organization and affiliate with the Illinois Automobile Trade Association. Lynn M. Shaw, representative of the National Automobile Dealers Association, spoke at the meeting at which the drive was decided upon. Benefits of state organizations were emphasized by him. "Legislation can not be trusted," he warned, "and once a tax goes through, it sticks. A source of revenue is seldom repealed."

Herschel Earhart, Ray Taylor, A. L. Stewart and Ray Lee will be captains of the drive and each will direct a team of ten men.

Quincy will be host to the state association next spring and desires especially to make a good membership showing at that time. Plans for the show to be held then are already under way and A. L. Stewart, C. Lawrence Wells and R. C. Taylor have been appointed by A. P. Nesta, Quincy association president, general show committee. "Unusual jobs" display will be feature of the spring show.

Show Held in Holyoke

HOLYOKE, MASS., Oct. 24—A closed car show under the auspices of the Holyoke Automotive Dealers Association has been held in the new showrooms of the Magna Auto Co. There were fourteen exhibitors, and the entire interior was decorated with autumn leaves and flowers. The exhibits made up a representative display that completely filled the exhibition space. About 5000 persons attended the show, and the management express themselves as well pleased with the sales and interest.

Syracuse Chooses Officers

SYRACUSE, Oct. 21—The Syracuse Automobile Dealers Association has adopted the Boston plan to govern the sale of used cars. Howard H. Smith, secretary of the association, is in Boston studying the plan.

Officers of the association were re-elected at the annual meeting. They are: President, S. J. Silverman; vice-president, Charles C. Hanna; treasurer, Charles W. Bull; directors, B. W. Moyer, George H. Norris, Fred J. O'Neil and H. B. McLellan. McLellan succeeds John W. Lee, jr., resigned.

The association now has a membership of 30, an increase of eight compared with last year.

Gardner Manager in Cincinnati

CINCINNATI, Oct. 19—Harry T. Gardner, who is one of the younger veterans in the business of managing automobile dealer associations, has become general manager of the Cincinnati Automobile Dealers Association. Gardner at one time was executive secretary of the Syracuse, N. Y., association, later holding a similar position with the New York association, which he resigned to enter the automobile sales field. Gardner has instituted a news letter as a feature of the association activities and has begun preliminary work on the show, to be held Feb. 7 to 14.

Cleveland Tire Dealers Elect

CLEVELAND, Oct. 20—The Cleveland Retail Tire Dealers Association has elected the following officers: President A. B. Craft; vice-president, John Jones, and secretary, J. W. Van Den Bosch. They form the board of directors together with R. F. Valentine, retiring president; A. P. Garrett, Arthur Mechanic and Homer Whelpley.

Akron Exhibits Closed Cars

AKRON, OHIO, Oct. 24—Akron's first closed car show and fall automobile style exhibit has been held here with twenty-one dealers exhibiting more than forty models of closed cars. The exhibit was staged under auspices of the Akron Motor Vehicle Association. No open cars, accessories or tires were exhibited.

Edward S. Jordan, president of the Jordan Motor Car Co., addressing members of the vehicle association at the Portage Hotel, predicted a new era of development for the closed car model, and later formally opened the show.

The big armory, which seats over 3000, was elaborately decorated, while a gigantic arch, spanning Bowery Street on Main Street and leading to the armory, was built and kept lighted every night of the exhibit. Frank O'Neil was manager.

Vigilantes in Indianapolis

INDIANAPOLIS, Oct. 24—The Indianapolis Automobile Trade Association has fathered a movement that will result in the appointment of 100 motor vigilantes by the Board of Public Safety and the local police department. Those who serve in the movement will be appointed in secret and will so operate in the endeavor to help law enforcement officials to bring about more complete obedience of the motor vehicle laws and regulations than has been the vogue there.

The plan as worked out by John B Orman, manager of the trade association, will be in operation soon, and appointees supplied with their secret numbers and card blanks for the reporting of the license number of those cars observed breaking the motor laws and traffic regulations. These reports will go to the police department, which will warn the offenders.

The association has reached the conclusion that it is not only to the best interests of owners and drivers to have law enforcement aids but that it is the duty of the trade body to start these things in a purely selfish interest for more business.

Cars have increased 20 per cent this year, repeating Indiana's record for the same advance a year ago. Congestion is increasing on all roads and streets and the speed menace and improper driving must be eliminated if more cars are to be sold.

Louisville Show in November

LOUISVILLE, KY., Oct. 24—A closed car show will be held in Louisville Nov. 20 to 25 under the auspices of the Louisville Automobile Dealers Association. A big advertising campaign will be launched two weeks before the exhibition. As usual, the closed car show in the fall will be staged in the showrooms of the various dealers.

PORTLAND TAKES LEAD IN ORGANIZING STATE

(*Continued from page* 44)

Fields, Fields Motor Car Co.; S. V. W. Peters, Portland Motor Car Co.; L. R. Therkelsen, Therkelsen Motor Co.

Ralph J. Staehli, secretary of the association, was re-elected for the coming year.

Robinson, in being elected to the presidency, returned to the executive position with the Portland body which he held a year ago, having served as president during the term from the fall of 1920 to the fall of 1921. He is the first man to be elected to the office twice.

Direction of the annual automobile show, formation of a state-wide association embracing all lines of the industry, study of the used car problem and study of proposed legislation affecting the automobile will be the four main problems before the association during the coming year, and the new board of directors is already forming with an idea of taking up all four. The annual show will occur in February, it has been decided, and as the time is still quite far distant definite plans are not yet being taken up.

Formation of a state-wide association framed along the lines of the Washington and California bodies is already well along, the plan having been fostered by the last administration, and a meeting to complete the arrangements is expected to occur this fall. While the Portland dealers' body will be but one of the units composing the state body, as the most important automobile body of the state, the association has naturally taken the lead in the proposed expansion.

Louisville Distributor Dies

LOUISVILLE, KY., Oct. 23—John Alderson, president of the Standard Automobile Co., Louisville distributor for the Cadillac, died at his residence at Buechel of heart disease, following a week's illness. He was sixty-one years old.

HOFFMANN BEARINGS RIGHTS ACQUIRED

NEW YORK, Oct. 24—The Norma Co. of America of Long Island has acquired the American patents and business of the Hoffmann Manufacturing Co. of Chelmsford, Essex, England, maker of Hoffmann roller, ball and thrust bearings. The line of Norma Precision ball bearings now will be supplemented by Hoffmann Precision roller bearings and other bearing products in the Hoffmann line.

The Norma company will erect a new plant for the manufacture of Hoffmann products in America. Meantime, they are being imported and sold under the regular Norma engineering service.

Thomas H. Glenn Dies

BOSTON, Oct. 24—Word has been received here of the death at Dunkirk, N. Y., of Thomas H. Glenn, first manager of the New England branch of the Firestone Tire & Rubber Co. at Boston.

Sell More Than Brake Lining

WHEN relining brakes, give some thought to what the lining will do after it has been applied. Will it wear? Will it give satisfaction? Is it a job you can be proud of?

These questions concern *you* more than the owner, for future business and real profits depend upon *service rendered.*

GARCO Asbestos Brake Lining is SOLIDLY WOVEN. Make the comparison yourself. Compare the GARCO weave with that of any other lining on the market and you will see the additional asbestos: the close, compact, tight weave that has made GARCO the leading lining of the industry.

GARCO builds business for the service man and gives satisfaction to the user!

NO-LEAK-O Piston Rings

THE ONLY GROOVE THAT CANNOT CLOG

When the Job's Finished—What?—

When you finish your "jobs" are they followed by a string of complaints from dissatisfied customers?

If you use No-Leak-O Piston Rings you can turn most of these complaints into satisfied customers. No-Leak-O Piston Rings "won't leak because they're sealed with oil."

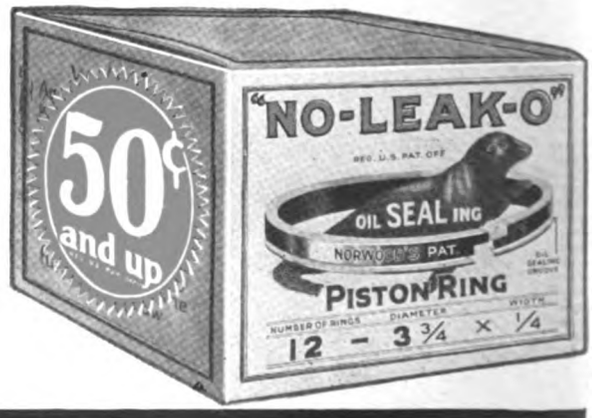
They are made in one piece—easy to install—quick seating—of finest material—guaranteed against breakage—individually tested for accuracy. A specially cut groove—the patented No-Leak-O "oilSEALing" groove—packs an impassable oil film in between piston and cylinder walls which gives *perfect oil control aud compression in each individual ring.*

No-Leak-O is the *leading* replacement ring; it makes good on every job.

Over 200 reliable jobbers carry No-Leak-O Piston Kings in all standard sizes and *over* sizes.

Write for free booklet, "Know the Facts About Grooved Piston Rings." Let us tell you about our liberal dealer proposition and how our National Advertising can increase your profits. Quick action on your part will mean bigger profits.

NO-LEAK-O PISTON RING COMPANY



Dept. T-44

BALTIMORE, MD.

One price during eight years of continued success

One design—for all cars—50c and up

Important: In buying piston rings insist on the genuine No-Leak-O with the original "oilSEALing" groove, packed in this standard package bearing the famous ring and seal, our registered trade mark. Beware of imitations.

WON'T LEAK

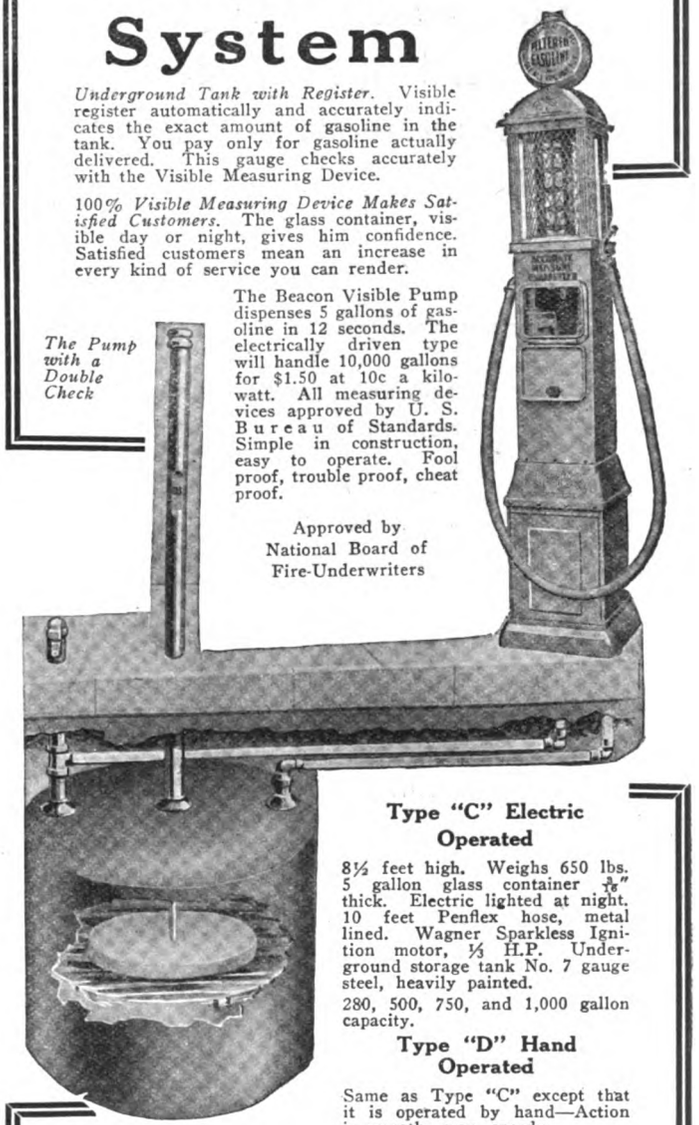
Get More Profit from Gasoline

Many garage owners get no profit from gas because they have no reliable method of "checking" the gas they buy.

They suffer another loss because they have no reliable way of checking sales of gasoline by their employees. These losses are absolutely prevented when you are protected by the Double Checking.

BEACON
Visible Gasoline
System



Underground Tank with Register. Visible register automatically and accurately indicates the exact amount of gasoline in the tank. You pay only for gasoline actually delivered. This gauge checks accurately with the Visible Measuring Device.

100% Visible Measuring Device Makes Satisfied Customers. The glass container, visible day or night, gives him confidence. Satisfied customers mean an increase in every kind of service you can render.

The Beacon Visible Pump dispenses 5 gallons of gasoline in 12 seconds. The electrically driven type will handle 10,000 gallons for $1.50 at 10c a kilowatt. All measuring devices approved by U. S. Bureau of Standards. Simple in construction, easy to operate. Fool proof, trouble proof, cheat proof.

Approved by National Board of Fire-Underwriters

The Pump with a Double Check

Type "C" Electric Operated

8½ feet high. Weighs 650 lbs. 5 gallon glass container ⅛" thick. Electric lighted at night. 10 feet Penflex hose, metal lined. Wagner Sparkless Ignition motor, ½ H.P. Underground storage tank No. 7 gauge steel, heavily painted.

280, 500, 750, and 1,000 gallon capacity.

Type "D" Hand Operated

Same as Type "C" except that it is operated by hand—Action is smooth, easy, speedy.

Let us prove to you that the Beacon Visible Gasoline System will give you a real profit from your gas. Write for large illustrated catalogue fully describing this profit earner for you.

OLDSMOBILE

In Indianapolis—

"You might say that we are new Oldsmobile dealers, having had the line since September, 1921, but in all of our eight years' experience in selling automobiles we have never had cars from a factory that came thru in more perfect condition than the Oldsmobile cars we have had since taking on the contract. On the cars we have put out in Indianapolis at retail our service expense has been practically nothing, with an average of less than $5.00 per automobile."

—THE LATHROP-McFARLAND COMPANY
(Indianapolis, Ind.)
J. S. McFARLAND

You know and we know that a successful dealership must be based on a right product.

The Oldsmobile product is right! The above letter from one of the largest and oldest automobile selling organizations in Indiana is typical of hundreds of fine tributes paid Oldsmobile Fours and Eights by dealers everywhere.

In addition to an excellent product consisting of two distinct lines, 15 easy-selling models, and a price range of $955 to $2025, Oldsmobile offers the unequalled advantages of the General Motors financing plan.

Put your efforts on a line offering the cars and the franchise which will assure you real prosperity. We have opportunities now in a few territories for aggressive dealers.

How Shall the Industry Pay Its Salesmen?

Some Dealers Say They Have the Problem "Licked"; Others Are Looking for Help—Let's Have an Exchange of Ideas for the Good of the Entire Trade

WHAT are your salesmen looking forward to as winter approaches?

Will they have to run into debt on their drawing accounts to live until spring?

Or will they have a steady income through the months when deliveries are few and far between?

Or, perhaps, will they be getting a bonus about Christmas or New Year's time to pay accumulated debts or put a nest egg in the bank?

Interesting questions, aren't they?

And here are some more:

Are your salesmen working for you or for themselves?

Are they interested exclusively in their own sales or in their sales and your profits?

Whose side do they take when it comes to fixing an allowance on a used car, yours or the prospect's?

Again interesting questions, aren't they?

They are doubly interesting, it might be added, because they arise, all of them, from a single source, from the problem which may be stated in the question, How shall the industry pay its salesmen?

LET'S look at the salesman's side of it first, the human side of the question. Selling requires enthusiasm. Particularly does the kind of selling that is necessary in winter require enthusiasm. It takes a bright, alert, determined salesman, enthusiastic over his car and his job, to sell automobiles for future delivery, which is a big part of every salesman's winter task.

Can a salesman muster the enthusiasm and determination necessary to sell if his mind is disturbed by worry over where the next month's rent is coming from or how the grocer is to be paid; or if he is digging deep into next spring's commissions by taking advances on his drawing account? Isn't there a good reason why every dealer who can possibly finance such a plan should be considering some means of assuring good salesmen a steady income throughout the year? Isn't it due the salesmen of this industry that plans be worked out which will remove the natural temptation to over-spend in boom periods, with the resultant necessity of skimping in dull times to make ends meet? Wouldn't the automobile business approach more rapidly the stability which it must reach some day if some of the uncertainties could be taken out of its salesmen's compensation?

Now for the dealer's side of the case. It will be agreed that the salesman whose income is spread with some uniformity throughout the year, who is not harassed by financial worries, is the more productive and satisfactory employee. But as long as the used car enters into the business there is another important element which may well be considered in connection with methods of paying salesmen in establishments except those where ironclad rules prevent the salesman's influence being exerted in the fixing of used car allowances.

IN a great many dealer organizations where salesmen either make used car allowances or confer with the dealer or a used car department manager about them it is possible to remove the salesman from the customer's to the dealer's side of the transaction by making him interested in profits on sales rather than in sales alone. It may be argued that inasmuch as most dealers base new car commissions on the cash received for the new car—that is, the difference between the new car list price and the used car allowance price—the salesman will be interested in making the allowance as low as possible. He will, generally speaking; but if a difference of $100 in allowance means the making or breaking of the sale it is natural that he would rather drop $5 off his commission than lose the sale. He loses sight of the fact that the dealer drops $95 from his gross profit, which may leave the sale with no net profit at all. Some dealers have made their interest in net profits the salesman's interest also by basing commissions on profits rather than sale prices.

Take the case of a dealer who pays his salesmen on the basis of one-third of the net profit on each transaction. To illustrate his plan it will be tied up with the situation developed in the preceding paragraph. Assume that the net profit on a transaction involving a used car, with the allowance price stated by the dealer or his used car appraiser, is $150. The salesman would get $50. But suppose an additional allowance of $100 is given. The net profit would be cut to $50 and the salesman's compensation would be a third of that or $16.67. He loses $33.33 because of the extra allowance as against $5 under the straight commission plan, and the amount cut off the dealer's revenue is $66.67 instead of $95. This makes the interests of the dealer and his salesman more nearly identical. Isn't it possible that neither would lose, but that the salesman would succeed in persuading his prospect to accept the lower allowance?

Digitized by Google

ANOTHER dealer has a sinking fund plan under which his salesmen, who put valuations on used cars, share either in profits or losses incurred in trading. The plan works out like this: Suppose a salesman sells a car listing at $2,000. The factory discount to the dealer is 20 per cent, so the gross profit on this sale would be $400. This gross profit is distributed as follows: $200, or 10 per cent of the list price, is credited to the company; $100, or 5 per cent of the list price, is credited to the salesman's commission account. The remaining $100 is credited to the sinking fund of the salesman making the sale.

If a used car is accepted as part payment on the new car, payment of the $100 credited to the salesman's commission account is deferred until the used car has been sold. A 5 per cent commission on the used car selling price is paid to the salesman who sells it. This commission is charged to the sinking fund account of the salesman who took the used car in trade. Of course when a salesman sells a used car that he traded in himself his commission account is credited with the 5 per cent on the used car selling price.

Any losses incurred in selling a used car are charged to the sinking fund account of the salesman who took it in. If these losses exceed the balance in the salesman's sinking fund account, the excess is charged to his commission account. The commission accounts are settled quarterly. The salesmen have a liberal drawing account.

The sinking fund accounts are settled at the end of the year. Any salesman having a balance in his sinking fund at that time receives one-half of this balance, the other half going to the company. The sinking fund gives the salesman a definite margin to work on in making allowances. So long as he keeps his over-allowance within the limits of this account he gets the customary 5 per cent on the new car sale. Furthermore, by minimizing the losses on his used car deals, he can increase his compensation.

ON the other side of the question, having more direct bearing on the salesman's need for steady remuneration, dealers have worked out numerous plans which may be roughly classed under the headings of salary and commissions, salary and graduated commissions and salary and bonus.

One dealer has a simple plan of paying his men $25 a week and 3 per cent commission on all sales. On $100,000 worth of business the compensation would work out like this:

Salary, 52 weeks	$1,300
Commission on $100,000	3,000
Total salary and commission	$4,300

This salesman earns the equivalent of 4.3 on the sales which he makes.

Another dealer with a good selling car pays his salesmen $40 a week, with a graduated scale of commissions beginning at 1 per cent on the first $25,000 worth of business and increasing 1 per cent with each additional $25,000 until the salesman has done $100,000 in a year, when his commission is 5 per cent. Compensation of the salesman who sells $100,000 worth of cars is as follows:

Salary, 52 weeks	$2,080
Commission, 1% on $25,000	250
Commission, 2% on 25,000	500
Commission, 3% on 25,000	750
Commission, 4% on 25,000	1,000
Total salary and commission	$4,580

This salesman earn 4.58 per cent on his total sales. In addition he is free from seasonal worry, with a stated salary coming in every week and commission payments when he reaches the different periods in gross sales.

A THIRD dealer pays his salesmen a salary figured on their sales, but somewhat below the equivalent of a 5 per cent commission. He has $30, $40 and $50 a week men. A man may be advanced from the $30 to the $40 or from the $40 to the $50 class any time during the year, but if he persistently falls back in sales rating so that logically he would drop into a lower class he is not retained on the staff. When the end of the year comes the $30 a week men get a bonus, bringing their total compensation for the year up to 5 per cent of their sales, while the $40 and $50 men get bonuses, making their earnings slightly over 5 per cent. The bonus, paid in midwinter, is intended to furnish ready funds to bank or to assist the salesman in some kind of extraordinary financing which is necessary occasionally in almost every family.

Dealers who use the salary plan claim that it brings salesmen more effectually under the control of the head of the house. It gets them out of the class of brokers working more or less on their own time. It makes them integral parts of the organization.

Dealers who have profit-sharing and loss-sharing plans of compensating salesmen say that it gives the men a more direct interest in the business, making them ready to fight on the side of the dealer to avoid used car losses.

REGARDING the compensation of salesmen, Frank R. Tate, Dodge Brothers dealer in St. Louis, says: "The automobile industry is the victim of lack of progression, inasmuch as the majority of retail dealers have stuck to the old form of compensation for salesmen ever since its inception. It is now time that the subject should have sane treatment."

What do YOU think? How do YOU pay your salesmen? Will you give the trade the benefit of your progressive ideas and experience? Write to Motor World about them.

Have You a BETTER Plan of Paying Salesmen?

DEALERS throughout the country have shown keen interest in a number of articles printed in Motor World during the summer and fall, describing various methods of compensating automobile salesmen. This interest has prompted Motor World to open its columns for a more extended discussion of this subject which is so vital to the progress of the industry and the prosperity of the men in the trade, both dealers and salesmen.

Have you a method of paying salesmen which varies from the usual straight commission or commission and drawing account plan? Will you write to Motor World, giving the details of your plan and stating the degree of its success. Your story may be of great assistance to a dealer somewhere in the country who is seeking for a way out of difficulties due to an unsatisfactory plan. And you may find a means of making your own plan even better than it is in the story of another dealer who has developed an idea that had not occurred to you.

Motor World will provide liberal space to bring about a countrywide exchange of ideas on this subject. How do YOU pay your salesmen?

Tell the Trade About It—In a Letter to Motor World

You Can Write Tire Ads with Shears and Paste Pot, but—

It Takes Time and Thought to Prepare the Kind of Copy That Sells, Says This Successful Kansas City Dealer

"YOU'LL excuse me now, please, because it's now 3 o'clock, and I have to have the copy for an advertisement ready by 5."

Two hours to write a tire advertisement! Who ever heard of such a thing!

All a dealer has to do, to prepare copy for any amount of space a tire dealer could possibly buy, is to snatch a sample of company advertising, clip out a phrase or so, attach his name and street number, maybe his telephone number also—and the job is done. Five minutes—ten at most—ought to suffice for writing any tire service station's advertisement.

And here is a tire service man expecting that it will take two hours to write the ad; and furthermore actually having set aside this particular two hours for the job!

Another queer thing about this incident is that it was the president of the tire company who was writing the advertisement!

THIS man, R. E. Robinson, general manager of the Osgood-Robinson Tire Co., had plenty of other things to do, goodness knows. He had just completed the opening of a new tire store and service station in Kansas City, Kansas, the firm having operated in Kansas City, Missouri, for the previous five years. And to show how important it was that he "look after business," instead of bothering with advertising, let's mention that the company had opened its new station in a building erected for its purposes, having taken a ten-year lease on half a block frontage, half for its own present needs.

It had taken the lease, and fitted its station and store up so well partly because it had been given exclusive representation on Goodyear tires in the entire city of Kansas City, Kansas—"a city of more than 100,000 people, with many very large industries. There were therefore many local dealers and tire stations to get acquainted with, so that the company's wholesale distribution might be developed. There were plenty of things to do"—and here was the president of the company writing an ad!

Another odd thing about it—the ad was to accompany one of the Goodyear company ads.

Now, anybody knows that all a tire man has to do, when the company uses space, is to take a little space below the big spread, to let the public know that he handles those tires.

The Osgood-Robinson Tire Co., however, took just about as much space as the Goodyear company took—to be exact, the manufacturer having 11 inches, four columns, and the Osgood-Robinson Tire Co. the rest of the four columns, only eight inches being left.

But—

Robinson has been giving this close and careful attention to advertising for some time. And that is one of the reasons that his company has grown so substantially.

Another reason that the company has grown, is that the same close and careful attention is given to service.

Note carefully the combination of those two subjects of attention:

"Service" and "advertising."

The thought is expended on the advertising in order that the story of the service may be effectively told to prospective customers.

The service is maintained at a high standard, because experience has shown that desirable customers want good service and are willing to pay for it.

The firm has found that the customers believe the Osgood-Robinson service is worth paying more for.

The customers don't quibble about price of Goodyear tires or of the service. The Osgood-Robinson company has never entered the cut price competition, never has advertised to get business on the basis of its low prices for service, because its prices are not particularly low.

And when this company spends money for any service, it is, consistently, willing to go far enough to get the best results. It not only spends the money for the space, or for the printing, but for everything else connected with the means of publicity, to make its use most effective.

It buys substantial space in the newspaper, on occasion, and invests valuable time in preparing the copy.

Its Kansas City, Mo., business has been built largely through direct mail advertising. And on this literature, real money has been spent as well as time in preparation.

Pictures are used on almost every piece of literature; not stock cuts provided by the company, but pictures taken for the purpose, or line drawings made to illustrate the point which the advertisement stresses.

The company spends real money to make its mail advertising effective—and spends more, to get the advertising to the right people. Three different mailing lists are kept on file, to which different kinds of literature—all specially prepared—may be sent. There is one list of truck owners, another list of owners of passenger cars, and a third list which has on it the names of the company's regular customers.

An addressing machine handles these lists.

"We often want to get an announcement, or a particularly good bit of mail advertising, to our customers as promptly as possible," said Robinson. "With the addressing machine, we can get out letters or cards to one or more lists on the same day that we receive the printed matter from our printer."

Still other lists, are used for special purposes. Sometimes a message is to go to owners of a particular kind of car or truck, in which case names are selected from monthly revision of license lists, and envelopes or cards are addressed by typewriter.

"Of course it is a lot of expense and trouble to take care of the lists, and prepare the copy," said Robinson, "but you've got to spend money to make money."

The new establishment in Kansas City, Kansas, as well as the service station and store in Kansas City, Mo. (exclusively on Goodyear solids and cushions for four years) demonstrate that it is well worth Robinson's while to spend two hours writing a newspaper advertisement.

Putting Local Appeal Into Tire Advertising

HERE are some examples of how the Osgood-Robinson Tire Co., Kansas City, stimulates local interest by writing its own advertising to support national copy. Figures 1 and 5 show ads that appeared on the same page of a newspaper. 1 is factory copy and 5 is the dealer's own ad. Figure 2 shows a folder used by this company in a direct mail effort. Figure 3 shows how the price appeal is combined with a service appeal in a newspaper ad and figure 4 is one of a number of blotter ads that are used as envelope stuffers

Quality Membership the Aim of Reorganized California Trades

Elimination of Undesirable Members and Increasing of Public Confidence Sought in Plans at Notable Santa Barbara Gathering—Harry S. Mason, Los Angeles, New President

By H. H. DUNN

SANTA BARBARA, Cal., Oct. 18.

THE California Automobile Trade Association, an organization of more than 3000 firms and individuals in the automobile, motor truck, equipment, repair, service and garage branches of the automotive industry, was thoroughly reorganized and put on a new business basis of operation at the annual convention in the Arlington Hotel here Oct. 16 and 17. More than eighty delegates, representing as many local branches of the association took part in the convention, and Bakersfield was selected as the place for the next annual meeting in October, 1923, exact date to be selected later.

Reorganization was accomplished along lines important to both the men of the automotive industry and to all the motorists of California. For the first time in the seven years of the existence of the California Automotive Trade Association, by-laws were adopted forming the basis of the reorganization. These by-laws were written and adopted with the express purpose of:

1—Increasing the confidence of the public in the members of the association, and improving the standards of dealing with the public by these members;

2—The elimination of the undesirable member; the establishment of a membership based on quality, rather than quantity; the removal of the member who does not support and take part in the work of the association, and the taking away of the backing of the association from those men in the industry who do not deal honorably with the public.

IT was brought out that, of the more than 3000 members of the association, hardly more than one thousand were in good standing. Authority was given in the new by-laws for the elimination of these members, and the watchword, "better quality and smaller quantity," in membership, was adopted.

Following the adoption of the by-laws, the following officers were elected, to serve for one year:

Harry S. Mason, Los Angeles, president; George Dunton, of Anaheim, vice-president for the South; U. S. Grant, San Diego, vice-president for the South; George R. Murphy, San Francisco, vice-president for the North; Walter Fawcett, vice-president for the North; Robert W. Martland, secretary-treasurer and manager. These officials succeed George Haberfelde, Bakersfield, president; J. F. Flynn of Sacramento and William L. Hughson, of San Francisco, vice-presidents for the North; and Joseph A. Moore of Pasadena, and Glenn Thomas, of Long Beach, vice-presidents for the South. Bob Martland, secretary-treasurer and manager, doesn't count; his re-election every year is merely a matter of form, which should have been made a regular holiday, just like Saint Patrick's Day, but wasn't, due to pressure of other and newer business.

In resolutions presented by Martland and unanimously adopted, Ray Sherman, former editor of Motor World, and now merchandising director of the Automotive Equipment Association, was made an honorary member of the California Automobile Trade Association, and similar honorary membership was tendered to Gordon Lee, director of the automotive department of the National Chamber of Commerce, provided the acceptance of such membership would not be contrary to the policy of Secretary Hoover.

Leaving Manager Martland and Treasurer Martland out of it, Secretary Martland then delivered to the delegates a brief address which had a great deal of influence on the adoption of the by-laws, to be described later. This address pointed out a majority of the defects in present-day automobile trade associations, and outlined the remedy which had been found best in this particular case.

Reports from the various crafts, which had held divisional meetings, were then called for, and H. C. Brokaw, chairman of the Garage and Repair Craft, presented a report urging the licensing of mechanics, as remedy for the "curbstone" or fly-by-night mechanic, "who," says the report, "is a damaging factor at present combatted only by the co-operation of the automotive associations with the city councils and the police." The bonding of employes also was suggested. The meeting in general seemed to oppose the licensing of mechanics, but to favor the education of mechanics by courses in connection with public schools, either day or night, or in classes to be addressed frequently by factory representatives, and men named for the purpose by the manufacturers of automobiles, trucks and equipment.

The dealers, reporting through George Dunton, chairman, held that the used car problem is one to be worked out by each dealer according to his own location, trade and conditions. The dealers laid plans in their craft meeting to fight legislation inimical to the industry at the coming session of the state legislature, but did not go into details as to the character of the unfriendly legislation expected this winter. There are, however, several schemes to be presented to the legislature which will make the life of the repair man and the dealer somewhat harder than it is at present, and some laws are proposed inimical to the operation of motor truck fleets on the highways. These will be fought, as they come up, by the California Automobile Trade Association.

Report from the secretaries of the various branch associations, dealing largely with their duties to their associations, and their relations to the state

Digitized by Google

association, was read by Otis Hymer, secretary of the Bakersfield local, and chairman of the secretaries' meeting.

The battery crafts, which had sent the largest group of delegates to the convention, likewise presented an interesting report, through J. G. Brown, of Los Angeles, chairman. Brown declared that free service had been eliminated in the automotive industry except in the business of the battery man. "All factories," said he, "favor a service charge. San Francisco dealers polled their trade on this question, and the majority of the customers were in favor of a reasonable charge for good service." The plan will be effective Jan. 1.

Small Stations Flourish

In connection with this, the battery men brought out the fact that, in California cities, the neighborhood station is rapidly coming to the front, getting the business away from the larger downtown station, and becoming more and more popular with owners. The elimination of discounts, and the substitution of small charges for watering and cleaning and similar operations was urged by the battery men. Retention of discounts for quantity sales, however, was approved, and it was admitted that repair schedules must be made elastic, to fit conditions which differ with each locality.

The incoming president, Harry S. Mason, of Los Angeles, spoke briefly, supporting Martland's plan for a thorough sifting of the membership, and pledging himself to carry out this plan.

The financial report showed that a number of local branch secretaries were not remitting the State dues promptly to the state secretary, and that much money paid to the local secretaries is used by them in local expenses, while the dues to the state association wait for payment. Some $4,000 was reported as outstanding among the local secretaries, due to the failure of the latter to pay into the state association dues paid by individual members to the local secretary. The financial report was accepted and a motion to employ an auditor and collect the state dues, by civil procedure if necessary, from the delinquent secretaries, or from the boards of directors of the local branches, was adopted when offered by H. C. Brokaw. The opinion of the meeting seemed to be that the fault lies not so much with the local secretaries as with the presidents and boards of directors of the local branches.

The Reorganization Plan

Then came the important business of the convention—the re-organization of the California Automobile Trade Association, through the adoption of its first set of by-laws. Some opposition to some of these by-laws developed, but was voted down and the by-laws eventually were adopted as written by a committee especially appointed at the last annual convention. The local branches were consulted in the assembling of these by-laws, and they represent the majority thought obtainable in California on the subject of automotive trade associations. For this reason, they will be of interest to other associations.

Objects of the association are first stated to be "establishment of a higher plane of commercial integrity for those engaged in the automobile industry, through the application of better business methods, to establish, through cooperation and acquaintance, a greater degree of confidence among the members of the association; and, by concerted action, to merit in larger measure, the confidence of those with whom we deal, by affording them that protection which our association offers, and thereby obtain recognition for those ideals and principles for which the California Automobile Trade Association stands."

Any person, firm or corporation legitimately engaged in any branch of the automotive industry in California is eligible to active membership. Others may be made honorary members through their special achievements in the industry. In districts in which there are no local associations (branches) members may be admitted direct to the State association, but it, primarily, is an association composed of branches, an organization of organizations. Twelve members are necessary for the formation of a branch.

An important article concerns fees and dues, reading in part as follows:

"Each local association shall collect from each member, on January first of each year, $12, said sum to be immediately sent to the State secretary-treasurer-manager as payment of one year's dues to the State association. * * * In the event that a member of a local association pays this $12 as dues to the State association, and resigns from or is dropped by the local association, he is not to receive any rebate from the State association, nor is he entitled to membership card therein or to the insignia of the State association." It is believed that this by-law will materially assist the local association secretaries, not only in collecting the State dues, but in holding together their local organizations.

One annual meeting is to be held each year, in October; the northern division meets once a year, in February, and the southern division once a year, in June. The line between the two divisions is defined as the northern boundary of San Luis Obispo, Kern, Tulare and Inye counties. Representation at these annual meetings, over which there was some argument, was fixed as follows:

"Each local association of 20 members or less, in good standing in the State association, shall be entitled to one delegate. Local associations having 20 or more members in good standing shall be entitled to one delegate for every such 20 members. At any general or divisional or special meeting, of the association, any member may attend and may take part in the discussions which may arise, but only those elected as delegates from their associations may have the right to vote."

They're Both Happy

Because the California Automotive Trade Association promises to attain greater things through the re-organization and planning of the recent convention in Santa Barbara. On the left is George Haberfelde, of Bakersville, retiring president, and on the right Harry A. Mason, of Los Angeles, the new one.

Details of the Plan

The cleaning up of the association is included in Article VII of the by-laws, which reads:

"If any person, firm or corporation, or local association, while he or it is a member of this association:

"(a) Violates any fundamental rule or principle of this association;

"(b) Is convicted of felony or misdemeanor involving moral turpitude, or is finally declared by any court of competent jurisdiction to have committed any fraud; or

"(c) Upon written complaint of any member or local association is found, after investigation, unworthy of membership in this association, then,

"He or it shall be liable to expulsion or suspension from membership in this association by the executive board thereof, after first being given an opportunity to present his defense, and any such expulsion or suspensions from membership may or may not be made public, as determined by the facts in the case."

Section (a) of this article is the one which will enable the State association to finance itself, since it compels the immediate payment of dues, while sections (b) and (c) are expected to improve the relations of the membership to the public, and, consequently, increase the confidence of customers in the insignia of the California State Automobile Association.

At the conclusion of the discussion of the by-laws, and prior to adjournment, Secretary-Treasurer-Manager Martland presented to George Haberfelde, retiring president, a finely engraved silver carafe and tray, as a gift from the association, in token of the esteem in which Mr. Haberfelde's work for the organization is held.

Built a Park on a Rubbish Heap

Now Business Is Good for This Small Town Dealer and His Fellow Tradesmen

N. E. Hug standing by the welcome sign in Higginsville, Mo., Rest Park, which he built, owns and operates free

WHAT N. E. Hug, filling station manager at Higginsville, Mo. (a town as small as its name might suggest) has done to make his business prosperous and popular, can be done by any car dealer, garage man or accessory retailer in most any small town in America.

Hug had an *idea*. And he worked it out successfully because it involved the hooking up of his business with a public service that had nothing to do with his business.

The *idea* aimed at comfort and pleasure for the people, and especially for the children, of Higginsville.

First let's get the "atmosphere" of the situation at Higginsville. It is a town of less than 3000 people, a coal mining town, with good agricultural territory around it, and a county fair ground. It is an old, old town—and, it must be confessed, rather soiled-looking to the passengers that pass through it on the railroad trains.

N. E. Hug's Vision

A muck-hole, bordered by tumble-down shacks too rickety for use, blotted the south side of the view at the railroad station, this point being also the "edge of town" for motor tourists.

In this town Hug had been managing the E. M. Wilhoit Oil Co. filling station and oil distributing business for twenty years.

And then he had his vision.

A company which had built a filling station near the city trashpile, opposite the depot, went out of business; and Hug, for the oil company, bought the filling station site and station. Then, for himself, with his own money, he bought the rest of the destitute ground that had constituted the perennial eyesore. And on his own ground, still with his own money, he prepared a "Rest Park." He hired men to clean up the site and fill in; then with his own hands he planted flowers and shrubs, painted the lower trunks of the trees, built park seats and a swing, and an arch on which he painted the word "Welcome." He maintains this park himself. And everybody is welcome to it.

During the spring and summer of 1920 and immediately upon his completion of the park, he gave parties here. Most of the parties were for children, and for them he supplied ice cream cones or popcorn or some element of the refreshments; and he sometimes provided the band. But Higginsville now has a band of its own that plays concerts in this park.

Park Brings Prosperity

Higginsville has a city park, but it is a mile away from the business center, on one side of the residence district. Hug's park is at the edge of the business district, and practically in the residence center of the town.

Hug's expenditures have paid him lavishly in pleasure and satisfaction.

They have paid him and the other business men of the town lavishly in dollars and cents. Tourists like to come through Higginsville now; they all have bright recollections of this town because of this park and of the really good things in the town to which they gave attention because the park incited interest.

The traveling public thinks of Higginsville favorably now because of the pleasant scene at the station, and traveling salesmen are inclined to stop off at Higginsville, which means that merchants are being stimulated to better merchandising. The merchants are fixing up their places to live up to the reputation which the filling station "Rest Park" is giving Higginsville. This fall the proprietor of the hotel, across the railroad tracks from the park, is painting his building and remodeling its front, and a white way is to be installed, visible for several blocks to passengers on railroad trains.

A person can't get within 40 miles of Higginsville and mention the town without being told of Hug and his park. And it goes without saying that his oil business, both at the filling station and in the surrounding country, is growing healthily.

"The More Calls I Make, the More Trucks I Sell"

"I'VE found this to be true," said a successful middle Western truck salesman, "that the more calls I make in an effort to sell trucks, the more trucks I sell.

"I've worked the proposition out on a mathematical basis. Ever since I've been in this business I've kept an accurate track of the number of calls made to-day, the number of sales I've made each month and so on. And I've found by actual count that it takes me just about so many calls to sell a truck. We'll say that I have to make five calls before I sell a truck—of course, that isn't the actual number of calls I make before making a sale, but it is an easy figure to work with in illustrating my point.

"Now, if I make only five calls a week, that means I'll sell one truck that week. If I double the amount of calling I do and call on ten people during the course of the week in an effort to sell trucks, I'll sell two trucks, and so on.

"I find that the percentage of calls I have to make to sell trucks holds good most of the time. Of course, there have been months when it was very hard to make sales when I had to make more calls than usual to sell a truck. But the average holds good most of the time.

"Believe me, I've found this proposition to be the best incentive in the world to work. Think what it means to know for a mathematical certainty that when I make a certain number of calls I'll make a certain amount of money! That's why I work so hard all the time."

Isn't there a hint in this for other truck salesmen? Why not adopt for YOUR slogan this phrase: "The more calls I make the more trucks I sell?"

Poor Contacts

By NEAL G. ADAIR

ABOUT a month after C. J. Reilly, Sennett distributor in the Callawassa territory, had urged Chadwick, his dealer at Oldtown, to build a new drive-in for his service station, Chadwick turned up at the headquarters of C. J. Reilly, Inc., with the announcement that the job was done.

"Yes, sir, we're all set," Chadwick said, with evident pride. "Got as neat an entrance as you'll find anywhere in the State. Customer drives onto a clean concrete floor, runs right alongside an accessory showcase with the service clerk's desk behind it; no chance for him to start wandering around the shop getting madder every minute because somebody doesn't wait on him; service clerk catches him the minute he comes in, most likely before he gets out of his car. And there you are."

"Fine work, Chadwick," Reilly exclaimed. "Sure does look as though you're all set, except—. Got your service clerk yet?" he asked, suddenly switching from compliment to question.

"Get him all right," Chadwick returned. "Told Flannigan, the shop foreman, before I left this morning to pick up a boy that knows a little something about automobiles."

"And about—anything else?" Reilly suggested.

"What else does he need to know?" the Oldtown dealer countered. "We aren't big enough to have a service salesman like you do. Foreman's got to talk with the customer anyway about anything bigger than a simple adjustment. And a boy who knows something about cars can handle these little adjustment jobs and sell some accessories."

"Maybe he can do that," Reilly said, "but can he represent you? Will he be able to establish and maintain the right kind of contact between your customer and Sam Chadwick, Sennett dealer in Oldtown?"

"What do you want for that kind of a job, an Ambassador to England?" Chadwick retorted.

" 'That kind of a job'," Reilly echoed. "Now we've got something to talk about. I thought you had my idea all the way from A to Z when you went ahead and put in this new entrance in place of the grease hole that used to insult your customers. But you only got me half way. What good is the finest automobile in the world without somebody at the wheel? And what can you accomplish with all this equipment for contact with your customers, if you don't have a man capable of making the right kind of contact?"

"But I can't afford — " Chadwick began.

"Of course, you can't afford to put half a man in one of the most important jobs in your business," Reilly interrupted. "You want a man to do a man's work for a man's pay, and you'll get every cent of it back in better satisfied customers, which means more business.

"Chadwick," Reilly continued, "this thing makes me think of the way some mechanics I've had experience with go at a trouble shooting job. They test here and there and everywhere, all over the electrical equipment, and tell themselves what a tough job they are up against. Finally they try the battery connections, which they should have done first, and find the trouble is due to a poor contact.

"We have a lot of that kind of trouble in the automobile business—poor contacts. We lose sales because some salesmen don't truly represent the house to prospects, then we lose re-sales and service business because the fellow at the back door neglects our customers or treats them flippantly or discourteously or even contemptuously sometimes.

"Poor contacts! Here you have a chance, with this new entrance and the equipment for a service clerk, to build up the finest, tightest possible kind of contact with your customers. You talk about picking up a boy for the job. Isn't there enough ignorance in your place now about proper methods of dealing with the public—there is in ours, I admit—without going out deliberately and hiring some more? You can pick up a piece of know-nothingness for fifteen or twenty dollars a week, but what you want to do is to go out and find thirty or thirty-five dollars' worth of sense and ability—ability to sell your service and your stability and reputation to these folks who are going to drive into your shop."

"But how could a man like that earn his keep?" the Oldtown dealer protested.

"Let's look the job over and see," Reilly replied. "Here's your man—this service clerk—sitting at his desk behind the accessory counter. A car comes in. We'll say the driver is a new owner; it's his first visit to your place since he bought his car. The service clerk walks up and meets him when he gets out of the car, perhaps before, and gives this new owner a first impression that is worth a lot to you in future business; the customer gets the idea right away that you are interested in him and his car, that the sale was only the beginning of a long business relationship. Then the clerk finds out what the customer wants, possibly makes a minor adjustment then and there, perhaps looks in his record for the cost of a repair job that is apparent and makes out the order; possibly calls the foreman if the car requires expert inspection beyond his ability. When the owner comes back for his car, if it is left for repairs, the clerk meets him again, collects for the work done and sends the customer on his way. Can you estimate, in dollars, what work like that would be worth to you?

"And that isn't all. From his accessory showcase the clerk can sell items of equipment—and you ought to be selling a good volume of it, adding the bigger profits it yields to the closer profits in automobile sales. He can increase your inspection and adjustment and repair business, too, giving time that a foreman can't always spare to talk with customers about their cars and learning little things that lead the way to profits for you and greater satisfaction for your customers in the operation of their cars.

"You can pick up a boy for the job, Chadwick, no doubt about it. You can crank him up every morning, and he'll grind out about so many words every time a customer drives in, but the words won't always fit the customer or the occasion. You have to realize that this service clerk of yours is going to be you, as far as most of your customers are concerned. He must be able to represent you as you are. An incompetent or a half-competent man or boy won't do."

Chadwick scratched his head. "I worked in Felton's Garage before I opened my own place; remember, C. J.?"

Reilly nodded.

"For awhile I was a trouble shooter," Chadwick continued musingly, "and many a time a poor contact put me in a fine little hole."

Editorial Notes

What Does It Cost?

THE prevailing low prices of automobiles are among the causes of the prominence being given in the trade to the always old, yet ever new question, "Must discounts be longer?" There are men both in the manufacturing and merchandising fields who contend that if a great many dealers had greater discounts they would give them away in long trades. On the other hand, letters are coming in to Motor World every week from men in the trade who say that with lower prices causing lower profits per unit of sale, the best they can make out of their business is a living—no more than they could earn on salary with no risk of investment. One dealer writes that the cost of doing business in his territory runs from 16 to 20 per cent, sometimes more. Another says that dealers in small towns or big cities, the former with lesser costs and the latter often with larger (distributor) discounts, may be able to make profits, but that "in cities of 50,000 it can't be done."

It may be that, particularly if prices are to be forced still lower, the average automobile merchant must have a longer discount, but how can the fact be determined without taking into consideration the various classes of automobile businesses involved? Is the dealer who says he can't earn more than a bare living just selling cars, or is he getting some of the side profits that can be obtained from automotive equipment and gas and oil sales? Is he operating a service station as a sales promotion branch of his selling organization or is he making profits on repair work? Is he working for himself or for his new car customers when he buys and sells used cars? In other words, can we say definitely that any automobile merchant's business is not a profitable one until we know whether he is taking advantage of the various sources of profit that are open to a business such as his in a locality such as he serves?

The answer to these questions in any mercantile establishment is correct bookkeeping. Books kept on a departmental basis will show a dealer where he is making money and where he is losing it. They will suggest reorganization of some departments, elimination of others, addition of others. They will show a dealer whether he most needs a larger margin between buying and selling prices or better methods of buying and selling. They will emphasize the advantage of rapid turnover with small profit margins over large discounts with slow turnover. In short, books well kept will show business men what they must do to make a profit.

There has been much talk of the necessity of a survey of the cost of running an automobile business. Such a survey, if it could be made to present concrete conclusions, would illuminate the statements and counter-statements so freely made regarding discounts. Such a survey might be the forerunner of a readjustment of wholesale and retail prices of the industry's products. Until it is made, if ever, the question of profits and how to obtain them remains one for the individual business man to solve for himself. He will get nearer a solution and find ways of improving his condition, to an extent at least, without outside aid if he will be as particular about his bookkeeping methods as about the appearance of his salesroom.

What does it cost to run an automobile business? What does it cost to run yours? Do your books tell you? If they don't ——.

"Until Ready"

THE orchestra plays "te-tum, te-tum, te-tum" until the singer gets his collar, necktie and throat adjusted and warbles the opening note of the solo. Can the automotive dealer, in the hazy, lazy days of fall, sell equipment that the car owner will want when winter comes? No? Yes? Read on.

A motorist stopped at an eastern dealer's accessory store just a few days ago—a "spell of weather" had set him thinking about snow and cold—and asked for a radiator cover. There had been a touch of frost in the air the past two mornings and he wanted to avoid engine trouble. The dealer had the radiator cover and put it on in short order, then he practiced some effective "ask 'em to buy." He wanted to know how the customer was "fixed for chains." The customer had none and didn't want them—"until we get some snow." The dealer agreed with him but suggested that sometimes, when snow does come, chain stocks run low and occasionally motorists have to wait until their particular sizes can be obtained on re-order from the jobber. The customer was induced to take the chain as a measure of preparedness.

Another dealer, selling a motorist a windshield cleaner on a rainy fall day, induced the customer to take a winter front for his radiator for the colder weather bound to follow. And so it goes. It is not necessary to wait for winter to do winter business. There are plenty of opportunities to sell winter accessories now to forehanded men and women who are easy to convince that it is better to buy an article before it is needed than to run the chance of having to wait for it when the lack of it causes inconvenience, discomfort or danger.

Motorist—How are the roads to Jericho?
Garageman—Don't know.
And they call it a service station!

Several cities have held "the best closed car show we ever had." Has yours?

Shorter Discounts a Used Car Remedy?

Quincy Dealer Believes They Would Check the Dealer Who "Plunges" in Used Cars

EDITOR Motor World: It does seem peculiar that a dealer with a long discount plunges just as far in endeavoring to buy a used car as does a dealer with a short discount. Not only that, but we are inclined to believe that he will go considerably further, believing, mistakenly, that inasmuch as he has a long discount he has only to obtain a portion of the price allowed for the used car to make what he calls a profit. He never takes into consideration that the used car is costing him money constantly, not only for space occupied but for actual labor and time put in by someone endeavoring to sell the car. In other words, two sales must be made in order to make one profit, and it seems to us one of the mistakes every dealer makes is to actually penalize a man who has the cash.

A Typical Case

Witness the following case which took place within the past few weeks in this city: A man purchased a used car for $450. Almost immediately after the purchase he took it to another new car dealer and was offered $700 on the car in trade for a new car. This man then went back to the dealer from whom he purchased the used car, stating he wanted to buy a new car from him, but the dealer would not allow him any more for the used car than the price he had just paid. This particular case looked to be about the limit. Because this man had a used car, one dealer was called upon to go into competition with himself in order to sell a new car.

If the factories generally gave shorter discounts, the average dealer who plunges on used cars could not very well cause as much damage as he does now with the long discounts, or they would not last long if they continued their plunging methods. It seems to us the factories could go a long way in obviating the used car difficulty, and we understand some of them are now working very seriously along these lines. They could, no doubt, for obvious reasons, force a dealer to work along regulated channels.

Education Needed

It is our belief that only by education will we eliminate the used car problem, and at this time some few dealers throughout the country who have been big enough to overcome this menace in one way or another have turned it from a source of worry into a source of profit.

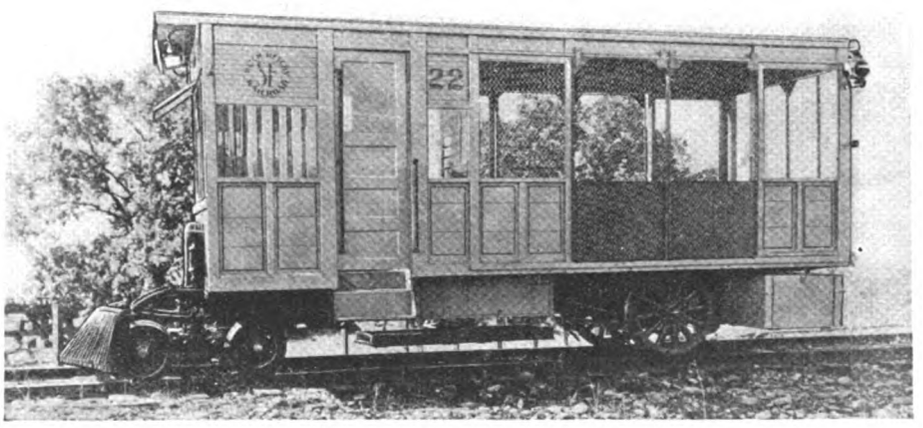
And we want again to remark that the National Used Car Conference held at Chicago has in itself caused some mighty good work to be started along the line of eliminating the used car problem.—Morris Adler Co., Quincy, Ill.

Write to Motor World About It

This page every week is devoted to discussions of topics of the trade by Motor World readers. Have you a suggestion to overcome a difficulty or improve some condition within the industry? Write to Motor World about it.

Seeks Larger Discount

Editor Motor World: I am taking the liberty of writing a letter to Motor World, as I have been reading quite a few of the letters that have been written and published in your magazine in regard to the used car situation, and also as to whether the discount on new cars is enough for a dealer to make any money.



I am not in a position to say what a dealer can or cannot do in a small town, such as 5000 or less, but I will say that it will be impossible for a dealer to make any money in a town such as ——, having a population of 40,000, unless the discount is increased.

Our company has been in business now for ten years, and usually we have been able to make a little money, but I really believe there is not a dealer in this town making money at the present time, other than the Ford people. I do not know what reasons all of these concerns have for not making any money, but I feel I know what our main reason is.

In the first place, it is almost impossible to increase our volume more than it has been in the past twelve months, as the trade-in of used cars limits our business. When we get a stock of about 20 used cars, we discontinue trading until we can get the stock cut down, and it is mighty hard to find many prospective buyers who do not have old cars to trade in, and the more expense created in handling used cars, the less profit we make per new car. The drop in prices on new cars makes quite a difference on 10 or 12 cars at retail per month. We are now making about $135 less per automobile than we did two years ago, which would figure about $1,500 less gross profit on 12 cars. It has been impossible to cut our overhead much, not to exceed $400 or $500 per month. So you can see it is hard to make the monthly statement look right on a basis of this kind.

Anything Motor World can do to help bring about a realization that dealers cannot make money on the present basis, I am sure, will be appreciated by thousands of retail dealers all over the country. There is no line of merchandise on earth that I know of where old merchandise is taken as part payment for new, with the new product on a 20 per cent discount basis.—Rocky Mountain Dealer.

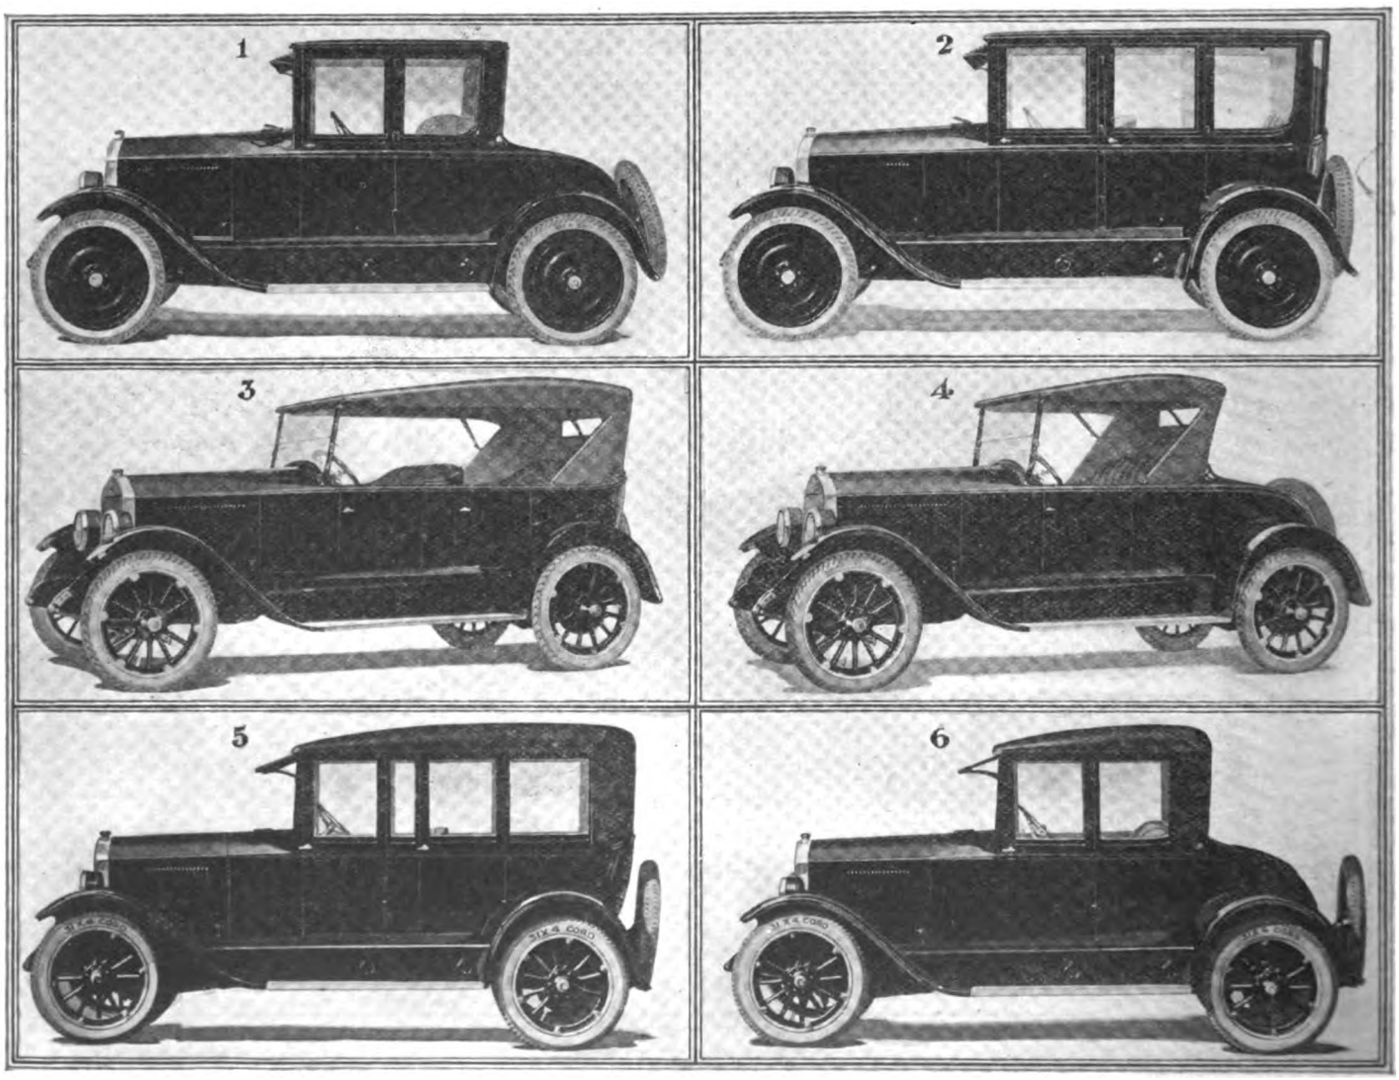
Dort Brings Out a Six Cylinder Car

Comprises Many of the Same Units Used in the Four—Longer Wheelbase—Modified Falls Engine—Four Cylinder Prices Reduced and Minor Changes Made in Body

THE Dort Motor Car Co., which has previously manufactured only four-cylinder cars, has added a six to its line. The new six, while following fundamentally the lines of the previous Dort cars, differs in a great many respects in exterior appearance. Mechanically, the six is similar to the four, employing a great many standardized units similar to those in the four, but, of course, differing as to engine and in the parts requiring heavier construction, due to the increased stresses of the more powerful engine. The wheelbase is also longer, being 115 in. in the six-cylinder model, as compared with 108 in the four.



Coincident with the announcement of the Dort Six comes the information that some minor changes have been made in the Four together with a price reduction. New and old prices on the Four are:

Model	New Price	Old Price
Phaeton	$865	$885
Roadster	865	885
Yale sedan	1,070	1,095
Yale coupe	1,020	1,045
Harvard sedan ...	1,370	1,385
Harvard coupe ...	1,240	1,265

The design changes are in the hood and radiator, which have been altered to give the car smoother lines.

The engine in the new six cylinder model is the Falls model T-8000, but which has been modified, however, by design features incorporated by Etienne Planche, Dort designer. The modifications consist in a re-designed intake manifold with a venturi effect, due to a taper in the diameter and easier interior curves, for the purpose of securing superior distribution and carburetion throughout the entire range, particularly at low speeds. The crankshaft also has been increased in diameter to help eliminate periodic vibrations within the speed range of the engine. The engine is a high-speed design, turning over 3000 r.p.m. at 60 m.p.h. car speed. It is

Digitized by Google

an overhead valve type 3⅛ in. bore by 4¼ in. stroke, or 195.06 cu. in. piston displacement. The combustion chamber volume is 21.82 per cent of the total volume, giving a compression pressure of 74 lb. at 300 r.p.m.

The crankshaft in the Dort adaptation of the Falls engine is mounted on three bearings, the dimensions being from front to rear as follows: 2.10 in. by 2-5/32 in.; 2 in. by 2⅛ in.; 3 in. by 2-3/32 in. The lower rod bearings are 1.997 in. in diameter and 1.626 in. in length. These are steel backed and babbitt lined bearings, the babbitts being bonded to tin and the tin bonded to the steel.

Probably the outstanding feature of this particular engine is the fact that it is unique in overhead valve practice in that it has a built-in pressure feed oiling system, which feeds the overhead valve mechanism. Oil is led under pressure through the rocker shaft then through drilled passages through the rocker arm to the top of the push rods. The top of the push rod ends in a cup in which the ball end of the rocker arm operates. Oil flowing under pressure from the rocker arm shaft through the drilled rocker arm comes out through a hole in the ball and into this cup. This keeps the cup and ball continually lubricated and provides a liberal film to cushion the shock. A lead passes down through the push rod to the tappet so that the cam contact is also lubricated. Another feature of the valve action is the employment of the new silicon-chrome alloy, "Silicrome," being the product of the Steel Products Co., Cleveland. The cooling is thermo-siphon through a Fedders radiator.

The engine auxiliaries include Carter carburetor, 1 in. size, American Bosch starting, lighting and ignition in combination with a U. S. L. 6-volt, 90 amp. hr. storage battery. The clutch is a Detlaf. This is a dry disk type with six disks. The transmission gearset is the same unit used in the four and manufactured by the Dort company itself. The drive is taken from this through a Mechanics Machine Co.'s universal joint to a three-quarter floating Flint axle. The drive is taken through the rear springs, and the torque is taken through the third member of the rear axle by means of a yoke at the front end of the tube which encloses the propeller shaft. This is the same construction and same axle as used in the four-cylinder model.

Some notable features of construction which have been adopted recently in this axle are the mounting of the differential between two Hyatt roller bearings in order to secure the advantage of the long line support in these two points and also the mounting of the long series Hyatt roller bearings at the front end of the propeller shaft for alignment of this unit. The rear axle ratio on all body models is 4.66 to 1. The wheels are all 31 by 4 in. equipped with cord tires. Steering is by Gemmer gear.

Six bodies are provided. These are a five-passenger touring car at $990; three-passenger roadster, $990; five-passenger Yale sedan, $1,195; three-passenger Yale coupé, $1,145; five-passenger Harvard sedan, $1,495; three-passenger Harvard coupé, $1,365.

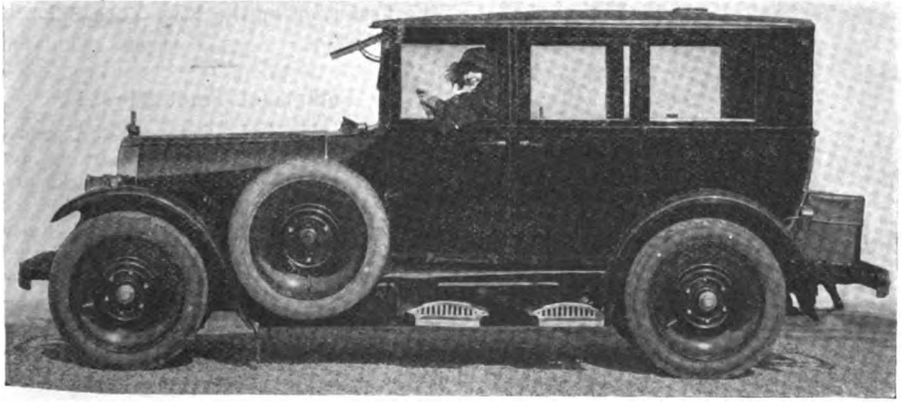
GORDON LEE TO TOUR PART OF MIDDLE WEST



WASHINGTON, Oct. 30—American automobile manufacturers and other business men in the Middle West will be told the trade extension work that is being conducted by the automotive division of the United States Department of Commerce in behalf of the automobile industry by Gordon Lee, chief of the division, who will leave Washington Nov. 1 on a ten-day speaking tour.

His itinerary will be: Nov. 3, an address before the Association of Automotive Equipment Manufacturers, Chicago; Nov. 6, an address before the Toledo automobile fraternity and Chamber of Commerce; Nov. 7, automobile men and Chamber of Commerce of Columbus, and on Nov. 10, the Iowa Automotive Merchants Association, Des Moines.

New Nash Six Roadster, $1,210

An announcement of the coming of this new six roadster was made in the last issue of Motor World. The top is ecru silk mohair and the upholstery is dark gray Spanish leather. The wheels are finished in bright vermillion

New Haynes Model 55 Sport Sedan, $2,695

The newest Haynes model is the Model 55 sport sedan for $2695. The chassis and body are the same as the standard Model 55 but a considerable amount of equipment is added. Six disk wheels with six cord tires, 32 x 4½ in., are standard and other equipment includes a trunk, nickeled bumpers front and rear, adjustable visor, protection bars, individual steps and individual fenders. Finish is in deep maroon

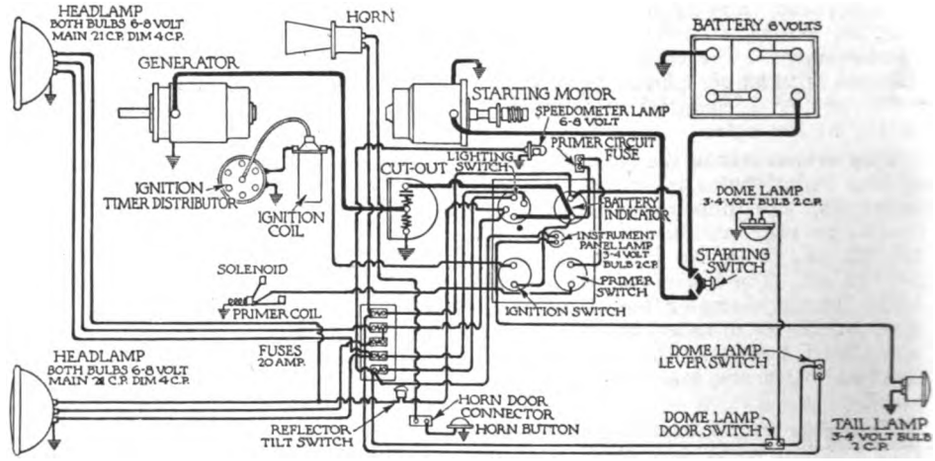
Rubay to Market a Line of Town Cars

THE Rubay Co., Cleveland, is preparing to introduce a line of small town cars to bear the name Leon Rubay. They are intended especially for city use and are said to follow closely the design of cars used for similar purposes in Europe. The chassis is a French design, but adapted to American conditions by American engineers.

The chassis has a 118 in. wheelbase, intended to facilitate maneuvering in traffic, a small four cylinder, 2¾ x 5¼ in. high speed engine, said to be capable of developing 36 hp. at 3000 r.p.m., single plate clutch running in oil, conventional gearset mounted as a unit with engine, full floating axle with stamped steel housing, four wheel brakes operated by steel ribbons and an aluminum dash. Only closed bodies of Rubay design and construction will be used. These will include a four-passenger coupé, six-passenger sedan, berlin, cabriolet and brougham.

The engine is a clean design, has cylinders with ⅞ in. offset, separate head with integral manifolds, overhead valves and camshaft driven by helical bevel gears and a concealed water pump. Air supply for the Stromberg carbureter is drawn over the exhaust pipe and through the cylinder block. This passage communicates with the crankcase so that a slight vacuum in the latter tends to prevent oil leakage.

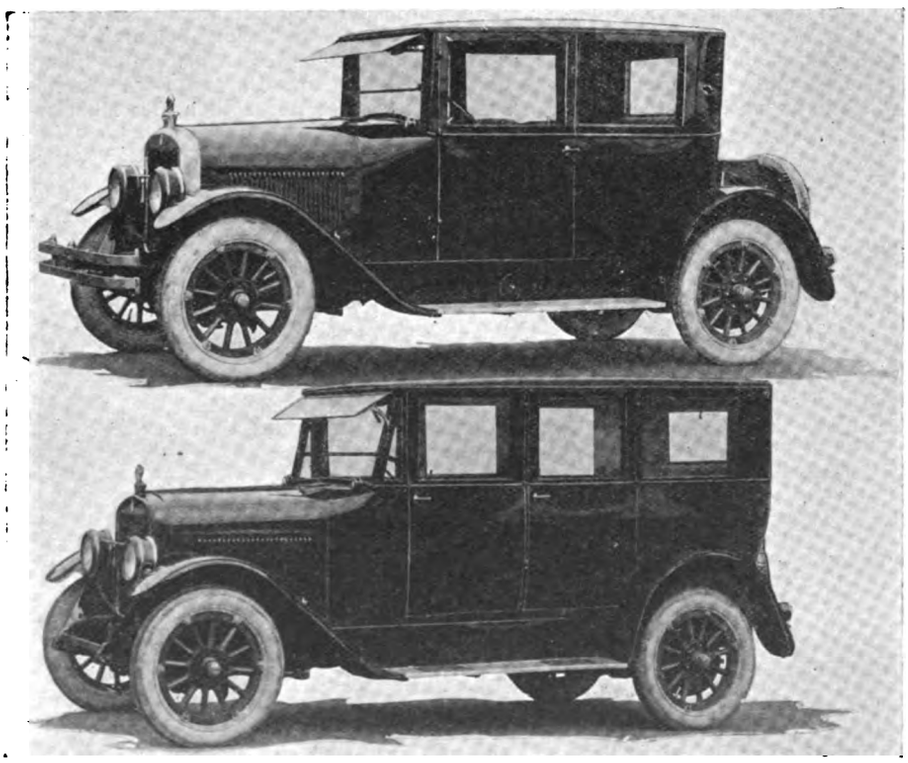
The cylinder barrels extend well into the case, and the cylinders are attached with internal studs so that no external connections appear. Lubrication is full force feed through hollow crankshaft and camshaft. The crankshaft of chrome nickel steel is carried on three main bearings. Connecting rods are of forged Lynite, pistons are cast Lynite with three concentric rings.



A vacuum tank is carried in a recess in the aluminum dash. Bosch electric units are employed. Starter and generator are supported beside the gearset, the generator having chain drive with eccentric mounting for adjustment.

Brake drums are of aluminum with steel linings for the expanding Thermoid covered aluminum shoes to bear against. Drive and torque are taken by a torque tube. The differential carrier is attached to the rear cover plate. The axle gears give a 5.1 to 1 reduction. Both front and rear wheels are carried on Timken bearings. They are of wood and have Firestone rims.

The front axle is forged with chrome nickel steel. The shafts for operating the front wheel brakes are carried in the channel forming the rear part, the I-section, the cams being in the lower part of the drums. Both sets of brakes are pedal operated, the rear set being also hand operated.

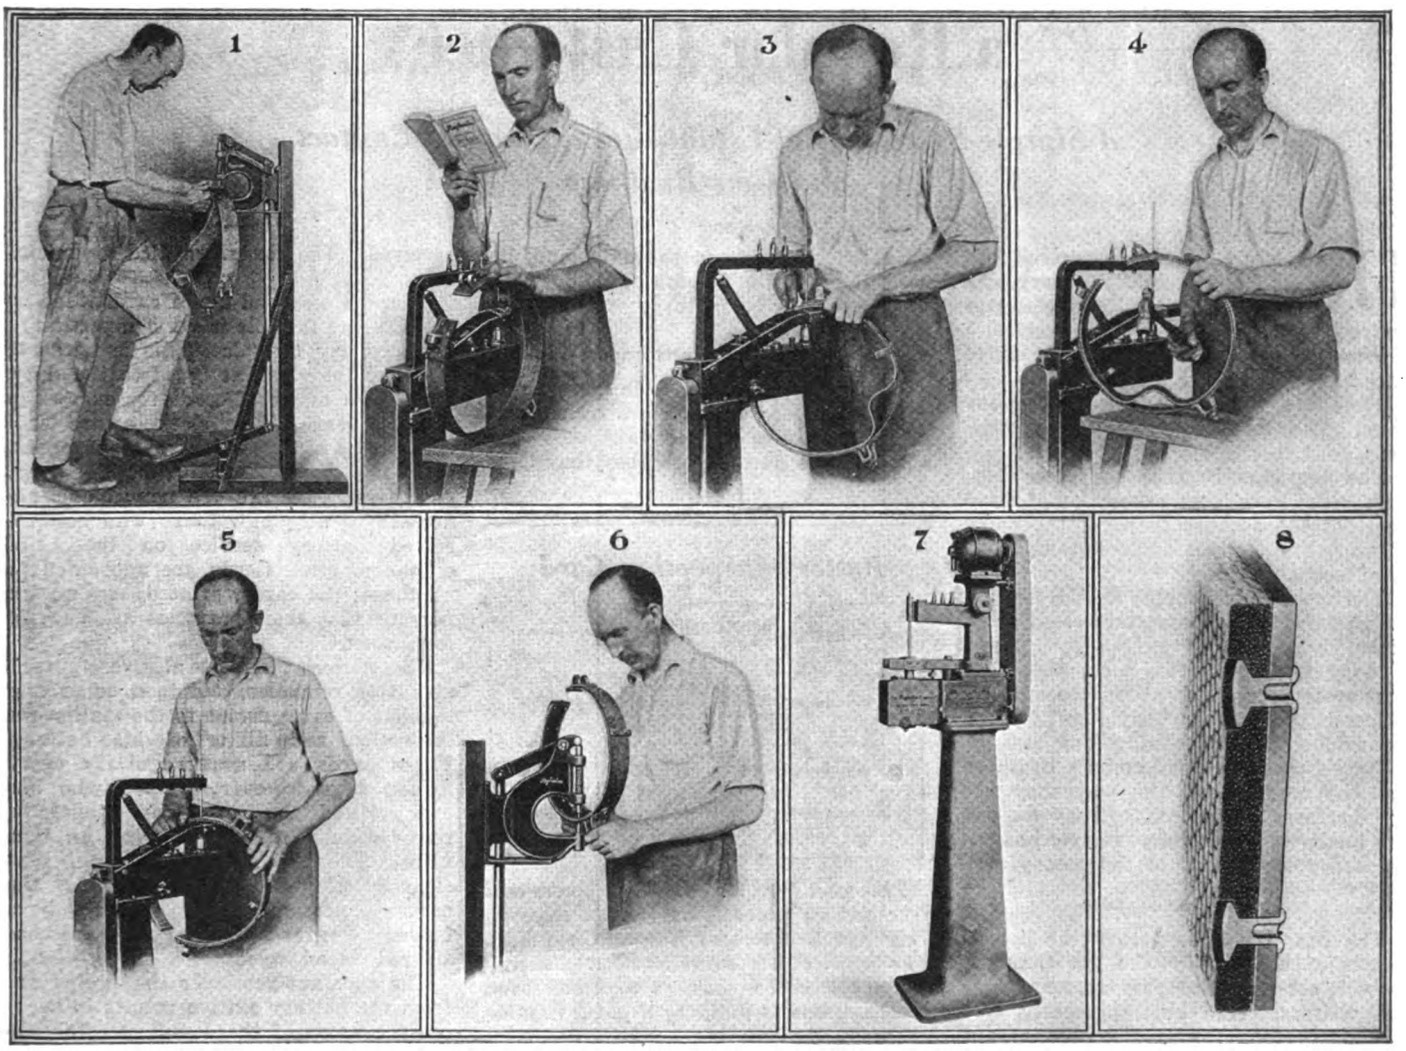


Springs are low and normally flat. A special spring mounting is used, both front and rear. The front end of the front spring is attached to the frame by the conventional eye and bolt. The rear end of the spring is flat and is carried between two hardened rollers mounted in a cast steel spring bracket. The same type of mounting is used for the front end of the rear spring.

It is planned to exhibit the cars for the first time at the New York Salon in December.

Wiring diagram for two unit, 6-volt North East starting, lighting and ignition system on new Franklin Series 10-A

King Sedanette, $1,995 (Top); Sedan, $2,550 (Bottom)



Two new closed bodies have been added to the King line. These are a sedanette and a seven-passenger sedan added on a chassis which is similar in all respects to the standard King chassis, except that it is 124 in. wheelbase instead of 120. Mechanically, the cars are the same as previously with the exception of the adoption of a ball bearing steering thrust bearing in the steering knuckle in place of the plain bearing. The axle is a Columbia, however, as previously. In the fittings, the drum type headlamp has been adopted and parking lights of similar design as the headlamps are also part of the standard equipment. The fender lines have also been altered somewhat to coincide with the exterior lines of the body. The sedanette sells for $1,995 and the seven-passenger sedan for $2,550

Equipment Trade Abroad

WASHINGTON, Oct. 26—A world wide survey of foreign markets for American made automobiles, trucks and accessories, will soon be made by the automotive division of the United States Department of Commerce, co-operating directly with the Motor and Accessory Manufacturers Association, the Automotive Equipment Association and the Association of Automotive Equipment Manufacturers.

Digitized by Google

A New Raybestos System for Brake Relinings

Steps in the Application of Brake Lining by the New Raybestos System

1—The old lining is removed from the brake band with the Raybestos riveting machine with a special attachment for punching out rivets. 2—The data book gives the size of lining to be applied. 3—One end of the lining is drilled and countersunk and anchored with a rivet. 4—The loop in the band is flattened. 5—One side of the band is drilled and countersunk. 6—The rivets are applied and headed on one side. 7—The Wright & Corson locating, drilling and countersinking machine. 8—A cross section to show the flat head tubular rivets properly applied with lining countersunk

AN entirely new method of applying brake linings has been developed by the Raybestos Co., Bridgeport, Conn. It consists in removing the old rivets, drilling, countersinking and applying new rivets, all by machine. Two machines are used, one a Raybestos riveting machine which removes the old rivets and heads the new rivets, and the other a Wright & Corson locating, drilling and countersinking machine operated by an electric motor which locates the position for the hole, drills and countersinks the lining in one operation while the lining is in position on the shoe.

This machine consists of a drill head, drilling arm, locating arm and motor support mounted on a pedestal. The motor is ¼ hp. The end of the locating arm is drilled and threaded for a brass bushing reamed to take a ¼ in. steel index or locating rod. The rod is free to move up or down and can be locked in any position. This rod fits into the hole in the band bringing the lining beneath into proper position so that the drill and countersink will penetrate the lining at exactly the right place. The moving parts run in a bath of oil.

The Raybestos riveting machine can be set up on a bench or against the wall. The work may be held with both hands as the plunger is operated by a pedal. A spiral spring returns the plunger.

The other equipment for the system consists of a supply of special hollow brass rivets with flat heads and a Raybestos data book giving sizes of brake linings and a schedule of flat rates for brake lining operations on various cars and trucks. Actual tests conducted in two service stations showed that a Dodge car had the brakes relined and adjusted in 41 minutes, the hand method requiring about 4 hours. A Buick car had the brakes relined and adjusted and a minor repair made to the brake mechanism in 1 hr. 8 min., a job that ordinarily takes 5 to 6 hours by hand methods. Experiments conducted on commercial vehicles that ordinarily require 6 to 7 hours by hand methods showed that the installation could be made in 1½ hours.

The entire equipment, machines, data book, supplies, etc., is being installed on a license basis.

The entire machinery and equipment for applying brake linings by this method is obtainable on a lease basis for the term of one year, with the privilege of renewal each year. It is expected that applications for leases will be selected with regard to proper distribution in territories and the ability of the lessee to handle the work. Payments on the lease will be distributed over the year.

Making the Free Battery Service User a Regular Customer

A Simple System That Establishes a Pleasant Contact and Gets Business

HOW many motorists drive into your battery station every day to get free inspection, free water or free service?

Who are they? Do they ever come back?

You have these people right in your shop. They are all prospects for business.

The Jennings Brothers, Kansas City, Kan., get a very large proportion of these free patrons because they get the name of every one of them and follow up their brief acquaintance.

The system is as simple as A B C—and as effective as a bung-starter—or as a nickel in the slot.

Many battery service men, observing the system, marvel at it, because it seems as though everybody ought to have been doing the same thing long ago.

Here's the way the Jennings Brothers get the names—and the way they get the business afterward. (They do get the business, for battery volume has increased 200 per cent in the past year!)

Getting the Names

The first job is to secure the list of names of the people who get the free service, some regular patrons, some casual visitors. And note, presently, one of the reasons for getting the names of motorists who drive in for service.

In the service station, on the wall where they can be easily reached, are a dozen boards about five by nine inches, each board having a hole in it, by which it is hung on a nail. On each board is slipped a sheaf of blanks, with the following wording, the blanks being prepared in the office, by typewriter:

Free Battery Inspection Slip

Name of Car .....
Kind of Battery .....
Name .....
Address .....
Rate .....

The blanks can be prepared by typewriter as well as being printed, because ample space must be left for careless writing by patrons.

When the motorist drives in to secure inspection or water, the employee who greets him hands him this board with its places for data and a pencil, asks what he wants, and as he starts to fill this want, asks the patron to write in the information desired. There is no promise or obligation involved in the writing—the name of the car, kind of battery, name and address of patron, and date of the service. Hardly ever does a motorist refuse to write in the data, and, indeed, it gives him something to do while the battery is being inspected or water added.

Data to a Card Index

The slips are taken each evening to the office, where the data are transferred to a card index of the patrons. Very many of the patrons, whether they have ever bought anything at this place or not, are already on the cards as having received service before. If a visitor's name is already on a card, the date of the present service is noted on his card. If there is no card for a visitor, one is made for him.

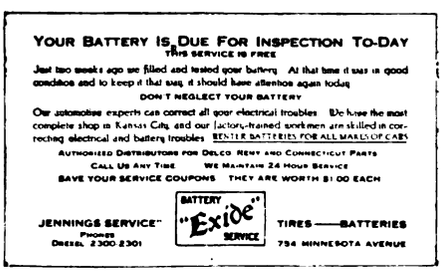
Every person who drives into the battery service station is recorded on these cards and the date of the service he received. The cards are filed alphabetically.

There is a second file of cards, filed by dates. And this file is very important.

Every day the "date" file is taken in hand by the clerk assigned to the duty. There is a bunch of cards for every day of the month. The clerk, aware that the day is the fifteenth of the month, picks out the cards indicating the third. On these cards are the names and addresses of all the visitors who had received battery service on the third of the month. Cards are addressed to all these; the cards, printed, remind the patrons that their batteries are due for inspection.

The motorist almost always appreciates this reminder, and in a surprising number of cases comes to the station for inspection and filling of his battery. These cards are sent regularly every fifteen days to every person who has ever visited the station, whatever he received in service or repairs, on that visit. The files are, of course, kept cleansed of "dead wood," but only the names of persons who are known to have moved away or sold their cars are considered "dead wood."

The constant reminder thus going out from the battery station results in keeping the name of the Jennings establishment before these car owners. And no obligation to spend money there is indicated—although there is always the pleasant suggestion that the company is able to handle battery troubles.



It is the regular, persistent notice to these occasional patrons that makes regular patrons of them. They can't help remembering the name of the station—and they naturally gravitate to that station when they want attention for their batteries.

The regular patrons appreciate the reminder, too.

One came into the station the other day.

"Say, I was glad you sent that notice postcard," he said. "I was going away on a trip to-morrow and had plumb forgotten to think about my batteries."

Battery Inspection Card

This post card is sent to customers and free service users every fifteen days by Jennings Brothers of Kansas City, Kan. The service has established a pleasing contact with car owners and has been instrumental in building a good, regular clientele.

"Bargain Days" Attract Tire Customers

But They Don't Mean Cut Prices Says This Dealer Who Is Selling on the Department Store Plan

THE S. O. S. Tire Service Co. of this city has found a new way to move automobile tires and accessories.

It is using the methods employed in the big department stores bargain days.

Ed Allison, manager of the company, which carries a complete line of standard tires and accessories, said the bargain days would be weekly features at the company's big store.

"Bargain days do not mean cut prices," Allison said. "It is a day when standard merchandise is offered the public at figures slightly above the cost to the merchant. There is nothing shoddy offered by the big department stores on bargain day. Nor is there anything offered by the S. O. S. on its bargain days. We offer our Firestone and Oldfield tires and all the standard makes of accessories at prices slightly above our buying price. The goods move. The customers are pleased and so are we. That's the big idea in our business."

The S. O. S. has had two of these weekly bargain days. It has now adopted the policy of having one every Saturday.

Allison said the real purpose of the bargain days is to get new customers, bring new faces to the store and interest them in tires and accessories carried by the concern. He declared the policy of the S. O. S. of "the customer must be pleased and stay pleased" would result in holding the trade once obtained.

The company said it was surprised at the number of new customers coming to the first two bargain day sales and at the amount of tires and accessories moved. Allison declared the time has come when the automobile public is as interested in a bargain day for tires and accessories, and is as entitled to them, as the housewife is in bargain days at the China ware or cut glass counters or the husband at the shirt or tie counters.

Allison made it plain that the advent of weekly bargain days—one every Saturday—is not a price-slashing affair, but a sale with a purpose—a real business purpose—the same purpose they are held in department stores.

Using Advertisements in Window Display

AN interesting window display for the accessory store can be arranged by clipping from the trade paper all ads of accessories handled by the store and by then pasting these on cardboard and putting them in the window with a sample, in front of each ad, of the accessory mentioned in the ad. Then with this display there should be a large placard reading about like this: "We Sell the Well Established Lines."

Ideas On Selling and Management

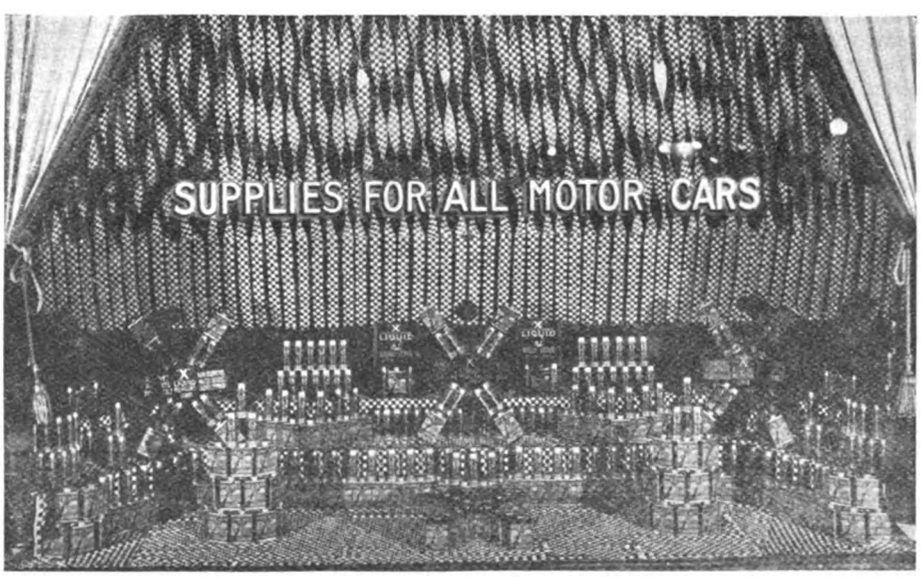
Garage Waiting Room Has Accessory Display

CUSTOMERS waiting to have their cars brought down from the repair shop at the Albertson Motor Co., Dodge dealer in Los Angeles, are invited to sit in comfortable leather rocking chairs in the accessory shop located directly off the service floor. The chairs are so arranged that the customer must face the entire stock of accessories.

Floorman Helps Horn Sales

TO help the sale of electric horns: We have two or three styles of electric horns mounted in the accessory room and when the salesman is talking to a customer, when he sounds the horn in the stockroom, the floor man in the garage goes to all the cars that are stored with these horns and gives each horn a short blow. We have tried this and have made a number of horn sales with this plan.



Recent Purchasers Sign in Salesroom

A MIDWESTERN car dealer has a large sign in his show room reading like this: "Recent Purchasers." Under this heading he gives the names and addresses of folks recently buying from him and the model purchased.

An Idea to Help Alcohol Sales This Winter

A CHART prominently displayed in the accessory show windows this fall showing the capacities of radiators on the principal makes of cars and the quantities of alcohol needed in the radiators to keep them from freezing interest every automobile owner and draw more attention to your store, thereby helping your business considerably.

A Striking Accessory Display

Here is an example of how a very striking window was made by producing a background for the display of X-Liquid that harmonized with the containers. Use of special merchandising equipment, supplied by the maker, enhanced the appearance and the selling power of the window

Owner Must Prove Repairman Lacks Skill

Supreme Court Places Burden In Suit Based on Alleged Negligent Workmanship

THAT there is a burden of showing want of skill on an automobile owner when he sues an automobile repairman for damages for alleged defective repairs was the decision of the Supreme Court of Iowa in the recent case of Pugh vs. Mackie Motors Co., reported in 189 Northwestern Reporter at page 674.

In this case the owner sued for damages alleged to have been caused to his automobile because of negligent repairing on the part of the motor company. The verdict was rendered in favor of the motor company on the trial, whereupon the owner appealed. The Supreme Court, however, affirmed the judgment of the lower court in the motor company's favor.

In May, 1917, the man bringing the suit was the owner of a 1917 model 35B Chalmers car. In June, 1919, contemplating a long trip, he took his car to the repairman and told his service manager that he intended to use the car on the road a lot and that he wanted it looked over and overhauled, and that the company should do whatever was necessary to put the car in shape.

The motor was then taken down in the owner's presence and an explanation was given him as to what was wrong. Certain recommendations were also made as to what repairs were necessary. The owner thereupon said to go ahead, and left the car.

The company, acting under the instructions given it, went ahead and performed labor, inserted new parts, and finally delivered the car and rendered its statement, which was paid.

Several months thereafter the owner again brought the car to the company, and other repairs were made and paid for. The owner then started on his trip and drove to Miami and Dakota, and from the latter place home, in all a distance of about 6500 miles. All this time he made no complaint.

After returning home the owner still made no complaint, but took the car to the company again and had a patent heater installed. A short while later something went wrong with the car and the company suggested that certain other parts be replaced, etc. Thereupon the owner took the car to another repairman and had the work done there. The following summer he started the suit against the repair company.

The court, in deciding against the car owner and in favor of the repairman, pointed out that the suit was based on injuries claimed to have been caused to the car because of the negligence or want of skill and workmanship on the part of the repairman, and said that in a case of that kind the burden of showing negligence or want of skill, etc., is on the party bringing suit—that if he allege that the work was not done in a workmanlike manner—he must prove it before he can recover on such a charge.

The court also drew attention to one of the owner's allegations—the one that the heater did not work properly—and said that the fact that the owner failed to return it or tender it back cast suspicion on the claim. The car owner was therefore held to have failed to make out a good case and the judgment in the repairman's favor was affirmed.

Practical Questions of

Business Law

Are discussed every week on this page

By GEORGE F. KAISER
Attorney at Law

Readers are at liberty to write to the legal editor of Motor World for help in solving their business problems. Their inquiries will be answered through the mails.

Can Car Taken Out of State Be Replevined?

Editor Motor World:—Will you please advise whether a truck sold in Massachusetts on lease, taken to the State of New Hampshire by the lessee and there attached for personal obligations incurred by the lessee, can be replevined by us.—The W. W. Co., Inc., Worcester.

Answer.—The law of New Hampshire provides that property may be replevined by its owner or the person entitled to possession of it on the giving of a bond for double its value. As you did not say what the car was attached for, I can give you no further information. I suggest that you place your claim in the hands of a local New Hampshire attorney at once. If you wish me to, I will be glad to give you the name of a reliable attorney where your debtor is located.

Court Rules on Gasoline Station Liability

That a gasoline station proprietor is not liable for injuries to a boy, who goes on its premises and takes gasoline from its tanks located 125 feet from the street in a vacant lot, caused by his clothing catching on fire from a bonfire, was the recent interesting decision in the case of Flaherty vs. Metropolitan Stations, Inc., reported in 196 New York Supplement at page 2. The court in this case pointed out that even if the gasoline station had violated the law respecting the storage of gasoline, as it was conceded to have done in this case, it would not be responsible.

Dealer Loaning License Plates Responsible for Accidents

The Supreme Judicial Court of Massachusetts in a recent case decided that an automobile is a nuisance on a highway and its operator is a trespasser when he is driving with license plates borrowed from a dealer and that further the dealer may be held liable for accidents because of his having loaned the license plates. In this case a $6,000 judgment against a dealer was therefore affirmed. McDonald vs. Dundar, 136 Northeastern Reporter, pg. 264.

In another case which came before the same court at the same time it was decided that a car bearing borrowed license plate was not legally registered so as to protect one owning and operating it. Same vs. Rawson.

In still another case the same court gave as its opinion that one whose agent rented a car and allowed it to be operated without bearing lawful and proper license plates was liable for injuries sustained by persons injured by the car while it was so driven regardless of the negligence of the driver. Pierce vs. Hutchinson, 136 Northeastern Reporter, pg. 261.

The Supreme Judicial Court of Massachusetts in the case of Zundan vs. Radner recently before it decided that in a personal injury case expert testimony, that a standing automobile could not have started up without the intervention of some person unless it had been permitted to stand with its engine running, was properly admissible. 136 Northeastern Reporter, pg. 387.

Care of Other's Property

That one undertaking the care of property not belonging to him is bound to use that degree of care and skill which the nature of the relationship and the peculiar circumstances of the particular case require and whenever the person having charge of the property fails to use the proper degree of care or follow instructions given him is liable for resultant losses, was the Supreme Court of Kansas decision in the case of Security National Bank vs. McCutcheon reported in 208 Pacific Reporter at page 636.

PUTTING CHRISTMAS ATMOSPHERE INTO SALESROOM AND WINDOW

Ideas That Will Help You Make a Seasonable Selling Appeal During the Coming Holidays

THE window and salesroom of every automotive dealer can present a strong, seasonable selling message during the coming Christmas holidays. These displays may be as elaborate or as simple as the dealer feels he can afford to make them—but every dealer can and should get into the Christmas atmosphere this year. If the Christmas displays don't sell a car, they at least will leave pleasant impressions with many people which may exert a favorable influence on some prospect's mind weeks after winter's snows stop flying. On the other hand such displays often do appeal to persons who are thinking of making liberal Christmas gifts to members of their families—and some of them DO decide to purchase a car instead of that period model phonograph they had in mind. The Christmas appeal does sell accessories, and it is going to sell more this year than ever before.

Last Christmas a number of automotive dealers found their efforts decidedly worth while. Following are descriptions of some particularly effective Christmas motor car windows:

The Car Gift Suggestion

Davis-Chile, Hutchinson, Kan., made an attractive setting. Snow-white cotton covered the window floor. A structure, about three feet high, built around the two rear sides of the window, was made to represent a stone wall. This wall, which was made of wall-board, was traced with black paint in order to represent stone. White cotton batting covered the wall coping. In the middle of this enclosure stood a sedan car, the wheels and top of which were decorated with the cotton batting. There was a miniature cedar tree beside the car, while a large gilt-edged card on the tree suggested:

"Buy This Car for Your Wife as a Christmas Present."

The Christmas Service Spirit

The Quick-Tire Service, Inc., Indianapolis, demonstrated the helpful Yuletide spirit in a very unselfish manner—a manner which showed that getting business was not everything with them. Newspaper advertising was resorted to to give publicity to the following unusual offer, which was without strings or obligations:

Attractive Christmas Interior

An attractive arrangement of merchandise with appropriate Christmas atmosphere in a section of the accessory shop of Harold L. Arnold, Los Angeles. Window displays that compelled attention from Christmas shoppers, vigorous advertising in the daily papers urging accessories for Christmas gifts, brought a rushing holiday business to this Los Angeles establishment

"HOPEFUL OF BEING HELPFUL"

"Our fleet of automobiles will carry your Christmas gifts to the needy. There will be no charge whatever for our services.

"On Christmas Eve, Christmas Day and Christmas evening, our service cars will be at the disposal of the charitably inclined—be they car owners or not—for the distribution of Christmas cheer to the poor.

"We will gladly carry anything—a child's toy, a pair of warm gloves, a cook stove or a half ton of coal—to any needy person, anywhere, at any hour of the day or night.

"Although our store will remain open over the holidays to receive these delivery requests, we urge you if possible to arrange in advance for our service on Christmas Day.

"We hope to receive many calls; foreknowledge will enable us to plan our work so as to give our utmost contribution to the cause of Yuletide joy.

"If you have something to give to one less fortunate than yourself, but have no definite person in mind, call on us to deliver it to one of the charitable organizations. On behalf of their many dependents they will heartily welcome your contribution.

"And to you all, the wish that has been uttered many years and yet is never old—

"Merry Christmas"

"Quick-Tire Service, Inc., Meridian at North."

Saying It with Tires

N. E. Hett, Kitchener, Ont., Canada, placed an automobile tire against a background of imitation snow. Green mosquito netting was stretched across the back of the tire, while paper letters, pasted on the netting, spelled the words: "Season's Greetings." The lettering was frosted at the top.

Digitized by Google

The Alignment of Front and Rear Wheels

Rapid Tire Wear and Difficult Control of the Car Result from Wheels Being Out of Line—Methods of Testing Wheel Alignment and Making the Adjustments

WITH the great increase in the number of cars running on streets and highways, collisions of a minor nature with other vehicles, curbs, posts, etc., become more and more frequent. Most of these bumps apparently cause no damage to the vehicle and the owner thinks little of them. But in many cases the apparently slight jar has been sufficient to throw the wheels out of line to such an extent that the wheel will appear wobbly when the car is running or it will make steering more difficult or cause undue tire wear.

When all four wheels of the car are properly aligned, the wheels have a true rolling motion and the wear on the front tires is almost negligible excepting for the natural cutting caused by sharp objects pressed into the tread. The rear wheels, of course get more wear on account of the natural slip between the tread and the road due to propulsion or braking. With wheels out of line, however, the wheel not only rolls forward, but it has a side slip. In other words the tread of the tire is being pulled crossways across the highway. An interesting table has been prepared by the Weaver Mfg. Co., to show what this side slip amounts to when the wheels are out of line 1 in.

Tire size	Feet of sideslip per mile
30	174
32	165
34	155
36	147
38	137
40	131
42	126

Should a 34-in. tire be run out of line 1 in. for 3400 miles, it would be dragged sideways 100 miles, this being distributed around the circumference of the tire. As the circumference of the tire is a little over 100 in., each inch would be dragged about a mile. From this it can be easily understood why tires wear out so rapidly when the wheels are not in line.

Effects of Misalignment

Fig. 1 shows three views of a front tire out of line. At the left is shown the "plowing" action of a tire when the wheel is out of line. There is a tendency to throw up a furrow of dirt on one side. The other track shows the smooth line left by a tire mounted on a wheel that is in correct alignment. The two views at the right are the "before" and "after" of an interesting experiment with a misaligned wheel. The center view shows the apparatus which consists of a metal plate on a greased floor. A line is marked on the plate and a ruler held by the wrench is placed on the line. After the misaligned wheel has passed over the plate, the plate is twisted and pulled over as shown in the illustration to the right. These three photographs were taken by the Weaver Mfg. Co.

The throwing of wheels out of alignment is generally caused by driving up against curbs or bumping a post. The drop forged parts of the steering mechanism bend and the bend remains. The correction is made by shortening or lengthening the tie rod which has a thread on one end and a threaded clevis which can be turned one way or another.

Front wheels are the ones most likely to be out of line. The test for alignment is made by measuring the distance between the rims at the front of the wheels and then measuring the distance at the back. The distance at the front should be slightly less than at the rear. Manufacturers' recommendations vary from ⅛ to ⅝ in. The distance must never be more at the front than at the rear. If there is lost motion at the king pin bushings or in the tie rod bushings, the reading may not be correct. Lost motion should be taken up before making the measurements.

In many cars it is not possible to take the measurements at the rear of the front wheels on account of the sod pan or crankcase being in the way. It is then necessary to use a special type tram with extensions like a pair of calipers or else use some other method.

Fig. 2 shows a wheelgage which measures the distance directly in inches and has chains so that the instrument can be kept horizontal by allowing the chain

Better Mechanics

Article No. 263

Readers are invited to ask this department for suggestions to work out mechanical difficulties. When asking for information, please state whether you maintain a permanent file of Motor World, as many inquiries are answered by reference to previous issues.

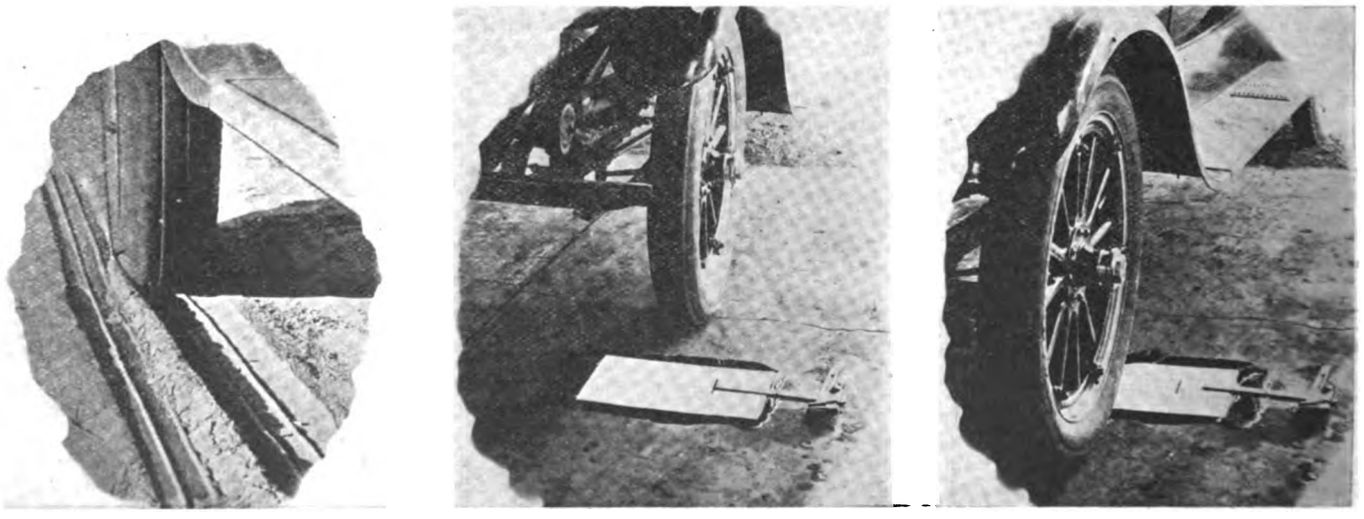

Fig. 1—The effect of a misaligned front wheel. The view at the left shows the ridge of dirt thrown up and the center and right views show how a sheet of metal is removed by the tire.

Digitized by Google

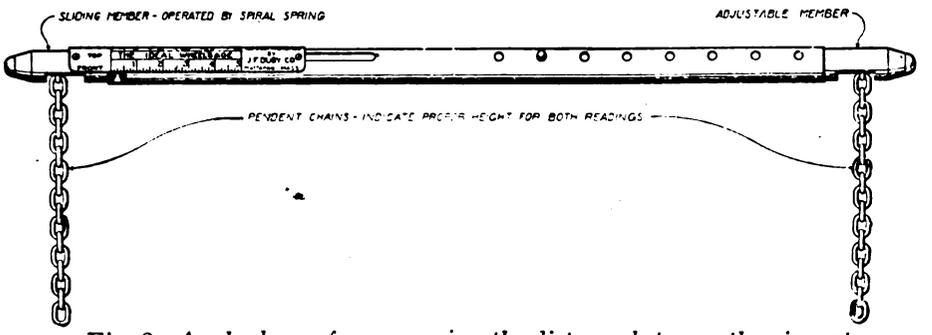

Fig. 2—A wheelgage for measuring the distance between the rims at front and rear

to just touch the floor on each side.

Fig. 3 shows a roller type wheelgage that measures the side slip by merely driving the car across. Hands on the dial indicate the amount of misalignment and the plate is mounted on rollers to allow free action.

Rear Wheel Alignment

The alignment of the rear wheels is not quite so easy to check up. The most usual defect in alignment is a bent axle shaft which causes the wheel to wobble. This can only be corrected by straightening the shaft or replacing it with a new one. On cars with Hotchkiss drive, it sometimes happens through carelessness of the owner that the spring clips holding the axle to the springs will loosen, allowing the axle to move along the spring. This, of course, throws the whole axle out of line in addition to causing strain on other parts. This misalignment can generally be detected by noting the original position of the clips on the spring by paint ridges or grease marks. If this is not possible, then careful measurements can be taken from the rear hubs to the front axle spindle bolts and noting if the distance is the same on both sides. Other indications of the axle being out of square will be a tendency for the car to drift to one side or the other of the road and excessive tire wear. On cars with radius rods at the rear, the axle can be squared up by making the adjustments at the forward end where the adjustment nuts are located.

Major faults such as a bent frame, sagged axle housing or bent axle tube will cause other troubles and will have to be located by inspection of these parts. Where the axle housing is sagged or the tube bent, the differential gears and the ring and pinion gears will probably be thrown out of line, causing a noise or even breakage of the gears.

Wobbly wheels are another cause of excessive tire wear and also wear on other mechanical parts. Some wheels can be trued up in presses, first being swung between centers and chalked to locate the high spot. If the bend is serious, it is generally better to replace the wheel as bending it back again is a tedious process and may in some cases weaken the wheel. Wire wheels are straightened by altering the tension of the spokes. Changing the tension of two or three spokes means truing the wheel all over again, constantly testing for rim position and spoke tension. Wood wheels with steel rims are straightened by bending the rim straight again. This will generally bring the wooden spokes in line again but there is a possibility of loosening one or more spokes so that they develop a squeak. Sometimes this can be fixed by wedging.

Beside the straight-ahead alignment on wheels, there are two other positions that have an important bearing on the proper running of the car. One of these is the camber or outward slant of the front wheels and the other is the castor or forward slant of the king pins.

Fig. 4 shows the camber of a pair of front wheels to bring the contact point of the tire nearly under the center line of the king pin. The dish of the wheel also has something to do with this.

Fig. 5 shows the slant of the king pin to get castor action which means that the wheels trail. A certain amount of castor action makes easier steering.

Lost motion in various parts of the steering gear cause tire wear, difficult steering and in some cases produce "shimmying," although this may be due to faulty design as well as lost motion. The following are places to look for lost motion and the remedies:

1. King pins or spindle bolts and bushings—New bushings or pins or both.
2. Clevis pins and bushings on tie rod —New bushings or pins or both.
3. Front wheel bearings—Adjust bearings.

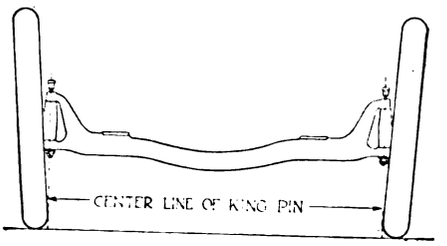

Fig. 4—How front wheels are cambered to bring the turning point nearly under the center line of the king pin

4. Ball sockets on tie rod and drag link—Tighten adjustments.
5. Steering gear—Adjust for wear or replace parts or adjust thrust bearing.
6. Steering column upper bearing—Replace if necessary.
7. Lost motion in locking steering wheels—Remedy depends on construction.

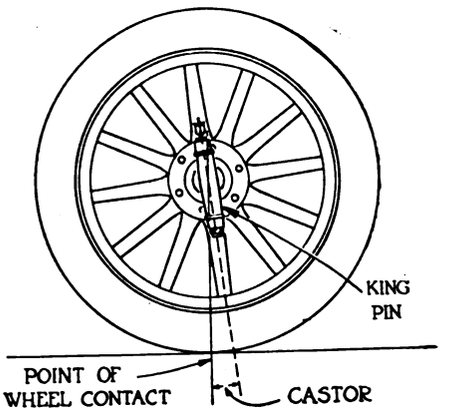

Fig. 5—Diagram showing how the king pin is placed at an angle so that the turning center of the wheel is behind a point on the road intersected by the center line of the king pin

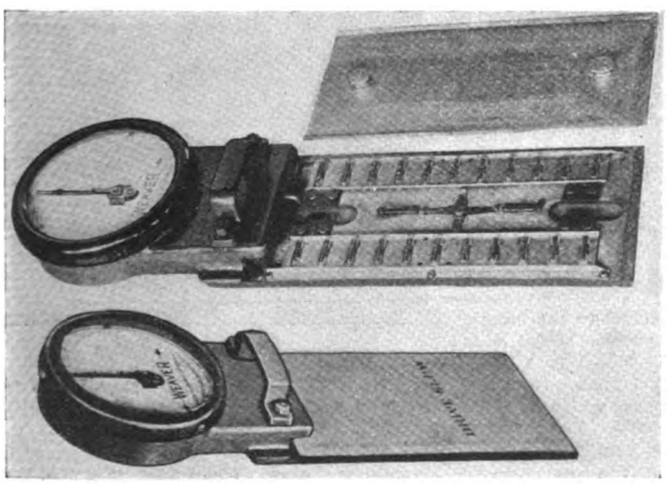

Fig. 3—A wheelgage that measures the slip on a dial by means of two hands

Replacing Ford Rear Axle Housings

The present type Ford rear axle housings are beveled at the point where they join the drive shaft housing, instead of being machined with a shoulder as formerly. When using one of these new type housings for repairs on a car having the malleable type drive shaft roller bearing housing, it will be necessary to replace the roller bearing housing and drive shaft ball bearing, using the present forging type roller bearing housing T-2583-B and present type bearing T-2591-B.

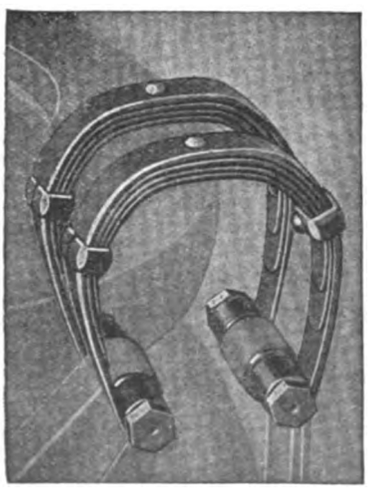
Equipment to Sell

New Devices for the Car and Truck

Pioneer Car Heater



Pioneer Auto Heater Co., Inc.,
Cincinnati, Ohio.
Prices Model GB, $20; Model G, $25; Model GG, $35; Model F, $15.

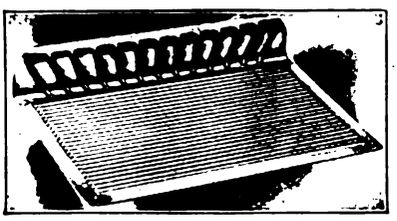
The heater is so designed that any object which falls on its surface will work its way off on the floor. There is no grating or depressed section to catch dirt. Model GB is 14¼ x 9½ in. Type G is 26½ x 7 in. and type GG is the same size but fitted for twin exhausts. Type F is 10⅝ x 10 in. with a solid aluminum top. The bottom of all of the heaters is made of cast iron to protect the radiating plate from cold air currents under the car and retain heat. A control is supplied for all models, this being of the pedal type.

Eclipse Master Springs

Indiana Parts Co., Richmond, Ind.

The master springs are for all cars using Hotchkiss type drive, such as Studebaker, Dodge, Lincoln, Haynes, Nash and Lexington. The springs take the place of the shackle and there are two for each spring end. The springs are shipped complete with all bolts, ready to attach. Made in two models, No. 1 for cars weighing under 3,000 lbs. and model No. 2 for cars weighing 3,000 lbs. or over.

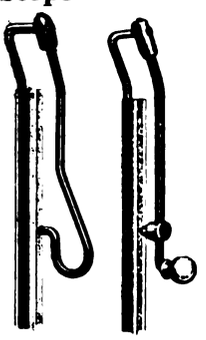
Presto Cigar Lighter



Metal Specialties Mfg. Co.,
338-352 North Kedzie Avenue, Chicago.
Prices $6 to $7, depending on voltage.

This is a cigar lighter which is concealed behind the dash and which automatically rewinds when the cord is returned and automatically lights when the cord is drawn out. The cord is long enough to allow its use by all occupants of the car and a full size lighting element lights any cigar. A safety fuse protects the battery from possible short circuit.

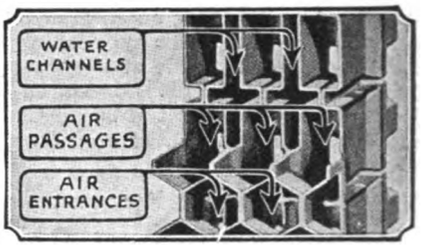
Merit Aluminum Step Mat



Lowe Motor Supplies Co.,
1721-23 Broadway, New York City.
Price $4 per pair.

The step mats have a corrugated surface and a scuff plate at the rear to protect the runningboard filler. The size is 14 x 8 in. and the steps are packed one pair in a paper carton.

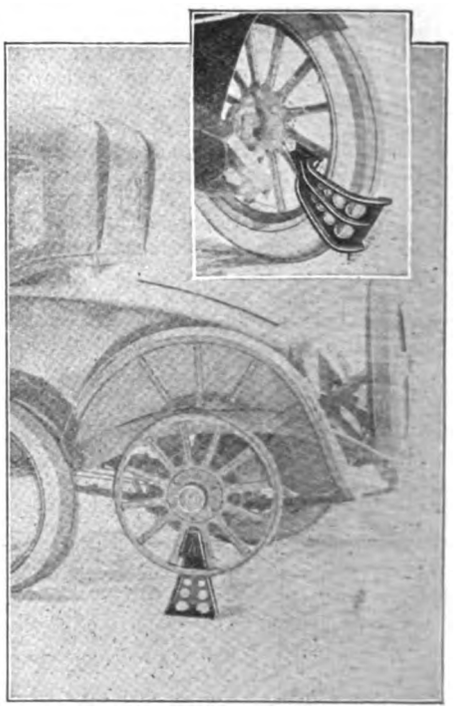
Clear-O-Scope



Fernald Mfg. Co.,
Northeast, Pa.
Prices Model A, $1.25; Model B, $1.75.

This windshield cleaner can be used on either open or closed cars and on any type of windshield. It is installed by drilling a 17/64 in. hole through the upper windshield frame in front of the wheel. The wiper arm is run through the hole and attached to the handle arm by means of a set screw. Model A is black enameled finish and Model B is black enamel finish with a nickel knob. Both are complete with inside wipers, which may be had separately for 25 cents. The cleaner member is made of pure gum rubber, presenting two edges, flared at the correct angle between the glass with a shoving action.

Hexcel Radiator for Fords

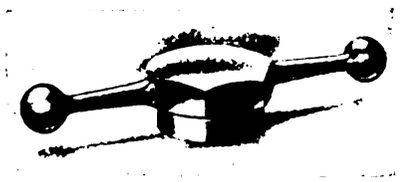


Opitz Mfg. Co., Milwaukee, Wis.
Price $16.

The radiator combines features of the fin and tube type, and the cellular or honeycomb type of radiator. There are over 18,000 knife-edge fins and cooling surfaces, yet the air passages are free and do not tend to clog with dust or mud. It is claimed that a greater volume of air can be moved through the Hexcel radiator than with other constructions. The air entrances and outlets act as a protection to the water channels of which they are a part.

Ospeco Wheel-Jak

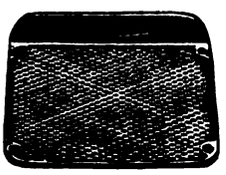
Superior Lamp Mfg. Co.,
150 West Fifty-second Street, New York City.
Prices, No. 1, $3.50; No. 2, $4; No. 3, $4.50.



The device combines a wheel jack and a mud hook. The car can be raised in a few seconds with the use of the jack, ready to dismount a tire. The jack can also be used for putting up a car for the winter, or for installing chains. When used as a mud hook it will pull out of snow, mud or sand.

Digitized by Google

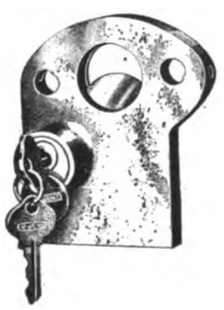
Gotham Radiator Cap for Ford and Chevrolet Superior



Lowe Motor Supplies Co.,
1721-23 Broadway, New York City.
Price $1.25 for Fords; $1.50 for Chevrolets.

The radiator cap is of hexagonal design with bars and knobs. It is made of bronze, highly nickeled, and polished. Each cap is packed in a carton showing the car that it will fit.

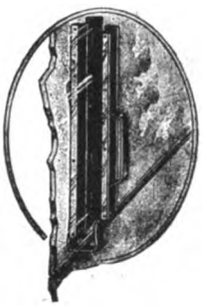
Runningboard Mats for Fords



Automatic Heel Co.,
621 Albany Street,
Boston, Mass.

The runningboard mat is 7 x 9 in. polished aluminum. It is the exact size to fit between the raised grooves on the Ford runningboard. A raised back protects the runningboard steel. A strap placed through the hole makes a luggage carrier.

Sure-Lock Car Lock



The Sure Lock Mfg. Co.,
107 St. Johns Street,
New Haven, Conn.
Price $8.

The lock consists of a plate with a key-controlled shutter, the plate being placed between the intake manifold and the carbureter. When the shutter is closed and the key withdrawn, it is impossible for any mixture to be drawn in the combustion chamber. The device cannot be removed by taking out the bolts, because the bolts are held in place with headless set screws which require a special key for their removal.

Jiffy Windshield Cleaner

La Vietes Mfg. Co., Inc.,
Station A, New Haven, Conn.
Price $1.50

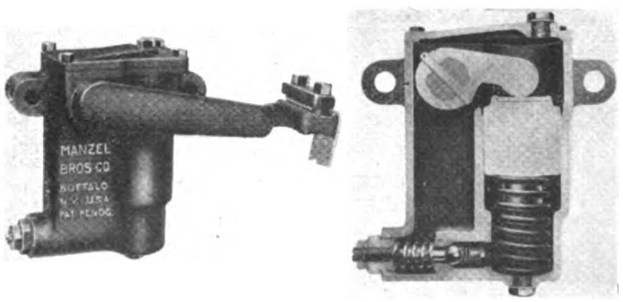
This is a horizontal motion windshield cleaner for any two-piece windshields. It attaches to the upper half of the glass and can either be left on the windshield or removed when not in use. It is made of aluminum and rubber with a tempered steel spring which is made rustproof. The addition of rubber pegs on either jaw eliminates the possibility of the rubber bending over the edge of the aluminum, thus making it impossible for the rubber to break.

Kil-Shok

York Electric & Machine Co., York, Pa.

The device is for application to the front wheels of Fords, Chevrolets and other makes of light cars and trucks. It is intended to absorb small bumps. There is only one working part, which is built into the spindle, and this is a drop forging. As the front wheel hits the bump, the cranks of the device swing backward.

Piston Ring



W. M. Mfg. Co.,
180 Main Street,
Manchester,
Conn.
Price 60 cents.

The ring has two grooves, thus giving three oil scraping edges each way. The grooves retain sufficient oil to maintain a seal around the ring. The ring is made in one piece and designed to be used either side up. Made in sizes from 2 to 5 in. in diameter graduated by sixteenths and in widths of 1/16, 1/4, 3/16 and 3/8 in.

Hydraulic Shock Absorber

Manzel Brothers Co., 309-319 Babcock St., Buffalo, N. Y.
Price $90 for Set of Four

The absorber is of the hydraulic type and can be fitted to practically all lengths of cars. It is attached to the frame and connected to the axle by means of a webbed strap and clamp. It does not interfere with the normal compression of the springs, but checks the rebound and side play. Automatic control is maintained by double-acting valves which open and close according to the severity of the shock and control the passage of oil between the inner and outer chambers. The valve action may be regulated according to the weight of the car by increasing or decreasing the size of the valve openings. All working parts are immersed in oil. Installation occupies from four to five hours.

Wedford Savex

Wedler-Shuford Co., St. Louis, Mo.
Price $9.

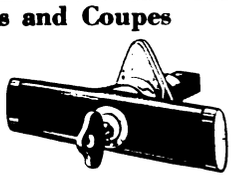
This is a thermostatic device for regulating the mixture on the Ford carbureter. When the engine is cold, more gasoline is turned on at the needle valve and when the engine is hot the needle valve is turned down, all this being done automatically by expansion and contraction of the exhaust manifold. The position of the needle valve is recorded on a dial on the instrument board. In case of an overheated engine the device will stop the engine completely.

McKay Tire Chain

U. S. Chain & Forging Co., Pittsburgh, Pa.

The chain is subjected to a special hardening process that gives the links both hardness and toughness. The fasteners are of a type which are easily put on or taken off, but which cannot become accidentally unfastened. The tire links are put up in special envelopes.

Noc-Out Priming Extension

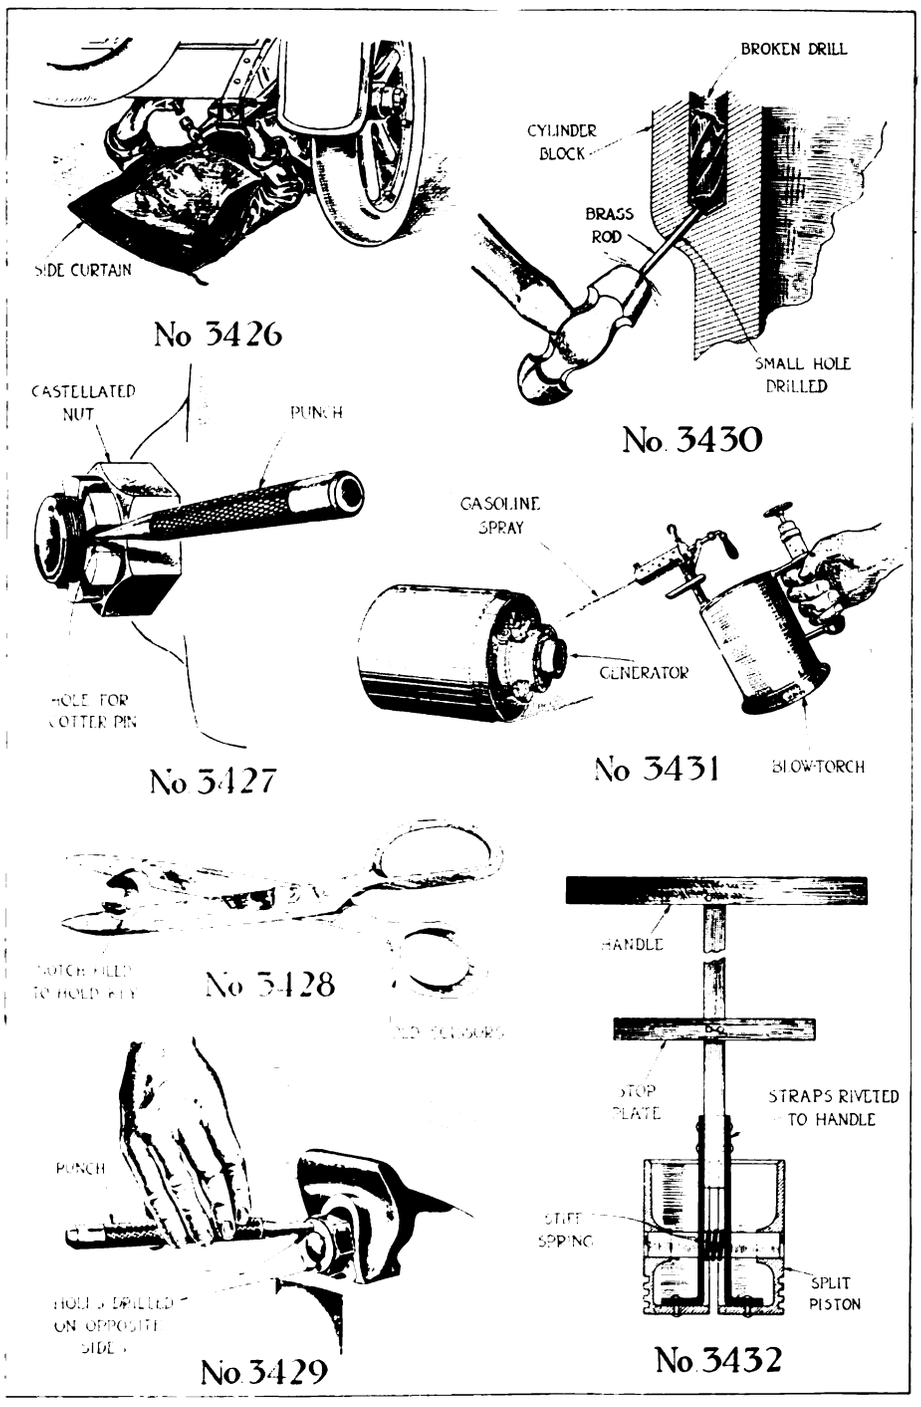


R. T. Mfg. Co., Green Bay, Wis.
Price $1.

The extension is screwed into the spark plug hole and the spark plug is screwed into the top of the extension. A channel around the edge holds a small quantity of gasoline for priming and this is admitted to the combustion chamber by opening the valve at the side of the extension. They are made for 1/2 in., S. A. E. or metric size plugs.

Mount Carmel Lock Handles for Ford Sedans and Coupes

Mount Carmel Mfg. Co.,
Mount Carmel,
Conn.
Price $5 to $6.



The standard Ford sedans and coupes are not equipped with lock handle doors. These handles are interchangeable with the standard handles and are fitted with keys. The cover plates are locked in position when the door is locked, and the screw heads are always covered. The set consists of one lock handle for the right hand door, one handle without lock, and exactly the same design for left-hand door and one nickel plated lock for inside left hand door. Full nickel plated, any style, complete set $9. Black, hard rubber brass nickel mounted any set, dial complete for $11.

Repairshop Shortcuts

Reputations

IT is curious that certain trades have reputations. They must have done something to deserve them. Take the plumber, for instance. You can hardly think of a plumber without imagining him sitting smoking his clay pipe, waiting for his helper to bring some tools from the shop. And the old-time garage, sad to relate, had some "rep" too. It was generally thought that if an owner went in to get a spark plug changed the garageman would have his engine all apart by the time you could say Jack Robinson. Maybe the plumber is not as black as he is painted, and we know that the garageman to-day is not soldiering because he has too much real work to do and has to cut time on jobs to get them through.

No. 3426 — Face Protector. — When working under a car where grease, oil or dirt is liable to drop, a touring car side curtain with celluloid window is spread over the mechanic's face. He can see through but will be protected.—Scott S. Bond, Hattiesburg, Miss.

No. 3427—Lining Up Cotter Pin Holes, —If a castle nut will not quite pull up so that the cotter pin will enter freely, a small nail punch driven between the castles and into the hole will generally clear the way and allow the pin to enter. —Scott S. Bond, Hattiesburg, Miss.

No. 3428—A Holder for Horse Shoe Washers.—A pair of scissors filed or ground out the right shape and size makes a good tool for removing or replacing horse shoe washers. When working on close places the points can be cut off.—John W. Barber, St. Cloud, Fla.

No. 3429—Removing Rusted Rim Nuts. —Where nuts are so rusted on the studs that they cannot be turned, two small holes are drilled in opposite sides of the nut and the nut split in half with a punch. The threads on the stud can be chased with a die if necessary.—E. J. McKinney, Proprietor, Blackshear Garage, Blackshear, Ga.

No. 3430—Removing a Broken Drill.— Where a drill has broken in a casting near the outside, a small hole can be drilled at an angle and the pieces driven out with a small piece of brass rod. The rod can be bent as it is driven in.—G. A. Luers, Washington, D. C.

No. 3431—A Gasoline Bath for the Generator.—A blow torch is used for cleaning the parts of a generator. When cold, the torch will throw a fine spray of gasoline through the needle valve with sufficient force to remove grease and oil from the commutator.—Scott S. Bond, Hattiesburg, Miss.

No. 3432—A Cylinder Lapper with Stop Plate.—A cylinder lapper made of a split piston with a spring to keep a tension against the cylinder walls has a stop plate to prevent the piston going down too far into the bore. This is simply a piece fastened across the handle at the proper place.—Herbert H. Holmes, Watervliet, N. Y.

RAILROAD HEAD URGES WIDER USE OF TRUCKS

Tells Road Conference They Should be Adopted on Certain Branch Lines

WASHINGTON, Oct. 28.—More than 400 educators, engineers attaches of foreign embassies and representatives of the automotive industry attended the Second National Conference on Education for Highway Engineering and Highway Transport which ended here today. It was the most important meeting of the kind ever held in this country and marked a long step in promoting the construction of highways along lines which will do most to serve the entire nation.

Much attention was given by the educators, representing more than 50 schools and colleges, to the important position which will be occupied in the future by motor transport. They realize that many trained men will be needed to direct this branch of transportation along scientific lines.

Brosseau's Program Accepted

There was general acceptance of the program outlined by A. J. Brosseau, president of Mack Trucks, Inc., for the financing of highway construction. It was his contention that the funds for building roads should be a tax upon property as a whole and that maintenance costs should be met by the users of highways, principally operators of motor vehicles. Brosseau declared that if roads were properly built and properly maintained they would not break down. He argued, however, that careful consideration should be given to the needs of the community to be served and that concrete and other highly expensive materials should not be used when the traffic does not warrant.

W. H. Lyford, vice-president of the Chicago & Eastern Railroad, read a paper on "Co-operation versus Competition Between Motor Truck and Railroad Transportation." His conclusions were based upon extensive research. He declared railroads should supplement other service in congested centers by providing cartage for collection and delivery of freight. He asserted also that railroads should abandon unprofitable branch lines and serve the public with motor trucks.

Investigation to Continue

A dozen committees which were appointed to consider various phases of highway and highway transport engineering education will continue their work and it will be several months before their final reports are prepared.

All the delegates to the conference are convinced that motor vehicles will play a tremendous part in the future development of the nation. For that reason they believe all branches of the automotive industry should promote by every means possible the expansion of the highway system.

Looking Ahead

ISSUES of Motor World in the near future will contain accounts of two conventions whose proceedings will have wide interest for the automotive trade.

In Motor World of Nov. 8 there will be a story of the forthcoming annual convention and business exhibit of the Automotive Equipment Association to be held in Chicago Nov. 13-18. This convention brings together 500 manufacturers and jobbers of automotive equipment and their sales and purchasing representatives. It develops many subjects of interest to the retail as well as the wholesale trade.

The issue of Nov. 22 will contain the full report of the convention and show, written by Motor World editors who will be in attendance, and illustrated by specially photographed pictures. It will tell about new merchandise and new merchandising plans of the manufacturers and jobbers.

In the issue of Nov. 22 there will also be a complete report of the convention of factory service managers to be held in Chicago under the auspices of the National Automobile Chamber of Commerce. The factory service managers are thinking and talking about subjects of vital interest to dealers, service managers and garagemen. Make a note to read what they say at their convention.

NEW ROLLS-ROYCE CAR NOT TO BE MADE HERE

SPRINGFIELD, MASS., Oct. 30.—The new 20 hp. Rolls-Royce, now being brought out by Rolls-Royce, Ltd., Derby, England, will not be built in America and is being produced in England solely as an expediency on account of the very high taxation per horsepower on motor cars and the high operating costs in England and on the continent. While the car will cost, if laid down in America, practically the same as the product the company is building in this city, there has been no demand in America for a car of this small power and size, at this high price.

To Build Bodies at Elizabeth

NEW YORK, Oct. 30—Part of Durant's big plant at Elizabeth, N. J., will be utilized for body-building. It will be occupied by the new body-building concern which is being organized by Jay Hayes and Victor Preston, of the Hayes-Ionia Co. of Grand Rapids, Mich. As yet no name has been selected for the company, but it is understood that it is a separate and distinct organization from the Hayes-Ionia Co. While it will not be a part of the Durant organization at the present time, it is thought that it will be taken into the fold later on.

FINISH COMPILATION OF USED CAR MANUAL

Intended to Assist Associations or Groups Working in Co-operative Effort

NEW YORK, Oct. 28—A Manual of Used Car Co-operation, intended to assist dealer associations or groups of dealers desiring to work together for the profitable handling of used cars, will soon be ready for distribution to the trade. The manual is being compiled under the auspices of the National Association of Automobile Show and Association Managers, 239 West 39th Street, New York. It will be made available for dealer association secretaries and others desiring it at a nominal price covering the cost of compilation and publication.

The manual does not make any claim to furnish a panacea for the used car situation. It sets forth the steps that can be taken by a group or association of members in any community to co-operate in establishing definite used car values in that community. In the book will be found the forms necessary to set up and operate the machinery of co-operation with full explanations of how the forms are used.

Compilation of the manual was completed this week at a conference of the compilation committee, including Herbert Buckman, manager of the Cleveland Automobile Manufacturers and Dealers Association; L. B. Sanders, secretary of the Boston Used Car Statistical Bureau, and Neal G. Adair, editor of Motor World and executive secretary of the National Association of Automobile Show and Association Managers.

CHICAGO WEEK SELLS CLOSED CAR MODELS

CHICAGO, Oct. 28 — If interest aroused, attention attracted and prospects gathered, mean anything in the merchandising of automobiles, then the first annual closed car week of the Chicago Automobile Trade Association was a success.

Virtually every dealer who participated in the exhibition is satisfied with the outcome. Attendance, especially in the medium-priced car salesrooms, has been most gratifying and not only sales but salesmen as well benefited by the show as a stimulant. Dealers in outlying districts as well as on "the row" worked hard for success and the effects of the event will, it is thought, be felt until the spring brings the "big tent" affair at the Coliseum.

A big portion of the visitors were owners of open cars and it was from this field that the largest number of sales were made.

Spooner Resigns as Secretary

DETROIT, Nov. 1—F. Ed. Spooner has resigned as secretary of the Old Timers Club. No successor has been appointed.

NATIONAL TIRE BODY TO HOLD CONVENTION

Dealers Will Meet in Milwaukee in November to Discuss Big Problems

MILWAUKEE, Oct. 30—One of the most important national gatherings of a conspicuous branch of the automotive industries scheduled for the coming month is the annual convention of the National Tire Dealers' Association, which will be held in Milwaukee on Nov. 14-16, with headquarters and sessions in the Hotel Pfister. Due to the fact that the tire trade, wholesale as well as retail, is confronted with problems overshadowing any which have yet arisen, this convention is expected to attract the largest attendance of any of the national conventions held since the association was organized.

The Milwaukee and Wisconsin Tire Dealers' Associations will act as hosts to the convention, and the Federal Rubber Co. of Cudahy, suburb of Milwaukee, will provide educational and entertainment features, which include a tour of inspection of the factories. The program, while not yet completed, provides for a strictly business meeting, with entertainment taking its proper place. The convention will conclude with a banquet on Nov. 16.

Tire Changing Contest

A feature out of the ordinary will be a tire-changing contest against time. Charles W. Paine of Philadelphia, claimant of the world's championship, will defend his title against all comers, more particularly against Karl Mitz of Drayton, N. D., who also claims the world's record and is a specialist in changing Ford size casings.

Officers of the national association are: President, R. F. Valentine, Cleveland; vice-president, Frank Zeman, Chicago; acting secretary, Sam A. Rowe, Milwaukee; treasurer, Thomas F. Whitehead, Chicago; directors, R. R. Wooley, Cincinnati; E. P. Farley, Minneapolis; R. J. Walters, Baltimore, and E. J. Methudy, St. Louis.

PARTS MAKERS DOING SURPRISING BUSINESS

NEW YORK, Oct. 28—Parts makers are doing a surprising business for this time of the year, according to reports from members of the Motor and Accessory Manufacturers Association. This statement is based on September, 1922, which is 62.1 per cent better than September of 1921. Last month sales ran to $37,300,050 as compared with $23,141,891 12 months ago.

Receiver for Kelsey

NEWARK, N. J., Oct. 30—Judge Boudine of the Federal Court of Trenton has appointed Stewart A. Young of Newark receiver for the Kelsey Motor Co. of this city upon application of C. W. Kelsey, vice-president and general manager of the company. Liabilities are placed at $90,000, but the assets are claimed to be five times this. Kelsey asserts that they soon will straighten out matters and that the receiver will be discharged within 90 days. Manufacturing operations will be continued with Kelsey as general manager.

CAR BEING DISPLAYED STOLEN FROM WINDOW

MADISON, WIS., Oct. 30—The very latest in motor car thievery is reported by the Jacobson-Austin Co. A new phaeton, valued at $3,500, was stolen out of the display window between Sunday evening and Monday morning.

The car was recovered at Hebron, Ind., two days later in possession of Theodore Thiel of Columbus, Wis., who is in custody. The theft of the car was not discovered until employees of the Jacobson company came to work Monday morning. The front door of the garage had been unlocked and the phaeton backed out of the window, it being necessary to move several other display cars to get it through the service floor.

It was then driven out of the alley at the rear, almost directly across from the Madison police station. Thiel is held on the charge of operating a car without the consent of the owner. He insists he purchased the car from a stranger. When arrested in Indiana he had in his possession Ohio state license plates.

SHOCK ABSORBER SUIT DECIDED FOR TEMCO

COLUMBUS, Oct. 30—The United States Circuit Court of Appeals has handed down a decision in the suit of the Temco Electric Motor Co. against the K. W. Ignition Co. of Cleveland for infringement of the Thompson patent relating to shock absorbers for Ford automobiles. The case had been appealed from the District Court of the United States for the Northern District of Ohio whose decision was reversed.

The decision carried with it a recovery of nearly $300,000, said to be one of the largest in a patent suit of this sort which has ever been secured. It is stated that 25 or 30 other concerns are also involved in this decision and that some of them already have settled without suit.

A Correction

Owing to an error in composition, the advertisement of the Manley Manufacturing Co. of York, Pa., in Motor World of Oct. 18 gave the price of a garage flood light as $14. The correct list price is $15.

APPERSON TO OBTAIN NEW WORKING FUNDS

Plan of Refinancing Includes Bringing Out of Light Car Next Spring

CHICAGO, Oct. 30.—New capital of $700,000 is to be provided for the Apperson Bros. Automobile Co. of Kokomo, Ind., under a plan of refinancing which contemplates the bringing out next spring of a new light car in addition to the regular 8-cylinder model.

The new finance is to come from an issue of first mortgage gold bonds which will be offered through the firm of A. S. Terrill & Co. of Chicago and New York. The bonds will bear 7 per cent interest and will mature $40,000 annually beginning Oct. 1, 1924, the balance Oct. 1, 1932. The trustees will be the First Trust & Savings Bank of Chicago and George L. Davis, vice-president, Howard National Bank, Kokomo.

Detailed plans for the new light car are not yet ready for announcement. It is understood that the car will conform in every respect to Apperson quality and appearance and probably will be known as the Apperson Junior. It is specifically stated that the standard 8-cylinder Apperson chassis will be continued. The production for next year is estimated at 2500 8-cylinder cars and 4000 of the smaller models.

Current Assets Large

The balance sheet prepared on the basis of the new financing shows that the company's total current assets are $1,863,156 as compared with current liabilities of $606,073, or about three to one. A statement by Edgar L. Apperson, president of the company, says that the result of operation to Sept. 30, 1922, indicates a profit for the year ending Dec. 31 exceeding $300,000. Average annual earnings for the five years, 1916 to 1920, inclusive, are given as $199,238. The loss for the year 1921, after writing off depreciation of inventory, is given as $9,311. The parts business is said to amount to over $300,000 a year.

The purpose of the bond issue, as stated by Apperson, "is to provide for additional models and add to working capital." The bond issue will be secured by a closed first mortgage covering all plants, real estate and fixed assets of the company.

CASE LOWERS PRICES ON TWO CAR MODELS

RACINE, WIS., Oct. 27—J. I. Case Threshing Machine Co. announces price reductions ranging from $70 to $370 on its passenger car models. No change has been made on the Model X phaeton and roadster. The list is as follows:

	Old Price	New Price
Model W, phaeton	$2,200	$1,990
Model W, sedan	3,250	2,975
Model W, coupe	2,850	2,480
Model W. sport	....	1,950
Model X, sedan	2,690	2,575
Model X, suburban coupe	2,550	2,480

DURANT WILL BUILD ANOTHER STAR PLANT

To Cost Million Dollars and Be Located at Flint—Capacity 8000 Month

NEW YORK, Oct. 30—W. C. Durant has ordered the construction of a fifth factory for the manufacture of Star cars. It will be located at Flint, Mich., will have a capacity of 8000 cars a month and will employ 4000 men.

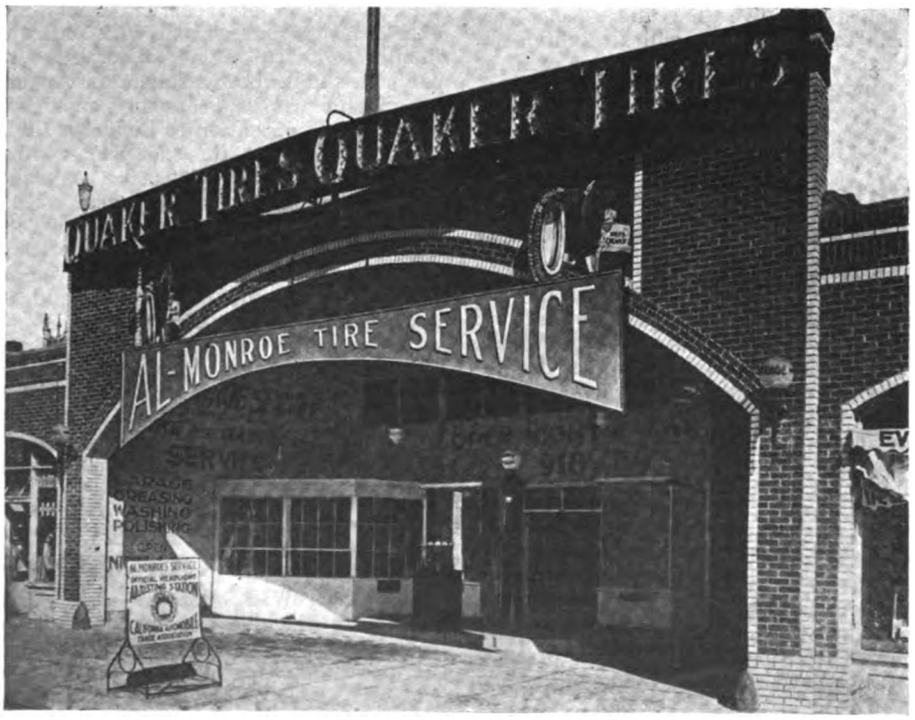
It is to be a million dollar plant and will be a duplicate of the one now in course of construction for the manufacture of the Flint car. It will afford 51,-640 sq. ft. of floor space and be of concrete and steel construction, brick faced. Contractors have agreed to have the plant completed by May 23.

The main assembly plant will be three stories in height, 80 x 900. There will be three wings, two of them three stories, 80 x 400, the third one story, 257 x 400.

The revised Durant schedule calls for the production of 281,000 Star cars between now and Dec. 31, 1924. Between Jan. 1, 1923, and Jan. 1, 1924, 86,000 will be made at Lansing, 50,000 at Flint, 53,-650 at Elizabeth, 43,000 in California and 32,250 at Leaside, the Canadian plant. It is expected that the four plants now in operation will produce 16,000 cars before the first of the year.

SAYS STATION WAGON IS CAR, NOT TRUCK

NEW YORK, Nov. 1—Affirming a decision recently made by Justice Norman S. Dike in the case of George G. Zabriskie against Walter W. Law, Jr., president of the State Tax Commission, the Appellate Division holds that the common type of automobile, known as the suburban or station wagon, is not a commercial truck but a passenger car, and as such is entitled to the lower license rate collected by the Automobile Bureau.



Judge Dike's decision held that station wagons were subject to the personal use of their owners only and were not used for the transportation of passengers or freight for pay, hence were not commercial vehicles.

Ford's September Output

DETROIT, Oct. 30—In September, during which its plants were closed four days, the Ford Motor Co. produced a total of 95,126 cars and trucks in the home and foreign plants, in comparison with 136,132. Of this total the six foreign plants turned out 5369 and Canada 3511.

Including September, Ford's production so far this year totals 925,325.

An Attractive Tire Station Front

A "front" that attracts attention and carries a strong "drive in" appeal—Al Monroe Tire Service of Los Angeles, Cal. One of the features of his business is the amount of work done in the early hours of the morning. His establishment keeps open day and night. It never closes. In order to make the night shift profitable he made a vigorous drive for the tire business of bakery and milk companies, which start their day's activities about three o'clock in the morning. By rendering efficient service at any hour of day or night, he was able to line up a following of healthy proportions

TIRE ABUSES SHOWN BY WARRANTY POSTER

Educating Medium Is Placed in Hands of Dealers by Rubber Association

NEW YORK, Nov. 1—As its first move in a national campaign to establish permanently the Standard Tire Warranty, the Manufacturers Division of the Rubber Association of America is distributing hangers, showing how tires are abused, to the 125,000 tire merchants representing 120 tire manufacturers.

These hangers, which the tire merchants are asked to display prominently in their stores, point out some of the abuses of tires that may be wilful or entirely accidental, and carry the warning that responsibility for such misuse is not assumed by the manufacturer under the terms of the Standard Tire Warranty. They also point out that tires, like the engine or other parts of the car, require a reasonable amount of attention and ask car owners to avoid the more common abuses, in order to secure the best results from tire equipment.

Message to Dealers

In its message to tire dealers accompanying the hanger, the association says:

It is believed that the poster presents a few important facts and suggestions, with helpful illustrations concerning the more common causes of tire trouble which may properly be termed abuses. These facts and photographs, being offered by the tire manufacturing industry as a whole and not handicapped by being identified with the product of any one company, should give the dealer a means of defending his interest when an unjust claim is being pressed by a tire user. The placard is also a medium through which the dealer can educate the car owner to better care of his tires.

If the tire seller directs attention to the message of the placard at the time of a sale, it undoubtedly will prevent some of the controversies which later grow out of unreasonable claims for adjustment of tires which have been willfully or ignorantly abused. That prevention will result for two reasons, at least—one, because directing attention to the poster will have the effect of causing some car owners to care better for their tires, and the other, because it will have served to emphasize to the careless user the announcement in the Standard Warranty that no unmerited consideration will be shown when tires have been abused.

The placard will be followed shortly by distribution to car owners of a pamphlet on the same subject.

Grant Receivership

CLEVELAND, Oct. 28—Joseph Hostetler has been appointed receiver for the Grant Motor Car Co. under a bond of $50,000. The plant will be closed for a short time for inventory, but the receiver acting under his authority will continue to operate it with a view to working out the receivership under the protection of the United States District Court.

MINNESOTA PROFITS FROM TOURIST TRADE

Income from 500,000 Motorists Visiting State Aggregated $30,000,000

MINNEAPOLIS, Nov. 1—What advertising of its roads and attractions has done for Minnesota is summarized by Ivan A. Copper, executive secretary of the Ten Thousand Lake Association with headquarters in St. Paul. The income from motor tourists is now $30,000,000 a year.

While Minnesota has always had its 10,000 lakes it never began to appreciate them as a tourist attraction until 1917. The association was organized and the first year through publicity brought in $1,500,000 from 40,000 visitors. The year before that the attendance was only 17,000. Finally the state legislature took notice and made an appropriation for the organization. In 1919 145,000 visitors left $6,000,000. In 1920 there were 200,000 visitors, and last year 300,000 of them spent $20,000,000 in the state. Meanwhile the legislature and the towns are spending $40,000 a year, but in 1922 500,000 visitors were lured.

So successful has been the Minnesota plan that Wisconsin and Montana are to copy it in attracting visitors each year.

One feature that backs up the work of the resort association is what is being accomplished by the state highway department. The report of the commissioner, C. M. Babcock, just out, shows that in 16 months there have been 241 miles of road paved, 2246 graveled and 2261 graded. This is in addition to 982 miles of re-shaping and 804 miles of regraveling, and the routine maintenance of 7000 miles of state highways. Although funds available were 25 per cent less than expected in less than 16 months the state nearly trebled mileages of grading and graveling on the trunks and almost financed the paving, now 353 miles.

DUTY PLANT AT ELGIN IS FINALLY ACQUIRED

CHICAGO, Oct. 31—The American Steam Truck Co. has completed negotiations by which it acquires the factory of the Duty Motor Truck Co. at Elgin, Ill. These negotiations have been in progress for several weeks, and for a time it appeared as if they would fail because of the opposition of some members of the Elgin Chamber of Commerce.

The new factory has 25,000 sq. ft. of floor space, and an addition on a five-acre tract adjoining the present factory is planned.

Wilson Directs Chalmers Sales

DETROIT, Nov. 1—Earl B. Wilson has been appointed director of sales of the Chalmers Motor Co. following his resignation from the sales department of the Willys Corp. For several years he was connected with Buick in branch and factory sales work, serving in Chicago, Memphis, Philadelphia and Flint. He entered the sales field first handling farm machinery, serving several years before entering the automobile business.

J. B. Bartholomew

President of the Avery Co., who was elected president of the National Association of Farm Equipment Manufacturers at its annual meeting in Chicago

Multibestos Appoints Miner

WALPOLE, MASS., Nov. 1—E. C. Miner has been named as sales manager of the Multibestos Co.

WILL BUILD DURANT BODIES IN KENTUCKY

Mengel Co. Formed at Louisville, with 30,000 Capacity During First Year

LOUISVILLE, KY., Nov. 1—A $600,000 automobile body manufacturing concern, with the Mengel Co. as the principal stockholder, will begin operations here early in 1923.

It is understood that Durant interests are responsible for the formation of this new company, which will be only one of a half dozen body building concerns that will work on the 300,000 bodies Durant will require in his operations during the next year.

Plans are being made to manufacture 30,000 bodies during the first year and to give employment to 500 men. A five year contract, totalling $20,000,000, has been obtained, it was announced. It is understood that this is a Durant contract.

The new company will be known as the Mengel Body Co. and will be incorporated under the laws of New Jersey, and the initial capital is expected to be increased soon.

Plans for the company were agreed on by R. Frank Monroe of Ludington, Mich., an expert automobile body builder who has been associated with Durant in such work; W. C. Durant, William L. Hoge and Arthur D. Allen of the Mengel company. Allen will be president of the company, and Monroe and Hoge, vice-presidents.

Good Roads in Oregon Chief Factor in Development of Trade There

PORTLAND, ORE., Nov. 1—Automobile men, merchants and business men generally in Oregon agree that there is one factor that has had more to do with development of the State and the expansion of the automobile industry in the State within the last five years than any other, and that is building of hard-surfaced roads. The enormous increase in the number of automobiles and trucks within the State, and the expansion of all lines of the automotive industry, is traced directly to this cause above all others. So enthusiastic are the automobile men in regard to the good roads, in fact, that they have been leaders in the movement to provide money for highway construction through automobile licenses and gasoline taxes, the latter now running two cents per gallon. It is notable, however, that every cent raised in Oregon through these taxes, excepting a small percentage for administration of the motor vehicle division, goes for the construction and maintenance of State and county roads outside the limits of incorporated towns.

Oregon now ranks near the top among the States of the Union in permanent highway construction, in proportion to the population. With scarcely three-quarters of a million people within the State, Oregon has just completed a $50,000,000 road building program and now has over 1000 miles of hard-surfaced pavement outside of incorporated cities and many thousand miles more of gravel or graded road. This latter feature is a factor in Oregon, which is a mountainous State, and grading alone has frequently run to $10,000 per mile and more.

The State highway system now includes a main east and west road across the State, known as the Columbia River Highway, of which 200 miles is paved and 135 miles graveled, and a north and south road across the State, 350 miles in length, and known as the Pacific Highway. This latter is paved the entire distance, excepting for a few short sections totaling a dozen miles or so, where work is under way. This road provides a paved highway from the Washington State line to the California line.

LOS ANGELES PUBLIC CONFUSED BY PRICES

Some Dealers Quote F. O. B. Factory, Others Switch to Local Delivery

LOS ANGELES, Oct. 30 — Despite recent agitation favorable to advertising prices of motor vehicles for delivery at California points, the majority of dealers continue to quote factory prices. Some have switched over to local delivery prices and as the result the buying public is very much confused. Agitation in favor of advertising local prices is growing and a change quite likely might be brought about if a dozen of the largest distributors in this state should depart from the old custom.

Some dealers who favor quoting local prices have said they believed this would be a good subject for the National Automobile Dealers Association to act upon. It is assumed that if that body acted, the factories would be so impressed that they would abide by dealers' preference and grant them the necessary authority for changing advertising copy. Some dealers maintain they should have the privilege of selling their merchandise as do dealers in other commodities.

They maintain the public knows nothing about the cost of most articles at an Eastern factory point and cares less, but the buyer is concerned as to what his outlay will be. It is cited that the highest quality and most expensive furniture originates in the East. In their national advertising the furniture factories refrain from price quotations. The California merchant advertises the sales price to the buyer and that in the end proves the only factor worthy of consideration.

As the result of the agitation of the advertised prices of automobiles, the dealers themselves are in a quandary as to the course to pursue. When one reads a section of the newspaper devoted to automobile advertising he is interested in the price. Unless a reader knows the location of every factory whose product is advertised and can approximate the freight charges, the advertising becomes a Chinese puzzle.

The question of "handling charge" also enters. Knowing the factory price, the customer asks the cost of the freight and can figure the war tax. In many instances there still remains a discrepancy between the total of these three sums and the actual retail price. The dealer says the difference represents the "handling charge." The latter usually includes what the dealer sets up as an expense covering the sending of a crew to the railroad yards, unloading the cars, and conditioning them. Some factories have required their dealers to eliminate this charge, but the custom continues general.

WOOD NAMED TO HEAD FIFTH AVENUE COACH

NEW YORK, Oct. 30—Frederic T. Wood has been elected president and general manager of the Fifth Avenue Coach Co. and the New York Transportation Co. to fill the vacancies caused by the resignation of President John A. Ritchie and Vice-President and General Manager George A. Green, who have joined the Yellow Cab Manufacturing Co. of Chicago as president and vice-president and general manager, respectively. Wood will fill the dual role, while R. E. Fielder will continue as chief engineer.

RAILROAD SHORTAGE RETARDS DELIVERIES

Shipping of Finished Cars Is As Difficult As Getting Through Material

NEW YORK, Oct. 30—Production continues to be maintained at a high rate in the face of obstacles occasioned by the railroad situation. It is increasingly difficult to get through shipments of materials, despite various means adopted to expedite deliveries. The diversion to other uses of such rail equipment as would be available for automotive manufacturing centers has necessitated a wider use of motor trucks augmented by the employment of boats for shipments from more distant points.

The popularity of the closed car is a dominant factor in the maintenance of high production programs. Some factories are reporting a shortage of bodies for cars of this type, due to the unexpected demand at a season, when in other years there has come a perceptible falling off. Where there has been a curtailment of manufacturing schedules it has been due to the inability to obtain a sufficient body supply rather than to any pronounced decline in sales.

With the freight car shortage situation becoming more serious, the industry is experiencing as great difficulty in shipping its products as in getting its material. Although driveaways are increasing in number they are unable to take care of all the orders in dealers' hands. Manufacturers located at such points as Detroit and Cleveland are making use of boat shipments, to a great extent, to get their products into dealer territories. The Northwest in particular, where there is strong evidence of renewed buying interest, is being fed in this manner, but even there deliveries are behind.

More Dealers Become "One of a Thousand" in National Association Campaign

ST. LOUIS, Nov. 1—C. A. Vane, general manager of the National Automobile Dealers Association, announces the following new members for membership as "One of a Thousand" since the last list was issued in September:

California—P. K. Webster Co., Inc., and Bell & Boyd of Oakland; J. J. Jacobs Motor Co. of Sacramento; Bairs Garage, Chas. Green Co., Harvey M. Harper, A. E. Hermanson, Sales & Service and Lundblade & Jewett, all of Eureka; Harry E. White, Inc., of Glendale; Walter M. Murphy Motors Co. of Los Angeles; Edgar & Hays and Orange County Garage Co. of Santa Ana.

Colorado — James-Nash Motors Co. and Colorado Motor Sales Co. of Denver.

Connecticut — The Arthur L. Clark Co., Inc. of Bridgeport; The New England Motor Sales of Greenwich.

Illinois—Reo Motor Car Co. and Charles Lange & Bros., of Chicago; Guy C. Ferre of Decatur.

Iowa—Repass Automobile Co. of Waterloo.

Massachusetts—J. W. Robinson Co. of Lawrence.

Missouri—Nash Motor Sales Co. of Kansas City; Le Grande Garage of Sedalia.

New Jersey—Elizabeth Automobile Co. of Elizabeth.

Ohio—The Fuller Automobile Co. of Cincinnati.

Oregon—Braley, Graham & Child, Inc., Oldsmobile Co. of Oregon, Talbot & Casey, all of Portland.

Pennsylvania—The Johnstown Automobile Co. of Johnstown; Harper & Harper of Philadelphia; Steel City Automobile Co., and Studebaker Sales Co. of Pittsburgh.

Texas—Amarillo Buick Cadillac Co. and Cullum Motor Co., Inc. of Amarillo.

Utah—Browning Automobile Co. and Grady Motor Co. of Salt Lake City.

Vermont—P. T. Donovan of Burlington.

Washington—Riegel Brothers of Spokane; Charles R. Simpson of Bellingham; Nugent Motors Co. of Everett; Central Agency, W. L. Eaton, Franklin Wicks Co., Great Western Motors, Inc., William L. Hughson Co. and Nute Motor Co., all of Seattle; Schott-Halsey Motor Co. of Yakima.

Wisconsin—East Side Buick Co., Edwards Motor Car Co., Frint Motor Car Co., Koehler-Rahn Auto Co., W. H. Krueger Motor Co. and Nash Sales Co., all of Milwaukee.

DRIGGS AND DIAMOND CONTRACT CANCELLED

NEW YORK, Nov. 1—Deciding to market its own product, the Driggs Ordnance & Manufacturing Corp. has dissolved its contract with the Diamond Taxicab Co., which called for the manufacture of taxicabs to equip the fleets to be put out by the Diamond company. This has resulted in the formation of the Driggs Taxicab Corp., which will manufacture taxicabs in the plant of the Driggs Ordnance corporation at New Haven, Conn. It is planned to turn out 1000 of these cabs in the first year.

A selling organization is being perfected to handle this product. It will be known as the Driggs Taxicab Sales Co., with E. E. Garrison in charge of sales. Its headquarters will be in New York, probably at 19 West 44th Street, the present location of the Driggs Ordnance & Manufacturing Co.

The Driggs taxicab will sell at $1,950 f.o.b. New York, and the selling plan will be based on time payments to the drivers direct.

PACKARD PAYS EXTRA DIVIDEND ON COMMON

Total Amount Authorized Is 5 Per Cent—Action Due to Increased Business

DETROIT, Nov. 1—Increased prosperity of the company and the favorable outlook for a continuation of good business are the reasons given by the directors of the Packard Motor Car Co. for the declaration of a 2½ per cent extra dividend, in addition to the regular quarterly dividend of 2½ per cent in cash on the company's common stock, of which there is about $11,885,000 outstanding. Both dividends are payable on Oct. 31 to stockholders of record at the close of business Oct. 25. The total payments in the October dividend will aggregate $594,205.

The last previous payment was in October, 1920, at the rate of 10 per cent per annum on stock of the par value of $10 a share.

Packard is enjoying its greatest prosperity, its profits being greater than at any other time in its history, save for a brief time during the war when the manufacture of Liberty engines brought in rich returns. Its profits run from $600,000 to $900,000 a month at present.

The factory reports that it is unable to catch up with orders on its single six. Starting with a production of 800 a month, it has climbed to 1600 and expects to manufacture 2000 single sixes in November.

McCONNELL RESIGNS AS HEAD OF KLAXON

NEW YORK, Oct. 30—D. A. McConnell has resigned the presidency of the Klaxon Co. of Newark, N. J., effective Dec. 31, although his active connection with the company ceased Oct. 15.

With F. Hallett Lovell, Jr., McConnell formed the Lovell-McConnell Manufacturing Co. in 1906 to manufacture the Klaxon horn, which was one of the pioneers in the electric warning field, and which was invented by Dr. Miller Reese Hutchison. In 1916 Lovell retired, following the selling of the Lovell-McConnell interests to United Motors, which in turn transferred the interests to General Motors a couple of years ago.

Lovell retired from business altogether at the time, and McConnell remained with the Klaxon interests as president and general manager until the present.

Neel-Cadillac Club Elects

PHILADELPHIA, Nov. 1—The Neel-Cadillac Club, composed of employees of the Neel-Cadillac Co.'s organization, has been organized with the following officers for the ensuing year: President, Joseph Comly; vice-president, C. Emory Williams; secretary, Miriam Lichty, and treasurer, Hugh McHenry.

The board of directors is composed of the following Neel-Cadillac associates: Harry M. Gilmore, W. J. Neel, W. P. Smith, Miss Miriam Dee and Harry Ettinger.

A program of social activities has been planned for the fall and winter. Chief among these is a Hallowe'en Party, to be held Saturday evening, Nov. 4, also a musical comedy, the date to be announced later.

FORD USING RADIO AT RAIL TERMINALS

DETROIT, Oct. 31—The Ford Motor Co. is using radio communication on its railroad between Dearborn and Springfield, its two main terminals.

Consideration is being given to the practicability of using the radio as a means of communication between the plants and branches of the Ford company, this involving the use of a code or the perfection of tuning so there would be no interruption of service.

CLIMAX TAKES OVER ROTARY TIRE PLANT

COLUMBUS, Nov. 1—The Climax Rubber Co., which has been operating plants at Columbus and Delaware, has taken over the factory of the defunct Rotary Tire Co., just outside of Zanesville, on a lease proposition. The lease was made by I. S. Hoffman, president of the Climax Co., with the Franklin Mortgage Co., of Columbus which took over the property from I. R. Winegarner, the receiver.

The Climax company has taken possession and started operations at the plant. The equipment is sufficient for the manufacture of 500 casings and 500 tubes daily and it is planned to get under full production soon. The plant is one of the best equipped in the state, among the smaller ones, and has a floor space of 50,000 square feet.

JOBBERS IN ATLANTA REPORT BETTER SALES

Wholesale Accessory Business in Southeastern States Increases Monthly

ATLANTA, Oct. 30—Several of the larger automotive equipment jobbers in Atlanta, with salesmen covering the various southeastern States, advise that wholesale accessory business in this district has increased steadily from month to month since early spring, with August, September and October sales about on an equal basis with the best months of 1920, when accessory sales were at the high water mark in this section.

Among the wholesalers who are authority for this statement was E. H. Baughman, vice-president of Ozburn-Alston & Co. of Atlanta, one of the South's largest jobbers and president of the Southeastern Automotive Equipment Association.

Tool, machinery and miscellaneous sales to garages and service stations over the district have been particularly good, with this business probably in greater volume at this time than it has ever been, as an unusually large number of service stations have been established the past three or four months over the Southeast. Gross business in service stations and garages, automobile distributors here advise, is also on a par with the best months of the inflation period immediately after the war.

The outlook is for a steady volume of profitable business all through the winter months.

As to tire sales, distributors here covering southeastern territory advise conditions substantially the same as reported above for accessory and equipment sales, with particularly good business in heavy truck tire sales.

The principal improvement in all sales has been in the smaller towns and communities dependent largely on rural business.

Cashing in on Advertising Value of Service Car

Some dealers are cashing in in a fine way on the advertising value of their service cars. A good example of this is the service car used by the H. O. Harrison Co., San Francisco distributor for Hudson and Essex. The car is enamelled white and kept spotlessly clean. The name of the company and its product, lettered on the side, never fail to attract the eye, when it is on an errand of mercy

RE-SALE VALUE FACTOR IN BUILDING OF CAR

Edward S. Jordan Tells Purchasing Agents Quality Should Rule Buying

DETROIT, Nov. 1—In urging that manufacturers be governed by quality in purchasing material for cars, Edward S. Jordan, president of the Jordan Motor Car Co., told members of the Purchasing Agents Association of Detroit that the industry has now entered its fifth phase, in which the owner has become the dominant figure and a company, to succeed, must build a car which pleases the owner.

He tied this statement up with the second hand value of the car. Naturally, he said, that car which pleases the owner most is the one which has the greatest second-hand value. He stated that on lists sent out all over the country, asking dealers to put down the list price of each car and alongside it the car which had the greatest relative re-sale value, it was found that the name of twelve manufacturers appeared on the list of all of the dealers. These twelve manufacturers are naturally the most consistently successful in the field, he said.

In illustrating his point he took two cars, A and B, selling for $1,500 each originally. One car, he stated, had a maintenance bill of $100 for the year and a depreciation of $200, making the total cost to the owner $1,800 for the year. The second car had a maintenance bill of $200 for the year and a depreciation of $500, which brought the price of this car to $2,200 to the owner

He used this to illustrate the point that the owner is becoming educated to the fact that the first price of the car is not the only point to consider. The depreciation, or, in other words, the re-sale value, must be taken into consideration when figuring the expenditure for the car. Also, the ability to service the car at low price.

ESTIMATES GASOLINE CONSUMPTION IN 1923

WASHINGTON, Nov. 1—Gasoline consumption for the calendar year of 1923 will be 5,670,000,000 gallons, it is estimated by the American Petroleum Institute. The figure is arrived at by an estimate showing that there will be 13,500,000 gasoline engines in use in 1923, each using an average of 420 gallons of gasoline.

At the present rate of refining methods—one barrel of gasoline secured from each four barrels of crude—the total petroleum requirements of crude oil will be 540,000,000 barrels.

The entire note of Jordan's speech was optimistic, and his predictions pointed to the most prosperous era through which the automobile industry has ever passed. Regarding the well-known saturation point, he stated that this will never be reached until everybody who desires to go from one place to another or to transport goods from one place to another has an automobile. In other words, it is his belief that we can never reach this point.

BOATS USED TO SEND CARS TO NORTHWEST

DETROIT, Nov. 1—The fourth boatload of Buick cars for the Pence Automobile Co., Minneapolis, in the past five weeks has left Detroit. In this shipment 214 cars, all closed, routed by way of Duluth. Boat shipments to the Northwest territory are being used exclusively because of existing railroad conditions. The cars are driven away by dealers on arriving in Duluth. All cars in the shipment were reported to be sold.

W. R. Stephens, sales manager of the Pence company, was in charge of the shipment.

WISCONSIN MAY HAVE $1,000,000 WAREHOUSE

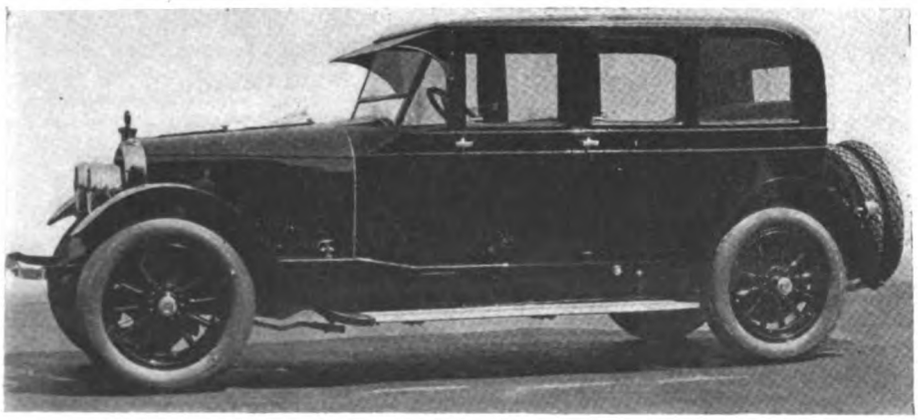
Would Help to Solve Problem of Storage During Slack Period of Winter

MILWAUKEE, Oct. 30—Plans for the organization of a bonded warehousing corporation that will be responsible for the storing of more than $1,000,000 worth of motor vehicles during the winter months are under consideration by the automotive division of the Association of Commerce of Green Bay, Wis. The dealers of Green Bay and vicinity again are confronted by the problem of adequate and controllable warehouse space for new car stocks during the slack selling season from the end of November to the end of March, when the most severe weather of the winter usually comes.

It is planned to lease the main exposition building of the Brown County Fair Grounds as a warehouse. Practically all dealers would become stockholders in the bonded warehousing corporation, which would provide proper guards, insurance and other requirements. The building has 30,000 sq. ft. of floor space, is weatherproof and ideal for storing motor vehicles.

It was erected two years ago at a cost of $18,000 by the automotive division to provide an adequate hall for displaying automotive merchandise. The division is paying for the building out of the profits of the annual county fair motor show. About $5,300 was paid off in 1921 and $4,700 this year, leaving $8,000 to be absorbed by the 1923 and 1924 shows.

ONE OF FOUR MODELS OF STEINMETZ BUILT



SYRACUSE, N. Y., Oct. 31—Announcement is made by the Thorne Machine Tool Co. of this city of the completion of a new model electric car for the Steinmetz Motor Car Co. of Baltimore. This is the first of four which is to be made for experimental purposes, the experiments to last about a year before production is attempted. The car has been built under the direction of Charles P. Steinmetz.

In producing the model the aim has been to develop an electric driven vehicle weighing under 2000 lbs., with a speed up to 40 m.p.h. and an operating radius of 200 miles. The motor, it is said, will be placed in the rear axle housing.

Packard Honors Harrington

NEW YORK, Oct. 30—Packard executives and department heads held a dinner at the Waldorf-Astoria, to celebrate the twentieth anniversary of A. C. Harrington's connection with the Packard Motor Car Co. Harrington joined Packard in 1902 when the factory was at Warren, Ohio, and now is vice-president of the New York company.

Dorris Bringing Out a Custombuilt Sedan, $6,800

The Dorris Motor Car Co. is fitting a new "custombuilt" sedan to the regular chassis, the price being $6,800. The bodies are made to specification by the Hume Body Corp., Boston, and are finished, painted and upholstered at the Dorris factory. The painting and upholstery is according to the purchaser's selection. The frame construction is hardwood and the metal covering is aluminum. The equipment is very complete

G. M. C. EXPECTS 1922 TO BE BIGGEST YEAR

Estimates in "Facts and Figures" That Production Will Total 468,355

NEW YORK, Nov. 1—Estimating the last quarter, the car manufacturing units of the General Motors Corp. will sell 468,355 motor vehicles in 1922, which will give it the greatest year in its history. With net sales of $218,859,267 for the first six months of the year, it would seem as if 1922 would top the best year in the history of General Motors—$567,320,603 in 1920.

Stockholders are given this information in "Facts and Figures," prepared by the Department of Financial Publicity of G. M. C. and sent out to-day. There are 70,000 stockholders at the present time, a considerable growth in the last year, for at the end of 1921 there were 66,837 of all classes, while in 1920 there were 36,894; 18,214 in 1919; 4379 in 1918, and 2920 in 1917. Of this total of 70,000 there are 41,144 owning 100 shares or fewer and only 7410 who own more than 100 shares of common.

Common Stock $14 a Share

On June 30, 1922, the book value of the preferred and debenture stocks was over $380 per share; and of the common stock $14 a share.

The booklet says:

Few realize that the combined value of the products sold annually by the General Motors group during the past few years is greater than the annual revenue of any railroad; and, further, is exceeded by few industrial corporations. The net sales for the first six months of 1922 were $218,859,267. The largest year was 1920, when the total was $567,320,603 for the full 12 months. Net sales by years ended Dec. 31 follow:

1922*	$218,859,267
1921	352,527,386
1920	567,320,603
1919	509,676,694
1918	269,796,829
1917**	96,295,740

*Six months ended June 30.
**Five months ended Dec. 31.

The excess of current assets over current liabilities (not working capital) June 30, 1922, was $122,725,264. Cash in banks was $35,527,973; sight drafts, $10,430,382; notes and accounts receivable, $21,899,134; and inventory, $94,166,601. Current liabilities include accounts payable, $22,184,843; taxes, payrolls, etc., $16,979,253; and accrued dividents, $1,068,354.

Over 2,000,000 Cars Built

"Facts and Figures" further states:

General Motors, since 1905, has produced over 2,000,000 passenger cars. Of this number approximately 75 per cent, or more than 1,500,000, were in use on Jan. 1, 1922. According to the National Automobile Chamber of Commerce, there are 9,300,000 passenger automobiles in the United States. To be conservative, at least one out of every seven passenger cars is a General Motors product. Since one out of every seven is a General Motors car, it follows that this group carries approximately one billion passengers annually—approximately, the number of passengers carried by all the steam railroads in this country.

GENERAL MOTORS CORP. SOLD 316,136 CARS AND TRUCKS IN FIRST NINE MONTHS OF YEAR

NEW YORK, Nov. 1—The combined sales by the car and truck divisions of General Motors Corp. in the first quarter of this year totaled 71,039; the second quarter, 135,751, and the third quarter, 109,346. This makes a total for the first nine months of 1922 of 316,136, which exceeds the full 12 months of 1921.

The sales for the year to end Dec. 31, 1922 (last quarter estimated), compared with the actual sales of the three preceding calendar years, follow:

	*1922	1921	1920	1919
Passenger Cars:				
Buick	134,000	83,888	116,213	119,853
Cadillac	22,000	11,130	19,790	19,851
Chevrolet	249,000	75,667	144,502	132,710
Oakland	26,000	12,661	37,244	54,451
Oldsmobile	23,000	20,245	26,241	33,345
Commercial Cars:				
Chevrolet	2,900	1,489	4,938	2,682
GMC trucks	5,600	2,760	5,137	7,730
Oldsmobile	1,500	466	8,383	7,782
Totals:				
Passenger cars	454,000	203,591	343,990	360,210
Commercial cars	10,000	4,715	18,458	18,194
Miscellaneous**	4,355	6,493	30,627	13,334
Grand total	*468,355	214,799	393,075	391,738

*Based upon the actual sales for the first nine months of 1922, together with estimates for the last three months.
**Includes tractors; and also cars and trucks not now manufactured.

MONROE MAY REMOVE PLANT TO LOUISVILLE

LOUISVILLE, Oct. 31—The Monroe Motor Co. of Indianapolis, which recently was reorganized after defending a receivership suit, is negotiating through Attorney Warren T. Godfroy, here, to consolidate with a Louisville manufacturing concern and move to Louisville.

Neither the Fletcher-American National Bank of Indianapolis, which has a controling interest in the property, nor Godfroy would reveal the identity of the company here.

The Monroe company owns no property in Indianapolis, but leases its buildings. According to Godfroy's information, it has $750,000 quick assets and no indebtedness. Godfroy said that he visited the plant and that it is turning out three cars a day.

Ford Sales in Southeast

ATLANTA, Oct. 28—W. B. Fitzgerald, sales manager of the Atlanta branch of the Ford Motor Co., states October sales of this branch well above 4000 cars, with orders in hand from southeastern dealers for better than 5000 cars. November sales, he advises, will be close to 5000, advance orders for November delivery being already above 4000. This is on a par with the best monthly sales records ever made by the company's Atlanta branch.

SERVICE SUGGESTED AS CHRISTMAS GIFT

BALTIMORE, Nov. 1—Encourage your patrons to adopt the Christmas service present on the certificate plan, such as is used by many department stores during the holiday season, is the suggestion of the Black & Decker Manufacturing Co.

It says:

The automotive repair man could sell a Christmas service present in the shape of an order for a carbon cleaning and valve grinding job, a brake relining job, a bearing adjustment job, a clutch overhauling job, etc., for a specified make of car.

Nearly everyone who owns a car has a high percentage of pride of ownership in addition to which the comfort and satisfaction of driving a car that is operating properly is in many cases more desirable than a silk shirt.

It would seem that a person would be especially appreciative if he received an attractive card which authorized him to go to John Jones' garage and have his brakes relined with the compliments of the season from some good friend.

It suggests that these cards could be made up in an attractive style with the usual holly decorations and could be supplemented with hangers in the windows and on the walls of the dealer's place of business, suggesting the idea of buying a Christmas service present and listing some of the most common jobs with the flat rates which have been predetermined for these jobs.

Brennan, Inland Sales Head

ST. LOUIS, Oct. 31—B. G. Brennan has been appointed general sales manager of the Inland Products Co. which has just moved into its new plant.

G-M TRUCK EXTENDING FACTORY CO-OPERATION

Creates Four New Divisions Under Supervision of Sales Promotion Manager

PONTIAC, MICH., Oct. 30—The General Motors Truck Co. has created four divisions under the sales department to assist truck salesmen in all sections of the country, this step being taken as a means of increasing the co-operation between the factory and the dealer.

The divisions come directly under the supervision of the sales promotion manager and, in turn, are supervised by experts in truck statistics and sales.

The divisions are:

The loose materials division, where dealer and factory problems in the hauling of sand, gravel, ashes, garbage and any other article which can be dumped are worked out.

The bus division, where figures are prepared and problems worked out in the marketing of bus chassis for school work, interurban and city transportation.

The highway engineering division, where demonstration problems and dealers' questions are worked out. A function of this department is to help the dealers and distributors in closing sales, either through the use of literature or by personal factory representation.

The statistical division, where figures are gathered on motor truck registration and many other subjects of help to the dealers.

LAST PAYMENT MADE ON FACTORY BY PAGE

PLAINFIELD, N. J., Oct. 31—Carl H. Page, president of the American Motors Corp., has made the final payment of $5,646.48 on the total purchase price of $200,000 set upon the property by the court at the receiver's sale and the reorganized company of which Page is the head has formally taken over the plant.

Under the re-organization plan put into effect some months ago interests identified with the original company have provided working capital amounting to about $250,000, and it is announced that the balance of the new company's stock will be turned over to a group of Philadelphia brokers under an arrangement that will net the company an additional amount of $250,000 or $500,000 altogether.

Page reports that September was the best month in the company's history and expects the plant will be running on a 1000 car per year basis within the next 60 days.

Oakland Models Oversold

DETROIT, Nov. 1—Thirty per cent of Oakland production in 1923 will be closed cars, according to C. J. Nephler, general sales manager. September was the company's biggest month this year, due to the introduction of its new models, and October production will run higher. The company reports its sport car and two-passenger coupé oversold. The sedan and five-passenger coupé now are in full production. Full working time is assured for the winter months.

W. R. Tracy, assistant sales manager, back from a trip through the Middle West, reports business in industrial centers holding up in good shape.

CARAVAN TO EXPLORE REGIONS OF SAHARA

NEW YORK, Oct. 28—Approved by the French Government, which will send official observers, an automobile caravan is being organized by Andre Citroen, French automobile manufacturer, for an exploration of the Sahara desert, according to a copyrighted cablegram to the New York Tribune.

Citroen has built the cars, which really are moving fortresses, being armored and equipped with the well known caterpillar tread, as were the tanks in the war. This protection is necessary because of the bandits who infest the desert. The expedition, which will start about Dec. 1, will be divided into three sections. The first will carry machine guns, mounted in armored cars; the second, the food supply, sufficient for a year, and the third, the gasoline, water and spare parts.

The desert trip will be through country unknown to white men, and it is believed will produce scientific results of interest, and it is hoped by the scientists will disclose ruins of prehistoric cities.

TIMKEN WILL CENTER ON NIBLESS BEARING

DETROIT, Oct. 30—The Timken Roller Bearing Co. has recently announced its intention of converting its entire production facilities to the manufacture of the nibless bearing, known as the V-type, which has been made in increasing quantities for the past five years. This type has more rollers than the original type with a riveted cage and a correspondingly greater capacity—25 to 40 per cent greater, it is said.

The cage employed is formed from considerably heavier stock than the A-type cage formerly used, but has the same section as the E-type cage used with single-head rollers. The V-type cage gives a simple and rigid structure with reasonable weight. The bridges used between the rollers are cold-forged to give the desired contour.

The combination of the nibless roller with the new cage gives a compact bearing having maximum capacity with minimum weight. Millions of these bearings have been produced and are understood to be giving satisfactory service, but it has required considerable time to change the tooling equipment over to suit it to the manufacture of the new product. Many sizes of the V-type bearing are now in production.

COUNTIES CAN LEVY TAXES IN ALABAMA

Appeals Court Says It Cannot Be Held as Form of Double Taxation

BIRMINGHAM, ALA., Nov. 1—The court of appeals of the State of Alabama has held that under the present laws the counties have the right to levy special county licenses against trucks and automobiles which are operated on the public highways, and that they still held the same rights and powers under the Goode law of 1915 that they held prior to the enactment of the automobile license law of 1919. The license law of 1919 provides a means for the retirement of the State highway bonds by levying assessments against motor cars and trucks.

The court of appeals held that the imposition of a special license tax against motor trucks by the counties was not a violation of that provision of the constitution which prohibits double taxation Alabama Supreme Court decisions were quoted to sustain the ruling of the court. Judge William H. Sanford wrote the opinion, and it was concurred in by the presiding judge, C. R. Bricken, and Judge Henry P. Merritt.

LOCOMOBILE PROPERTY FORMALLY TRANSFERRED

NEW YORK, Oct. 30—By order of Referee Keogh the property of the Locomobile Co. of America at Bridgeport, Conn., has been formally transferred by the trustee to the new Locomobile Co. of America, a New York corporation controlled by W. C. Durant. The new interests are going ahead on the policy decided upon when Durant first took over Locomobile.

The schedule calls for the manufacture of 800 cars during the 1923 season, and 1000 men will be employed at the Bridgeport plant. No new models will be added nor will there be any price changes. The sales organization will be strengthened in all parts of the country, and new district representatives added in those sections where the conditions demand them. The first one of these new appointments is that of the H. D. Shawkey Motor Co. of Pittsburgh, which also has the Durant in that territory.

Rickenbacker in Turin

DETROIT, Oct. 28—E. V. Rickenbacker, vice-president and director of sales of the Rickenbacker Motor Co., is now at Turin, Italy, visiting the Fiat plant, builder of the car which won the last French Grand Prix.

After a visit to Germany to inspect the automobile and aircraft manufacturing plants, Rickenbacker attended the Paris show and from there went to Italy. He will return to America by way of England.

ASSOCIATION ACTIVITIES

Boston Dealers Meet

BOSTON, Oct. 30—The Boston Automobile Dealers Association held a meeting and dinner at the Kenmore Hotel which is to be a forerunner of others that will begin to put the association more in the limelight and have it take an important place in the affairs of New England. The keynote of the meeting was cooperation. While the main theme was a discussion of the used car problems other matters were touched upon.

President J. H. MacAlman called the meeting to order and outlined some of the problems encountered by motor car dealers. He introduced J. W. Bowman as the first speaker. Bowman in the last year has spent a great deal of time and study upon dealers' troubles and has given unsparingly of his efforts to make the Used Car Statistical Bureau a success. It is possible that he may be drafted by the association to specialize upon a campaign of building up an organization whose scope will not confine itself to Boston, or in fact to Massachusetts, but spread throughout New England. He spoke convincingly about the needs of cooperation.

L. B. Sanders, secretary of the Used Car Statistical Bureau, told of his trip to Chicago and how the Boston Plan was received.

Joseph S. Donovan, speaking for the general committee, stated that the result so far attained by the Boston dealers showed that stability had displaced chaos.

There was a general discussion which lasted for a couple of hours. When the meeting ended it was agreed that frequent meetings would be beneficial, and more of them will be held throughout the winter. There is talk now of seeing to it that the motor industry, through the dealers' association, is given representation upon the board of directors of such bodies as the Boston Chamber of Commerce, so that when anything inimical to motoring comes up these other organizations can be brought into line to lend a helping hand.

"Night in Bohemia"

PHILADELPHIA, Nov. 1—For its first fall meeting, the Motor Truck Association of Philadelphia held a "Night in Bohemia," at the Adelphia Hotel. Speeches were curtailed and a vaudeville and musical show was provided by Chairman R. Arthur Bittong. President Thomas Quirk presided.

F. H. Williams, chairman of the legislative committee, reported that important data with regard to the license fee question would be laid before the association at its next meeting. In discussing the used truck problem, Williams stated that he though it was an individual matter for each distributer to determine for himself and stated his disbelief in any general rule of practice for the trade.

Walter Y. Anthony, former president of the association, also spoke and expressed the opinion that the used car plan in operation in the Philadelphia Automobile Trade Association probably would work out better in the passenger car field than it would in the field of trucks.

E. J. Cattell, former City Statistician, but now connected with the local Chamber of Commerce, made one of his characteristic addresses, stating that the question of transportation, especially with regard to trucks, would do more to save Europe than any other factor

He sounded a warning note with regard to careless driving of trucks and passenger cars on the highways, asserting that the abuse of the speed laws is reflecting on all users of commercial and passenger cars and that this abuse soon would have to be stopped, or such vehicles would be legislated off the highways.

Early Start on Atlanta Show

ATLANTA, Nov. 1—Preparations for the 1923 Southern Automobile Show, which will be held in the Atlanta Auditorium the middle of next February, were started the latter part of October. Virgil W. Shepard will again be general manager of the show, which will be held, as usual, under the personal direction of the Atlanta Automobile Association. Floor space will be greatly enlarged, as several companies were unable to get in for the 1922 show. The association is getting an early start in an effort to make the 1923 Atlanta show one of the largest that has ever been held in the southern territory.

It has also been announced by the Atlanta association that during the winter months the organization will bend its efforts to carry out a complete educational campaign for the benefit of the members, which include most of the automobile and accessory dealers in Atlanta. Service, salesmanship and the used car problem are the three principal factors to be taken up at each meeting of the organization this winter.

Riley Elected in Kansas City

KANSAS CITY, Oct. 30—The Kansas City Motor Car Dealers' Association held its annual election at a meeting that indicated a fine degree of the cooperative spirit and good feeling. Nelson S. Riley, who had served the organization as president several years ago, when he was branch manager for the Studebaker Corp. here, was elected president. He is now president and general manager of the Studebaker-Riley Co., retail distributor of Studebaker cars in Kansas City.

Sam W. Ramsay of the Midwest Oldsmobile Co., also formerly an active member and officer of the association, was elected vice-president.

Directors elected were: A. L. Ellwood, Ellwood Motors; W. H. Morgan, Nash Sales Co.; A. P. TenBrook, Oakland Motor Car Co.; Arthur Bunker, Bird-Sykes-Bunker Motor Co.; Geo. W. Cox, Willys-Overland branch; W. C. Howard, Howard Motors, Inc., and E. P. Moriarty, Moriarty Motor Co.

Tents for Los Angeles Show

LOS ANGELES, Oct. 27—The first automobile show to be held in Los Angeles for two years is scheduled to open Nov. 11 and continue until Nov. 19. Because of the lack of adequate housing facilities four large tents with board floors wll be used for the purpose. Exhibitors will pay $1 per square foot for the space and membership in the Motor Car Dealers Association is necessary to obtain space for car or truck exhibitors.

A section of one tent will be devoted to accessories.

Because of opposition on the part of truck dealers, the truck exhibit will not be segregated but space assigned in each tent for commercial vehicles. The objection was based upon the point that in a segregated display comparatively few visitors to the show would inspect the trucks, and in order to give them an even break in the attendance the new plan was decided upon.

Illinois Acts on Tax Repeal

PEORIA, ILL., Oct. 28—The Illinois Automobile Trade Association has taken active steps to co-operate with the National Automobile Chamber of Commerce and the National Automobile Dealers Association in the campaign for the removal of the Federal excise war taxes on automobiles and automotive products.

A letter has gone out from the office of the association to all members requesting them to communicate with the candidates for Congress in their respective dictricts and determine their attitude on the repeal of these taxes.

Will Build Car at Show

CINCINNATI, Oct. 30—John J. Behle, general manager of the Cincinnati Automotive Trades Association, announces that an automobile is to be built of parts and accessories on display at the Automotive Accessory and Radio Exposition to be given by the association in Cincinnati Nov. 22 to 29. One-eighth of the car will be built each day. The purpose of the plan is to demonstrate, according to Behle, that the exhibitors will have on display everything needed for an automobile. The completed car will be donated to a local charitable organization, to be selected later.

Harry T. Gardner of Syracuse, N. Y., has been installed in the position of manager of the Cincinnati Automobile Dealers Association, left vacant by the death of Harry K. Shockley. Gardner is already making plans for the next Cincinnati automobile show, which will be held the middle of February.

A determination to rid the storage battery business of profiteering was reached by the Cincinnati Battery Service Association meeting recently. Charles Ratterman, head of the Ratterman Motor Service Co., made the principal address of the evening, emphasizing the value of organization. He has made a summary of the State laws relating to automobiles, which he informed his hearers will be placed before the next session of the State Legislature.

Charlotte Show in February

CHARLOTTE, N. C., Oct. 31—The Charlotte Automotive Trades Association has decided on Feb. 5 to 10 as the dates for the automobile show, which it was decided some time ago to stage the coming winter. The show will be held in the Made-In-Carolinas Exposition Building. The building is a mammoth structure with two floors and will give the automobile association more than twice the space it ever had for an exhibit.

There is ample space for cars, a large assembly room for concerts, and excellent lighting facilities. Heretofore the local show has never been able to take care of all the applicants for space.

Baltimore Adopts Boston Plan

BALTIMORE, Oct. 28—Thirty-six members of the Baltimore Automobile Trade Association have decided to adopt a co-operative used car plan similar to that used in Boston and a number of other cities.

The dealers made their decision after listening to an address by L. B. Sanders, secretary of the Boston Used Car Statistical Bureau, who told of the successful operation of the Boston plan.

CHANGES IN THE TRADE

Detroit Ball Bearing Co. has moved to 3958 Cass Avenue, Detroit.

Hansen Auto Supply Co., dealing in accessories, is a new St. Paul concern.

E. O. Merchant Co., Minneapolis, has been appointed northwestern distributor for Transport Trucks

E. Stevenson and **W. G. Coe** have opened an establishment for the sale of used cars in Cincinnati.

E. W. Arrasmith, formerly Oakland dealer in Kansas City, has opened a Chevrolet agency and service station in that city.

Warren Given Co., St. Paul, has been made community distributor for the Buick. The company handles also the Milburn and Rauch-Lang cars.

Tri-State Motor Sales Co., Maxwell-Chalmers distributor in Memphis, has appointed **Opie C. Stephenson** manager of its used car department.

Signal Truck Corp. has established a direct factory sales and service station in Indianapolis with J. T. Crossland, a veteran Signal salesman, in charge.

J. Q. Friend has been appointed territory representative for Traffic trucks, operating under the Philadelphia branch of the **Traffic Motor Truck Corp.** of St. Louis.

Dale Bros., Minneapolis, 12 years in business, has been appointed authorized dealer by the **Pence Automobile Co.,** Buick wholesaler, and will carry Buick and G. M. C. parts.

Franklin Automobile Co. announces the following new dealers: **Sydney J. Morris,** Laramie, Wyo.; **Zeb C. Cummings,** Tarboro, N. C.; **Pratt Motor & Implement Co.,** Newbern, N. C.

O. W. Olson, St. Paul, has been named Garford truck agent and will open a sales and service station as the **Northwestern Garford Co.** Olson formerly was with the **St. Paul White Co.**

Teddy Rowe, new district manager for the **Everyday Piston Ring Co., Inc.,** East Rochester, N. Y., has been put in charge for the company in Minnesota and the Dakotas, with headquarters in Minneapolis.

Dunham-McCumber Motor Co., Fond du Lac, Wis., has been incorporated to succeed to the partnership business of **H. E. Dunham** and **B. E. McCumber,** proprietors of the Nash sales and service station for several years.

Charles P. Hughes, formerly secretary of committees of the Automotive Equipment Association, has become connected with the **Frank Miller Co.** of Brooklyn, N. Y., as a sales representative in the Chicago territory.

W. W. Mitchell, manager of the Atlanta branch of the **Ford Motor Co.,** advises that **Samuel Murray,** with the branch for several years, has been named assistant manager. He was formerly purchasing agent and head of the sales department.

Nathaniel Leverone, has resigned as secretary and treasurer of the **Hill Pump Valve Co.,** Chicago, to become secretary of the **Advance Lamp Works** of Chicago. For a number of years Leverone has been a leader in the Automotive Equipment Association.

Western Auto Supply Co., with headquarters and a retail accessory and parts store in Kansas City, is opening a second retail store there. The company now has 67 stores. **Don W. Davis** is president of the company; **W. J. Boshell** has been made manager of the second Kansas City store.

George W. Nelson, president of the St. **Paul White Co.,** has been appointed to distribute Federal trucks in Minnesota and northwestern Wisconsin. **H. E. Casselton** is salesmanager. The White line is to be distributed hereafter from the Twin City branch just completed in Minneapolis.

Louis C. Gill has been made resident manager in Minneapolis for the **Joy Bros. Motor Car Co.** of St. Paul, Packard distributor. He has been handling the wholesale business in Minnesota and Wisconsin for the company. He had been special tire representative for the **B. F. Goodrich Rubber Co.** in Chicago.

Harper-Shourt Motor Co., Minneapolis, has been named by **Torbert-McGregor, Inc.,** as downtown salesagent for the Durant and Star cars. **C. W. Harper** for many years has been head of the Harper garages and has taken as partner **A. J. Shourt.** A general garage and service business will be conducted.

W. J. Keefe, president of the **Overland-Waterloo Co.,** Waterloo, Iowa, has completed arrangements in Des Moines to establish distributing center for northeastern Iowa deliveries of Overland and Willys-Knight cars in Waterloo. **R. J. Clemons,** president of the Iowa company, recently inspected the territory and approved the establishment of the center.

C. E. Fifer has been appointed factory representative of the **Reo Automobile Co.,** with headquarters in Greensboro, N. C. Fifer will have charge of the territory embracing all of North Carolina, Virginia, South Carolina and Maryland. He formerly resided in that city, being connected with the American Southern Motors Co. He was also at one time connected with the Motor Co. at Winston-Salem, N. C.

Rahr-Nash Motor Co. of Manitowoc, Wis., which has been incorporated to act as Nash and LaFayette dealer in Manitowoc county, has taken over the **Hagen Motor Car Co.** garage and service building as headquarters. The principals in the new company are **William** and **Niels Rahr** and **William S. Schrader.** The Rahr interests will continue in the present location the business of the **Rahr Auto Grinding Co.,** established several months ago.

Peerless Motor Car Co. announces the following dealers: **Peerless Motor Sales Co. of New Jersey,** Hackensack, for Bergen County; **Fogarty & Woodburn,** Newburgh, N. Y.; **American Auto Co.,** New Brunswick, N. J.; **Harry A. Goff,** Central Valley and Highland Falls, N. Y., for Orange County; **Hemstreet Bros.,** Monticello, N. Y.; **James Gibson,** Cornwall-on-Hudson; **Henry Burgainder,** Monroe, N. Y.; **Samuel H. Grossman,** Harrison, N. J.

Louisville, Ky.....Nov. 20-25

RACES

Los Angeles.....Nov. 30

San Diego.....January

OUTPUT OF 9 MONTHS PLACED AT 1,875,227

WASHINGTON, Oct. 30—Figures received by the Department of Commerce through the Bureau of the Census place total production of passengers cars in September at 186,562, compared with 249,225 in August, and of motor trucks at 18,843 as against 24,200 in August. While the September production is the lowest since March, it is considerably above the figures for September, 1921, when 144,669 passenger cars and 13,648 motor trucks were produced.

The following table gives the total output for each of the last nine months. With a few exceptions the reports each month are from identical firms and include approximately 90 passenger car and 80 motor truck manufacturers. September figures are subject to slight revision when all reports have been received by the Department.

1922	Passenger cars	Trucks	Total
Jan.	81,693	9,416	91,109
Feb.	109,171	13,195	122,366
March	152,959	19,761	172,720
April	197,216	22,342	219,558
May	232,431	23,788	256,219
June	263,027	25,984	289,011
July	224,057	21,357	245,414
Aug.	249,225	24,200	273,425
Sept.	186,562	18,843	205,405
Grand Total	1,696,341	178,885	1,875,227

Roy D. Chapin Returns Home

NEW YORK, Oct. 28—Roy D. Chapin, president of the Hudson Motor Car Co., was one of the passengers on the Majestic, returning from a 10 weeks' business trip in France and England. As a result of the trip Chapin announces the establishment of a general European depot in London for the distribution of Hudson and Essex cars.

CLEVELAND DEALERS TAKE ON NEW LINES

CLEVELAND, Oct. 26—Automobile row here received its biggest shake-up of the year when distribution of the Hudson, Essex, Chandler and Olds was placed in new hands.

The Stuyvesant Motor Co., which in 1920 built a $1,500,000 sales and service plant to handle the Hudson and Essex cars, has relinquished those two cars and has taken over the Chandler six from the Simmons Motor Co.

The R. J. Schmunk Co. has taken over the distribution of the Hudson and Essex models. Schmunk was for many years sales manager for the Peerless Motor Car Co. He left that company when R. H. Collins of Detroit acquired control of the majority of the stock.

The Simmons Motor Co. has taken over the distribution of the Oldsmobile from the Ohio Oldsmobile Co.

Royal Coach

$2145

[plus War Tax—f. o. b. Factory]

Setting a new mark for high-grade coach building at a low price is an uncommon achievement, yet this is what the Royal Coach is doing. The Royal Coach body is covered entirely with metal so that the high finish will be enduring. The best coach-building traditions are followed in every detail of the framing. There is no skimping anywhere! Subtract the price of the five-passenger Touring Car from the price of the Royal Coach and you will be startled at the slight difference. And you will be even more impressed after you examine the Royal Coach and see how much that difference in price buys—but you must see it! See this wonderful five-passenger Royal Coach today!

Profitable Line for Dealers

Two-passenger Roadster, $1695; five-passenger Touring Car, $1695; seven-passenger Touring Car, $1795; five-passenger Lark, $2045; five-passenger California Top, $1995; seven-passenger California Top, $2095; five-passenger Royal Coach, $2145; four-passenger Coupe, $2345; five-passenger Sedan [with two taxi seats] $2545; four-passenger Brougham, $2645

Wire or disc wheels $100 extra—except on Lark

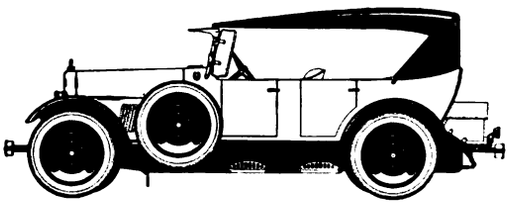
"No Extras to Buy"

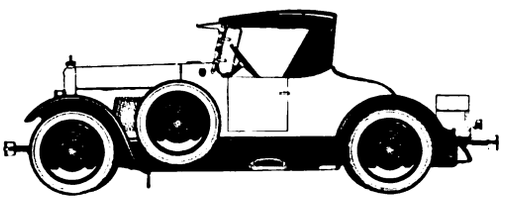
is a powerful selling appeal for the New, 1923

HAYNES 55 SPORT SERIES



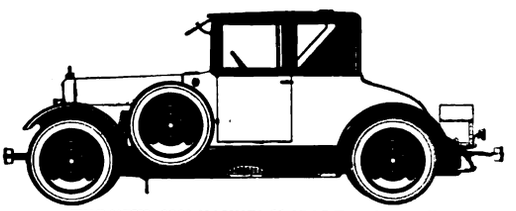
ALL that experience can suggest and the heart can desire in a sport model, will be found in the lavish completeness of equipage which distinguishes this newest offering of Haynes foresight.

It is distinctly what the motoring public wants. Any true sport model should possess such accessories as six disc wheels, six cord tires and tubes, sun visor, trunk and protection bars in rear, as well as the smartness of individual fenders and individual aluminum steps, and the convenience of handsome windshield wings on open models.



You find all these essential features on the new 1923 Haynes 55 Sport Touring Car —on a graceful body of rich maroon, with Spanish leather upholstery, and an accurately tailored top. The famous Haynes-built six-cylinder motor supplies the dependable performance and power which assure perfect motoring satisfaction.

With such a series to supplement the standard 1923 Haynes 55 and 75 models, the open territory available to good dealers becomes doubly valuable.



Are you qualified to represent the Haynes? Write, telephone or telegraph for an appointment — confidential if you desire. Address Dept. 1152.

A Prophecy

Hundreds of good dealers now selling good cars in the $1,000 class will eventually sell the Jordan also.

I'll guarantee to prove to you that you can make more money on twenty Jordans than you have ever made on fifty sales in the $1,000 field.

Will you let me do it?

Edward C. Jordan

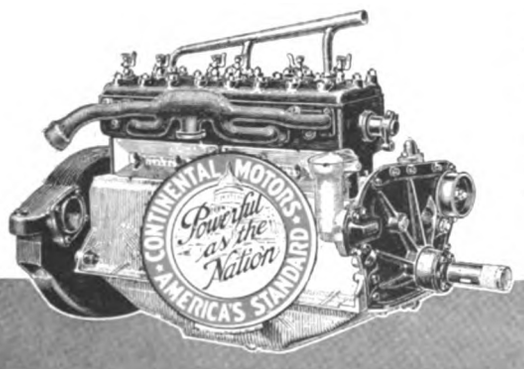
The modern sky-scraper is the development of the building progress of the last decade, a progress entirely due to comprehensive specialization in every field of construction.



The SPECIALIZED car is recognized as standard

Just as the progress of the last decade has developed these cathedrals of commerce—the modern sky-scrapers—the automotive progress of the last twenty years has developed the SPECIALIZED car.

Just as the skyscraper rises under the labors of scores of great specialist-organizations, the SPECIALIZED car is the result of the co-ordinated efforts of car builders and the leading manufacturers of specialized units—motor, transmission, universal joints, axles, clutch, etc.

SPECIALIZED cars are in constant demand and stay sold on the strength of the car's reputation and the added reputations of the manufacturers of their performing units; on their standing with the car-buying public; and on the uninterrupted performance assured by parts-distributing stations throughout the world.

See that your car is a SPECIALIZED car and that upon the crankcase of the motor is that sure sign of motor specialization—the Continental Red Seal.

Giving the User What He Wants and Drawing a Handsome Profit Yourself

The car owner wants a fan belt that runs at smooth, even tension and keeps the motor cool.

He wants a belt that won't snap, break or tear apart on motor acceleration—or stretch.

Hundreds of garage and accessory dealers are meeting this want with the Goodrich Fan Belt and turning a handsome profit.

Stock and push this better fan belt now. Easily applied—small investment.

"BEST IN THE LONG RUN"

Digitized by Google

The Centrifugal Governor

is a unique feature effecting the control, and economy of operation, of the Rolls-Royce Motor Car. When the Governor lever on the quadrant is set to any given position it automatically controls the maximum speed at which the engine will develop power (without the use of the accelerator pedal.)

Thus, when the car is running at speeds higher than that for which the Governor is set, the throttle will close, when the accelerator pedal is released, but, at lower speeds it will remain open

When the car descends a hill, at, say 20 miles an hour, with the Governor lever set at 15 miles an hour, the throttle is held automatically closed so long as the speed exceeds 15 miles an hour. This results in a marked saving of fuel and avoids popping in the exhaust when descending hills. This is one of the features which contribute to the unusual economy of Rolls-Royce cars, enabling them to do from 11 to 14 miles to the gallon of gasoline.

ROLLS-ROYCE

No Rolls-Royce has ever worn out

When starting from rest there is no need under any conditions to race the Rolls-Royce engine, because, as soon as the clutch is let in, and power demanded from the engine, the throttle is automatically opened wide by the Centrifugal Governor and the engine caused to develop its maximum power and speed at which it is set.

Equipment Makers and Jobbers Looking Into 1923

Convention and Show Will Bring 500 A. E. A. Members and Their Men to Chicago to Work for Bigger Business for Manufacturing, Jobbing and Retailing Divisions of the Trade

By NEAL G. ADAIR

MORE than 500 manufacturers of automotive equipment, with several hundred of their sales and purchasing representatives, will meet in Chicago next week to talk business. They will talk particularly about fall and winter business and generally about business for 1923. Exhibits of many of the industry's products will support the conversation.

The gathering is the annual convention and business exhibit of the Automotive Equipment Association. The place is the Coliseum, in the Windy City, and the dates are Nov. 13 to 18.

Just as the convention will not bring together all of the manufacturers and jobbers of the equipment field, so the exhibit will not show all the products of the industry, but both the convention and the exhibit, because of their representative character, will carry widespread interest for the trade. Manufacturers, wholesalers and retailers all over the country will have their eyes on Chicago while this great assemblage is in session.

The business exhibit this year will be exclusively for members and their representatives. It is a closed show, the first the association has ever held. Non-member manufacturers, jobbers and their representatives who have attended past exhibits as guests on invitations from members will not be present. The closed show is the product of the feeling of some jobbers that the privilege of viewing the exhibits and conferring with the manufacturers should not be extended to jobbers who take no part in the support of the association; in part also it is a result of the expressed sentiment of some manufacturers that they have all they can do, during a week's show, to talk with member jobbers and their buyers.

The closed show rule is not popular, however, with a great many members in both the manufacturers' and jobbers' ranks and it is virtually certain to come up for discussion with strong probability that the arrangement will be modified for future exhibits.

The convention will bring together 502 members, about evenly divided between manufacturers and jobbers. The exhibits will show the products of 213 manufacturers, the largest number to exhibit in the history of the association.

Beginning Monday, Nov. 13, the convention will be in session for five days and the exhibit, beginning at the same time, will be open six days. The plan which worked out so successfully last year, holding convention sessions in the morning and requiring attendance of delegates at the exhibit in the afternoon, will be continued.

The convention and the show taken together constitute a great agency of research into immediate and future business possibilities in the automotive equipment field. The business exhibit will present to the jobbers a striking array of the industry's merchandise, with suggested methods of selling it. Particular emphasis will be placed on new developments in the manufacturing and merchandising field. For the manufacturer the exhibit will present an opportunity for concentrated study of the coming season's and the coming year's possibilities of sales through the jobbing field. During the course of the week most of the manufacturers and their representatives will talk with a large number of jobbers and their buyers, getting an estimate of probable business in addition to placing some immediate orders. Last year there were slightly under 200 exhibits in the show. The raising of the total this year to 213 shows the keen interest of the manufacturers in this opportunity to show their goods and talk about them before an audience drawn exclusively from the wholesale distribution field.

The exhibit is expected to assist in clearing up to some extent many of the prevailing uncertainties in the automotive equipment field. Preconvention reports from some districts show equipment business, in volume at least, and in some cases in dollars and cents, running ahead of last year, while from some other large territories tonnage volume of business done is not up to last year's standard and money volume is far below. Manufacturers seeking indications of what business they may reasonably expect during the fall, winter and coming year, and jobbers in the process of deciding upon their lines for the coming season, alike

You Will Want to Read—

The account of the opening of the A. E. A. convention and business exhibit, in Motor World of Nov. 15.

The full report of the convention and exhibit in Motor World of the following week, Nov. 22.

Motor World editors will be in attendance at the convention and will spend many hours at the exhibit so that they can interpret for the trade the developments of importance alike to the manufacturing, wholesale and retail field.

Whether you go the convention or stay at home you will want to read the story. Look for the facts and sidelights in the next two issues of Motor World.

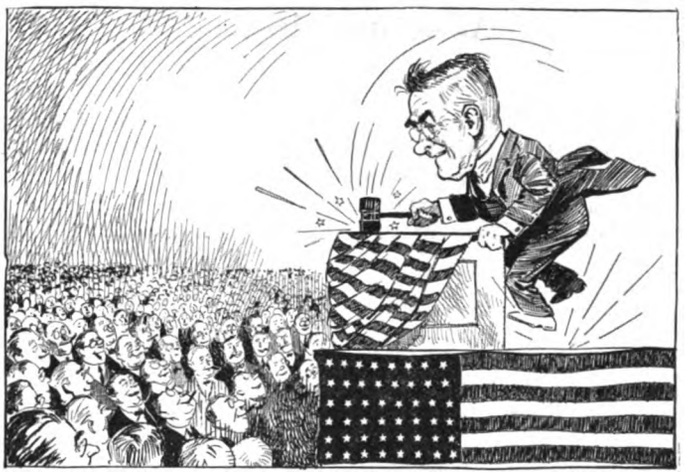
Digitized by Google

will have an opportunity to sound sentiment and opinion at this assemblage.

In the convention itself it is expected that the outstanding feature will be a report of the merchandising movement and an outline of its plans up until the time of the summer convention. Ray W. Sherman, merchandising director of the association, will come into the convention fresh from a trip of many thousand miles up and down the Pacific coast, and his observations on this and other recent tours, as well as plans of the merchandising committee for the winter and spring, will have a prominent place on the program.

One of these statistically inclined persons would have a wonderful time juggling some of the figures that have to do with the work of the merchandising movement. As the trade generally knows, the merchandising work revolves around two motion pictures which have been shown all over the country, the "Ask 'em to Buy" film presenting methods of selling automotive equipment at retail, and the "Shop Profits" movie, suggesting the use of system and adequate machinery and tools in the building of automotive service business. There are 28 of the "Ask 'em to Buy" films and 14 "Shop Profits" pictures in use in the sales promotion work of manufacturers and jobbers throughout the United States and Canada.

There is the first taste of the figures mentioned, but only a taste. Since the campaign started on Aug. 1, 1921, 684 merchandising meetings have been held, with nearly 60,000 people in attendance. Dealers and garagemen made up the bulk of the audiences but others were formed exclusively or in part of jobber salesmen and other representatives of jobbing and manufacturing houses. Sherman and his assistant, Edward S. O'Donnell, have traveled 75,000 miles in the work of holding sales promotion meetings and showing the films, and many other thousands of miles have been covered by jobbers and manufacturers' representatives and others who have conducted meetings without the assistance of representatives from A. E. A. headquarters.



More figures: The little book, "A Greater Business," printed companion of the "Ask 'em to Buy" film, has been distributed to 25,000 people in the trade, and the "Shop Profits" book has been put in the hands of 15,000 dealers and garagemen.

The A. E. A. authorized the merchandising movement at the summer meeting of 1921, voting $40,000 for the work at that time and continuing it with another appropriation of $60,000 at the mid-year meeting last June. The object of both the "Ask 'em to Buy" and "Shop Profits" phases of the movement is to indicate to the retailer the most effective methods of increasing profits by building up accessory sales and by the use of correct selling, record keeping and production methods.

Aside from the merchandising campaign, the convention will take up measures of co-operation between manufacturers and jobbers in furthering their own and the interests of retailers. There will be reports on the work of the traffic bureau, which every year collects considerable sums in over-charges for members. The convention will also hear reports of the year's work of the Universal Catalog committee and the standardization committee, which have compiled, published and distributed the Universal Catalog, describing products of manufacturer members, and the Standardization Handbook, which contains standard and recommended practices covering manufacturing and distribution methods.

Aside from the actual business of the convention and exhibit sessions, the A. E. A. meeting will bring manufacturers and jobbers together in informal and social gatherings, which have always been a strong feature of the meetings of this association. These meetings have been going on now for seven years, starting with the formation of the National Association of Automobile Accessory Jobbers, which later took in manufacturers as associate members, finally becoming the Automotive Equipment Association, and three years ago putting manufacturers on an active membership basis, which is the present status of the association.

The A. E. A. is one of the strong national associations in the equipment field, having members in Canada as well as the United States. Other associations in this branch of the industry include the Motor and Accessory Manufacturers Association and the Association of Automotive Equipment Manufacturers. The M. and A. M. A., as its name indicates, includes many engine and unit parts manufacturers as well as manufacturers of replacement equipment and accessories. The Association of Automotive Equipment Manufacturers, with a nucleus of Chicago members, has been building strength throughout the country until now it has upwards of 100 members. It is confined to makers of products within the equipment field. It has no jobber members and intends to function exclusively as a manufacturers' organization. Some of its members, like some of the members of the M. and A. M. A., belong also to the A. E. A. For the present the three associations, in different degrees of importance, are holding the center of the stage in the equipment industry.

When the Gavel Falls—

WHEN Commissioner William M. Webster calls the Automotive Equipment Association to order in Chicago one of the most important meetings of the year in the automotive industry will be under way.

The program is summarized as follows:

Monday, Nov. 13

10 a. m.—Opening of convention. Address of Howard M. Dine, president of the A. E. A., Canton, O., Commissioner's report.

2 p. m.—Opening of business exhibit.

Tuesday, Wednesday, Thursday, Friday

9:30 a. m.—Business exhibit opens, remaining open all day.

10 a. m.—Manufacturers' divisional meeting Tuesday, jobbers' divisional meeting Wednesday, general convention sessions Thursday and Friday.

Saturday

9:30 a. m.—Business exhibit opens, remaining open all day.

213 Manufacturers to Show Products at Chicago

Space Reservations Indicate A. E. A. Show Will Be Largest in Association History

TWO hundred and thirteen manufacturer members of the Automotive Equipment Association have taken space for the fourth annual business exhibit of the association, to be held at the Coliseum in Chicago, Nov. 13-18. The exhibit will be open Monday afternoon, Nov. 13, and all day the rest of the week. Following the successful experiment of last year delegates, who are required under the association rules to attend all convention sessions, will be obliged also to be present in the exhibition hall from 2 to 4 p. m. on Tuesday, Wednesday, Thursday and Friday.

The list of exhibitors follows:

A

Acheson Graphite Co., Niagara Falls.
Advance Automobile Accessories Corp., Chicago.
Air Reduction Sales Co., New York.
A. C. Spark Plug Co., Flint, Mich.
Ajax Auto Parts Co., Racine, Wis.
Albertson & Company, Sioux City, Iowa.
Allen Auto Specialty Co., New York.
Alvord Reamer & Tool Co., Millersburg, Pa.
American Chain Co., Bridgeport, Conn.
American Bureau of Engineering, Inc., Chicago.
American Hammered Piston Ring Co., Baltimore.
American Bosch Magneto Corp., Springfield, Mass.
Apex Electric Mfg. Co., Chicago.
Appleton Electric Co., Chicago.
Anderson Co., South Bend, Ind.
Atlas Specialty Mfg. Co., Chicago.
Atwater-Kent Mfg. Co., Philadelphia.
Automotive Products Corp., Hazleton, Pa.
Automotive Equipment Association (Merchandising Department), Chicago.
Automotive Journal Publishing Co., Pawtucket, R. I.
Au-To Compressor Co., Wilmington, Ohio.

How Some Jobbers Are Cooperating in the Merchandising Plan

MANY jobbers have been particularly successful in carrying the "Ask 'em to Buy" idea to the retail merchants and through them to the public. Their plans have been widely varied in detail and have approached the subject from different angles, but in most instances where the activities have been aggressively followed up they have developed stronger markets and better dealers.

On this and the following pages are some descriptions of the outstanding features of a few jobber activities in co-operation with the central merchandising plan. Many other jobbers have worked out plans that are equally as effective.

Putting a Winter Punch Into a Selling Campaign

A SEASONABLE "Ask 'em to Buy" campaign featuring holiday suggestions for motorists has been inaugurated on an extensive plan by the Beck & Corbitt Iron Co., St. Louis jobber, through the November issue of the *Accelerator*, a supplement to the regular catalogue published monthly to speed up dealers business.

This is to be followed by the December number which will be a special "Dealers Retail Christmas Number" devoted exclusively to "Gift Items," and the retail price only will be shown with the article listed. A separate dealers net price list will be included in the back of the book. The descriptions of the goods shown will be written to best advantage for retail use and the cover copy will be especially designed to attract Christmas shoppers.

"This arrangement," said A. R. Rooch, sales manager of the Beck & Corbitt Iron Co., "will enable our customers to sell their trade from *The Accelerator* without revealing their costs. In this way it will be very serviceable to them for Christmas merchandising.

"The decision to list only the retail prices along with each item in the Chrismas number was made after we had received hundreds of answers to our questionnaire sent out as a "flyer" with the October issue of *The Accelerator* requesting the dealer to state his preference on a coupon printed on the flyer. Not only did the majority of the dealers prefer the change but many of them sent in orders for hundreds of extra copies to be used by them to circulate among the automobile owners in their respective territory.

"We, therefore, intend to get out as many copies of the December *Accelerator* as required by our customers, at a cost to them of 10 cents each. The covers will be so arranged that the dealer will be able to have his name printed on them."

In addition to the *Accelerator* the company furnishes a colored Xmas display card free for window or showcase use. The card is 11 x 14 in.—6-ply cardboard in 3 colors—suggesting 16 ideal Christmas gifts, with a Christmas border. One card is included with each order of goods shipped since Nov. 6.

WINDOW DISPLAYS IMPORTANT.

Well trimmed windows are a very important factor in creating a Christmas mosphere and impressing upon the mind the passer-by the appropriateness of tomotive gifts for Christmas. A Christs window is very easily set up and need be at all expensive. A very satisfactory effect can be obtained by setting a Christmas tree in the center of the dow, covering the floor with white or paper upon which can be laid those les which the dealer believes to be suitable and the whole display can corated with tinsel and dusted with tion snow that can be secured for ation purposes. Stop signals, visors, other highly colored articles lend lves readily to such displays. Show play card we furnish (see page 1) ently in your window. These card. o be displayed effectively in your

be satisfied if they buy one present, ask em to buy another for some other friend. If you don't, the customer will merely go to another store and buy it. Keep the purchase within your store, for that's where it counts in your cash register.

GOOD CANVASSING IDEA

Calling at the homes of customers and suggesting to the women of the family that they give "something for the car" as Christmas gifts will bring good results.

SOLICIT BY MAIL

Good results can be obtained by sending a form letter to the wives of car owners, calling their attention to the many appropriate automotive gifts that will be greatly appreciated by relatives and friends owning cars. This plan brought big returns for a number of live dealers last year. If you have a mailing list, (you should

NOVEMBER IS HERE!

Get Ready for Christmas Sales

Display and Push Winter Goods

NOW

November is the month of two fold opportunity for the Automotive Equipment Dealer

With the approach of cold weather, comes the time to realize profits on the motorist's needs for winter necessities. The dealer who would make the winter months a "live" season instead of the before "dead" season, must begin NOW to get his house in order. He should provide to have his stock in before Jack Frost arrives in earnest—his seasonable goods well displayed and his plans laid for an aggressive "Ask 'Em to Buy" appeal to the motor car public, based on display and personal selling.

Every motorist who stops at your place of business Mr. Dealer is a likely purchaser of one or more of the many useful articles of equipment that will add comfort and economy to his car in winter. Are you going to be prepared to get the extra business with the worthwhile profit that goes with it?

This issue of the Accelerator shows a good selection of staple cold weather items—serviceable articles, that the average car owner will be glad to buy if they are shown to him and their merits explained. On pages 2 to 5 we outline a number of successful merchandising plans that will produce a quick and profitable turn over on winter goods, for any dealer who puts them to use

And then comes December, the big "pre harvesting" month for retail merchant all lines of business.

Only within the last year or two, has Automotive Equipment Industry awak to the tremendous possibilities Chris offers for the sale of its merchandise past, jobber and retailer alike, reg December as a poor month and accept falling off of their business for that pe a necessary evil. They sat quietly by the dealers in all other lines of busine earning big profits by Christmas m dising.

This year will record a different sto industry is awake to the big sellin tunity, and live dealers will cash i Christmas buying spirit. Whether ness is a garage or an accesso whether it is a battery shop or whether you have a car agency o pair shop, you can realize big pro coming Christmas season, if you effort to do so. Look over the pages for useful suggestions tha you plan your campaign.

Above all—don't delay. Have in, your displays arranged and plans ready by December 1st.

WINTER SELLING PLANS THAT WILL PAY DIVIDENDS

Selected from Motor World Winter Business Number

WINDOW AND INTERIOR DISPLAYS

1—Feature each week one or a related group of winter leaders and surround them with a few staple items as reminders. The WINTER LEADER should dominate the window. But it should be more than displayed. It should be SOLD as a winter necessity with signs, cutouts, catalogs, etc. Suppose the winter leader this week is a windshield wiper. One might be mounted on a windshield in the center of the window, the glass covered with Bon Ami or some other white substance to show the sweep of the wiper. A neatly lettered card mounted on the windshield or in the window, in front of it would carry the selling message—tell the public why motorists NEED windshield wipers in winter. Make the display SELL the featured article.

2—Make timely special displays. On stormy mornings feature some particular items such as skid-chains, windshield wiper or radiator hood. In white paint on the side of the window glass where it will not obscure the view of its contents, print—SPECIAL—Windshield Wiper ... (Price)

3—A wall case or display counter showing well displayed seasonable items, near the door where customers going in and out will see them will make sales for the garage or service station.

MAIL ADVERTISING HELPS

1—Keep the mailing list up-to-date. The best mailing list is one which contains the names of all people who have purchased previously. These names may be gotten and added to the list by providing that the name and address and name of car owned be required for and written on the sales check when it is being made out. The duplicates then go to the person in charge of the mailing list to be added to it. Classification of the mailing list according to car ownership is sometimes of practical assistance when its surwarrants.

2—Have letters typed or pamphlets printed presenting certain accessories as winter necessities and attach to these descriptive factory literature.

3—Have postcards printed presenting newly stocked items and send them out as required. Postcard efforts of this nature are usually most effective if they contain a short, trite message and a picture of the article. Suppose the article to be sold is a radiator cover. A cut of the cover one quarter to one-half the size of the postcard probably would be supplied by the jobber or manufacturer on request. In fairly large type under it or over it might be printed the name of the particular item and its retail price. The selling message might be as follows: "Are You Wasting Power this Winter?" Heat is essential for the efficient operation of your engine. Protect it with a well fitted radiator cover and relieve your nerves and your battery of the strain of starting a cold engine. We have just received a brand new stock of Radiator Covers. Come in and let us fit one to your car." Don't waste power this winter!"

Selling literature can be made stronger this winter if it always—Tells the motorist WHY he needs a particular accessory this winter—Tells him that you SELL just the item to meet that necessity—Asks him to BUY it FROM YOU.

SELLING IDEAS THAT WILL MAKE SALES

1—Ask people to buy winter accessories, mentioning particularly the WINTER LEADERS, and telling why these items OUGHT TO BE ON EVERY CAR this winter.

2—Make a practice of mentioning at least one WINTER LEADER to every customer who comes in to buy something else. Mention new goods particularly saving. "Have you seen the new ... yet?" etc., and proceed to tell its virtues as a winter accessory.

3—When the weather is inclement mention particularly some item that MIGHT be needed by the motorist on account of the weather condition of that day. People buy when necessity presses.

4—Put on a sales contest for employees with prizes for winners or pay small commissions on gross sales ER LEADERS and point out the necessity for them this winter.

5—Use the telephone. Make a selected list of customers and phone them telling them about your WINTER LEADERS and point out the necessity for them this winter.

6—A good plan for garages and service stations is to supply employees with "Accessory Prospect Report Forms" which provide a space for car owner's name, make of car, etc. and show a list of winter necessities. Have them look over all cars that come in and check on the blank, the items of equipment the cars lack. Then canvass the customer either by letter or through an alert salesman for possible accessory and equipment sales. The owner will usually buy, if he is shown that the article he needs will add comfort and safety to winter motoring.

ABOVE are shown four pages from the November issue of The Accelerator, published monthly and distributed among its dealers and salesmen by the Beck & Corbitt Iron Co., St. Louis automotive equipment jobber. This issue was bristling with practical winter selling suggestions and particularly with Christmas merchandising ideas. Note how this jobber is cooperating with its dealers by furnishing display cards, fancy wrapping paper and twine and other Christmas selling properties at cost. The page shown in the lower right corner is a reproduction of winter equipment selling plans from the Winter Business Number of Motor World, Oct. 18, 1922.

Digitized by Google

Christmas wrapping paper and twine at cost also are offered the dealer. The paper is printed in red and green while the twine comes in assorted colors.

The company's salesmen are now following up the November *Accelerator* with a personal call upon each dealer throughout Missouri, Illinois and the Southwest with additional winter merchandising plans which were outlined at a special sales conference held at the company plant Monday, Nov. 6.

Each salesman has been requested to co-operate with the dealer and to assist him in every way possible to make the winter months a live selling season.

The plan outlined to catch the Christmas shopper consists of well trimmed windows with the Christmas idea prevailing throughout, direct selling, or "Ask 'em to Buy" automotive presents, canvassing the homes of automobile owners, soliciting by mail, sending the wives of car owners a suggestive list of suitable automotive gifts, and using the telephone to solicit orders.

Some of the items suggested which are adapted for the motorists at this time of the year are anti-skid tire chains, radiator and hood covers, radiator shutters, anti-freeze solution, heaters, electric hand warmers, robes, primers, electric engine heaters, top recovering, bumpers, Moto-Meters, windshield cleaners, windshield wings, dome lights and other useful and necessary accessories.

Sales Meetings and Films Stir Southern Dealers to Action

Spreading the Gospel of "Ask 'em to Buy"

More than 200 meetings in the last forty weeks, usually attended by ninety per cent of the dealers invited and with an aggregate attendance roughly estimated at 28,000 men actively interested in selling, have been one of the means of educating and inspiring dealers used with gratifying results by the Osborn-Abston Co., Memphis jobber. The company also operates a large branch in Atlanta

"DEALERS who were making $100 and $200 on automotive equipment are now making $1,000 and more. Accounts that were formerly c.o.d. have become open accounts, with the dealer discounting his bills."

These are concrete results of a merchandising campaign that has been aggressively conducted by the Osborn-Abston Co., Memphis jobber. This campaign, in its general scope, has embraced most of the suggestions that have been developed by the merchandising activities of the Automotive Equipment Association, and includes as an important feature the showing of the films: "Ask 'Em to Buy" and "Shop Profits."

Shortly after the merchandising work was started by the A. E. A. this firm selected George E. Brusch of the sales organization to show the films and deliver lectures to dealer meetings. Up to the present time he has been busy every week and has shown the "Ask 'Em to Buy" film in practically every town in the Memphis territory, averaging five to seven meetings weekly.

A week before these meetings the salesmen make arrangements for them, for the hotel or picture theater in which the film is to be shown and take care of the details. Written invitations are sent to the dealers telling about the work, asking them to be present and giving the time and place the show is to be held.

The sales department, two or three days before each event sends postal cards as a second reminder. Brusch manages to get into each meeting town, meet the dealers personally and give them whatever merchandising assistance he can, including suggestions for window displays, stock arrangement, advertising, sales solicitation, etc.

Brusch makes no attempt to sell on these trips. Besides the film there are refreshments, and if there is no dealer organization in the town an attempt is made to establish one at the meeting, or at least get the dealers thinking seriously on the subject.

No advertising for the jobber is allowed to get into the meeting. It is planned purely as a co-operative step, extending a helping hand wherever the opportunity arises. The selling is taken care of only by the territory salesman, after the meeting has been held.

Since the beginning of this program of meetings Brusch has spoken to about 28,000 people interested in selling automotive equipment and tires in more than 200 meetings. He has held an average of five meetings weekly during the time.

The close cooperation of the salesmen in the territories visited by Brusch has contributed considerably to the success of the project. Not alone in the missionary work necessary to insure a good meeting have they been valuable, but particularly in following up the meetings by calls upon the dealers in which they helped translate the inspiration gained by the dealers at the meetings into actual selling effort in the stores and garages.

In addition to the meetings this firm gets out timely literature. One of the latest efforts is a Christmas poster for the dealer which suggests the purchase of automotive equipment for Christmas gifts.

Selling Ideas and Leaders Suggested in Bulletins

A MONTHLY four page bulletin which carries in each issue a timely merchandising idea and suggests weekly leaders is a feature of the merchandising service extended to its dealers by the American Motor Equipment Co., Boston jobber.

These bulletins, entitled "Automotive Leaders" feature prominently the slogans "Ask 'Em to Buy," "Ask 'Em to Pay," "Give 'Em Real Service" and in each there are short, interesting articles which present some practical method of translating these slogans into action in the dealer establishment. The first page of each bulletin is devoted to these articles. On the double page spreads formed by pages two and three are presented each month a few suggested "leaders." These leaders are selected because of their particular timeliness as objects of merchandising effort. Among them are some of the items of equipment that are all year round sellers, but they are presented with special suggestions for selling them with a timely appeal. The last page of the bulletin is devoted to the presentation of some item of shop equipment.

After reading these bulletins the dealer is expected to display them prominently on a bulletin board so that the salesmen in his store or garage may refer to them and constantly have before them the items they are going to push that month.

Another activity that has been helpful to this jobber in spreading the merchandising gospel is the distribution of a number of handbooks of "desirable comforts and conveniences for the motor car." In this booklet, there is grouped a compact, workable, salable list of the items almost universally of interest to both the new car and used car purchaser.

AUTOMOTIVE LEADERS

Monthly Bulletin of
AMERICAN MOTOR EQUIPMENT COMPANY
181 Massachusetts Ave., Boston

Published in the Interests of our Dealer Customers

April 24, 1922

Ask 'Em to Buy

TO OUR DEALERS

Ask 'Em to Pay

Remember—Customers do not know what you have to sell unless you tell them

Plan ahead—Don't wait until Mid-Summer before you start to sell Luggage Carriers, Stop Signal, Oil, C. & M. Grease Retainers, Spare Spark Plugs, Bulbs, Fan Belts, etc., etc.

Specialize on one article per week—you will not only sell more, but become a better merchant by so doing.

The Bulletin will furnish you a suggestion of certain articles to use as Leaders for one month. Many dealers have made money by adopting our suggestions. Try it out for at least one month and let us know the results.

Manufacturers spend millions of dollars each year to tell the Public about their Products that you carry. What are you doing to let these car-owners know that they can obtain this material from you?

Monthly Bulletin Carries Timely Selling

Here are two pages from the monthly bulletin of the American Motor Equipment Co., Boston jobber, in which a point is made to suggest a timely selling idea or two each month and in addition to this present each month a few "leaders" which are recommended for special selling attention during that period

A Pair of Equipment Selling Ideas

THE Blackstone Motor Co., Inc., Maxwell-Chalmers dealer in Binghamton, N. Y., uses an interesting card in reaching buyers of new cars with an equipment selling appeal. With a few obvious changes the card might be used profitably by many dealers.

On the face of the card is the following message: "In going over our records we find we have a number of deliveries to make within the next two months. In order to serve all of our customers without delay, we would suggest that you notify us as to about the time you expect to take delivery, and if you want any extra equipment installed, a list of which is printed on the back of this card.

"This extra equipment is manufactured by reliable accessory houses who make a specialty of equipping Maxwell cars. We offer this equipment at particularly attractive prices installed on your car. Extra equipment to be paid for at time of delivery. Please fill out and return."

The reverse side of the card contains a list of equipment with prices, including tire tube and cover, stop signal, Moto-Meter, spotlight, side windshield, five gallons oil, chains, tire chains, grease, pressure gage, body polish, nickel polish, theft lock, extra spark plugs, bumper, door pads. At the bottom of the list is the following message, to be signed by the new car purchaser and returned to the dealer: "Please arrange to make delivery on my car on or about ..... with above equipment (indicated with X). Name ....., Address .....

THE entire shop and office force of the C. & A. Auto Supply Co., equipment and tire dealer in Pittsburg, Kan., was organized into two competing teams and a contest in "Asking 'Em to Buy" was held. The contest covered a period of 30 days and developed a keen rivalry and aggressive selling effort on the part of all the employees which resulted in an increase of tire sales from $900 to $3,500.

There is a winter selling suggestion for many other equipment and tire dealers. A sales contest may be just the thing that is needed to prevent the inertia that creeps in some sales forces in winter. Why not make things hop in the store this winter with monthly sales contests, in which suitable prizes are given to the leader at the end of each month.

Traveling Service Man Builds Good Will for Distributor

Educating Dealers and Owners in the Care of Cars Proves a Profitable Investment

By W. W. BARNETT
Oldsmobile Distributor, Denver

IN traveling over the territory myself and in listening to the reports of my wholesale salesmen, I came to the conclusion that the dealers out through the territory needed assistance along mechanical lines and needed it badly.

I knew that the cars we had sold were good and that they would give good service if given proper care and attention and realized that the owners must be educated so as to get the best results in the use of their cars.

The dealers' demonstrating cars were not kept in the shape they should be—were not developing the power and the speed they should—were not as quiet as they should be—all due to lack of attention and thought.

ON my return from a trip to Wyoming, where I visited a number of our dealers, I decided to put a man on the job to be known as the wholesale traveling service man. I studied the men in my own organization here in Denver to find a man that was fitted for the position, and finally, after very serious thought and consideration, selected Arthur Hurt, a man working as a mechanic in the service department.

Knowing that he would come in touch with possibly dissatisfied car owners—possibly with discouraged dealers—possibly with difficult mechanical problems to solve—the man had to be one capable of meeting the car owners themselves in a pleasing manner. He had to be one capable of cheering up and "pepping" up the dealer himself, and a good "trouble shooter," as we have all learned to express that ability of a mechanic to locate trouble.

In addition to all of this, he had to be a man who was willing to take off his coat and get into the actual work of adjusting and repairing automobiles—fixing up the customers' cars—working on the dealers' demonstrating cars, instructing the dealers' service men, showing them carburetor adjustments, bearing adjustments, etc.

I feel confident that at a time when the distributor's dealer organization was likely to become wobbly, likely to become discouraged through lack of sales or for many reasons—or might think, "Well, if I sold some other make of car I might do better," the giving to my dealers of this assistance has tended to hold my dealer organization almost intact and has enabled them to do more and better business than they would have done.

Here in Denver it was impossible to keep in touch with the hundreds of Oldsmobiles out in the territory and only through actual visits to the various dealers and meeting through the dealer the car owner himself, could we learn of the occasional one that might be having trouble due to using of poor oil, misuse, neglect or actual ignorance.

In many cases the wholesale traveling service man has transformed a dissatisfied owner to a real booster, which we all know is the greatest asset any automobile agency can possess. The mere fact that we were interested enough in him and his car to send a man from Denver to look it over and make adjustments and suggestions was bound to please many car owners, and the results of a few hours' work made in nearly every instance a booster of him.

After several months of this service I am confident that it was a very wise move and have received letters, telegrams and telephone messages from Oldsmobile owners and dealers throughout the territory, expressing their appreciation of the wonderful service rendered.

It costs money, but has been worth it.

W. W. Barnett

His traveling service man preserves good will of dealers and owners

Eleven Things to Make a Tire Business Better

IN the analysis made of a tire dealer's place of business which was not doing very well, eleven reasons were discovered showing why trade was poor. Here are the remedies outlined to help him to better business. They may be worth something as suggestions to you:

1. Reduce tire stock to practically one line.
2. Cut down operating expense—salesman, bookkeeper, office supplies to just what is needed to care for trade. Cut out salesman's car and possibly proprietor's car.
3. Tear down all old signs and clean up entire establishment.
4. Display only signs which have real meanings.
5. Paint front end of store—inside and out.
6. Tear down partition of "private office" and instead, build a railing around desk space.
7. Install some sort of a background—a railing and curtain or beaverboard for window display.
8. Make tire rack space smaller and install more shelving for other goods.
9. Contract with newspaper for small ad—one column by two inches, preferred position, to appear in the daily newspaper two or three times a week.
10. Send out 12 letters per year to selected list of car owners.
11. Contact with as many of this list as possible by telephone.—*The Goodyear News.*

Give Away Profits to Make Sales? —Not on Your Life!

H. A. Testard, New Orleans Hudson-Essex Dstributor, Tells Some Merchandising Policies That Have Made Him a Successful Dealer

LOCATE in the business district. Do not give away anything to help sell your cars. Never let your customer get a false idea of what he is buying and keep in touch with those who drive your cars to get prospects.

These are the salient points of policy pursued by H. A. Testard, distributor of the Hudson and the Essex in New Orleans and one of the veteran dealers in that city. Testard adds that frequent rather than large newspaper advertisements get the business and that he has never paid more for a used car than he could get for it. He places the greatest emphasis on selling cars and accessories as un-associated transactions and does not permit his salesmen to present extras to their cutomers. This is part of his policy of convincing every buyer of a car that he is receiving the same treatment as others get.

"I SOLD bicycles before the days of the automobile and for some time after," says Testard, "and so far as it has been physically possible I have pursued the same policies during all my business career.

"First, I have always had my business as close to the center of the commercial and financial district as possible. This has forced me to be satisfied with much smaller space that I could get for the same investment or the same rent farther away. When a potential buyer has become deeply interested in a car, he will usually go any distance to inspect models. The first thing, however, is to interest him and I have found it easier to have a man or woman call at a convenient location in the business district. My present location, which I bought some time ago, is five blocks from the retail merchants' center, Canal Street, four blocks from the center of the banking district and less than that from the two larger hotels.

"While many able dealers disagree with me in this and have spent large sums farther away from the business center, I have never had any reason to doubt that my judgment in the matter of location is good.

"The next policy I have pursued is of as great or greater importance. That is that every customer's dollar is the same dollar to me. Mine is a one price house. I give away no extras nor do I permit my salesmen to give accessories to customers and pay for them themselves. I do not believe in eating into my profits by giving anything away, so everything I have in the place is sold for money.

"The fact that I have sold cars to the same persons for years is evidence that refusal to give anything away is a good policy. *It convinces the customer that he is getting his money's worth in the car.* It further convinces him that he is being treated the same as all other buyers, which I have found to be the basis of many sales.

"No man has ever made a greater effort than I have to see to it that the man who buys a car from me not only understands exactly what I have sold him, in and on the car itself and in service. I do not permit a customer to take his car with the impression that I intend to maintain it, regardless of accidents or careless driving, for any length of time, not even one day. When he receives the car from me, it is in the best possible condition. He is provided with all the information necessary for its proper handling. He knows just what the guarantee is and just what service in the way of adjustments and tuning up are sold with the car. This is, after all, only a phase of the 'one price' policy in that the customer always knows exactly what he buys and knows also that no other customer is getting something different for the same money.

"In addition to the routine work of the salesmen as conducted in every dealer's establishment, I make it a practice to write people I have sold to inquire whether they know of anyone else who might buy a car. I have been doing this for years and it pays. Most of the replies come by telephone, though I always inclose a stamped and addressed envelope.

"I have never overlooked the value of newspaper advertising, nor have I ever gone in for great spreads of space at one time. On the contrary, I have always favored frequent adver-

Plain Common Sense

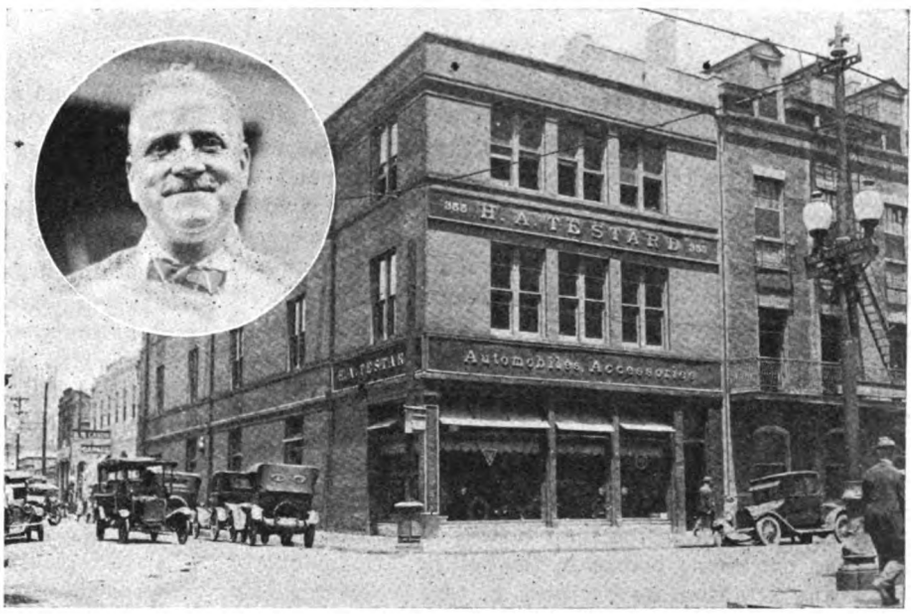
THERE is nothing thrilling or unusual in the methods of merchandising that have made the business of H. A. Testard, New Orleans Hudson-Essex dealer, a successful concern. There seldom is in the growth and prosperity of a lasting business.

But—like many other dealer enterprises—there is the indication of a clear conception of the fundamentals of good merchandising and the application of those fundamentals every day in the year.

Testard lists among the fundamentals of a successful dealership:

1—Locate in the business district.
2—Do not give away anything to help sales.
3—Never mislead a customer.
4—Use owner good will to find prospects.

Much is heard these days about giving away something to sell—in the used car phase of the business, and in other parts of the business. Testard has some definite thoughts on the subject. This story expresses some of them.



Digitized by Google

tisements of fair size in good locations in the papers. Big space and freakish displays of type and cuts have their value for certain purposes, such as attracting attention to something new or putting on a 'drive,' but I have never conducted a 'drive' and do not need that kind of advertising. *I keep the names of the cars I sell and my name before the newspapers by constant repetition rather than an occasional shout.*

"I have never yet allowed more on a used car than I could sell it for. Many a dealer has given away his profits by allowing too much on used cars. That is what made the used car such a serious problem in the business. It has never been much of a problem with me, as I have consistently kept on the safe side and I have never failed to tell a customer that that is where I intended to keep. *Every prospective customer, if properly approached, will appreciate the fact that the dealer is in business to make money out of the distribution of cars and not simply to distribute cars.* Dealers in pianos had the same experience with the used piano that we have had with the used automobile. They have solved the problem just as I solved it, and just as many other sensible dealers are solving it. That is, by offering what the used article is worth and standing like rock against any argument for further allowance.

"My advice to every dealer, and every prospective dealer, is to refuse to part with any of his proper profits for the purpose of making a quick sale. Get good cars and a good, central location and employ salesmen who are in sympathy with the policies I have outlined and if there is a possibility of success in the field it will develop into achievement."

He Doesn't Give Away His Profits Here

Above are pictures of H. A. Testard, Hudson-Essex distributor in New Orleans, and his place of business. Testard has built a good business by applying some sound merchandising principles, not the least of which is that the dealer is entitled to a fair profit and should not give it away to make sales. He tells an interesting story of the success elements in his business

3 Profit Producing Ideas for the Automotive Equipment Dealer

W. H. WHITE, manager of the equipment department of the Central Ford Agency, Seattle, Wash., discovered in cheese cloth a substantial source of profit and a puller for sales of other products. In taking stock of his department he discovered several bolts of cheese cloth which had been in stock a long time. There was no record of a sale of any of this material over several months.

White decided to move the cheese cloth. It was cut into three-yard lengths, neatly folded into a small compact package, wrapped with orange crepe paper held in place by rubber bands. The white ends of the cheese cloth were allowed to stick out. It made an attractive and interest compelling package. These were piled in a window, with a neat price card, each package priced at 20 cents.

No record was kept of the time, but the cheese cloth in this package sold out so readily and speedily that White was prompted to buy some more and see if the charm still worked. It did. Now he buys cheese cloth in bales and as many bales at a time as records show they formerly bought bolts. The buying price by bales and in larger quantities is substantially less than to buy in bolts. The retail profits are about 40 per cent greater than they were when stock was bought by bolt. And the retail price is less than the same grade of cheese cloth can be purchased for in the same lengths in the dry goods stores.

The increased profit and sale is the primary value of this "cheese cloth idea." The secondary value has been the sale of body polishes. The cheese cloth packages now are stacked on a table, on which is also a display of body polishes and cleaners. This table forms one of the most interest compelling displays of the entire store room. The orange color of the paper around the cheese cloth does the trick.

"I only wish that I could dig up another idea, once a year, just as good as that one," says White.

THERE was a charity ball in a middle western town recently and one enterprising accessory merchant arranged with the managers of the affair to install about ten of his spotlights around the hall. He wired up these spotlights so they could be operated during the dance. Then he advertised quite extensively that his spotlights were to be used in this way. This gave him a lot of unique publicity which helped him sell more spotlights to the people interested in the affair, as they were anxious to reciprocate for the help he had given them in making the dance a big success.

HERE'S one way to build confidence of the customer in the battery service manager:

"We keep readings of batteries while on charge," said Harry Jennings of Jennings Brothers, Kansas City, Kansas. "If there are indications of a weak cell, we tell the customer, when he comes for the battery, that such and such a cell will give him trouble in so many days. The cell goes bad; the customer comes in and admits that we hit it right. This customer is sure, even after one experience of this kind, that we know batteries, and that we are telling him the truth. He can see that we are watching closely for the protection of his interest. And the confidence built for us cannot be estimated."

Editorial Notes

Education on Selling

WHEREVER one goes in the industry these days he hears talk of the need of more salesmen than are now available thoroughly informed in automotive subjects and in the finer points of the processes of selling. One distributor said recently that he could place in his dealer organization all the real salesmen he could get. Another said if he could find a way to finance such a plan, possibly with factory assistance, he suggested, he would develop a school in which men could develop or improve themselves for automobile sales positions both in his own and his dealers' organizations.

There is no question but keener competition is putting salesmen to the test as never before. Some of the stars of former days are losing their lustre. New men or men who had not shone before in the selling firmament are attracting attention as business getters. Few big city organizations have all the capable salesmen they need. In the smaller dealerships the lack of employees with selling ability is even greater.

Some manufacturers have undertaken schools of salesmanship for sales executives of their dealer organizations and a few with limited numbers of dealers have found a way to pass on to retail salesmen opportunities for intensive sales study, generally for brief periods. The question now arises, must manufacturers and perhaps distributors who are going to retain or gain secure positions in the competition of the future develop means of enabling great numbers of retail salesmen to improve their ability to convince prospective buyers? Is education of dealer organizations to become a new function of the factory branch and distributor?

Apparently more must be done than in the past to foster knowledge and ability to present it in the country-wide ranks of men who are selling the industry's products to the public. One of the pressing problems of the industry is to discover how to do it.

That Christmas Gift

IT is encouraging to note the activity of a number of manufacturers and quite a good many jobbers of automotive equipment in promoting sales of something-for-the-car for Christmas gifts. Several manufacturers have made up paper over-covers in holiday colors for the containers of their products. The dealer can throw the jackets away and sell the article in its regular package after Christmas. Several jobbers supporting the efforts of their salesmen with effective printed matter—some of it taken from the pages of Motor World—are pointing out the profit possibilities in Christmas gift merchandising.

There is no arguing that there are abundant possibilities. "That Christmas present, what shall it be?" thousands of voices will be asking a month from now and the wise dealer or garageman will answer with display, advertising and aggressive selling of articles that are not only useful and appealing but that will be received as "something different" in many households where the car is a prized possession. By this time the manufacturer has had to complete his preparations for holiday business. There is still time for jobbers and retailers to get into the Christmas picture.

Giving Away Profits

SOME years ago the automobile industry was exercised over guarantees and free service. After much thunder and lightning the manufacturers got together and formulated the so-called "Standard Warranty," which definitely stated that the manufacturer would stand behind his product for a period of 90 days from the date of sale and replace any defective parts. The manufacturer did not agree to pay for the labor of taking the defective part out and putting the new one in, or for the cost of shipping any parts involved in the replacement transaction. The car owner, ostensibly, but the dealer, actually, bore the burden of these costs.

However, much good was accomplished by the general acceptance of the standard warranty plan and some of the frenzied competition of earlier days was eliminated.

Lately there has sprung up in many parts of the country a new form of competition. This is a guarantee of a long period of free service, sometimes covering a year. Apparently in most cases the cost of maintaining the free service for the specified period of time is carried by the dealer. It represents a definite charge to be added to the cost of selling each vehicle.

In too many cases dealers' salesmen are putting this feature right up at the front in a sales talk, expanding on the advantages of running a car for a year "at no service cost" and neglecting to bring to the attention of the prospect the design and construction features of the car.

Naturally such a sales policy pursued by two or three dealers in a town of moderate size materially affects the sales of other dealers and forces them either to operate on a similar policy or to offset this form of competition in some other way.

It seems incredible that dealers who have been through this form of competition should fall into it again. It means nothing more or less than cutting the price, giving the owner labor and parts for nothing. This has to come out of the dealer's profits.

Why a Used Car Plan Failed

One of the Co-operating Dealers Says It Was Due to Lack of Understanding of Overhead and Profit—Again Urges Survey of Costs

EDITOR Motor World:—As president of the —— Automobile Dealers Association, I spent a great deal of time and study on plans of handling used cars three years ago. For several months we had an agreement among ourselves to base all trade-ins on the Chicago Automobile Trade Association report as reflected by the report of sales from this zone, subtracting from this figure the estimated cost of conditioning and also the percentage of profit that we aim to make. We had no penalties and relied solely on the honor of each member to work out the problem from a merchandiser's standpoint in each trade involved.

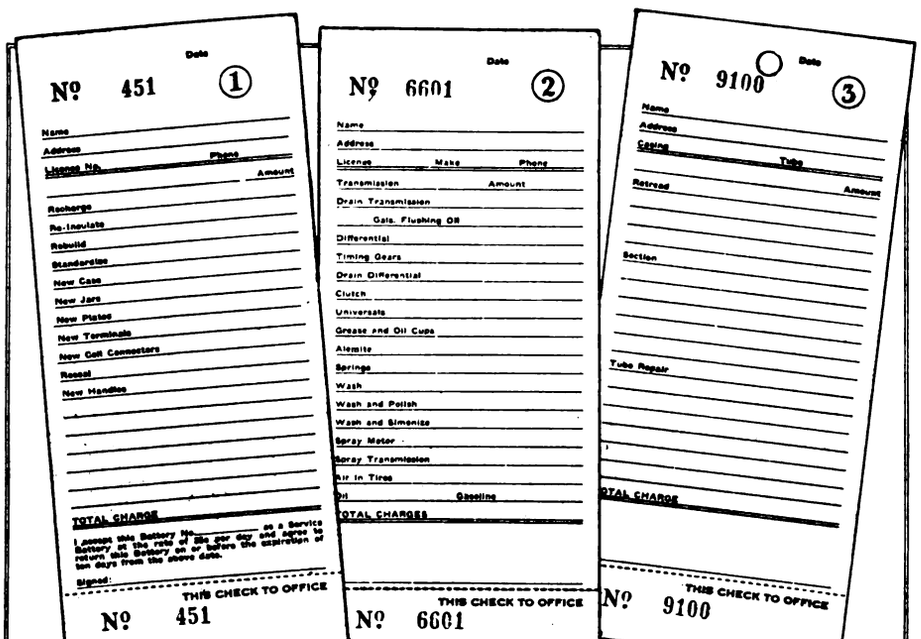
This is as simple a plan as I have heard of and ought to work, if any plan would. But it failed like nearly all of them do, not so much because men are inclined to be dishonest, but more because the merchandising problem of selling new cars by trading in old ones involves a problem of profit and overhead that most men in our line of business do not fully understand. I think that this is the main reason why these plans do not work better.

For instance, it costs more money to sell a used car than it does a new one. Manifestly, then, the mark-up on the used car must be greater than the new car discount. That is, if it requires 25 per cent discount on the selling price of a new car to enable the dealer to make money, then to take care of additional costs incident to the sale of an old car, the mark-up must, we'll say, be, not 25 per cent of the selling price, but 30 per cent.

Now notice that all merchandise discounts are figured on selling price. For instance, we buy a monkey wrench for 75 cents and sell it for a dollar. Our discount is 25 per cent—not 33 1/3.

Take the case of a $500 automobile which has been reconditioned and is ready for the resale price. How many dealers in the country are there who would contend that adding $150 and selling the car at $650 would give them 30 per cent profit? Nearly all of them would. Now here's the point—we are dealing on such a narrow margin in the automobile business that mistakes of this kind wipe out not only the profit on the used car, but some of the profits on the new. Finally no one ever knows what a used car will sell for, and the mark-up is more or less problematical. We may try for a 30 per cent mark-up, but before the year is over we almost always find that there is a considerable amount of used car merchandise in stock which must be marked down, which completely changes the complexion of the picture.

Write to Motor World About It



This page every week is devoted to discussions of topics of the trade by Motor World readers. Have you a suggestion to overcome a difficulty or improve some condition within the industry? Write to Motor World about it.

Now you and I are perfectly well aware that all merchants figure on marking down a portion of their stock to complete the year's turn-over. It has to be done, and this mark-down is figured in the mark-up when the merchandise is received and placed on sale. From what I have been able to learn, good department store merchandisers figure on making six per cent net on gross sales over a period of years. Automobile merchandisers have made only half that showing during the best years that our industry has ever seen.

To my mind this shows that automobile men do not understand their problem, and the only way this problem can be made intelligible is by a survey of costs and an interpretation of these costs by analyses similar to those in use in modern mercantile stores. — Western Dealer.

(This is the second letter from this dealer favoring a survey of selling costs.)

A Simple Set of Forms

A SIMPLE and yet a very thorough system of forms for its battery, tire repair and greasing and washing departments has been evolved by the Al Monroe Shop, of Los Angeles. The forms used are perforated in two places. The main portion of the form goes to the department where the work is to be done, a small check goes to the office and another check to the customer. At the end of the business day, the office checks are compared with the reports from the various departments to see that no jobs have been waylaid. The customer's check contains Monroe's address on the reverse side.

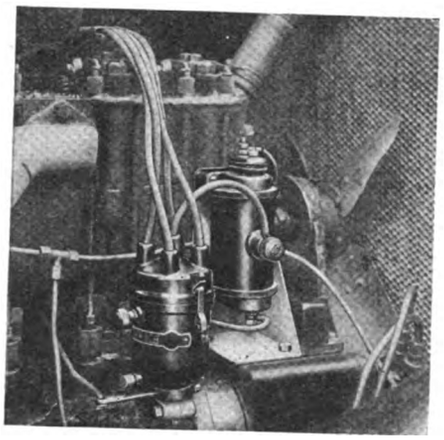
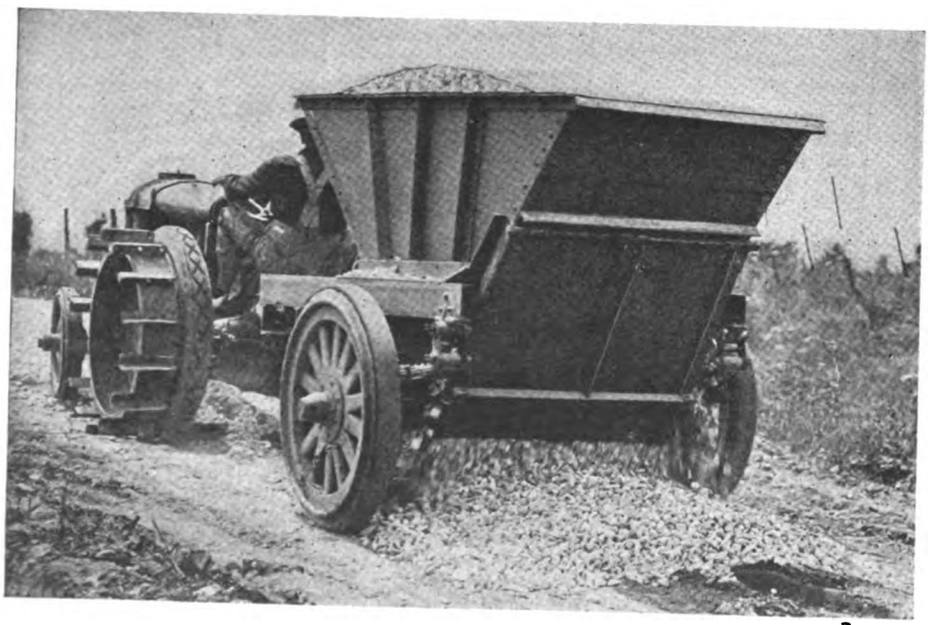
Some Interesting New Products Announced



The Miami Steel Trailer

A TRAILER of all-steel construction with the exception of the wheels and tires, for commercial hauling and industrial work with a Fordson tractor, has been brought out by The Miami Trailer Co., Troy, Ohio. The trailer has a rounded load capacity of 2 yards, provision for mounting a separate flared top box of ½ yard or 1 yard extra capacity for transporting materials of a total load of 2½ tons, but of a greater volume than 2 cubic yards. The body is of 10 gage steel, reinforced with angle arms and designed with the rear bottom dump door so that the sides of the opening may be controlled either to dump the entire load in one spot or to spread the contents 60 in. wide to any depth required. The entire load dumps back of the axle and behind the wheels of the trailer, and the load is practically balanced on the axle, sufficient weight being placed on the drawbar to prevent wear on the hitch connection. An automatic hitch bolts on the rear housing of the tractor, and the tractor is backed up to the end of the trailer drawbar and the coupling is completed without pins or cotter sheets. Only a slight upward pull on the drawbar is necessary to disconnect the trailer from the tractor.



The turning radius of the trailer is the same as that of the Fordson tractor, and the unit can be backed into any position or can be turned around on the sub-base of a road. The total weight is 1960 lb., and the price, complete with hitch, is $385.

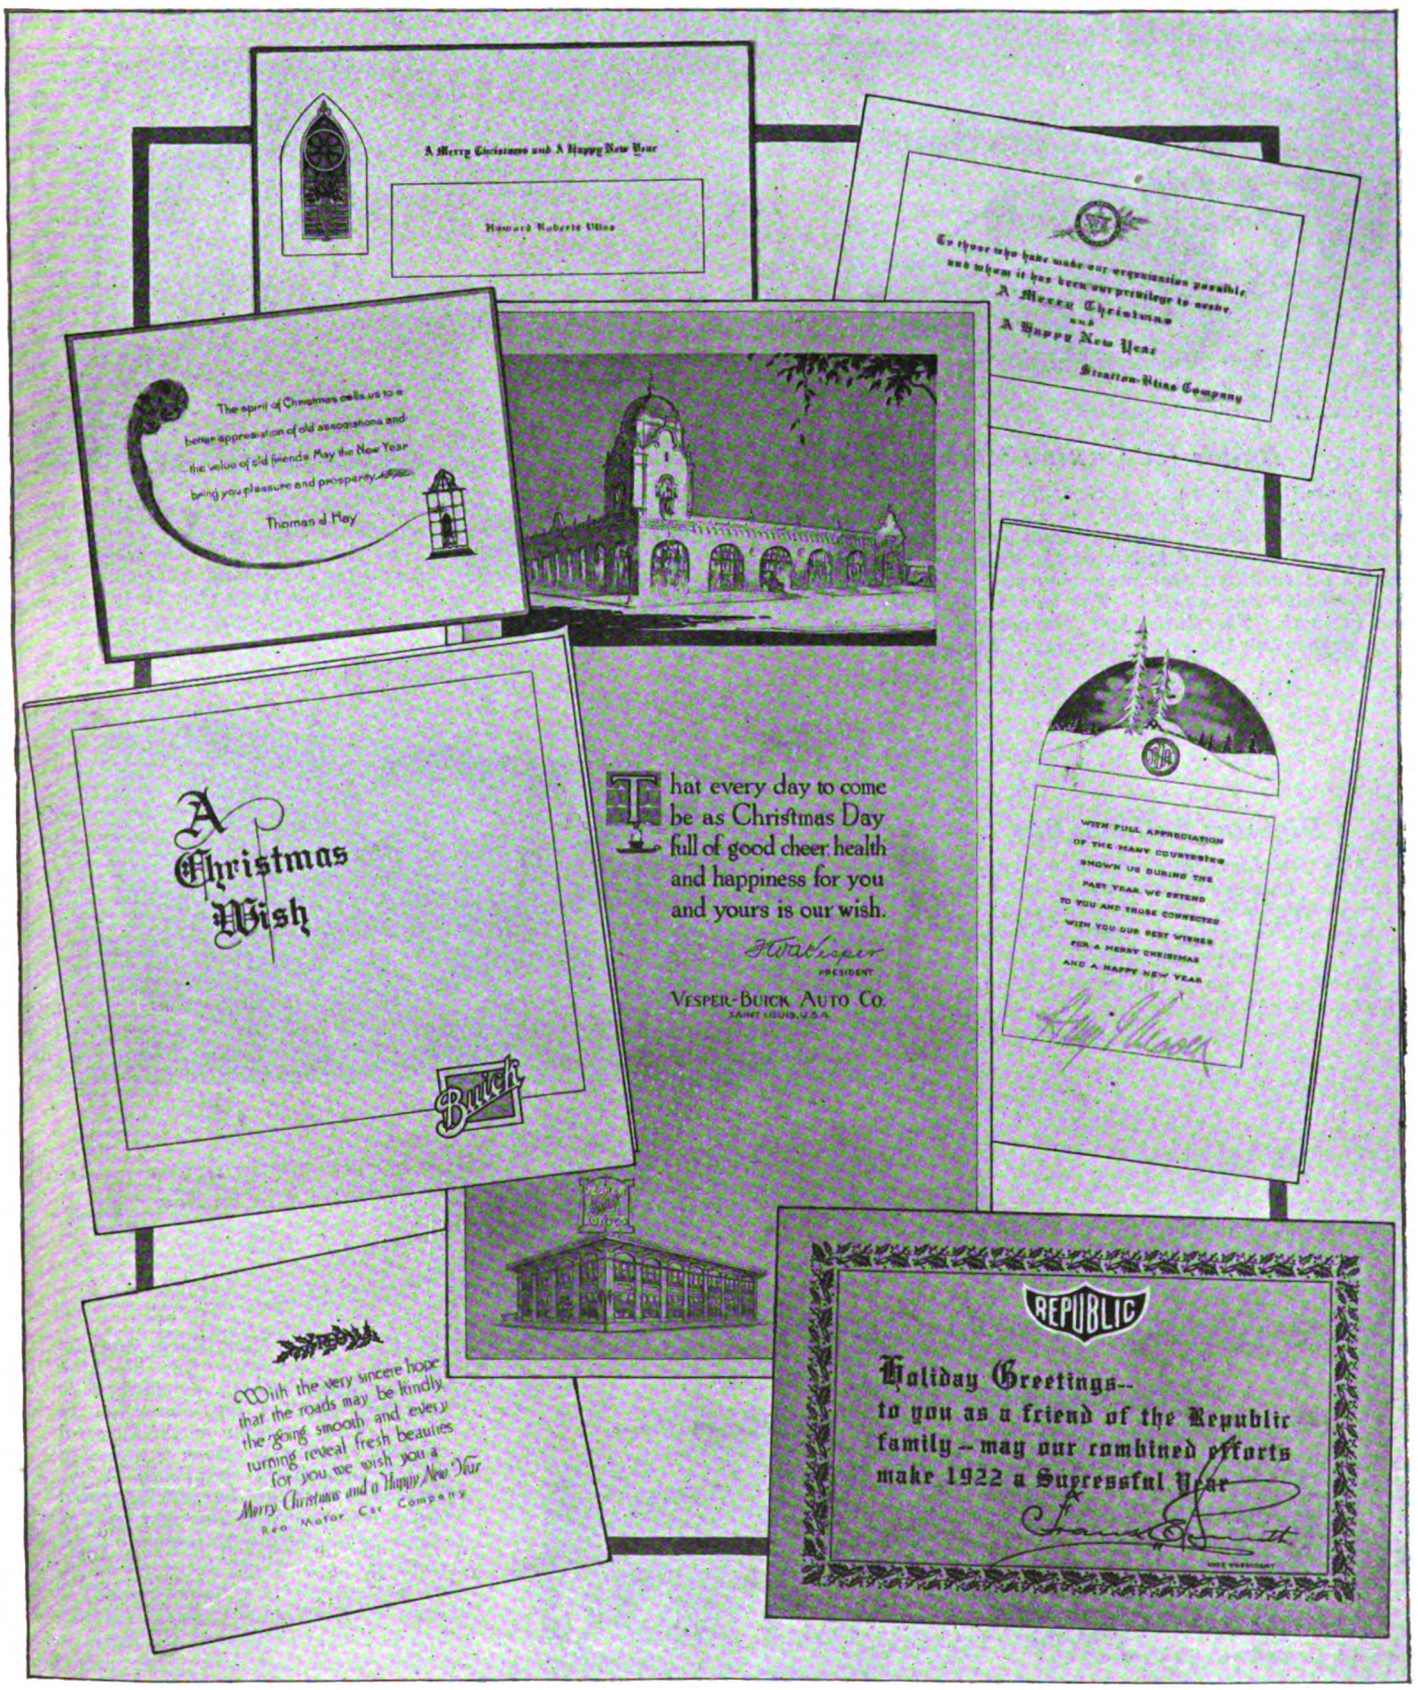
Colonial body for Fords

Bosch battery ignition for Chevrolet

The Miami steel trailer

Colonial Body for Fords

THE Colonial Body Co., Waltham, Mass., has brought out a new model four-door sedan body for Fords, known as the Colonial Beauty. A new feature is the counter-balanced door window lifter of the type used in larger cars. A metal molding around the windshield holds a tube of rubber so that the windshield touches it only lightly, but prevents rain from coming in. This can be operated with one hand.



The body is 3 in. longer than the standard Ford sedan, and the driver's seat is adjustable, giving a 4 in. movement backward or forward. The doors are 22 in. wide, the finish is in black enamel.

Bosch Battery Ignition System for Chevrolet

A BATTERY ignition system for the Chevrolet with an automatic spark control has been brought out by the American Bosch Magneto Corp., Springfield, Mass. The system is designed to replace the standard ignition which uses manual spark advance. The compensating governor on the system has been designed to fit the characteristics of the Chevrolet engine so that the spark is advanced and retarded automatically at a point of greatest operating efficiency. The system is waterproof, and the coil is mounted directly on the generator by means of a single bracket, which is supplied with a fitting. The timer distributor is mounted on the generator and is driven by the generator shaft. The system is applicable to all types of Chevrolet engines, including the Superior and FB models. The price is $24.50.

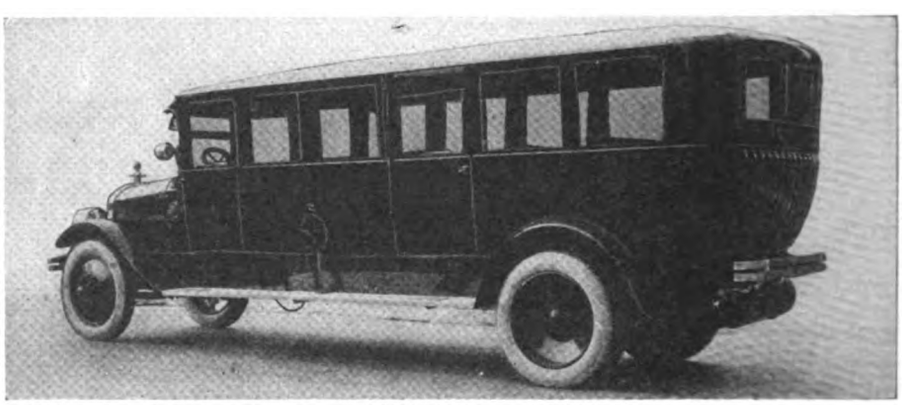
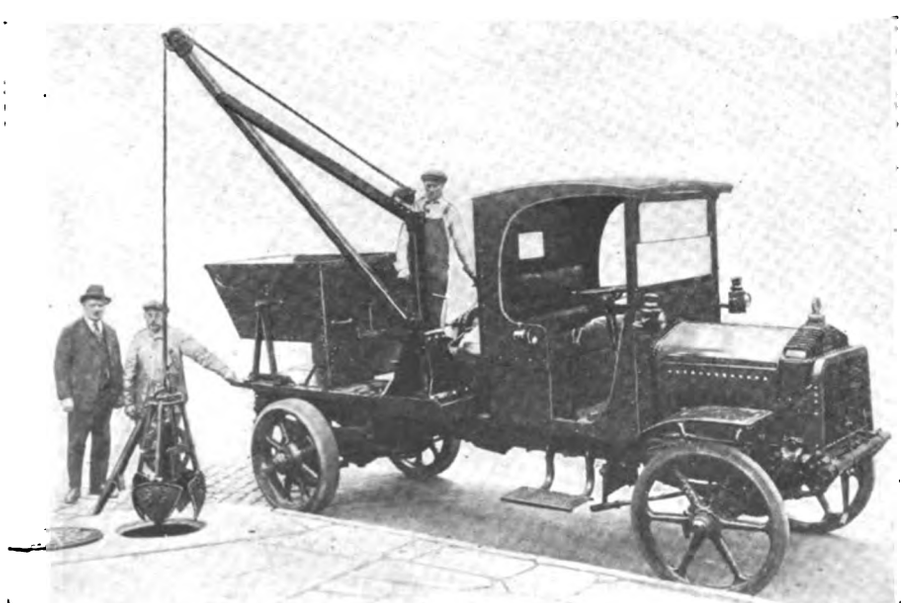
Interesting Things Automotive

Builds Ice Cutting Machine from Ford Units



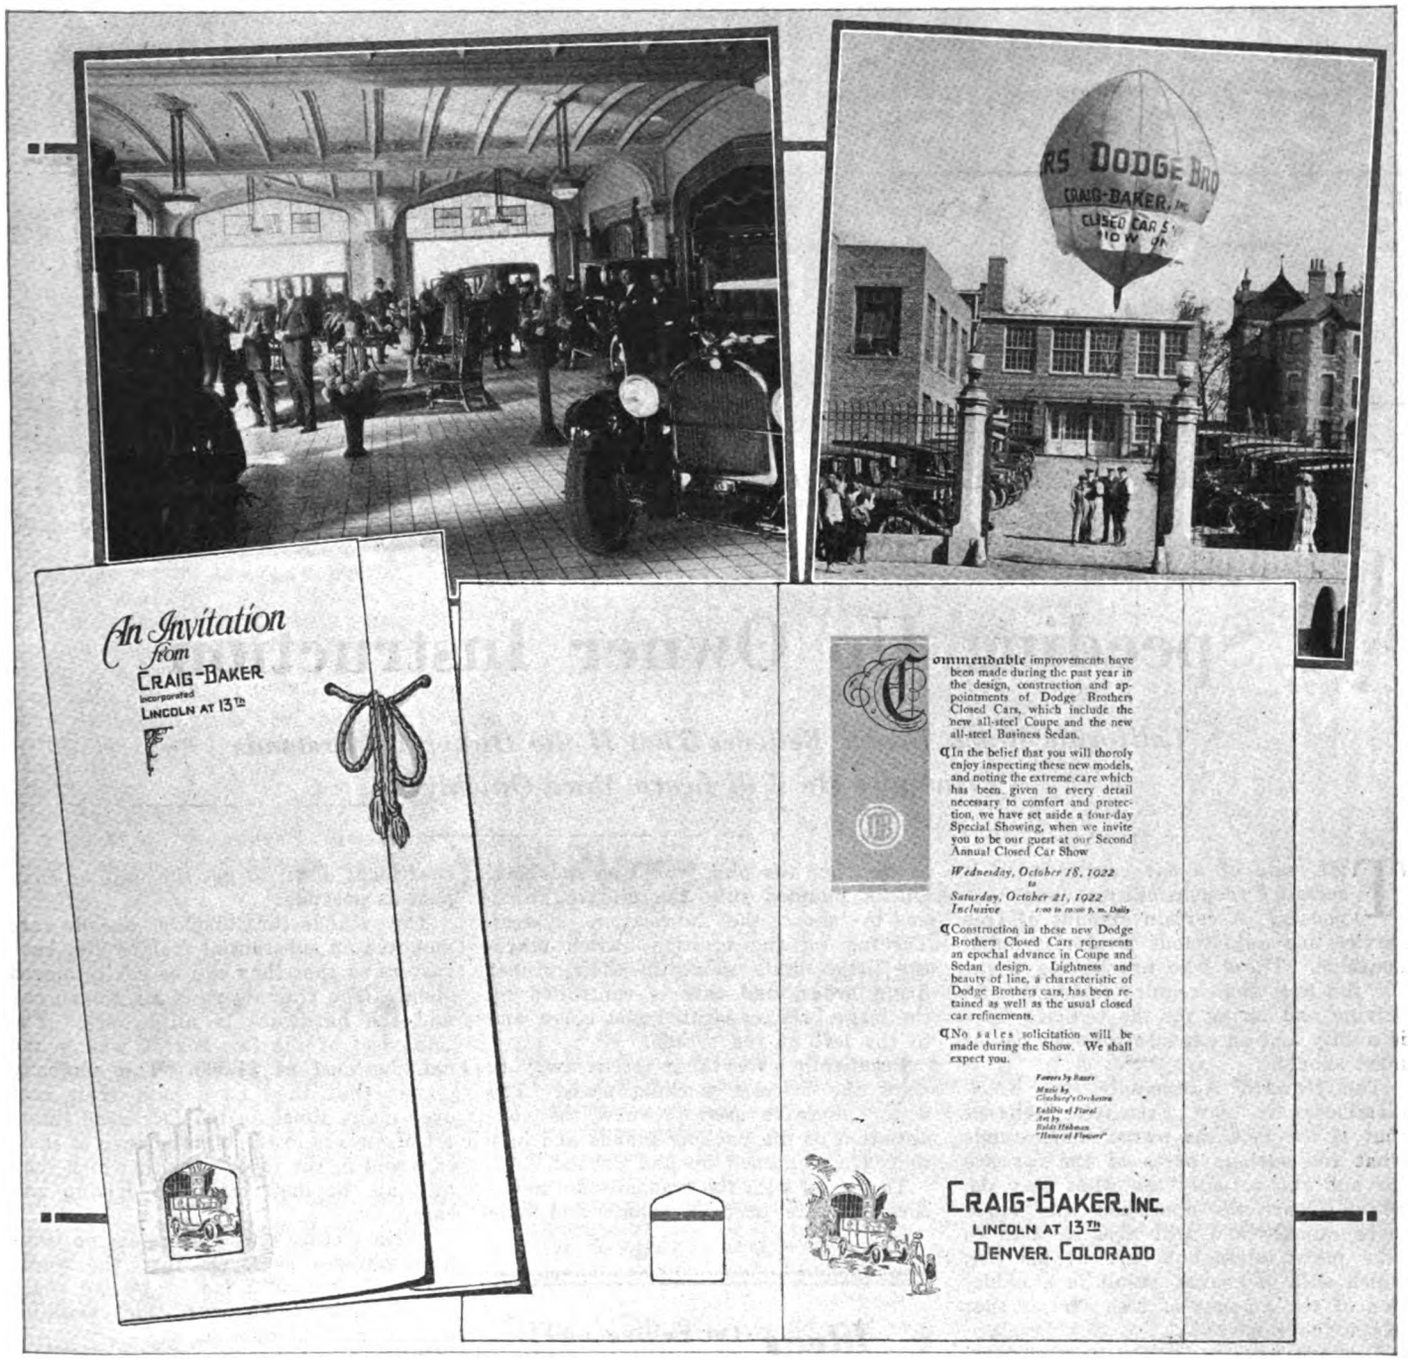
An ice-cutting machine which does the work of six men has been built by Kratochwill Bros., Muscode, Wis., from parts obtained from a disabled Ford. The engine, radiator, gasoline tank and coil are mounted on substantial runners. The saw is connected to one of the axle shafts cut off short while the torque tube makes an excellent saw mounting and provides the necessary flexible connection between saw and engine. The saw is 40 inches in diameter and will cut ice 17 inches thick. The clutch and feed control is from the front. The engine runs on high when the saw is working. The machine is fast and easy to handle



C. M. Glover, secretary-manager of the Santa Barbara Automobile Trade Association, which acted as host to the California state convention held there Oct. 16-17

A Highway Pullman Bus

This De Luxe bus makes hourly trips between Youngstown and Warren, Ohio. The distance is 20 miles. The vehicle is called a Mack Limousine Bus



P. F. Healey, New York, has designed a machine for cleaning sewer basins which is claimed to cut the cost of the operation in two. The machine consists of a Selden chassis on which is mounted a dumping body that may be removed. A grab bucket, operated by power driven drums is a part of the special equipment

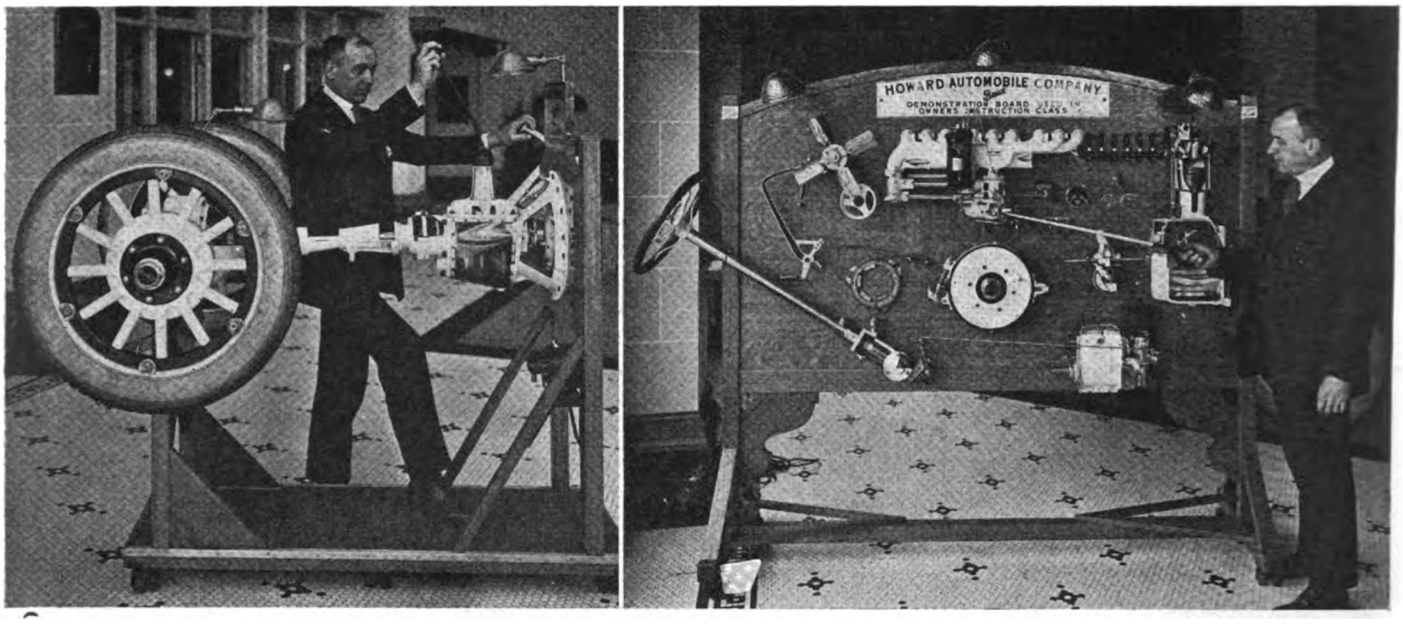
Denver Dealer Holds Own Closed Car Show

How Craig-Baker, Inc., Denver Dodge dealer, staged a closed car show and attracted large attendance through attractive display and publicity



AN attendance averaging between three thousand and thirty-five hundred persons each day was one of the features of the second annual closed car show held Oct. 18-21 by Craig-Baker, Inc., Dodge dealer for Denver and surrounding counties. That the show guests were genuinely interested is evidenced by the fact that, although there was no sales solicitation whatever at the show, the firm sold twenty-seven closed cars during the four-day event, as a direct result of interest aroused or brought to a climax by the show. Besides, many guests voluntarily asked for demonstration calls at convenient dates in the near future.

The showroom was given an extra-welcome atmosphere by flowers and other attractive decorations, and the guests were treated to candy, cigars, a high-class musical enfertainment and a Dodge motion picture film.

Besides sending out ten thousand unique invitations to a select list, the dealer concern used newspaper advertisements to announce the show. A special advertising feature was a large captive balloon, held at a height of six hundred to seven hundred feet, which could be seen from all parts of the city. At night, the balloon with its lettering was illuminated by a light inside.

At the close of the Saturday night show, the Craig-Baker organization of 75 persons from all departments celebrated the success of the event with a dance in the company's roomy and well-arranged building.

Two display boards to demonstrate the working of the Buick car. These are used by the Howard Automobile Co. in its owners' instruction course

Speeding Up Owner Instruction

California Buick Dealer Believes That If the Owner Understands Principles He Will Learn More Quickly

THE sale of a car carries with it certain responsibilities and expenses. A certain amount of free service and adjustment is almost indispensable. Those who are buying a car for the first time require instruction in driving and caring for the vehicle. This is a duty and an expense that the dealer must shoulder.

The Howard Automobile Co., Buick distributor in San Francisco, believes that if the new car owner understands what the various parts of the car are for and can actually see what they do, he will learn the operation very much more quickly and will also be able to take more intelligent care of his car, which will, of course, result in a reduction of the amount of free service that has to be rendered.

Two instruction boards were devised by R. C. Douglas, the superintendent. One of these boards carries the rear axle, wheels, propeller shaft, gearset and clutch, and the other contains all engine appurtenances and parts which can be used to display the working of the engine. The carburetor, vacuum tank, cylinders, ignition, starting and lighting and also the steering are shown in cutaway sections, most of which are made to move or operate.

The section of the six cylinder engine operates just as it would in the car, and it runs at about 15 r.p.m. In place of the spark plugs, small red electric lamp bulbs are used, and these light at the time the plug would be sparking. Oil is pumped into the oil trough so as to show the lubrication system. Turning on the ignition switch starts the little lights going in their proper firing order, and this is controlled by the large breaker located just below and to the left of the switch.

Practically everything is cut away to show the interior working parts. The water pump is used to show the construction of the packing glands and how they are tightened up and packed.

The stand with the transmission members has the propeller shaft and axle shafts cut down to get the unit as compact as possible.

The stands or display boards are mounted on substantial frames and have castors so that they can be easily moved about. The framework is all golden oak and the hardware is all bronze. The total cost of the two boards was in the neighborhood of $1,500. The company claims that they have paid their cost over many times in the increased interest of owners in the maintenance of their cars and in the rapidity with which they pick up the instructions in driving and care.

In the lecture course there are no technical phrases used. In fact, the wording is such that a lad of twelve could easily understand with the working models in front of him.

Ideas **On Selling and Management**

You will find them on this and the opposite page—ideas that will make dollars or save dollars for the

Car Dealer Truck Dealer
Equipment and Tire Dealer

Makes Monthly Calls on Owners

BELIEVING that satisfied customers are an automobile dealer's greatest asset, the O. K. Motors Co., Studebaker distributor of Louisville, has instructed its salesmen to call on every owner once a month and ascertain if the car is giving complete satisfaction. They are required to report each case. In most instances no complaint is made, but sometimes merely an adjustment is needed and the new owner is made happy. By the same token he is always a booster for the car.

It's Not the Space You Use but How You Use It

How a Los Angeles Dealer, with "Peppy" Talks in One Column Ads, Sells Bumpers

NINE dollars a day, spent in judicious advertising shaped along singularly distinctive lines, is selling twenty sets of Stewart bumpers to automobile owners in and around Los Angeles to-day where only one set of bumpers was sold less than a year ago.

Just about every automobile owner in Los Angeles knows "BILL THE BUMPER MAN," who directs the activities of the Stewart Bumper Shop. Of course, they do not know him personally but they cannot help but form a "general acquaintance," as his daily bumper talks in the Los Angeles daily newspapers must catch their eyes on some day during the week.

The Stewart Bumper Shop runs a one column display advertisement, slightly under six inches in depth, on the sporting page of two Los Angeles papers. The campaign calls for the advertisements to alternate—every other day in the morning and evening papers that are used. The expense of the campaign averages about $9 a day.

Typical of the advertisements published under the signature of "Bill" is the following:

LET 'EM FLAP

The flappers seem to have our solons on the run. They claim that there's too many traffic accidents caused by the driver showing more interest in some chicken crossing the road than in the road itself. But I'm strong for the flapper. What I'd do would be to have all cars equipped with a set of our Stewart Autoguards, then if a collision occurred, there would be no harm done. Of course, anybody with two good eyes can see that some flappers would be likely to demoralize traffic—they can even see more than that—but I believe that I have the proper dope on the subject.

"BILL."

Here's another written in a more serious vein:

DR. WATSON'S ESSEX

It's worth telling about. It is a beautiful little sedan—he bought it months ago, and it's about the classiest little coach job in town. The other day he was driving out of here and had just got well on his way when he ran smack into another fellow's car at 18th and Flower. Everyone knows that the Essex is a speedy little boat—has lots of pep and pickup and Mr. Watson was making about 15 miles when he hit. I saw the car right after the collision and I want to say that the bump didn't even bend his Stewart bumpers—they took up the shock of the impact and actually threw his car back from the one he hit. They surely do protect the car they're on. Why don't you get a set for your car?

"It isn't so much the amount of space you use in newspaper advertising but the way in which you use the space," say officials of the Los Angeles company.

Small Space Ads That Sell Bumpers

Here are three examples of the short, snappy ads that are used by the Stewart Bumper Shop, in Los Angeles, with much effectiveness. It is just one more proof of the fact that it is not so much the space you use in advertising as it is HOW you use it

Using Accessory Testimonials

GATHER data from some of the motorists who have purchased accessories from you, Mr. Accessory Dealer, telling about the ways in which these accessories have best served them. Find, for instance, how someone's spotlight helped him on a bad detour through mud and rain late at night; how chains helped a man make a town where, otherwise, he'd been mired; how a tow line helped a man who'd gone into the ditch. And so on. Then tell all these things in a series of advertisements in which you would play up the various accessories. Such ads would be unique and particularly interesting and would help some.

An Opening Ad Idea

WHENEVER a new accessory store or tire store or garage is opened a large amount of free publicity can be secured for the store by getting all the business establishments in the neighborhood and all the concerns that had a hand in constructing the building or in decorating it to combine with the store in a page of ads in which congratulations would be heaped on the establishment for its opening. This sort of thing would be good advertising for all concerned.

Fixing Liability When Car Is Being Towed

Some Interesting Court Decisions in Injury Cases—How Responsibility Is Decided

EDITOR Motor World:—As subscribers to Motor World, we would like to know what the courts have held in cases where parties have walked between two autos connected by a tow rope and been injured. How about it if this happened in the day time?—L. G. S., Buffalo, N. Y.

Answer.—It is perfectly legal to tow a disabled motor car, of course, and the courts have decided that if a car breaks down on a public street, it is necessary for the owner to remove it. As wrecking cars have largely taken the place of tow ropes, there are fewer occurrences or accidents of this kind now than there were a few years ago.

There is apt to be some confusion if a motorist breaks down on the road and telephones a dealer to tow him in as to who is responsible for accidents while this is being done. The matter is simply decided, however, by finding out who has control while the car is being moved. If the dealer or his agents are acting independently of the owner, then the dealer is responsible. If, on the other hand, the owner is controlling the removal, giving orders and directing what is to be done, the dealer is not responsible and the owner is the person who must pay for any injuries which occur.

It is not necessary to warn other people in any particular way that there is a rope connecting the two cars, except that "due care" must be used. An illustration of this would be if persons started to drive or walk between the two vehicles, the person in charge of the disabled car would not be considered to be using "due care" unless the presence of the rope was made known to them.

An interesting case is that of Titus vs. Tangeman, reported in 116 New York Appellate Division Reports, 487. A disabled car was being towed along a street, hauled by a rope about 10 feet long. After going a short distance a blockade of traffic was encountered and both machines were stopped near the curb, the rope resting on the pavement.

A mother and daughter out walking, endeavoring to cross the street, came to a point between the car tracks and the stationary cars. The mother inquired whether she could pass between the cars and, on being assured that she could, she started to step over the rope, when the front car started up, raised the rope and tripped and injured her. The woman sued the driver of the disabled car for damages, claiming that he was negligent, because he gave her permission to pass. The court held, however, that as the blockade of traffic had not been broken, it was not to be expected that the forward machine would start up and, as it did not move more than a foot in any event, the driver of the disabled car could not be presumed to have expected it to start, and for that reason he was not liable for the accident.

Another similar case was that of Canfield vs. New York Transportation Co., which is found in 128 New York Appellate Division Reports, page 450. It seems that two electric hansoms, owned by the transportation company, were going north on Broadway, in New York City. The power in the rear machine had given out and it was being towed, attached to the front machine by means of a rope which was about six or eight feet long and an inch to one and one-half inches in thickness. One of the company's drivers was in charge of each machine.

When 34th Street was reached, a traffic officer signaled the machine to stop, which was accordingly done. A woman was crossing Broadway and Sixth Avenue, headed for the corner of 34th Street. She attempted to cross between the cars, was caught by the rope, thrown down and injured. She accordingly sued the transportation company for damages.

The court held that under the circumstances the transportation company was not guilty of negligence any more than if the woman had walked directly into the machine, as the cars were on the street, where they had a right to be, and had been ordered to stop at the places where they then stood, and that, having attempted to warn her when she endeavored to pass between the cars, they fulfilled the obligation of using "due care," which was imposed upon them and were not in any way guilty of causing the accident.

Practical Questions of

Business Law

Are discussed every week on this page

By GEORGE F. KAISER
Attorney at Law

Readers are at liberty to write to the legal editor of Motor World for help in solving their business problems. Their inquiries will be answered through the mails.

Rights of Lienors and Mortgagors Conflict

Editor Motor World:—We would like your advice on the following case. A farmer about one mile from town has a car which is mortgaged by a bank in a close-by town. We have kept this car in repairs, oils and gasoline, under the understanding that the bill should be paid in full, and have asked the said farmer several times for it; one day that car was presented to us for repairs, and getting provoked about not getting any pay for it we decided to hold the car for the whole bill. The bank sent a constable down to get the car, but we refused to let him have it. Now the bank has placed a bond for twice the value of the car in the County court house, and the sheriff has notified us to let them get the car, and also that the bank has sued us for $50 damages. Can they sue for damages under these circumstances, and has a garage a lawful right to hold a car for pay? A Reader, Moneta, Iowa.

Answer:—In your State you have a lien for your charges for repairs and may hold a car until your bill is paid if the work is ordered by the owner, but we know of no case in your State where the relative rights of lienors and holders of chattel mortgages and conditional bills of sale was determined.

Bear in mind that anyone can *sue* for damages but to recover a judgment for damages is another matter. I do not quite understand how a bank could suffer damages in a case of this kind unless it lost an opportunity to sell the car, etc.

If you have not already retained a local lawyer do so at once.

Most Contracts Provide Dealer Must Pay Freight on Parts

Almost all manufacturers' contracts that provide for replacement of parts or defective materials, etc., contain the words "f.o.b. factory." It is generally understood by dealers that this means that the goods will be delivered free on board at the factory and that the expense of transporting them from that point must be borne by the consignee to whom they are consigned.

Occasionally a dealer does not understand this, however, and believes he is compelled to pay some unreasonable charge when he is called upon to pay the freight charges, when, in reality, he is doing no more than his contract calls for.

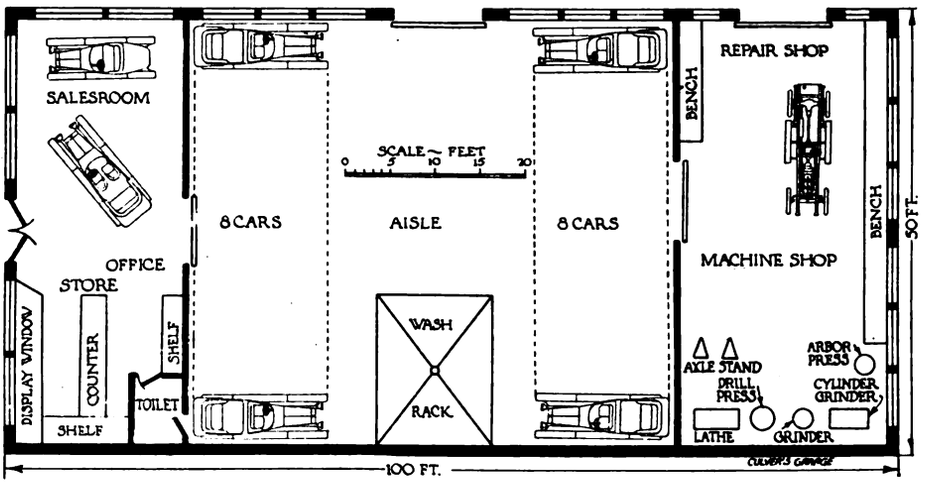
Building Provides for Sales, Service and Storage

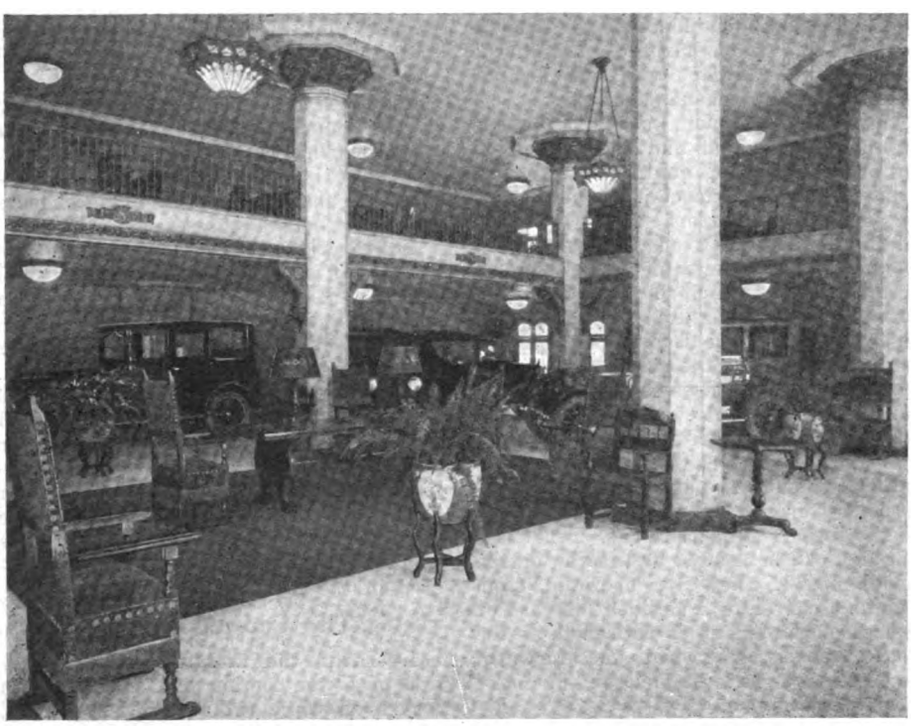
One-Story Building for Dealer in Small Town Provides Complete Facilities—Will Be Erected on Corner Property 50 x 100 Ft.



THE plan shown on this page is suitable for the business of a dealer situated in a small town. Provision is made for car and accessory sales, storage and service. The building is for a corner lot 50 x 100 ft.

A combination car salesroom and accessory store extends across the front of the building. The car display occupies the right half of this room and has the advantage of display windows on both the main and side streets. Two cars may be shown in this space without crowding.

The accessory store occupies the left side of this room. It has a display window facing on the street and is equipped with shelves and counter. By using a counter with a glass front, additional display facilities may be secured. A small space in back of the counter is used for the office.



The storage garage, which is located in back of the salesroom, is approximately 50 ft. sq. The roof over it is supported by trusses running parallel to the length of the building. The entrance to the garage is from the side street. The washrack is placed in the aisle. This portion of the building will have to depend on skylights to a certain extent for light and ventilation.

The shop extends across the rear of the building. It may be entered either from the side street or from the garage. The equipment, which is grouped at one end, consists of lathe, drill press, grinder, cylinder grinder, arbor press and axle stands. The windows provide adequate lights for this room, but skylights would assist in the ventilation.

Floor plan for one-story dealer building to be erected on corner property 50 x 100 feet. The storage capacity is about 16 cars

Salesrooms Like This Boost Sales

The picture shows a portion of the Studebaker salesroom in Brooklyn, N. Y. The cars are well displayed in attractive surroundings and the comfort of the prospect has not been forgotten. The sales offices are located on the balcony

Lansing Producing 20 Star Cars Daily

DETROIT, Nov. 2—The first Star cars are now being built at the Lansing plant of Durant Motor Co. of Michigan at the rate of 20 a day. This number will be increased to 50 as soon as body production gets into swing. By the first of the year production at Lansing and Elizabeth, N. J., will be approximately 1000 daily. Production in Elizabeth will begin about Nov. 1. About 18,000 will be built in the balance of 1922.

Orders received at the showings in New York, Washington and Detroit will be the first filled, and the remainder will be taken care of according to priority. Distribution of cars to dealers will be on a proportionate basis. In the early stages of the distribution the allotment will run about one car for every two Durant cars sold. This is due to the fact that orders covering close to a year's production are already filed.

Franklin Dealers Increase

SYRACUSE, N. Y., Nov. 2—The number of Franklin dealers has increased 27 per cent during the past year, according to Sales Manager S. E. Ackerman of the Franklin Automobile Co. Fifteen per cent of this increase dates from the first of this year. The Franklin company plans to have at least 2000 points of representation in this country eventually.

Tuning Up the Engine

Steps in An Operation That Is Often Performed in the Shop Either By Itself or in Connection With Some Other Work

IN practically every repair operation in which the engine is involved, it is necessary to tune up the power plant, either partially or thoroughly. Very often this is done in connection with other work on the car, but the operation is so common that it would seem advisable to have a systematic plan of going over the various components.

It is preferable, before doing any adjusting or tuning up to give the engine a test to locate in a general way the things that need to be done and to find out any serious faults. This test can best be made by taking the car out on the road somewhere and driving it at various speeds on the level and then climbing a stiff hill that will require all the engine power to climb on high gear.

Engine Power

The car should have no trouble in accelerating quickly to 30 m.p.h. or higher and to maintain this speed without undue noise or effort. An engine with poor compression, a poor mixture or with worn parts will labor and pound, and an experienced mechanic will be able to identify many of the noises and locate faults that can be remedied later when the car is in the shop. Here are some of the things to look for in the road test:

Poor Mixture.—The most usual evidence of a poor mixture is popping in the carbureter, indicating a weak mixture or black smoke coming from the exhaust indicating a rich mixture. If the mixture is good enough to run the engine without either of these evidences, it may be shown up by depressing the foot throttle quickly. The engine should pick up instantly without splutter or fuss. Obviously if the mixture is poor, the engine will not develop power, especially on hills, and will not accelerate well. This loss of power may be due to other causes, such as poor compression, late ignition, carbonized cylinders, weak spark or a clogged muffler. It is possible to identify some of these causes on a road test and others can be located in a shop test. Loss of power may possibly be caused by something outside the engine. A slipping clutch, dragging brakes and wheels badly out of line will be the most likely things to look for.

Knocks and Pounds.—The road test will show up loose parts through noise. A carbon knock is caused by an accumulation of carbon in the combustion chamber. This gets red hot and preignites the mixture just before the top of the compression stroke causing a sharp knock or clink which is reduced or removed entirely by retarding the spark. If the noise disappears when the spark is retarded, the cause is carbon. Carbon will also make the engine run a little hotter. A very excessive amount will cause a considerable increase in temperature due to the heat retaining properties of the carbon and also due to the fact that the engine has to be run with a late spark.

If the cylinders are not carbonized, it should be possible to run the engine with the spark advanced all the way when the car is running on the level. If it is not possible to advance the spark all the way and the knocking is not due to other causes, the spark is timed too far in advance. Another evidence of too early a spark would be backfiring of the engine on starting, either with an electric starter or with the hand crank.

Bearings loose will knock. Each has a distinctive sound and the sounds on different makes of engines vary somewhat so that experience is the only guide in definitely locating loose bearings. Main bearings that are loose give a heavy pound. The connecting rods give a lighter knock which is sometimes increased when the clutch is thrown out and the engine idled. If the looseness is not very great, the sound will be like a regular tapping. Loose piston pin bushings give a somewhat similar sound but the noise is lighter. Crankshaft or camshaft endplay in the bearings is generally, although not always evidenced by a pound once or twice every revolution of the engine. In a Ford car, crankshaft endplay can be located by turning on the headlamps if they are operated from magneto current. A decided increase or decrease in intensity is noticeable as the shaft moves backward or forward, separating or bringing closer the magnets to the spools.

Loose pistons make a slapping sound. The piston rings, through their tension, keep the upper ends of the pistons comparatively still, but the lower ends, not being held by anything slap back and forth against the piston walls at each stroke. The slap would be loudest as the piston ends the exhaust stroke and begins the intake stroke.

If the connecting rod is not properly aligned there will be a side slap of the top end of the connecting rod between the piston bosses. Usually there is considerable clearance at this point so that with the upper and lower bearing holes out of line there is chance for considerable noise at this point in addition to the wear on both the upper bushing and the lower bearings.

A weak mixture is sometimes the cause of a knock, but this will generally be accompanied by popping back in the carbureter and loss of power. If making the mixture richer stops the knock, this is no positive indication that the knock is caused by a weak mixture because a carbon knock can be stopped in the same way. This is one of the puzzling things about trouble shooting, and one which demands experience and study on the part of the mechanic.

Loose piston rings and broken rings make a noise. A ring that is a loose fit in the piston grooves will make a sort of click. A broken ring will cause a sort of rattle. A broken ring, however, sometimes catches and causes other trouble and the sharp corners at the break will cut scores in the cylinder wall very quickly.

A loose flywheel will cause a very heavy pound that sounds much like a main bearing pound, but it is heavier. The noise is caused by the wheel rocking back and forth on the flywheel bolts which are loose.

Improperly meshed timing gears are noisy. If too loose a mesh they will rattle and knock, while if meshed too tight they will sing and grind.

Other miscellaneous causes of noise are loose oil pump parts, loose push rods, overheated engine, loose engine bolts, oil stoppage, too much oil pressure and other loose parts somewhere in the power plant.

The following operations constitute a thorough tune up of the engine. Some engines, owing to special constructions would require special treatment not covered in the general operations.

The Cooling System

1.—Drain the radiator. Note condition of water coming out. Leave drain cock open while radiator is being filled, allowing it to stay open till water is reasonably clear of rust. Remove mud from spaces between fins or cells of radiator. Look for water leaks around

Better Mechanics

Article No. 264

Readers are invited to ask this department for suggestions to work out mechanical difficulties. When asking for information, please state whether you maintain a permanent file of Motor World, as many inquiries are answered by reference to previous issues.

Digitized by Google

hoses, examine condition of hoses and clamps and make any necessary adjustments. In replacing hoses, dip the hose in water, not grease. Grease eats the rubber.

2.—Examine fan, fan bearing, fan belt and pulleys. The fan belt should be tight enough so that it offers considerable resistance to being turned with the finger, but not enough resistance to put undue weight on the fan bearing. See that fan lubrication is in good shape.

3.—In replacing water in radiator, it is time to put in some kind of anti-freeze agent as freezing weather has already hit some parts of the country and may be expected in other parts almost any day.

Lubrication System

1.—Drain the oil from the crankcase. Examine the oil that is drained off. If it is in fair shape and without flakes of bearing metal, simply replace the plug or shut off the cock and put in new oil to the "full" mark. At this season of the year lighter oil should be put in. If the oil is full of sludge and sediment or flakes of bearing metal, the crankcase should be washed out either with a thin oil or with kerosene. In using kerosene for washing, follow with a washing with new oil, draining this out before replacing the oil.

If this is not done, the kerosene remaining in the troughs under the connecting rods will retain enough kerosene to materially thin out the new oil. In some engines the amount of kerosene will amount to as much as 12 per cent. As the oil naturally gets thinned out by the condensed fuel, this is not at all desirable.

2.—Clean the oil strainer, washing it with gasoline or kerosene to remove lint which often collects in the mesh and prevents the free entry of oil.

3.—Check oil pressure if the car is of the pressure lubrication type. The amount of pressure varies with the make of engine and the age of the engine. A new engine with tight bearings will show a higher pressure than an engine in which the bearings have loosened up. The manufacturer's recommendations should be closely followed. The adjustment for pressure is by means of the relief or overflow valve usually located right on the oil pump.

Gasoline System

1.—Inspect the tank for leaks or splash through the filler cap. Look inside and see if there is sediment or water. Draw off if any is present.

2.—Drain sediment traps at carbureter, vacuum tank or other places.

3.—If necessary, adjust carbureter mixture, basing performance of road test. Look for air leaks around manifold, carbureter flange, throttle valve rod, etc.

4.—If carbureter floods or does not get sufficient gas, check float level and adjust if necessary.

5.—See that choker operates properly and releases fully. Where controlled through a flexible tube and wire, the tube anchorage sometimes loosens up preventing full closing or opening.

Electrical System

1.—Remove spark plugs, clean off carbon, inspect for cracked porcelain and adjust electrode gap to approximately the thickness of a thin dime. If manufacturer has a gage, use this in setting points.

2.—Examine wiring for worn insulation, loose terminals, etc.

3.—Test battery with hydrometer and voltmeter. Gravity should be 1277-1300 fully charged. Less than 1150 indicates discharged. Inspect level of electrolyte and fill with distilled water. Voltage should be 2.2 volts per cell charged, 1.75 volts per cell discharged.

4.—Examine breaker points in interrupter, either magneto or battery system. Faces of points should be square and reasonably smooth. If burned or at an angle they should be dressed down. The metal is too hard to file, it has to be dressed on a stone. The opening varies slightly in different systems, but should be about 18 to 20 thousandths on battery systems and 10 to 12 thousandths on magneto systems. Use a makers' gage where one is supplied. The smaller gap on the magnetos is used to get a stronger spark at low speeds.

5.—Check charging rate on ammeter. It should run from 14 to 20 amperes with lights off. The cut-out should close at from 7 to 12 miles and open at slightly slower speeds.

6.—See if the starter starts the engine and engages properly.

7.—See that all switches, including the starter switch, are operating properly. If there are automatic cut-outs for ignition, see that they work the way they should. Look for loose fuses.

8.—Test all lights and look for flickers due to loose contacts.

Engine Compression

1.—Look over valves and see that they seat properly and that the tappet clearance is all right. About .003 in. is correct. If manufacturer makes other recommendations follow these. If engine misses, try inserting screwdriver between each valve spring, turning it to increase tension of spring. If missing stops when this is done to any spring, that spring is weak and should be replaced. See that valves do not stick.

2.—Turn engine over slowly with hand crank and see that each cylinder has an equal compression. This is difficult to judge in sixes, eights and twelves, and if compression does not seem to be up to par, better use a compression gage in each cylinder.

After completing all the above operations and such others as the special construction of the engine demands, take the car on another test run and see that noises have been eliminated, that the car pulls well on hills and that it will accelerate rapidly and without fuss.

Manipulation of Ford Babbitt Metal

IN rebabbitting cylinder blocks care must be taken to see that the metal is at the proper temperature for pouring. Perfect bearings can only be poured when the metal is between 800 and 840 deg. Fahr. If a pyrometer is not available, the temperature may be estimated from the appearance of the metal. At about 900 deg. the pot and metal turn red and the metal "burns," coating rapidly when the scum is scraped off. At the proper temperature the metal appears like quicksilver and tarnishes slowly when the scum is scraped off, the coat of tarnish showing all colors. When too cold, the metal acts sluggish and the tarnish takes on a dull appearance.

The temperature can also be checked with a soft pine stick. The stick should char immediately when immersed in the metal, but should not take fire unless held in the metal some time. The stick should be dry, as moisture will cause the metal to fly owing to the sudden formation of steam. Stirring the pot of metal with a dry pine stick will bring the impurities to the top quicker than anything else, and when brought to the top they can be scraped off.

Due to the fact that tin and antimony have a lower melting point and are lighter than copper, it is necessary to stir the metal thoroughly before pouring as otherwise there is a tendency for the copper to settle. If the metal should be poured without stirring, the resultant bearing would be mostly antimony and tin and the bearing would not be hard enough to stand up in service. Here are the proportions of metals used by the Ford Motor Co., in its babbitt bearings:

Metal	Minimum	Maximum
Copper	7.0 per cent	7.5 per cent
Tin	85.0	86.0
Lead	...	10.0
Antimony	7.0	7.5

Fitting Piston Pins to Alloy Pistons

IN many cases pistons are a tight fit, in alloy pistons the pin being locked in place by dowel pins. Under no circumstances should a pin be driven or forced into an alloy piston, as it will be certain to be forced out of round. The proper method of assembly is to place the piston in a can of boiling water for a minute or two. This will expand the piston and enlarge the hole sufficiently so that the piston pin can be inserted by hand. If the pin is still too large to slide in the hole, the pin must be an oversize and another pin should be selected which will go in the hole. If it is necessary to tap the piston pin slightly, hold the piston in the hand or against the body, not against a hard object such as the top of the workbench.

Equipment for the Shop

New Machinery and Tools

Manley No. 410 Portable Grease Pan

Manley Mfg. Co., York, Pa.

The portable grease and oil pan is run under the car when the crankcase is removed, catching oil, grease, dirt, etc. It is large enough to receive the whole crankcase, and is also used in the same way when taking down and washing off gearsets, rear axles, gears, etc. By removing the metal pan, it can be used as a truck for moving complete engines, gearsets, etc. The handle is provided with a universal joint, so that it can be placed out of the way when under the car. The bottom of the truck is lined with 1-in. solid oak and the pan is removable. The length is 36-in., width 24-in., height of pan 2-in., weight 68 lbs., complete capacity 750 lbs.

Pexto Bit Brace

Peck, Stow & Wilcox Co., Southington, Conn.

The brace can be fitted with screw driver bits, extension bits and ordinary twist drills. The brace has ball bearings and will hold all drills, taper, round or square shape, ⅛ to ½ in. The brace has drop forged steel jaws.

Greb Model G Ball Race Puller

The Greb Co., Inc., 172-173 State Street, Boston, Mass.

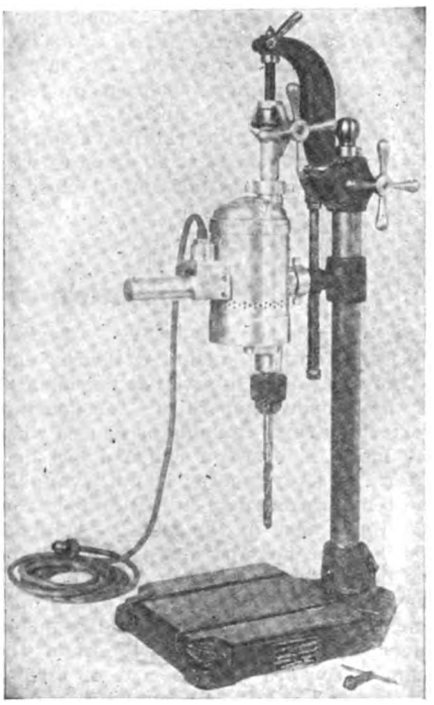
Price $22.50.

The ball race puller can be locked on any ball race from the smallest size up to 2-in. in diameter without any changes. It has a reach of 5-in. and the screw is ⅝-in. in diameter. The race is clamped in the apex of the triangle with the clamp shown on the right of the illustration, and the vertical screw removes the race.

Tiger Battery Recharging Clip

Du Chanois Electric Co., Youngstown, Ohio

Price, 20 cents each

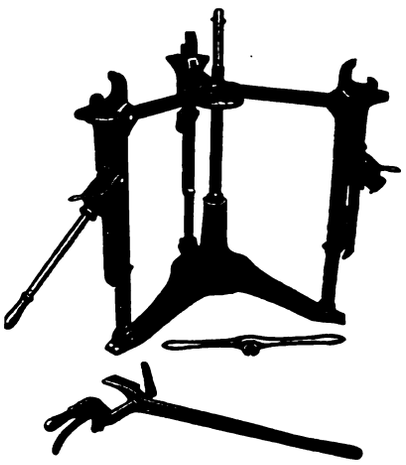


The clip is for connecting up batteries for recharging. The spring is 1¾ in. above the battery. The clip is made of cold drawn spring steel, lead coated. The jaws fit all types of battery terminals and the teeth bite through the corrosion on the poles. A slight pull upward after the connection is made makes the jaws sink in even deeper.

Way Portable Electric Drill

A. F. Way Co., Inc., Hartford, Conn.

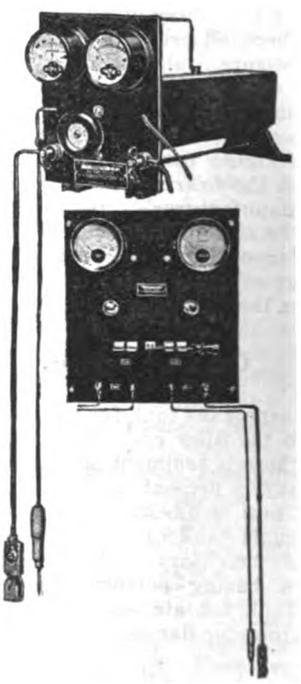
Price $100. (Portable unit only)



The features of the drill include a ⅓-hp. motor designed especially for the purpose by the General Electric Co., 20.7 to 1 reduction gear, plain, wick packed, and oil tight bearings, and a rigid aluminum housing with proper openings to insure, in connection with a blower mounted on the armature shaft, an adequate circulation of cooling air. The drill uses a special form of plain bearings on the ½-in. armature shaft, these bearings being spool-shaped and having two grooves in the babbitt lining. They are parallel to the axis and terminate in holes which run through to the smaller outer diameter of the spool. Wool wicking is threaded through the groove and the holes and the loose ends are then wound around the spool several layers deep, and soaked in oil. The drill is fitted with a ⅜-in. three-jaw Jacobs chuck, and a breast plate with spade handle interchangeable with an electrical handle or 1⅛-in. standard tube or bar.

List Tire and Rim Machine

E. J. List Mfg. Co., Inc., Havana, Ill.

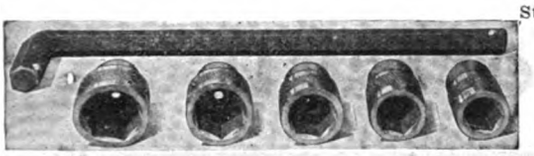


Price, $40

The machine is for mounting on the floor and will remove tires from Q. D. rims of any size. The three hooks on the standards catch the rim and pull it inward to remove the tire or outward to replace the tire by means of the threaded rod in the middle controlled by the handle.

Portostat Battery Test Sets

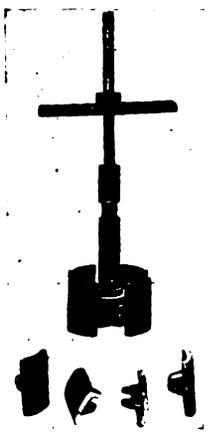
Forest Electric Co., Inc., 50 Columbia Street, Newark, N. J.



This is a carbon resistance discharge testing set for testing incoming batteries. The entire outfit is combined in a single portable unit.

Digitized by Google

Quickway Socket Wrench



Bethlehem Spark Plug Co., Bethlehem, Pa.

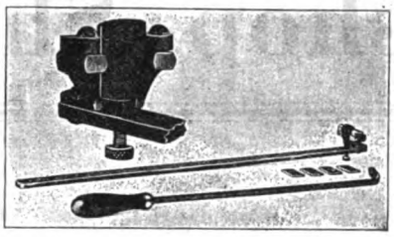
The sockets handle ½, 9/16, 5/8, 11/16 and ¾ nuts and bolts, covering practically all sizes used on average automobiles. The hexagonal handle is double ended, one to operate straight and the other at 90 deg. The sockets are broached and cyanide hardened. They are knurled on the outside.

Stimson Internal Lap Tool

The Stimson Engineering Co.,
598 Sixty-eighth Avenue, Milwaukee, Wis.
Price, $25

This is a device for lapping cylinders. The shoes which make contact with the cylinder bore are held by flexible connections at one end of the shaft. Two sets of shoes are provided, one to fit cylinders from 2¾ in. to 3½ in. and the other to fit cylinders from 3½ in. to 4¼ in. The shoes are easy to change, as each shoe is held in place by one cotter pin. A strap fits loosely on the drive shaft and a set collar is provided on the shaft to gage the distance the tool is to be fed into the cylinder. Cylinders can be lapped either in the chassis or out. The tool is automatically expanded as the work progresses by means of a coil spring which is adjusted by an adjusting nut. The tool is made entirely of steel except the shoes, which are cast iron.

Crescent Straight-Nose Plier



Crescent Tool Co., Jamestown, N. Y.
Price 50 cents.

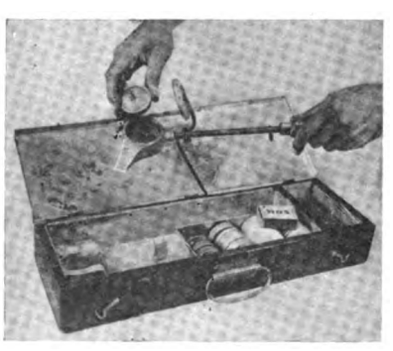
The pliers are of the thin straight nose type convenient for working in narrow and inaccessible places. The tool is drop forged, hardened and oil tempered, and the bolt and nut are turned from the solid bar of steel and hardened to insure a long life. The finish is nickel plate and each pair is packed in an individual carton. Made in 5 and 6 in. sizes, both at the same price. An assortment known as DB7 consists of six 5-in. pliers mounted on a purple card and six 6-in. pliers packed in individual cartons, furnished to the dealer at $3.75.

Toric Cylinder Score Filling Process

St. Paul Welding & Mfg. Co., St. Paul, Minn.

This is an equipment and a method of filling scores in cast-iron cylinders. The outfit consists of a cleaning scraper of hardened tool steel for preparing the score and removing the oil and other material so that the cast-iron solder will combine with the cast-iron wall. The surfacing tool holder has five hardened steel surfacing blades for finishing the filling metal to the original curvature of the cylinder wall. The five blades have double edges, giving a range of ten sides of the cylinder diameters 3 to 5 in. They are made of high carbon tool steel, oil hardened and drawn through a temper. The blades fit into an adjustable holder which gages the amount of filling metal removed when finishing the work. Surfacing blades are guided on hardened and polished steel balls.

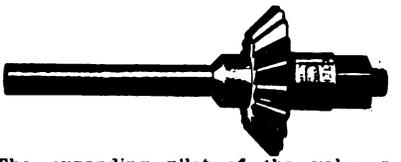
Folk Bearing Mandrel



Wayne Tool Mfg. Co., Waynesboro, Pa.
Price $7.05 to $22.45 each.

The mandrel is cylindrical at one end and at the other end has square faces ground, leaving, however, a small part of the cylindrical surface in between the flats. A connecting rod bearing tightened around the squared end and revolved is burnished to size. The round end is used to clamp the bearing and align the connecting rod and piston. Made in sizes from 1¼ to 3 in. The following size assortment will serve for most popular cars: 1¼, 1⅜, 1½, 1⅝, 1¾, 1⅞, 2, 2¼. The price for this set is $83.20.

Heatless Soldering Iron



International Sales Co., 921 Southern Building, Washington, D. C.

This is a soldering iron which employs no heat from an outside source but utilizes chemical action to produce the heat. The soldering iron has a receptacle cast into it. In this is placed a small tin container holding the required mixture, with means for ignition. The compound burns with a glow and not a blaze and little smoke is given off. It is said that sufficient heat is generated in a few seconds to do soldering work and the heat will be maintained for some time.

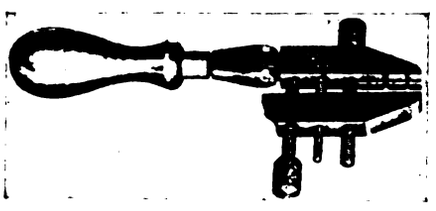
Wayne Valve Seat Reamer with Expanding Pilot

Wayne Tool Mfg. Co., Waynesboro, Pa.
Price $3.90.

The expanding pilot of the valve seat reamer insures a perfect sliding fit of the pilot where the valve stem hole has become enlarged by wear. After inserting the pilot in the hole, it is expanded by screwing down on the taper mandrel. The cutter has a ground taper hole which fits the ground taper part of the pilot, thus making all parts concentric. Furnished complete with wrench. Made with 5/16, ⅜ and 7/16 pilots and 45 or 60 deg. angles. Extra cutters $1.85 each. Worn cutters reground free, customer paying transportation.

Ace Connecting Rod Aligning Gage

Mark W. Jones, Fifty-third and Lansdowne Avenue, Philadelphia.



Price with ten bushings, $25; with two bushings, $20.

The gage is for testing the alignment of the connecting rod, piston and piston pin. The column is made from cast iron finished on the bottom, base and side, the base and side being lapped to a master plate within .0005 in. The spindle for bushings is made from machine steel, hardened and ground. The aligning side for piston pins is cast iron, machined and scraped for master plate. A steel spring gib operates by thumb screw and is quickly adjusted to the desired height. The standard aligning slide No. 2 will fit nearly all connecting rods. It is 2¼ in. between sides and suitable for rods 2¼ in. wide or under, with pins 2½ in. long or longer. The No. 1 slide is 1½ in. and made for Fords, Packard Twin-Sixes or engines of similar size. Aligning slide No. 3 is 3¼ in. and suitable for rods 3¼ in. wide or under with pins 3½ in. long or longer.

Starrett No. 200 Hand Vise

L. S. Starrett Co., Athol, Mass.
Price $2.

The outstanding feature of the vise is the adjustable handle which may be clamped at any point within a radius of 180 deg. The stationary jaw has three V grooves for clamping cylindrical pieces, such as wire. The rod and spring between the grooves prevents the adjustable jaw from flopping around when opening or closing the clamp. The capacity of the vise is 1-in., the depth from the end of the jaw to the first screw being 1⅛-in.

Repairshop Shortcuts

Ever Make Fuel Consumption Tests?

EVERY once in a while a customer comes in with the complaint that his car is only getting 4 or 5 miles to the gallon and he wants something done about it. Not infrequently it can be proved that the car is getting normal or nearly normal mileage and the owner has simply made a mistake in his figuring. It is very simple to disconnect the vacuum tank from the main tank as there is usually a shut-off cock. The vacuum tank will hold a measured quart. Run the car on this quart and multiply the miles by four as there are four quarts to the gallon. This will give the miles per gallon that the car is making.

Send your shortcuts to Motor World.

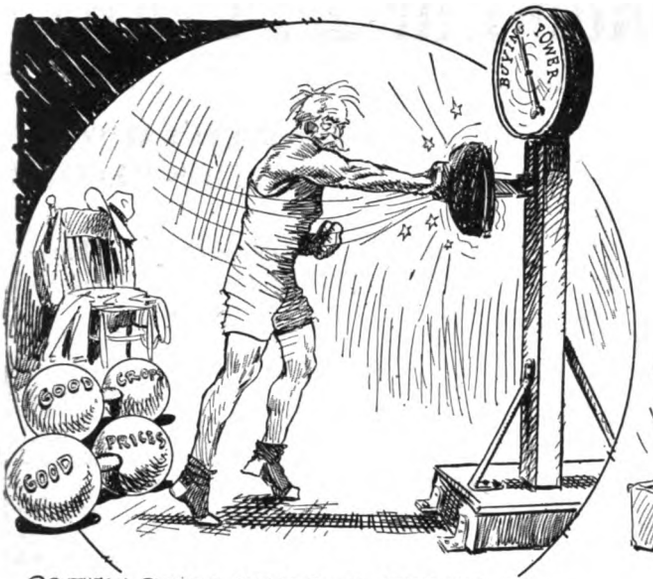
No. 3433—Grinding Valve Stem and Tappet Faces—It is worth-while to grind valve and tappet faces before re-assembling to allow for better adjustment. This is done by placing the valve stem or tappet in a drill chuck, pulling down against a piece of emery cloth attached to a board.—John St. Hornow, New York.

No. 3434—Tire Tool for Clincher Tires—Clincher tires that are rusted or stuck to the rim can be removed with a tool which is made from the bow of an old buggy top. The tool is made to fit the size of tire to be removed.—H. J. Engel, New Braunfels, Texas.

No. 3435—Fixed Spark Plug Wrench—A wrench fixed at the top of the work bench allows easy disassembly of spark plugs. It is made from a section of a hub cap wrench, screwed to the top and a hole cut in the bench.—G. A. Luers, Washington, D. C.

No. 3436—Magnetic Speed Wrench—The end of a socket wrench is magnetized by winding it with a number of turns of wire and passing a storage battery current through it. The magnetism in the wrench will hold nuts while they are placed on studs or bolts.—Arthur G. Raabe, Long Island City, N. Y.

No. 3437—Lock for Cash Register—If the cash register attendant finds it necessary to step away from the register, a simple lock can be applied by drilling a hole in the side of the register, away from the light, the drawer going through the case and the drawer. A wire nail is placed in the hole to prevent the drawer from coming out.—G. A. Luers, Washington, D. C.



No. 3438—Grease Cup Filler—A filler for grease cups is made from a grease gun mounted on a wall, fitted with an elbow threaded the same size as the grease cup. The grease cup is screwed in with the cap loose, and the plunger of the grease gun is pressed.—Arthur G. Raabe, Long Island City, N. Y.

No. 3439—Battery Terminal Marker—A tool for marking the positive and negative poles of a battery is made from a piece of steel rod bent to an elongated "U" shape and filed to a flat line marker on one end and a plus shape at the other end.—G. A. Luers, Washington, D. C.

October Output Placed at 244,000

PRODUCTION SO FAR NEARLY EQUALS 1920

Total Is 2,119,227 Against 2,205,197 in Best Year of Industry's History

NEW YORK, Nov. 6.—Not only has October, with its estimated output of 244,000 cars and trucks, been the seventh consecutive month of the year to show production in excess of 200,000, but it has brought the figure for the ten month period to within a few thousand of the total output for the best previous year in the production history of the industry. Thus far the aggregate for 1922 is 2,119,227 as compared with 2,205,197 in 1920.

Still Behind on Orders

Factories are still behind in filling orders for closed cars and are hampered in making deliveries by the unsatisfactory rail situation. It is probable that there will be a tapering off in production in November, although there is no evidence now that the demand for cars is showing any notable signs of weakening. This is the season when in other years the slowing up in sales has been pronounced. Manufacturing efforts are centering chiefly on closed models for which there has been an exceptionally brisk demand.

Taken in conjunction with the remarkable record for the month, reports from all parts of the country show that there is only a negligible stocking of open cars. At present, it is not likely that there is more than one month's supply of this type in dealers' hands or on the road to dealers. This fact indicates that the entire production is being sold and that manufacturers are not producing in excess of actual demand.

Farmer Demand Expected

Practically the only section of the country where there has been any accumulation, and that in very small numbers, is the Northwest. In that section, however, there is a pronounced feeling that such reserve is necessary to take care of the farmer demand which is expected to appear as soon as the return from this year's crops are received.

Factories are making greater use of driveaways to surmount difficulties in delivery. Last month these increased from 30,055 in September to 33,320. Instead of a falling off in carload shipments there was an increase from 25,950 in September to 26,980 in October. Boat shipments declined from 8,002 to 7,404 last month.

Most encouraging are the reports from truck manufacturing centers. Business shows an improvement of 75 per cent over a year ago with production for September 35 per cent greater than in the same month last year. Some plants are operating at capacity to meet the growing demand for rail cars and motor buses. Better industrial conditions have enhanced sales of motor trucks in those sections, and interest is showing a greater awakening among farmers.

HARRY MOOCK NAMED HUDSON SALES HEAD

DETROIT, Nov. 4—Harry Moock has been promoted to sales manager of the Hudson Motor Car Co., taking the position left vacant by H. B. Phipps, who has resumed charge of the foreign fields in which he created a remarkable record before the war. J. S. Draper, formerly district manager in the Middle East, has been made assistant sales manager.

Moock joined the Hudson company about a year ago, entering the organization after resigning the general managership of the National Automobile Dealers Association, where his energy and acquaintance among the dealers created a nation-wide reputation for him.

Fined for Short Measure

CHICAGO, Nov. 7—The two proprietors of a south-side garage were fined $25 each and costs by Judge Richardson, on charges of having sold short measure gasoline.

COAL PROVED FACTOR IN MONTH'S RECORD

Supply Scarce in September—Number of Unfilled Orders Taken Care of

NEW YORK, Nov. 6—Analyzing the report of the traffic committee, which showed an October production in excess of 244,000, directors of the National Automobile Chamber of Commerce at their monthly meeting decided that the increase was brought about by the increased availability of coal, which was relatively scarce in September.

The production in October meets a number of unfilled orders, as well as supplying October sales. The fall months, though seasonally fewer than the summer, are expected to register the best autumn trade on record.

It was reported that the demand for cars is keeping up, despite the season of the year, and that cars are moving at such a rate that dealers have not begun to think of stocking up. It will be another month, at least, before they will begin accumulating a surplus of stock, it is thought.

Explanation for Activity

This continued activity is explained in several ways. In the first place, the continued demand for closed cars has kept up the market and the industry as a whole is averaging 32 per cent production on closed cars, a growth of at least 10 per cent in the last year, made possible by increased capacity of the body plants.

Another explanation is that prospects who had been waiting for lower prices have come into the market because they are convinced that the manufacturers have met their demands for lower lists. Undoubtedly, too, the Ford reduction has been a great incentive to buying, which, of course, helps everyone.

The truck business, it was reported, shows surprising strength and the prospects never were better. Buyers are anticipating a shortage of railroad transportation and purchasing trucks accordingly, while the betterment of general business has been another contributing factor to the prosperity of the truck makers.

Used Car Improvement

The directors also discussed used cars and it was found that there has been an improvement noticed in used car sales in six states: Massachusetts, Ohio, Maine, Colorado, New York and South Dakota. But generally speaking, the situation is bad and will continue, although cooperation on the part of the dealers will help.

Dealers Are Not Storing Up Stocks

NO GREATER SUPPLY THAN FOR ONE MONTH

Conditions Throughout Country Good With Only Normal Number Weak Spots

DETROIT, Nov. 5 — No noticeable stocking of cars is reported from the dealers at this time. Sales managers state that while there are soft spots in the country, particularly in the grain zones, there are enough points where business is good to keep a steady flow without an accumulation.

Production schedules, of course, are being pared this month with the exception of Buick and one or two other notable examples. Taking an average of all manufacturers, there is not in excess of one month's supply of cars on the road or in the dealers' hands at the present time. Preparations made some time ago for an increase in the percentage of closed car models has been largely responsible for keeping this situation clear.

None of the companies report anything but a healthy general condition with not more than the normal number of weak spots, and a very active closed car demand from the metropolitan centers.

New York

NEW YORK, Nov. 7—Late October and early November have brought a decided slowing up in demand for open cars in the metropolitan territory. Open cars are coming in from the factories, some by freight and some in driveaways, but they are moving much more slowly and in some cases not at all from the establishments of distributors and factory branches. There is beginning a noticeable though not alarming accumulation of open car stock.

Outside the large retail centers of New York, Brooklyn and Newark the open car demand also has fallen flat, but dealers as a rule have only small stocks and a good many, because of used car inventories and lack of ready credit, are not accepting them in any considerable numbers.

Boston

BOSTON, Nov. 7—Some of the larger Boston distributors are now planning to arrange with their banking interests to stock cars for spring delivery. They will be both open and closed models. They are getting orders for spring delivery now as an indication that after the motor show in March there will be a big demand for cars and they have faith in the future when elections, strikes and other unsettled conditions have been swept away.

Philadelphia

PHILADELPHIA, Nov. 7—Inquiry shows that big distributors and dealers are not stocking up on open models. They are sold up and the question is one of deliveries. The tendency is to order more closed models than open ones.

Minneapolis

MINNEAPOLIS, Nov. 7—Dealers of the Northwest are stocking cars because they find the prospects are not flush with money to buy. Grain is moving slowly owing to the railroad and boat situation. Elevators are full of grain waiting to move. Liquidation is only on delivery of the grain. All models are affected but closed cars move better in cities than outside. Probably there will be light winter sales according to bankers.

St. Louis

ST. LOUIS, Nov. 7—Several dealers have stored open cars within the past few weeks due to a slump in sales recently. Very few have any larger number of closed cars on hand. Most dealers are behind on closed car deliveries, this being especially true on new models recently announced.

San Francisco

SAN FRANCISCO, Nov. 7—San Francisco, Oakland and Berkeley dealers are taking on no more new stocks than necessary to carry orders. There is no special demand in northern and central California for open cars. In fact the demand is for closed cars and the dealers

(*Continued on page* 46)

TAKE UNPAINTED CARS TO HURRY DELIVERIES

DECATUR, ILL., Nov. 6—Decatur automobile dealers have devised one scheme to speed-up deliveries of closed-cars, so greatly in demand as fall and winter season purchasers appear.

"We're taking cars from the factory before they are painted," explained one dealer, "and finish them in our own shops. It costs us more, but we save time and meet the customer's demands for immediate delivery. Our shop is kept busy, too."

NUMBER OF MODELS REDUCED BY HUDSON

Four Higher Priced Cars Are Eliminated as Part of Dealer Finance Plan

DETROIT, Nov. 6—Hudson Motor Car Co. has reduced the number of Hudson and Essex models to seven by taking out of its line the four higher priced closed models, including a touring limousine, limousine, cabriolet and sedan. This is a material change from past policies, for in one year Hudson and Essex produced as many as 12 different body types. Before the Essex came into being there was one season in which Hudson alone had nine models.

The new policy is to enable the dealer to concentrate on a few fast-selling models rather than to attempt to cover the entire field of motoring demands. The closed car proportion of the entire Hudson-Essex production now is 56 per cent and even this will be greatly increased in 1923.

Decision to reduce the number of models is made to aid in the carrying out of the company's new dealer finance plan, which aims to lessen the problems of the dealers handling the line.

Realizing the financial problems of the smaller dealer, the company has developed a plan which permits the handling of cars throughout the year at an unusually small expense. The details are very much along the lines of the usual national financing plan.

SHOW IN WASHINGTON DREW 25,678 VISITORS

WASHINGTON, Nov. 4—The most successful closed car exhibition ever held in Washington closed after being attended by 25,678 paid attendants. No official figures are available as to the number of automobiles and accessories sold, but an individual poll of the 85 exhibitors places the figures at approximately $75,000.

The show occupied 25,000 feet of floor space and was the most elaborate in the history of the local automobile exhibitors. Fifty exhibitors of cars showed 62 different makes. Thirty-five accessory firms were present with their exhibits.

It was voted to hold the spring open and closed show on March 10-17.

Best Buick October

DETROIT, Nov. 5—October was the best month in the history of the Buick Motor Co. Production reached 17,666. September production was the best previous month with 16,482.

SERVICE MEN TO HEAR PROBLEMS DISCUSSED

Program Completed for Two Days Convention to Be Held in Chicago

NEW YORK, Nov. 6—H. R. Cobleigh, secretary of service of the National Automobile Chamber of Commerce, has completed the program for the meeting of factory service managers which will be held at the Hotel La Salle, Chicago, on Nov. 14 and 15.

The first day will be devoted to factory problems and the second day given over to selling service associations to the dealer associations. The convention will be opened by Thomas J. Hay, president of the Chicago Automobile Trade Association, who will deliver the address of welcome. H. J. Leonard, vice-president and general manager of the Stephens Motor Car Co., also will talk. There also will be reports from the service and the pirate parts committees, after which the following topics will be discussed:

How to save transportation costs by shipping parts in carload lots of cars.
How are the taxable and the non-taxable automobile parts distinguished?
Parts discounts to independents.
Boxing parts for shipments.
Flat rate systems in practice.
Lubrication and inspection policies.
Overcoming misrepresentation of service by overzealous salesmen.

The feature of the second day, which will be the service association conference, will be a three-cornered discussion of the importance of better service and service associations as a means to improve it. The owner's point of view will be handled by Alexander Johnston, editor of Motor; the car seller's point of view by Gene Silver, Cole distributor in Chicago; and the maker's point of view by B. B. Bachman, president of the Society of Automotive Engineers and engineer of the Autocar Co.

The afternoon of the second day will be given over to a discussion on how to make service associations most effective. There will be an experience meeting of service association and service division delegates. The N. A. C. C.'s service division speakers' bureau also will take a hand and will tell how it functions for the service associations and divisions, helping them get topics, speakers and films to make their meetings of greatest interest and benefit. One of the speakers will be C. J. Buckwalter, president of the Ambu Engineering Institute.

PEAT-GASOLINE MAN GUILTY OF LARCENY

NEW YORK, Nov. 6—Louis Enricht, the 76-year-old resident of Farmingdale, L. I., who claimed to have invented a process of making cheap gasoline from peat, has been convicted of larceny by a Long Island court, on complaint of a Jamaica garage owner who had invested $3,000 in the Enricht Peat Corp., and who claimed Enricht made false representations.

According to a representative of the United States Patent Office, no patent ever had been issued for the making of gasoline from peat, and it was declared the Enricht method was impracticable.

New Apperson Six

KOKOMO, IND., Nov. 4—The new smaller Apperson six which will make its appearance during the winter will list between $1,200 and $1,400, the definite price not having been determined. It will have 122 or 124 in. wheelbase and the engine will be high powered.

New Studebaker Big Six Coupe, $2,375

The Studebaker Big Six line has been increased by the addition of a five-passenger coupé which includes such features as nickel plated front and rear bumpers, automatic windshield wiper, rear view mirror, Moto-Meter and ornamental radiator cap. The coupé has a two-door body and upholstery is in dark brown velour. Equipment includes heater, transmission lock, cowl ventilator, automatic windshield regulators, three-piece rain vision, windshield, eight-day clock and a trunk in the rear

MINNEAPOLIS UNITES IN ONE ORGANIZATION

Allied Automotive Industries Formed for Mutual and State Usefulness

MINNEAPOLIS, Nov. 7 — Common protection and advancement of good citizenship and to promote proper legislation at the coming session of the Minnesota legislature are the objects of an alliance of the automotive industry in Minneapolis, formed at a mass meeting in the West Hotel. The name is the Allied Automotive Industries, as adopted by representatives of every factor in the business, from motor car and tractor companies to automobile insurance agencies, including the radiator men, paint men, body men and such allied forms of business.

A tribute was paid to Walter Wilmot, many years active secretary for the Minneapolis Automobile Trade Association and manager of the annual winter and fall shows in the Twin Cities and at the State Fair Ground, in his choice as secretary. This association offered the services of Wilmot and the use of its offices for one year. Constitution and by-laws are similar to those of the Ohio State Automotive Trade Association, and the organization does not propose to displace the present separate trade organizations.

Mackie Chosen President

Officers elected are: President, J. H. W. Mackie, general manager for the Payne Motor Co.; vice-president, L. G. Wilcox, manager of the Motor Maintenance Co., and E. P. Farley of the Farley Tire Co.; treasurer, Austin S. Velie, treasurer of Eckland Bros. Co., body builders. Two hundred attended the mass meeting and a membership of 400 is urged.

President Mackie outlined four purposes of the new organization—better acquaintance, business co-operation, common protection, civic and state usefulness.

To make good the general purpose of the organization of affiliating all the allied industries, the board of directors will be made up of two representatives from trade organizations and six at large, to be chosen at the next general meeting. Such organizations exist as the automobile trade association and similar organizations of the northwest tractor men, garage owners, vehicle makers, tire dealers, battery men, service men, implement men, oil men, bus owners and accessory dealers.

Moon's Earnings

ST. LOUIS, Nov. 4—The Moon Motor Car Co., for the quarter ended Sept. 30, reports net profits of $326,478, equal, after preferred dividends, to $2.08 a share on the 154,213 shares no par common stock.

TRUCK ORGANIZATION MAKES YEAR'S PLANS

Dealer to Be Given Constructive Education—Merchandise Policies Stressed

DETROIT, Nov. 6—A vigorous constructive program for 1922-23 was outlined at a meeting of the National Association of Motor Truck Industries held at the Detroit Athletic Club. The speakers were M. L. Pulcher, president of the association; Don Whittaker, general manager; C. A. Musselman; C. A. Vane, general manager of the National Automobile Dealers' Association; Tom Snyder, secretary of the National Association of Commercial Haulers; S. B. Hadden, of the Allied Motor Commerce.

The program of the association calls for constructive education of the motor truck dealer. The keynote of the meeting was that the future of the industry will be based entirely upon the soundness of manufacturing and merchandising policies. This soundness can only be reached, it was pointed out, by proper co-operation between the manufacturers and parts makers.

According to the program which the association has set for itself, the manufacturer and dealer who is operating his business with a spirit of permanency and sound values will receive the support of the organization which is composed of assemblers, parts manufacturers and dealers, each of which group are represented on the controlling board.

LARGE FLEET OWNERS AGAIN ENTER MARKET

DETROIT, Nov. 6—Vance Day, general sales manager of the General Motors Truck Co., states that for the first time in two years large fleet owners are again buying trucks on a large scale.

It is his contention that, instead of receiving small orders for one or two trucks as they have been doing, the five big packers, owners of some of the largest truck fleets in the world, are again in the market, with the Standard Oil Co. and other large fleet owners. The truck company, Day says, has been filling single orders for 20 and 25 trucks at a time, and their salesmen report that still larger orders will be forthcoming soon.

ROLLS-ROYCE PLANS TO INCREASE OUTPUT

NEW YORK, Nov. 6—The Rolls-Royce Co. of America, Inc., is issuing $2,000,000 fifteen-year 7 per cent sinking fund gold bonds of an authorized issue of $3,000,000. The proceeds will be used for refunding higher interest-bearing obligations and the remainder for working capital.

While this issue will in no way be used for plant expansion, it will facilitate a slight increase in production as officials say that it is possible to increase output to more than 450 cars a year.

The plant is now running at capacity. Earnings since May 1 have been at the rate of over twice the interest charges and orders on hand, it is said, will enable the company to exceed this mark.

TRUCK BEATS LETTER MAILED NIGHT BEFORE

LAMONI, IOWA, Nov. 5—Driving a truckload of cattle over the Jefferson highway last week from Owatonna, Minn., to this city, a distance of 320 miles, Ralph Derry beat a letter, which he mailed the night before leaving, by 15 hours.

On the out-trip he loaded his car with apples bought here for 75 cents and $1 a bushel, selling them at the northern terminal at $1.90 to $2.50.

FIAT MAKES PRICE CUT ON TWO LINES

NEW YORK, Nov. 2—Fiat has announced a radical price reduction on its large 4-cylinder line, model 505, and 6-cylinder cars, model 510. Model 501, the small 4-cylinder line, remains unchanged. The new prices are as follows:

Model 505

	Old Price	New Price
Phaeton	$3,500	$2,500
Sedan	5,000	2,900
Landaulet	4,700	2,900

Model 510

	Old Price	New Price
Phaeton	$5,400	$3,700
Landaulet	5,500	4,500
Brougham	5,500	4,500

STUDEBAKER PRICES OF BIG SIX HIGHER

SOUTH BEND, IND., Nov. 6—Studebaker Corp. has increased the list on its Big Six, the increases ranging from $50 to $135, according to body style. The list is as follows:

	Old Price	New Price
7-passenger phaeton	$1,650	$1,785
4-passenger sport phaeton	1,785	1,835
4-passenger coupe	2,275	2,400
Sedan (regular)	2,475	2,475
Sedan (special)	2,650	2,750

Mason Tires to Advance

NEW YORK, Nov. 4—The Mason Tire & Rubber Co. will advance tire prices approximately 5 per cent Nov. 15.

Torbensen Gets Injunction

NEW YORK, Nov. 2—The Torbensen Axle Co. of Cleveland, has obtained a perpetual injunction in the United States District Court of New York, restraining the United Gear Manufacturers Corp. of New York City, from using the Torbensen name in selling parts for the Torbensen axle when those individual parts are not made by the Torbensen company.

NEW MARKETS OPENED FOR TRUCK BUSINESS

All Factories Busy, F. W. Fenn Reports After Tour Lasting Two Weeks

NEW YORK, Nov. 5—The motor truck industry, all things considered, is in wonderful shape at the present moment. It is doing 75 per cent more business now than it was at the beginning of the year; all its plants are busy, some of them at capacity, and new markets have been opened that promise much business in the immediate future. September was a rare production month, showing an increase of 35 per cent over the same month a year ago.

These are the conclusions reached by F. W. Fenn, secretary of the motor truck division of the National Automobile Chamber of Commerce, after two weeks spent in visiting some 15 factories in different parts of the country.

General business is the barometer of the truck industry. When business is good we will sell trucks, and lots of them, and I am glad to report that business is coming back. There is a labor shortage in all the industrial centers, the demand for trucks is surprising everyone and new markets are opening for us, which tell us that we are just scratching the surface right now.

Demand for Rail Cars

I find a great demand for rail cars. The railroads are coming into the market and not only want these rail cars but also used trucks for short hauls and for store-door deliveries. The carriers are finding that they either must take to the motor trucks and store door deliveries or spend millions building new terminals on the outskirts of the big cities. The electric railways, too, are proving good customers through frankly taking up the motor bus as a feeder to their main lines. The boom in highway building also has helped matters.

Of great benefit to the industry is the decisions of the public service commissions of New York and California, which have held that trucks and buses are necessary to the public and have granted franchises for the operation of bus lines despite the protest of the trollies.

I also feel that the farmers are going to prove mighty good customers.

Plants Visited Active

In my swing through the country I found everyone busy and very optimistic. Mack, Federal and White are going strong. At Diamond T I found great activity because of the fact that the American Railway Express is taking most of the output. Four-Wheel Drive at Clintonville is building flanged wheel trucks for use on the railroads of Porto Rico, Japan and China.

Graham at Detroit and Clintonville has announced a complete line of bodies for smaller haulage work, which has met with great success. The Graham is powered with Dodge engines and distributed by Dodge dealers. The Walker electric at Chicago reports many orders and great activity in the sales department, while the Watson Wagon Works at Canastota, N. Y., is doing so well that it has discharged the receiver who has been at the helm for some time.

RAY SHERMAN VISITS 25 CITIES IN MONTH

Trip Takes A. E. A. Merchandising Director from El Paso to Yakima

CHICAGO, Nov. 4—Twenty-five merchandising meetings in 25 cities is the October record of Ray W. Sherman, merchandising director of the Automotive Equipment Association, who has just returned from an extensive speaking tour which started at El Paso, Tex., and ended at Yakima, Wash., giving him an excellent opportunity to observe the condition of automotive business in the Pacific Coast states.

In speaking of his trip, Sherman said:

I was most impressed on this trip by the progress of the automotive merchant himself as a business man. For more than ten years I have traveled about the country meeting groups of men engaged in the automotive business. It used to be that at a public meeting of these men most of them would appear in flannel shirts and many in overalls, and it was in that sort of dress that they met the public in their places of business. At twenty-five meetings on this trip I didn't see a single man without a white collar and customary business clothes. Even the mechanics who attended the meetings were well dressed. This condition is beginning to be noticeable all over the country.

Sherman said that automotive business at El Paso and at Phoenix, Ariz., his next stop, had suffered this year because the local market depended a great deal upon cattle, cotton and copper, all of which have been low in price. Conditions there are improving rapidly, he said.

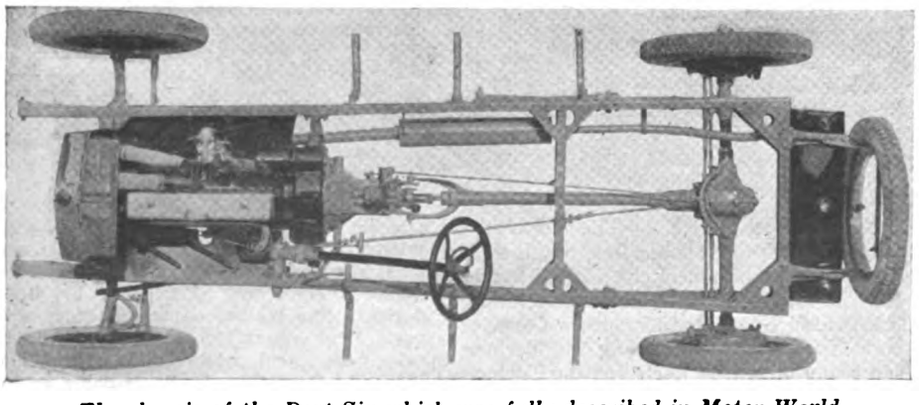
From Phoenix he went to Santa Ana, Cal., thence up the coast through Long Beach, Los Angeles, Bakersfield, Fresno, Sacramento, San Jose, Oakland and San Francisco holding meetings in each place. In these cities he found business thriving and he was especially impressed by the attractiveness of the automotive stores. Neat and orderly arrangement of stocks was the rule and nearly every store had a carefully arranged show window. A remarkable feature was the extent to which successful car dealers are operating accessory and supply departments.

Meetings were held at the following cities in Oregon: Medford, Roseburg, Eugene, Salem, and Portland. From Oregon Sherman went into Washington and addressed meetings at the following points: Chehalis, Aberdeen, Olympia, Everett, Tacoma, Seattle and Yakima.

In towns where the "Ask 'Em to Buy" moving picture was shown last year the attendance to see the "Shop Profits" film this year invariably was much better than last year, Sherman said. He believed this was due to the favorable impression made by the first picture. Everywhere he found a very keen interest in the question of increasing profits in automotive merchandising.

Preparations for a good Christmas business were apparent in many places.

(*Continued on page* 46)



MAINE KEEPS HEAVY TRAFFIC FROM ROADS

AUGUSTA, ME., Nov. 6—The Maine State Highway Commission has just served notice on owners of heavy trucks that there will be no hauling of heavy loads on the highways throughout the winter. At its meeting this week the matter was taken up, and it was announced that the commission felt that it was proper that it should put an embargo upon heavy traffic beginning on Nov. 15.

This will apply to all State highways and the other roads built in conjunction with cities and towns upon which the state expended any money. The notice states that all heavy loads should be moved over the highways before Nov. 15, and that an embargo will be placed beginning with that date. It does not say when it will be lifted, but as it goes on to say that it is the opinion of the commission that the most damage is done to the road surfaces during thawing conditions after a freeze that means late spring before the rule is rescinded.

Just what the owners of heavy trucks will do is problematical. However, as the law is specific, giving the Highway Commission that right, it is doubtful if anything can be done to prevent the regulation becoming effective.

Chassis of Dort Six

The chassis of the Dort Six which was fully described in Motor World issue of Nov. 1

JOBBERS HOST TO 603 DEALERS IN MID-WEST

Big Attendance Due to Preliminary Work of Four Firms Who Entertained

FORT WAYNE, IND., Nov. 5—A successful meeting of automobile dealers, with jobbers as the hosts, has been held here by the Fort Wayne Iron Store Co., Lomont & Co., R. M. Kaough & Co. and the Mossman-Yarnelle Co., local jobbers in automotive equipment. Six hundred and three dealers from Indiana, Ohio, Michigan and Illinois were present at the meeting and banquet. It was unanimously voted at the banquet to hold a similar affair each year.

The meeting was primarily arranged as an educational event. The delegates showed a warm interest in the program, which had to do principally with giving suggestions for efficiency in shop work, particularly in cutting down leaks in the operation of a modern accessory or automobile repair shop. A great deal of emphasis was laid upon sales psychology which should be employed in the selling of automobile accessories, and suggestions were given on the proper way to display accessories and advertise them in order to realize the greatest volume of sales.

Two reels of motion pictures, provided by the Automotive Equipment Association, of which the local jobbers are members, were shown to the dealers, and addresses were delivered by Robert A. Stranahan of the Champion Spark Plug Co. of Toledo and M. B. Ruark of the A. E. A.

Dealers Kept Informed

George A. Hibbins, manager of the R. M. Kaough Co., acted as general chairman of the committee which planned and conducted the convention. The initial work of making the affair a success was started six weeks ago, and all of the dealers invited were kept in close touch with the arrangements by means of letters and through the salesmen of the jobbers.

It is declared that much of the success achieved by the jobbers in getting such a splendid attendance is due to the fact that emphasis was constantly placed, in talks with dealers and in letters sent to dealers, on the fact that the meeting would be HELPFUL.

In addition to Hibbins, other representatives of the jobbers taking a prominent part in the meeting were W. Page Yarnelle, of the Mossman, Yarnelle Co.; C. J. Lomont, of Lomont & Co., and Herbert Lang, of the Fort Wayne Iron Store Co.

Franklin Pays Dividend

SYRACUSE, Nov. 6—The regular quarterly dividend of 1¾ per cent on the cumulative 7 per cent preferred stock of the H. H. Franklin Manufacturing Co. was paid on Nov. 1 to all stockholders of record on Oct. 20.

MONTREAL JOBBERS FORM ASSOCIATION

Members of Canadian Credit Men's Association Organize Trade Section

MONTREAL, QUE., Nov. 6—At a meeting held at the Old Colony Club, the wholesale automobile accessory houses which are members of the Canadian Credit Men's Trust Association, Limited, organized a trade section. J. Thurston Smith was elected president; James W. Green, vice-president, and Fred H. Pope, secretary.

Smith is well known to the business interests of the city. He is secretary-treasurer of Lewis Bros., wholesale hardware jobbers, ex-president of the General Accountants' Association, ex-director of the Dominion Commercial Travelers' Association, ex-honorary treasurer of the City Improvement League, and also ex-president of the Quebec Division of the credit men's association.

Green is credit manager of the Dominion Rubber System, with which firm he has been identified during the past 12 years.

Pope is manager of the Quebec Division of the credit men's association, under whose auspices the section will function.

The following firms have joined the section:—John Millen & Sons, representative, C. E. Kendrick; Goodyear Tire & Rubber Co., representative, E. H. Dudley; Canadian Fairbanks-Morse Co., Limited, representative, W. H. Irvine; K. & S. Tire & Rubber Goods, Limited, representative, C. S. Lee; Dominion Rubber System, Limited, representative, J. W. Green; Lamontagne, Limited, representative, O. L. Baillargeon; Lewis Bros., Limited, representative, J. Thurston Smith; Sun Co. of Canada, Limited, representative, E. S. Graham; Gutta Percha Rubber, Limited, representative, J. N. Smith; Ames-Holden-McCready, representative, M. J. Kearns.

BENNETT HILL WINS RACE AT BERKELEY

BERKELEY, CAL., Nov. 3—Bennett Hill and his Miller-motored racer won the 100-mile race here Sunday in 52 min., 38.4 sec., an average of 114½ m.p.h. Frank Elliott was second, a quarter of a mile behind the winner. Jimmy Murphy won third from Harry Hartz by an eyelash.

Hill took the lead at the start and was never headed, driving through without a pit stop and coming in on ragged tires rather than risk losing the race to Elliott by stopping to change them. Tommy Milton was hit in the face by a splinter from the board track, thrown up by the car ahead of him, and was put out of the race in the first lap. The splinter smashed Miltons' goggles and drove a fragment of glass into the ball of the right eye, his only good eye, by the way. He drove into the pit blinded and was rushed to a hospital in Petaluma, where specialists summoned from San Francisco reported that the eye would be saved.

This was the last race of the season on this track, the next event on the coast schedule being the Thanksgiving Day races at Los Angeles.

New A. E. A. Sticker

The second issue of the Automotive Equipment Association's series of merchandising stickers has been issued and distributed to manufacturers and jobbers for distribution in turn to dealers. The new issue is directed toward Christmas buying. It is printed in red on a white field with appropriate Christmas tree and holly decorations

A. E. A. MEETING HELD IN CONNECTICUT CITY

BRIDGEPORT, Nov. 2—The first meeting in Connecticut of the merchandising campaign of the Automotive Equipment Association was held here tonight under the auspices of three manufacturers and four jobbers. The "Ask 'em to Buy" film was shown to more than 100 dealers and garagemen of Western Connecticut, and a talk on automotive equipment sales promotion and also on shop profits was given by Neal G. Adair, editor of Motor World.

The meeting, following a dinner, was held in the cafeteria of the Bridgeport Brass Co., which co-operated in the occasion with the American Chain Co. and the Raybestos Co., both of Bridgeport, and with the following jobbers: Hessel-Hoppen Co., New Haven; Horton-Gallo-Creamer Co., New Haven; C. S. Mersick & Co., New Haven, and Post & Lester, Hartford.

L. H. Woodruff, manager of the automotive equipment department of C. S. Mersick & Co., presided at the meeting.

Trucks on Pennsylvania Farms

PHILADELPHIA, Nov. 4—It is announced that the farmers of Pennsylvania now are using 9072 motor trucks.

EQUIPMENT MAKERS HAVE ZONE SYSTEM

Seven Districts Provided—Association Makes Plan for Chicago Convention

CHICAGO, Nov. 4—The Association of Automotive Equipment Manufacturers of which George Fritz is general manager, will hold its convention at the Congress Hotel Nov. 14. The principal business will be the adoption of a new constitution and by-laws, draft of which has been approved by the board of directors and published in pamphlet form. Another matter of business will be the enrolment of new members, a number of whom have indicated their desire for membership. The present membership is 85 manufacturing firms.

The association has issued a prospectus which outlines the various departments and activities of the organization, which is being expanded into a national organization. The following departmental activities are listed: Exchange of trade information; credit reports; research department conducting the following activities—data showing business done by years and months with percentage of increase or decrease, comparison of collections, comparison of production cost, business administration; jobbers' department including suggestions to help the jobber meet his problems in the distribution of automotive equipment; foreign trade department; information bureau.

Zones Established Tentatively

A zone system of organization has been outlined with a director to be elected from each of seven territorial zones. It is planned to have meetings once a month in each zone of the members in that zone to consider trade problems. The following zones have been established tentatively with suggested headquarters:

Western zone, with headquarters at Chicago; Eastern zone, headquarters, New York; New England zone, headquarters, Boston; Middle Western zone, headquarters, Cleveland; Southwestern zone, headquarters, St. Louis; Northern zone, headquarters, Minneapolis; and Pacific Coast zone with headquarters at San Francisco.

HARRISBURG JOBBERS CHANGE FIRM'S NAME

HARRISBURG, Nov. 5—The General Auto Supply Co., with headquarters in Harrisburg and branches at Lancaster and York, has been granted a charter and has changed its name to the General Automotive Supply Co. The capitalization of the new company is $300,000.

At a meeting of the stockholders the following officers were elected: R. W. Shreiner, Harrisburg, president; G. H. Shreiner, Lancaster, vice-president; L. V. Good, Harrisburg, secretary; Harry S. Smeltzer, Harrisburg, treasurer, and B. Smith, Harrisburg, assistant treasurer. R. W. Shreiner is general manager.

STOCKS OF TIRES LOW IN HANDS OF DEALERS

Factories Take Orders on Spring Dating Basis—Prices May Increase

CLEVELAND, Nov. 6—Commenting on the unusual activity in the tire industry this year, caused mainly, it believes, by increased touring and the many miles of new roads put into commission, the Federal Reserve Bank of this city says:

Dealers have operated with hand to mouth stocks, fearing more price reductions. There are few, if any, big dealers' stocks over the country, and this means continual orders to the factories. The average size of orders is small, but there are a large number of them.

Many factories are now taking orders from dealers on a spring dating basis. The new terms have been presented to the dealers by most of the large tire companies, and this indicates that the same policy of financing the dealer will be followed as in the past but with changes in the general scheme.

Some of the companies are preparing to make immediate shipments on spring dating orders and others plan to make shipments after Jan. 1. The price in some cases is being guaranteed against decline for six months. Other manufacturers are again following the trade acceptance plan. Practically all are serving notice on the dealers of a probable advance in tire prices in the near future.

OIL PUMPING THEME AT SERVICE MEETING

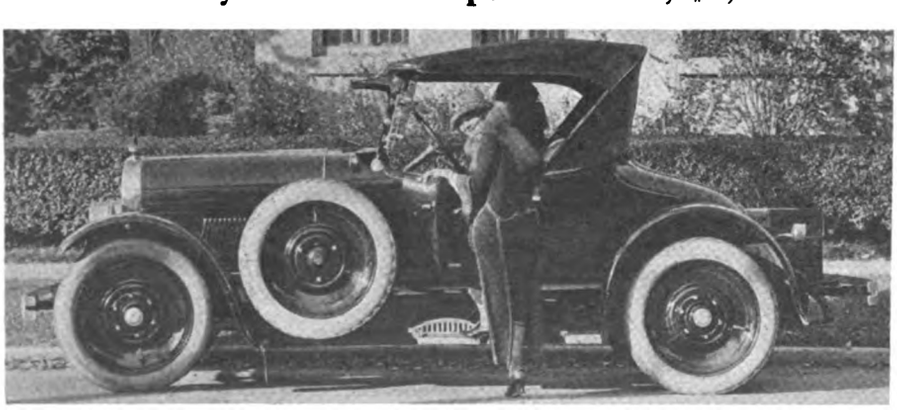
NEW YORK, Nov. 6—Oil pumping was discussed at a meeting at the Automobile Club of America, which was attended by 80 service managers and dealers, the principal speakers being A. Ludlow Clayden of the Sun Oil Co. of Philadelphia, H. E. Pengilly of the Standard Oil Co. of New York, and George A. Round of the Vacuum Oil Co.

Discussing the pressure type of lubrication, Clayden told his audience that oil-pumping troubles usually occur as wear takes place in the bearings, being followed by an apparent drop in oil pressure. A remedy is to still further cut the supply of oil by opening the by-pass, said Clayden.

Round, talking on splash lubrication, claimed faulty design of the connecting rod dippers and incorrect oil levels in the troughs often cause trouble, while Pengilly urged the service managers to make a special campaign to educate owners to change oil regularly.

Pengilly condemned the practice of flushing out the crankcase with kerosene and told of a new flushing oil which has, he claims, all the advantages of kerosene without its detriments.

Another meeting will be held at the A. C. A. on Dec. 1.



ACCIDENTS INCREASED 28 PER CENT LAST YEAR

WASHINGTON, Nov. 3—Statistics compiled by the Bureau of the Census show that during 1921 automobile fatalities increased 28 per cent. The record shows that 10,168 deaths resulted from accidents caused by automobiles and other motor vehicles, excluding motorcycles. This number represents a death rate of 11.5 per 100,000 population as against 10.4 in 1920 and 9.4 in 1919 and 9.3 in 1918.

The State of New York had 1633 casualties, or 15.4 per cent per 100,000 population in 1921, as against 13.5 per cent in 1920. Pennsylvania was next with 1086 casualties, or 12.2 per cent for each 100,000 population, as compared against 11.9 per cent in 1920.

According to the Bureau of the Census, there were 886 deaths resulting from automobile accidents in Illinois; 865 in California; 737 in Ohio; 519 in Massachusetts, and 443 in Michigan. The other States had fewer casualties. In Detroit there were 133 deaths from automobile accidents.

The Haynes Model 55 Sport Roadster, $1,895

This is one of the four sport models fitted to this chassis, the others being the phaeton, $1895, coupelet, $2195, and sedan, $2695. All have full sport equipment, six disk wheels and six 32 x 4½ in. tires. The roadster has windshield wings, nickel plated parts usual to this type of car and upholstery of brown Spanish leather

EFFECT OF NEW DUTY IN MEXICO AWAITED

Most Dealers There Had Depleted Stocks of Cars When Levy Was Imposed

MONTEREY, MEXICO, Nov. 3—What effect the placing of a 10 per cent ad valorem duty upon all imported automobiles may have upon the sale of cars in this country remains to be seen. The new duty was fixed by decree of President Alvaro Obregon and came wholly unexpected to dealers, many of whom found themselves with depleted stocks.

During the last several months there has been quite a revival in the demand for automobiles of American manufacture, especially for the medium price cars. Dealers made many sales, and this kept their stocks low. The 10 per cent ad valorem duty which must now be paid on all cars will be added to the retail sales price, it is stated.

Until recently the sale and use of automobiles in Mexico were confined almost entirely to the larger cities, particularly Mexico City, Monterey, Chihuahua, Guadalajara, Tampico, Torreon and a few others. This was due to two reasons—one, the danger which one met with of being held up by brigands in the smaller communities and rural districts, and, second, the lack of passable highways.

Country Rid of Bandits

The country has been practically rid of bandits during the vigorous administration of President Alvaro Obregon, although hold-ups continue to occur occasionally in some remote sections; at any rate, travel overland is now considered to be safer than at any time since the overthrow of President Porfirio Diaz, nearly twelve years ago.

The Obregon Government is giving much attention to the construction and improvement of public roads. The program for such improvements is extensive, but the lack of money is hampering its fulfillment.

Red Seal Battery Contest

NEW YORK, Nov. 6—Manhattan Electrical Supply Co. of New York is promoting a contest among jobbers and dealers in the automotive, electrical, hardware and radio fields, offering prizes for the best answer as to "Why the Red Seal dry battery is the best all-purpose battery." More than 50 prizes are offered. The answers must be given in not more than 10 words. The contest closes Nov. 15.

Pardee Returns to Commercial

NEW YORK, Nov. 1—C. L. Pardee, Jr., at one time credit manager for the Commercial Investment Trust Co., has returned to that concern in the same capacity.

Digitized by Google

STUDEBAKER SALES EXCEED PRODUCTION

Cars Produced in Third Quarter Numbered 29,924; Sales Aggregated 30,199

SOUTH BEND, IND., Nov. 5—Directors of the Studebaker Corp. at their meeting declared the regularly quarterly dividend of 2½ per cent on the common capital stock and the regular 1¾ per cent on the preferred.

The Studebaker report for the quarter tells of capacity operations and the sales demand ahead of production. There were 29,924 Studebakers produced and 30,199 sold. Production schedules for the fourth quarter call for 20,000 cars, which will make 110,000 for the year as against 66,000 in 1921.

Consolidated Balance Sheet

The consolidated balance sheet of the Studebaker Corp. and subsidiary companies is as follows:

ASSETS

	Sept. 30, 1922	Dec. 31, 1921
Cash	$20,123,734	$8,334,799
Sight drafts outstanding	4,137,804	1,822,393
Investments	3,563,590	2,178,170
Net receivable (less reserves)	6,176,207	4,035,221
Inventories	15,101,740	22,209,885
Deferred charges	623,219	394,262
	$49,726,297	$38,974,732
QUICK ASSETS		
Plants and property	$38,903,832	$37,290,413
Housing development	1,706,005	2,255,715
Trade name and goodwill	19,807,276	19,807,276
Total	$110,143,411	$98,328,138

LIABILITIES

Accounts payable—current	$4,046,504	$3,492,414
Reserve for taxes	3,642,646	2,904,373
Reserve dealers' discount and deposits	1,292,641	1,306,446
Other payable reserves	2,799,875	2,545,160
	$11,781,667	$10,248,394
ALL LIABILITIES		
Preferred stock	$9,150,000	$9,800,000
Common stock	60,000,000	60,000,000
Special surplus	4,455,000	4,050,000
Surplus	24,456,743	14,229,743
Total	$110,143,411	$98,328,138

The statement of comparative profit and loss and surplus as of Sept. 30 is as follows:

THIRD QUARTER

	1922	1921
Number cars produced	29,924	23,338
Number cars sold	30,199	21,086
Net sales	$35,065,894	$29,058,893
Net profits before taxes	4,934,370	4,251,867
Less reserves for U. S. and Canadian taxes	450,397	988,667
Net profits	4,483,973	3,263,200
Less dividends	2,565,375	1,221,500
Surplus	1,918,598	2,041,700

SAFETY CAMPAIGN LOWERS ACCIDENTS

BRIDGEPORT, CONN., Nov. 5—The "safety first" campaign inaugurated by the Bridgeport police department in handling and supervising motorists, as well as the school recently conducted by the department for operators, are credited by Capt. James Walker, head of the traffic bureau, with being responsible for the notable decrease in the accident death rate in this city.

Statistics show that during the three years, 1919, 1920 and 1921, there were 94 persons killed and 2031 injured in local street accidents.

In the opinion of Walker, based on available figures since then, this accident record will not be repeated for a long time to come, if ever, this year's figures to date indicating that the public is beginning to profit by the "safety first" campaign, are taking fewer chances and that motorists are more carefully supervised.

FIRST NINE MONTHS

	1922	1921
Number cars produced	87,951	56,163
Number cars sold	90,252	55,552
Net sales	$108,488,756	$80,593,998
Net profits before taxes	17,621,133	11,644,326
Less reserves for U. S. and Canadian taxes	1,980,759	2,000,000
Net profits	15,640,374	9,644,326
Less dividends	5,008,375	3,664,500
Surplus	10,631,999	5,979,826
Prior surplus	18,279,743	13,467,047
Total surplus	28,911,743	19,446,874

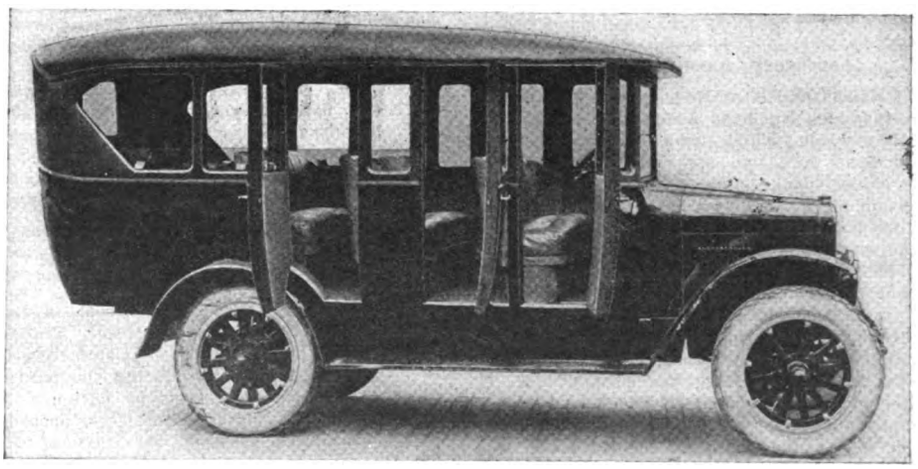
$1,751,905 EARNED BY NASH IN QUARTER

Profits of Company for Nine Months Reported as Aggregating $5,023,441

KENOSHA, WIS., Nov. 6—Nash Motors Co., for the three months ended Aug. 31, 1922, reports net earnings of $1,751,905. Net earnings for the nine months of the fiscal year total $5,023,441. C. W. Nash, president of the company, commenting on the above showing, said:

All this year we have been in a practically oversold condition, despite plant additions and increased production. Sales figures of the first 10 months of 1922 show that 95 per cent more Nash cars have been marketed this year than during the first 10 months of 1921.

The advent of better business conditions generally and the noticeable improvement among agricultural districts of both the middle west and southwest, together with a better outlook in tobacco and cotton territories of the country, point to a considerably greater demand for Nash cars this coming year than we have ever witnessed.



Stockholders of the company at a special meeting approved the retirement of the company's $3,500,000 7 per cent cumulative preferred stock.

PIERCE-ARROW SHOWS DEFICIT GROWS LESS

BUFFALO, Nov. 4—Pierce-Arrow Motor Car Co. reports an operating income of $11,209 for the three months ending Sept. 30. Interest, taxes and other charges were $351,178, which left a deficit of $339,969, as against a deficit of $2,109,999 in the same period last year.

Deficit for the nine months ending Sept. 30, 1922, amounted to $376,961.

New International Speed Sedan

The International Harvester Co. has introduced a de luxe bus for hotel, club and resort use. It is known as the International Model S Speed Sedan. The top is art-craft construction. The seats are wide and deep cushioned. Fourteen to fifteen passengers may be comfortably seated in the cross seats from which they can obtain an unobstructed view. Entrance is obtained through three side doors while a passage at the end of the third seat gives easy access to the rear without disturbing other passengers. Speeds of 25 to 30 m.p.h. can be obtained. The length of the chassis overall is 185⅝ in. Heavy pneumatic cord tires are a part of the regular equipment

ASSOCIATION ACTIVITIES

Red Arrow for Cars

PHILADELPHIA, Nov. 5 — Hundreds of red arrows bearing the legend, "Car to Right Has Right of Way," have appeared pasted on the inside of windshields in passenger cars and trucks, as the outcome of the October meeting of the Automobile Accessories Business Association, at which it was decided to distribute the printed "sticktights."

The movement is the beginning of a campaign on the part of the association to instruct automobile and truck drivers on the Act of Assembly of Pennsylvania, assigning the right of way to the car on the right and the movement has the backing of Mayor Moore, James B. Cortelyou, director of public safety and William B. Mills, superintendent of police.

The arrows are being distributed to passenger car and truck owners through dealers, garages and the three hundred members and guests of the Automobile Accessories Business Association who attended the recent monthly meeting. Within a few days thousands of cars, it is expected, will sport the little red arrows that act as reminders to the man at the wheel.

Eastman Elected in New York

NEW YORK, Nov. 6—Lee J. Eastman, president of the Packard Motor Car Co. of New York, is the new head of the Automobile Merchants Association of New York, having been elected to that office at a special meeting of the directors. The new vice-president is Russell L. Engs, president of the Cole Motor Car Co., Inc., of New York.

Eastman has been an active force in local automobile circles since 1919, when he came to New York from Philadelphia, where he was president of the Packard Philadelphia Co. As president of the Motor Truck Association of Philadelphia, vice-president of the Automobile Trade Association and director in the Philadelphia Chamber of Commerce, Eastman was active in improving sales methods, preaching good roads, supporting legislation for the good of the industry, and preventing the enactment of pernicious laws.

Accessory Association Meets

PHILADELPHIA, Nov. 1—The Automobile Accessories Business Association at its first fall meeting, which was held at the Hotel Lorraine, had two especially good and interesting speakers who addressed the organization on trade topics and, in addition, two films issued by the A. E. A., were shown on the screen.

The first speaker, R. A. Stranahan, president of the Champion Spark Plug Co. and former president of the A. E. A., answered satisfactorily in the affirmative the question implied in the topic assigned to him, "Ask 'Em to Buy and Increase Profits." W. C. Hecker, vice-president of the Curtis Pneumatic Machinery Co., St. Louis, also a member of the directorate of the A. E. A., was the second speaker, making an illuminating address on "How to Make Profits in the Shop."

Springfield Used Car Plan

SPRINGFIELD, MASS., Nov. 4 — At a meeting of the Springfield Automotive Dealers Association it was decided to adopt a used car plan similar to that followed in Boston, eliminating some features of the plan introduced here last winter, which met with persistent opposition from some members. This action was taken following a report of an investigating committee which had consulted different authorities.

The new plan provides for regular reports on all used car purchases by the dealers and looks to standardized practice in rehabilitating cars bought for resale. At the same time it does away with the arbitrary rating of all makes and conditions of cars on an age basis. As a result of the latest action, it is expected that the Springfield Automobile Board of Trade, which has dealt with the used car situation for the past eight months, will soon be dissolved and the problem be handled directly by the association.

Huntington Dealers Organize

HUNTINGTON, W. VA., Nov. 5—Automobile dealers of Huntington, at an enthusiastic meeting in Hotel Frederick, formed a permanent organization and elected officers to serve for the next year. Approximately 70 per cent of the automobile companies of the city were represented. Officers chosen included: Theodore Cavendish, president; J. E. Curtis, vice-president; W. R. Titus, treasurer, and B. R. Osborne, secretary. With three trustees to be chosen at a later date, the officers will constitute the board of directors.

Closer co-operation between the buying public and the dealers was pledged by the new association and an effort will be made to enroll a representative of each automobile selling agency in the city in the organization.

Safety Campaign in Salt Lake

SALT LAKE CITY, Nov. 6—The Intermountain Automotive Trades Association with headquarters here is in charge of the Safety Week program and many and varied are the things which it is putting over. Almost every civic organization is co-operating.

One of the biggest features of the week has been the visit of H. H. Matthieson, traffic engineer of Los Angeles, who is known as "The Safety Man," and who carried on a campaign for safety among the school children of the city. Substantial cash prizes are offered high school students for Safety essays. On Sunday the churches throughout the city will refer to the movement.

Des Moines to Meet Monthly

DES MOINES, Nov. 6 — Interest in the monthly meetings of the Motor Trades Bureau of the Chamber of Commerce is to be kept at high pitch during the winter months by a series of talks by nation-wide authorities on automotive subjects, according to Southard Whiting, secretary of the association.

Iowa County Meeting

WATERLOO, IOWA, Nov. 6—Sixty members attended the annual meeting of the Blackhawk County Automobile Dealers Association at which Harter B. Hull, Waterloo, was elected president; J. N. Collar, Cedar Falls, vice-president; F. B. Rupp, Waterloo, secretary, and W. M. Orr, Waterloo, re-elected treasurer.

Dan E. Weigle, managing a commercial club campaign, spoke upon "Co-Operation," developing his theme from the automobile men's viewpoint. Promoters of the fall style show were granted their request for a display of closed cars in connection with the show.

Atlanta Annual Meeting

ATLANTA, Nov. 4—D. C. Black, president of the Atlanta Automobile Association, an organization of automobile and accessory retailers and wholesalers, advises that the annual meeting of the body will be held Wednesday, Dec. 20, at the Capital City Club in Atlanta. Officers for the ensuing year will be elected at this meeting, and plans outlined for an educational campaign during the first half of 1923.

Salt Lake Elects Mendenhall

SALT LAKE CITY, Nov. 5—The County Automotive Trades Association has elected B. W. Mendenhall of the Mendenhall Auto Parts Co., as chairman to fill the vacancy brought about by the resignation of V. A. Culver of the Motor Mercantile Co. M. L. Graham of the M. L. Graham Co. was chosen vice-president.

Show for Greenville

GREENVILLE, S. C., Nov. 2—An automobile show next March was practically assured at a luncheon of the automobile bureau of the Chamber of Commerce this week. A special committee to investigate the matter further and make a definite decision was authorized by the bureau and will be appointed by President Eugene B. Smith in the near future.

ENGINEERS DISCUSS GEAR NOISE PROBLEM

DETROIT, Nov. 4—Five hundred production men attended the first production meeting of the Society of Automotive Engineers recently held here.

The problem of eliminating gear noise by means of more accurate production methods was prominent in the discussions. K. L. Herrman of the Studebaker Corp., in his paper on "Production Errors in Gears," gave the results of intensive research conducted by his company in an effort to eliminate gear troubles and thus give the owner a mechanism which will operate more smoothly. H. J. Crain and J. Brodie of Packard also discussed methods of reducing gear noise.

A. B. C. Hardy, president of the Olds Motor Co., was the chief speaker at the production dinner, held at the Hotel Statler. Pierre S. duPont, chairman of the board of General Motors Corp., also spoke briefly, while B. B. Bachman, president of the S. A. E., acted as chairman.

W. M. Waller Dies

WACO, TEX., Nov. 2—W. M. Waller, who has represented the Perfection Spring Co. in the replacement sales in the Middle West and Southwest, died at his home here after an extended illness. Waller, before going with the Perfection Spring Co., was with the Johnson Bros. Auto Supply Co. of Wichita, Kan., but more recently his home has been in this city.

CHANGES IN THE TRADE

Davis & Culver Automobile Co., Galesburg, Ill., has been appointed local distributor for the Gray.

E. D. Horrell, Galesburg, Ill., has been appointed agent for the Stutz car in that territory.

R. G. Ransom has been appointed office manager of the **Covey-Ballard Motor Co.**, Salt Lake City.

J. F. Nolan, president of the **Philadelphia Roamer Co.**, Philadelphia, has been appointed distributor of the new Barley.

Earl B. Beveridge, formerly of the **Beveridge Motor Co.**, Salt Lake City, has joined the **Taylor-Richards Motor Co.**

Lowry Bros. Motor Sales Co., Lake Geneva, Wis., has been organized to act as Essex, Hudson, Maxwell and Star dealer.

H. E. Lange and **A. C. Herrick** have purchased the **Ed. Jones Garage**, Muscatine, Iowa, and will continue the business.

Imperial Auto Supply store has been opened in Des Moines by **Claude Sheets** and **E. A. Frank**, both well-known local accessory men.

C. H. Blair has bought the **Thomas Street Garage**, Springfield, Mass., and will conduct it as a service and repair establishment.

Dort Motor Car Co. announced the appointment of **Baird & Collins** as dealers at Sturgis, Mich., and **J. H. King** at Portageville, Mo.

Franklin Automobile Co. has appointed the following dealers: **Thomas Gay**, Streator, Ill.; **Franklin Motor Car Co.**, Poughkeepsie, N. Y.

Milliman-Curtis, Kalamazoo, Mich, has taken the agency for the line of the **Barley Motor Car Co.**, including the Roamer and the Barley six.

Roberts Motor Co., of Valdosta, Ga., has been organized by **J. Y. Roberts, Abial Winn** and **C. C. Taylor** to operate an automobile agency in Valdosta.

Milford Waddle, Kalamazoo, Mich., has taken over the distribution for the entire Dort line. His territory includes Kalamazoo and eight adjacent counties.

H. L. Munson, formerly with the Buick organization in Hartford, Conn., has been appointed sales manager of the **Springfield Buick Co.**, Springfield, Mass.

Green Bay (Wis.) Motor Car Co. has been appointed Gray dealer by the **Daggett-Yewdale Motor Co.**, Milwaukee, distributor in Wisconsin and Upper Michigan.

James A. Muir has severed his connection with the **Corcoran-Victor Co.** of Cincinnati and associated himself with the **C. M. Hall Lamp Co.** of Kenosha, Wis., caring for the jobbing trade.

Republic Sales & Service Co., Hartford, Conn., automobile dealers, has been incorporated. **H. H. Hoffman, Matt Galya** and **Alexander L. DeLaney**, all of Hartford are the incorporators.

The Illinois Auto Supply Co., Decatur, Ill., has been appointed territory agent for the **Durant Motor Co.** and has the new Star car on its sales floor. The company is also agency for the Durant car.

Minott Garage, Greenfield, Mass., hitherto run by **Charles H. Minott**, Waltham dealer, has been leased by **Tirrell & Gilmore** and will be conducted as sales and service headquarters for the Hudson and Essex.

Nash-La Fayette Co., automobile dealers of Hartford, Conn., has been incorporated with an authorized capital stock of $100,000. The incorporators are **Walter L. Plumb, J. Cedric Sleeth** and **Albert E. Binks**, all of this city.

Aldrich Brothers, Kalamazoo, Mich., has taken the distributing agency for the complete Durant line in southwestern Michigan. **Aldrich Auto Sales Co.** has been formed in Battle Creek to take over the business given up by **Aldrich Brothers.**

Ponce de Leon Motor Co., of Ponce de Leon, Fla., has been incorporated to operate an agency in Florida territory. **Z. D. Adair**, of Ponce de Leon, is president of the company; **B. B. Murray**, vice-president, and **H. F. Adair**, secretary and treasurer.

Moon-Pittsfield Co. has been formed to distribute the Moon car in Pittsfield, Mass. **Walter T. Doyle** and **Robert R. Reeves**, who have been automotive salesmen for Pittsfield concerns, are in control and will appoint sub-agents in other parts of Berkshire county.

Harry W. Watson, who has been connected with the **Firestone Tire & Rubber Co.**, for six years, of which the major portion was spent in the Columbus office, has been made manager of the Columbus branch, which serves 32 counties in Ohio and six in West Virginia.

Lynn Whaley, former Acason dealer in Toledo, has been appointed to take charge of the wholesale territory covering 27 counties around Toledo for the **Transport Utilitor Sales Co.**, of which **K. G. Mengert**, formerly with Packard, has been named general manager.

Republic Sales and Service Co., Inc., Bridgeport, Conn., automobile dealers, has elected the following officers; President, **Matt Galya**; vice-president and secretary, **Alexander L. DeLaney**, formerly and for many years prosecuting attorney here; treasurer, **H. H. Hoffman.**

William Elliott Phelps, sales manager of the **Barley Motor Car Co.**, has returned from Pittsburgh, where he closed a contract with **C. J. Freeman** to act as the company's distributor throughout western Pennsylvania, under the title of **World Motor Co.**, handling the Barley six and Roamer models exclusively.

Roberts Motor Car Co., one of the leading pioneer truck organizations of Portland, Ore., and for several years past representatives of Republic trucks, has taken over the distribution for the Federal line. The Republic will be continued as before, the addition giving the company a wider range of trucks to handle.

Edward Taylor, formerly in charge of sales in the west central States for Transport trucks, has resigned to take a similar position with the **Stewart Motor Truck Corp.** with practically the same territory. His headquarters are at Cleveland and the territory takes in Ohio, Indiana, West Virginia, Kentucky and parts of Illinois.

W. R. Sherin Co., Milwaukee, operating a large repair, painting and trimming shop, has established a complete storage battery repair and service station. The new department is in charge of **Monroe Kleinsteuber**, for many years associated with the city of Milwaukee as assistant superintendent of the fire and police telegraph alarm system.

M. R. Himes, manager of the **United Garage Co.**, Toledo Reo dealers, has resigned and will be succeeded by **W. F. Hoy.** Himes has been confined to his bed with serious illness for several weeks. He will not withdraw from the Toledo Automotive Trade Association, of which he is a director, and will probably be back into the sales field here as soon as he recovers from his illness.

Edward H. Conger during the war in the United States Transport service and recently with the **Nash Motors Agency** of Philadelphia, has gone with the **Packard Motor Car Co.** of Washington, D. C. Prior to the world war Conger was in charge of all motor transports in Nicaragua during the revolution. During the war he was on duty at the Marine Corps depot of supplies in Philadelphia.

Oscar G. Woolverton, associated with the General Motors Truck Co. for eleven years, has been appointed Haynes district sales manager for Texas. The State, which formerly was part of the territory assigned to the **Charles W. Tway Co.**, Atlanta, has been definitely removed from that company's selling franchise, and it will be Woolverton's purpose to establish as many Haynes distributors and dealers in the State of Texas as possible with direct contracts with the Haynes factory.

Columbia-Kissel Motor Co. has been formed in Philadelphia to take on the distributorship of the Kissel car. The organizers are **E. J. Fink**, president, and **Samuel F. Levy**, secretary and treasurer, formerly Maxwell-Chalmers distributor in that city. In forming the company they have retained the services of some of their former executives, including **A. C. Rowland** as sales manager, and **J. W. Turner**, formerly general manager in charge of the Baltimore branch, as wholesale sales manager.

CHANGES TAKE PLACE IN BOSTON DISTRICT

BOSTON, Nov. 5—Changes continue to be reported in the Boston motor trade. The Columbia Motor Co. is handling the Moon.

B. C. Hamilton, who was in charge of sales for the Chandler-Cleveland Co., has joined the Brown Motors Co., distributor of Gray cars, as sales manager. Ralph B. Nettleton, who had been president of Chandler and Cleveland, and who introduced both lines into Boston, has gone to Cleveland to accept a position at the Chandler factory. The factory has sent on M. R. Parker as New England branch manager for the two cars. He had been a distributor at Atlanta and later acted as a traveling factory manager, supervising sales and was looking after things at Minneapolis when he was sent to Boston.

Plans are being completed to close contracts for the handling of both the Earl and the Case cars in Boston.

Elgin Is Operating

CHICAGO, Nov. 7—The Elgin Motor Car Corp., for which a receiver was appointed in Federal Court, is operating under permission of the court to produce as many cars as the materials and units on hand are sufficient for without the purchase of additional materials. This point will be reached within a few days, it is expected. In the meantime negotiations are under way for reorganization of the company.

DEALERS NOT STORING UP STOCKS OF CARS

No Greater Supply Than for One Month—Conditions Throughout Country

(*Continued from page* 37)

are not stocking up on open cars. If they could get more closed cars they would take them since orders are ahead of shipments. Prospective car buyers and a majority of the dealers feel that further price reductions are coming in the medium priced cars, and for this reason also are not putting in heavier stocks than actual orders will take care of.

Indianapolis

INDIANAPOLIS, Nov. 3—There has been no appreciable stocking or storage of open or closed cars to date. The large storage house leased to the dealers association is practically empty. Sales are still brisk in many lines. Two weeks ago there was a sharp drop in some lines. A shortage is noted in closed types with several dealers. Selling is keeping pace with deliveries. Sales are generally above average.

Kansas City

KANSAS CITY, Nov. 7—No decided general tendency is noted to stock cars here but there is a decided recognition of the probability that farmers will be able to buy this winter and that they are most likely to buy open models. They are not sold on closed cars chiefly because of supposed unfeasibility on rough country roads, and also because of farmers' tendency to buy transportation for needs as low priced as possible and yet have quality equipment.

Buffalo

BUFFALO, Nov. 7—Buffalo dealers are stocking cars, including open models, moderately. They are not filling warehouses with them as in former years but are taking reasonable precautions against being caught short when next year's business opens up. The foregoing applies to dealers handling makes of cars most in demand. The present demand naturally is very largely for closed models, and many of the dealers complain of inability to get cars enough.

Milwaukee

MILWAUKEE, Nov. 7—Milwaukee dealers say that there is nothing unusual in the manner of stocking cars nor quantity. They are proceeding as usual at this season.

Cleveland

CLEVELAND, Nov. 7—Motor car dealers here are not stocking open cars. They are carrying on an extensive campaign for the sale of closed cars and are doing well.

Timken Bearing Earnings

DETROIT, Nov. 6—Timken Roller Bearing Co. reports earnings for the first nine months of the year of $6,339,000, after depreciation and taxes. October's gross business exceeded September's, and current operations are up to the October total. This would indicate not only a new high record for the last quarter, but total earnings, after all depreciation charges and tax write-offs, of around $8,500,000, which is more than $7 a share on the stock.

RAY SHERMAN VISITS 25 CITIES IN MONTH

Trip Takes A.E.A. Merchandising Director from El Paso to Yakima

(*Continued from page* 40)

Some of the large jobbers have prepared to carry out aggressively the "Buy an Automotive Gift" campaign of the A. E. A. Dealers nearly everywhere showed a realization of the possibilities of this campaign, Sherman said, and were preparing to co-operate by using local newspaper advertising and by appropriate decoration of their stores and by using suitable wrappers, ribbons or tags for articles most likely to be selected for gifts.

The sale of accessories, Sherman said, is reaching its greatest volume in articles of practical utility. He mentioned spot lights, bumpers, moto-meters, windshield wipers, cigar lighters, mirrors, ash trays and heaters as among the items creating the greatest response with the buying public. He said that many articles once considered novelties, as cigar lighters and ash trays, are coming to be considered necessities.

A striking instance of profitable "Asking 'Em to Buy" was observed by Sherman at one of his stops. A car dealer who had a gasoline filling station used to ask the customer, "How Many Gallons?" He changed that question to "Shall I fill it up?" The result thus far has been to add an average of two gallons to every gasoline sale he makes.

Sherman said he found a number of car dealers who were reaping very satisfactory after-sale profits by keeping car purchasers coming back to them for all supplies, accessories and maintenance.

CHEVROLET STARTS PLANT IN BUFFALO

BUFFALO, Nov. 4—Ground has been broken for the erection by the Chevrolet Motor Co. of an automobile manufacturing plant in this city to duplicate the one the company is erecting in Cincinnati.

There will be erected, beside the automobile plant, a building in which Fisher bodies will be made. These bodies will be placed on chassis manufactured in the other plant.

It is expected 1200 men will be employed in the Chevrolet building when it is opened and 800 men in the Fisher company's factory. The Chevrolet plant will have capacity of 450 cars. The two buildings combined will have floor space of 400,000 square feet.

Joins El Automovil Staff

NEW YORK, Nov. 5—Edgar P. Day, who for a number of years has represented The American Exporter and previous to that the Horseless Age, has joined the advertising staff of El Automovil Americano, the Spanish automotive dealer paper published by The Class Journal Co., and will make his headquarters in Detroit.

Parker Tire Receivership

INDIANAPOLIS, Nov. 4—The Parker Tire & Rubber Co., which operates a tire plant in this city, has been placed in the hands of a receiver. Suit in what was called a "friendly receivership case" was brought in the name of the Central Rubber & Supply Co., jobbers in mill supplies and automobile accessories.

Though insolvency is not claimed, it is alleged that an emergency exists and the assets of the company are endangered by numerous debtors' claims and threatened suits. The Bankers Trust Co. was appointed receiver, and it is understood that, though the plant will not be operated for the present, its stock of tires will be sold by the receiver.

ASSOCIATED MOTORS HAS DAYTON OFFICE

DAYTON, OHIO, Nov. 2—Executive offices of the Associated Motor Industries have been opened here in a three-story building which has been completely remodeled for the purpose. The building is about 250 by 150 feet. The sales department with spacious display rooms is on the first floor. Officers of the company occupy offices on the second floor. Departmental offices are on the third floor.

U. S. Tractor Progresses

MENASHA, WIS., Nov. 4—Rapid progress has been made in the last six months by the U. S. Tractor & Machinery Co. of Menasha, Wis., in liquidating its indebtedness, and adequate capital has been provided to enable the concern to resume quantity production of tractors and farm operating equipment on a larger scale. Manufacturing schedules will be materially increased Nov. 1.

MOSSBERG

ALL STEEL WRENCHES AND TOOLS

No. 612 Speed Brace

Speed Brace Socket Wrenches

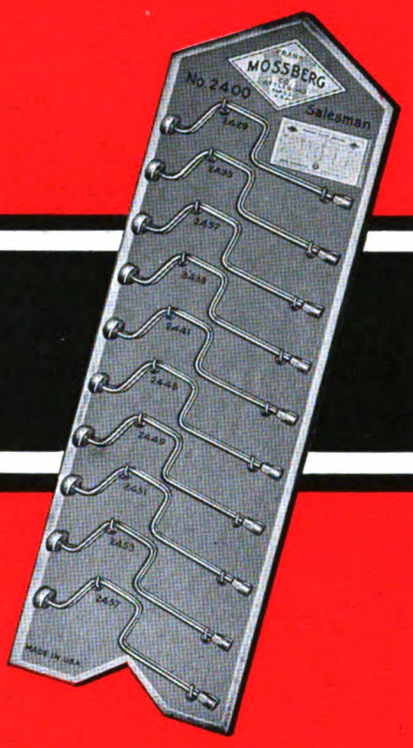
No wrench can handle that out-of-the-way nut or bolt like a Speed Brace Socket Wrench. And the Mossberg line contains a complete assortment of these efficient wrenches in all sizes and shapes for all kinds of work.

These are supplied the dealer, together with sales boards—Silent Salesmen—in assortments that correspond with the demand. All live ones. Mossberg all-steel construction, finished in burnished nickel. Rugged, practical wrenches, made for hard work. Popular among your customers.

No. 2400 Salesman

This well balanced display board assortment contains 70 Speed Braces in quantities ranging from four to nine of each wrench. Each number is made of ½ inch steel bar, is 19¼ inches in length, and is finished in burnished nickel. The board itself is made of chestnut with nickeled steel hook. Size, 20 inches by 60 inches. Free with complete assortment.

"L" Salesman



Assortment contains 140 Solid Socket Wrenches—47 6-inch "T" Wrenches—57 12-inch "T" Wrenches, and 36 10-inch Offset Wrenches. All fast sellers. Constructed of ½ inch steel bar, finished in burnished nickel. Board 20 inches by 60 inches—same high quality as "2400" board. Furnished free with complete assortment.

Selling Open Cars This Winter

A Story That Tells How Some Dealers Who Can't Make Closed Car Deliveries Are Putting a Seasonal Appeal Into the Merchandising of Open Models

By LEON F. BANIGAN

INABILITY to make prompt delivery of closed models this winter threatens to curtail sales and profits for many dealers and, in some instances, to actually turn what otherwise would be a profitable year into a lean one.

The story of one eastern dealer handling a popular make is probably typical of hundreds of others throughout the country. This dealer entered 1922 with more than $50,000 worth of new cars and more than twenty used vehicles. But he had faith in the car he sold, faith in the future market and faith in his ability to wrest a fair profit from his business. For ten months he drove his organization at white heat. More than 200 new car sales, the reduction of his used car surplus, and the wiping out of his obligations to his banker was his reward for that ten months' work—

But not yet a penny of real profit on his investment. On his desk on Nov. 1 were orders for closed cars unfilled since Aug. 1 AND A LETTER FROM HIS DISTRIBUTOR ANNOUNCING THAT THE DEALER COULD EXPECT NO MORE CLOSED MODELS for the remainder of this year.

TO that dealer it meant just one thing—a year's hard work and *nothing* to show for it.

Nothing, UNLESS he can hold those closed-car prospects and sell them open cars while this winter's snow is flying—

Nothing, UNLESS he can make his open models attractive enough to prevent those closed-car sales from going to other dealers who were more fortunate in their ability to get closed models of less popular makes—

Can he?

That is this dealer's problem and that is the problem of many another dealer selling a popular make automobile this winter.

It is an issue that must be faced squarely. Will dealers who can't hope to supply the demand for closed models this winter plan NOW their winter selling efforts on open cars?

The answer is emphatically *"Yes,"* because in this lies the only opportunity for a profitable business through the winter.

At the outset it is well to recognize the fact that the open car of to-day is an infinitely better winter car than it was a few years ago. Five things have contributed to this:

1—*Chassis and powerplant refinements that have made all motor cars more dependable in all kinds of weather.*

2—*Better body work and especially the improved curtain and windshield designs which provide better protection from the elements.*

3—*Production and perfection of many accessories that contribute greatly to the comfort and safety of winter driving.*

4—*Improvement in design and workmanship of winter tops for all makes of automobiles.*

5—*Lower initial and operating cost of open models, even when equipped especially for winter driving.*

And it is these five things that CAN be sold this winter by the dealers who must depend on open-model sales for the bulk of their profits.

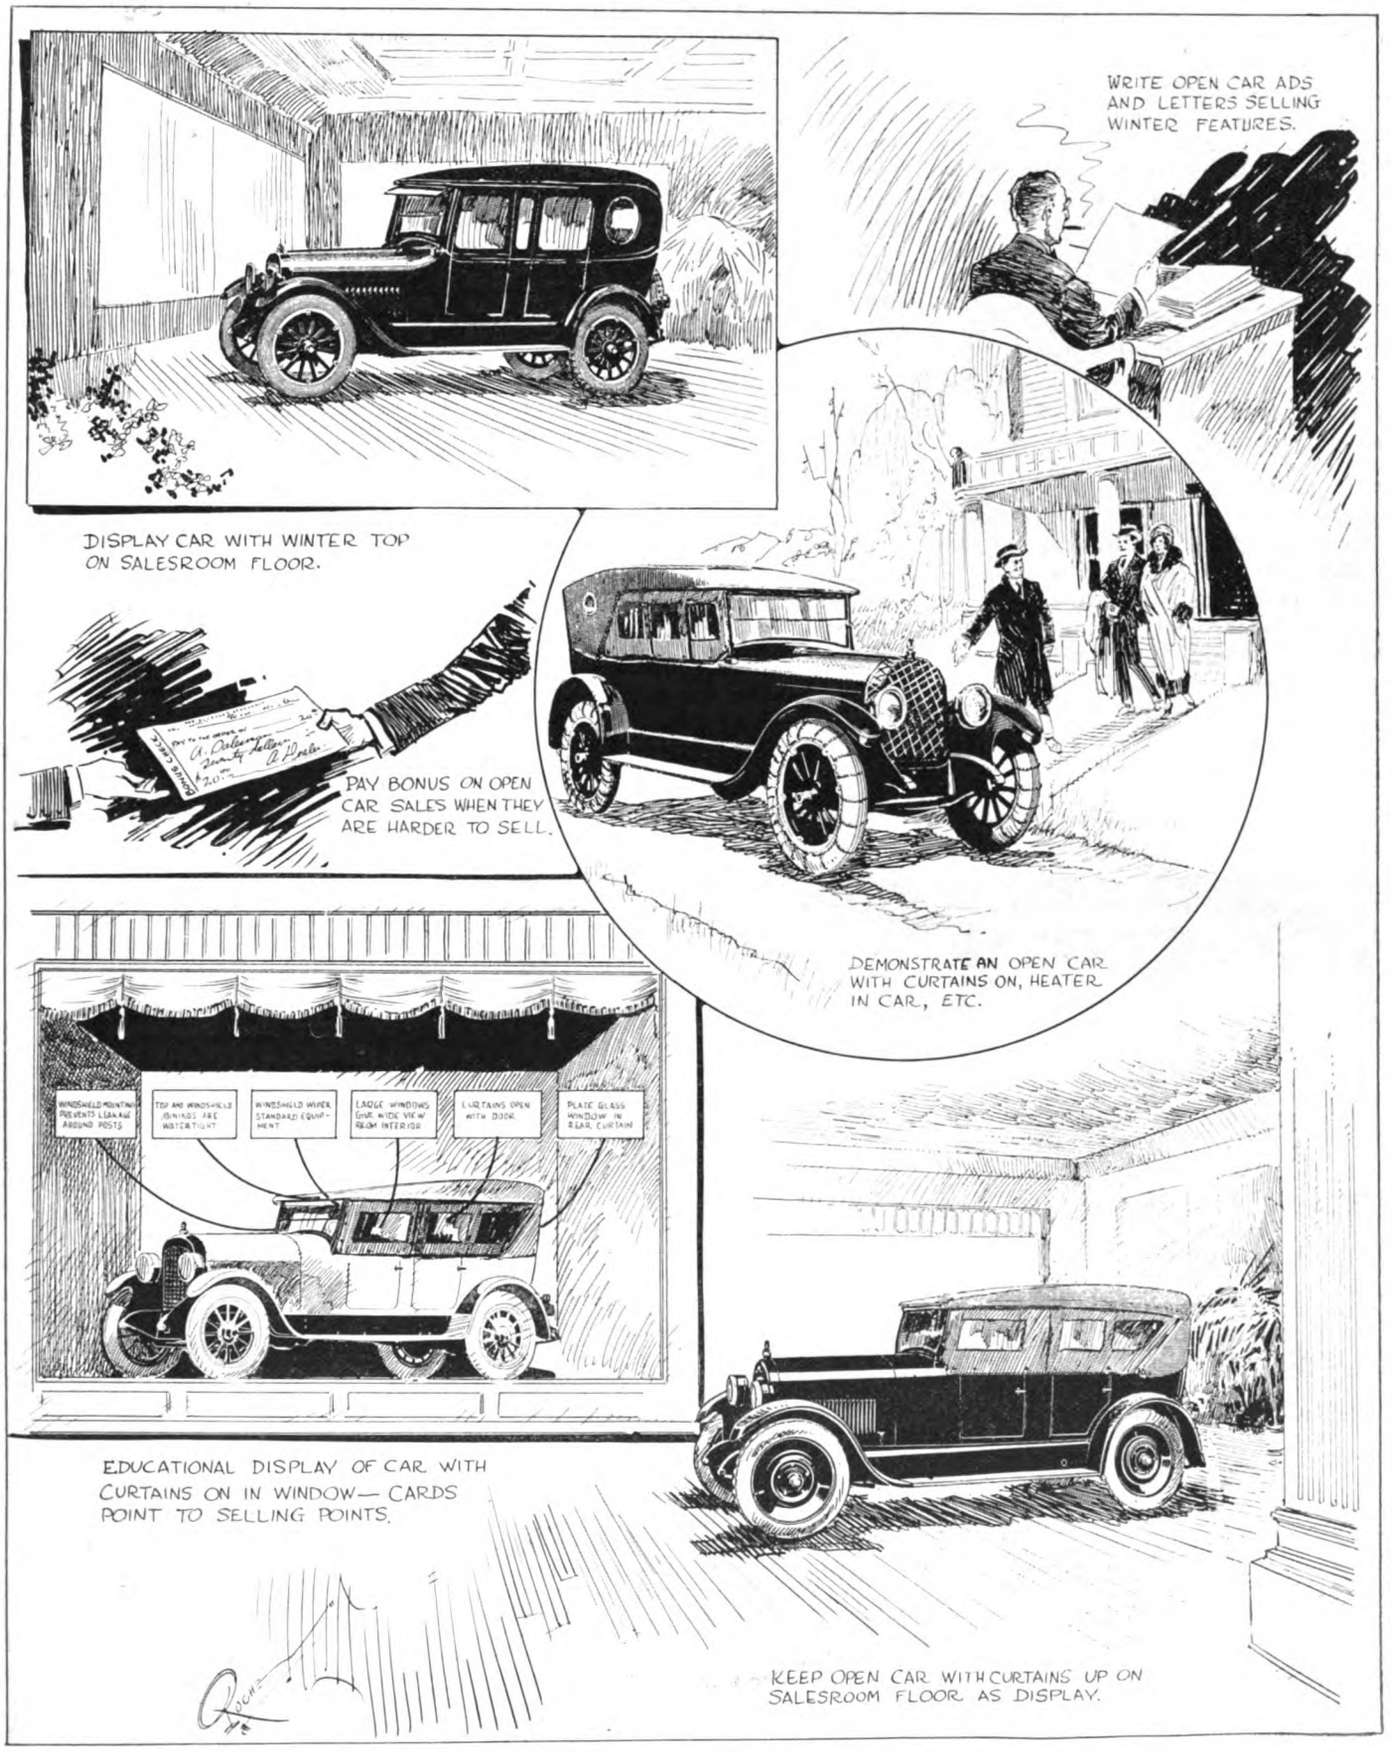
However, in selling the open car for winter use, no dealer will wish to present the open car in such a way as to place the closed model at a disadvantage in the prospect's mind. Enthusiasm in selling the open model must not be allowed to carry the dealer to a point where he will make it embarrassing for himself to sell closed models when they are more plentiful. It is not necessary to make claims of superiority for the open model, or to belittle the virtues of closed models. But it is desirable to sell the fact that OPEN CAR COMFORT IS POSSIBLE IN WINTER AND DEMONSTRATE IT.

Following are a few selling ideas that have been successful in moving open cars for dealers who could not supply the demand for closed models.

Salesroom and window displays.

1—During cold weather display on the salesroom floor and occasionally in the window one phaeton with all curtains attached, a heater installed, a protector on the hood or radiator, a tire cover, tires equipped with chains, wiper on the windshield, mats or scuff plates on the running boards, etc. Make it a rule to SELL every prospect who enters the salesroom on the various features that may be pointed out on this special car. Such a car on the salesroom floor not only helps sell open cars to prospects who can-

Nothing to Sell but Open Cars



"CAN'T get closed jobs this winter—might as well shut up shop!"

It's not a new story. Some dealers have been saying so every winter, but some others know that open cars CAN be sold in larger quantities when they are presented with a seasonal appeal. This story tells some of the methods that have been successfully used in past winters to present the open car as a desirable winter car when closed models are scarce.

Is there an idea or two in this story that will help you sell more open cars this winter?

Digitized by Google

Making a Winter Appeal with Open Cars

Digitized by Google

not be supplied with closed models, but it provides a means of making a stronger selling appeal to the open-car prospect.

2—Equip a car with a winter top that is properly fitted and attractive in appearance and also with the other winter equipment mentioned in the foregoing paragraph, and use this on the salesroom floor to sell the winter-top ideas as a substitute for the closed car that cannot be delivered. Be prepared to quote a price instantly on this model with full equipment as it stands. Such a display and the ability to promptly quote a price "as she stands" has been particularly successful in selling open cars to closed-car prospects for some dealers.

An Educational Display

3—Make an educational window display of the winter features of a phaeton by equipping it with curtains and winter accessories and run ribbons from winter selling features to signs which describe them. For instance, attention might be directed to the water-tight connections now made in motor cars where curtains and top join the windshield, etc. Advantages of gypsy curtain, now practically universal, and other refinements may be stressed. Point out any other features of car in body or chassis that may be mentioned as distinctly advantageous in winter driving.

Advertising:

The dealer who must sell open cars this winter may very profitably devote a part of his advertising effort to selling the ability of his open models to serve well in winter weather.

Some newspaper space may be devoted regularly to pointing out the fact that it is possible to ride in comfort in "open" models, and how his cars are particularly built to give winter comfort.

Newspaper advertising and sales letters that sell the open-car equipped with a winter top have been used profitably by some dealers. In such efforts the price was quoted on the completed job and demonstrations were made in a car that had been equipped by the dealer, or that belonged to a friendly owner.

Demonstrating:

Many dealers report success in selling open models in winter by demonstrating them with curtains up and a heater and other winter accessories attached. Many an open-car sale has been lost through the fact that a demonstration date, previously made, fell on a cold, damp, raw day and the dealer and his salesmen gave no thought to selling anything but the mechanical performance of the car, completely overlooking the comfort factor in the demonstration. Some dealers have found it advantageous, where open cars are used in demonstrations, to have them equipped with windshield wings, which enhance considerably the comfort of winter driving. Other dealers make arrangements with owners of cars fitted with winter tops to use these occasionally for demonstrations.

Make the Prospect Comfortable

Neglecting to provide foot warmers for demonstrations on extremely cold days has killed many a sale for some dealers and salesmen.

Remember that the comfort of the prospect is one of the things that is going to figure in the sale of cars that are demonstrated this winter.

Selling the open car:

Aside from the displaying, advertising and demonstrating of open cars in winter there are other merchandising efforts that some dealers have profitably employed.

One of these is the practice of offering one or two per cent higher commission on models that the dealer wishes particularly to move. Some dealers, finding open models piling up in cold weather, offer one or two per cent bonus on these for a limited period. Other dealers have found it effective to conduct a sales contest offering special prizes and bonuses for open-car deliveries made by salesmen in certain periods.

Selling Used Cars

The factor of comfort is one often overlooked in selling used cars in winter. Some dealers have found it profitable to pay particular attention to repairing the curtains of used cars and showing a few used cars with the curtains up. When dealers sell used cars this way they do not neglect the opportunity of calling the prospect's attention to the good condition of the curtains and the comfort that they will afford him while driving the car in winter weather.

On the whole, a special winter selling effort on open models does not involve the expenditure of a lot of money or doing anything radical in a merchandising way. It simply means the USE of a timely, seasonal appeal in presenting the ability of open models to provide reasonably comfortable winter driving.

The dealer who can't make closed car deliveries and who puts intensive, seasonal effort into selling open jobs this winter is going to sell more and make more money than the fellow who devotes all his time and effort to dodging and putting off closed car prospects.

Could You Dress This Window for $40?

The "welcome" sign is only an incident in the welcome which this window extends to the passerby. In Brooklyn, N. Y., where it graced the sales room of the Kunkel Automobile Co., Velie dealer, many passersby became visitors, some of them prospects and several of them customers as a result of the appeal which it made to inspect the cars shown. Kunkel's men had a lot of fun getting up the exhibit. All they had to buy was lumber and paint for the fence. The ferns were regular salesroom decorations and the autumn leaves, evergreens and pumpkins were gathered in a trip with a car out into the country on Long Island. A few bushels of ordinary gravel made up the roadway and green paper with shredded strips pasted on it by hand provided the grass along the edges of the road. The display was used during Brooklyn's "Autumn Auto Show," which was just another name for a closed car week

Taking the Proverbial "Stitch in Time"—

How One Dealer Insures Complete Understanding, on Both Sides, Before Starting a Repair Job

By TOM BOTTERILL
Hudson and Essex Dealer, Denver

Tom Botterill

WE have always been of the opinion that the successful dealer, now and in the future, will be the one who gives serious consideration to his old customers, not only through the courtesy of the sales department, but also the courtesy that comes through the employees of the service station or the repair department.

We have felt as motor cars became more or less standard that those dealers who wished to stay in business could only do so by giving their customers service and courtesy superior to that of their competitors.

It has occurred to me that, if the work that comes to the repair department was taken in properly, and if the right explanation was made to the customer, that everything would go along much more smoothly and more satisfactorily than it usually does; and in order to try to accomplish this, we have issued the following instructions or suggestions to the men in charge of taking in the work of our repair department:

"Be sure to have a distinct understanding with the customer on work.

"Hurry Up" Jobs

"If the customer wants a 'hurry-up' job, and you know it cannot be done in a satisfactory manner, tell him so. Explain to him that haste on mechanical work usually spells a poor job, but if he must have it, we will do the best we can, if he is unable to give us the necessary time.

"As an example: When a job of tuning comes in, or suppose the customer has a noise in the motor, explain to him that we will do the things that will usually remedy this trouble, but perhaps this will not do the work as it should be done, so that he may have to come back.

"Tell him it is our rule to take care of such troubles at the least possible expense and delay, but often in doing this, we find that we have not overcome the particular trouble, so that you must impress upon him that if such happens in his case, to be sure and bring the car back, calling our attention to the fact that the trouble is still there.

"Explain to him that there are so many things that may happen to a motor car that our diagnosis is not always correct, but that we stand ready to make good on any defects that may occur in our shop or our work.

"Explain to him that our whole efforts are to please him, but that so long as the human element enters into work, we are bound to make some mistakes, but that we sincerely regret these mistakes and only want the opportunity to make good.

"I want you to sell our service. I want you to impress the customer with the fact that we stand ready to make good on any work, regardless of what it may cost us.

"During the months of June, July and August, the shops are unusually busy, and that is the time when the customer should be treated the most courteously, and everything should be explained to him thoroughly.

"I have often noticed that there is a feeling we should have more room, but this can easily be explained to him by the fact that we only have three or four months when the shop is working at capacity, and the rest of the year, we are looking for work.

"Impress upon our customers the necessity of having their overhauling or their big work done during the dull season, like October, November, December, January and February. At such times we can do better work, do it quicker and save him considerable money.

"We want each customer thoroughly impressed with the fact that we are particularly anxious to please him, and that our whole efforts are to do so. While we may occasionally make mistakes that will displease him, nevertheless, we always stand ready to make good on those errors.

"Extend every courtesy in your power to every customer. In other words, 'Do unto him, as you would have him do unto you.' Always see that every car goes out in good shape—steering wheel cleaned off, the upholstery in good shape, and that no grease spots or dirt be allowed to appear on any car that is left here to be repaired.

"The strict observance of these suggestions will assist you very much in reducing complaints from your customers and insure you a greater co-operation from the customer."

You will note that we have repeated ourselves quite a good deal in these instructions, particularly on those points dealing with courtesy and thoughtfulness in regard to the wants of our patrons. I am satisfied from a careful study of our records that fully 90 per cent of our cars are sold through the direct or indirect influence and good recommendations of our old customers, and I know that there is no surer way of offending these customers than being careless and negligent in our Service Department.

Building Good Will

It seems to me that it is far better to explain thoroughly to a customer just what can be done in regard to his troubles, have a clear understanding as to the work to be performed, and also call his attention to the fact that men are only human after all and not infallible, and that if our work is not satisfactory in all cases, our intentions are, so that we may thoroughly realize that we are trying our best to please him, and particularly to impress upon his mind that any work that we should turn out that is unsatisfactory to him, he may feel free to come back immediately and call it to our attention, and it will be taken care of without charge to him.

We have been drilling our shop employees for some time in the necessity of this courtesy to the customer, and this year we have had fewer complaints than ever before in our history. We have always had a very liberal policy in regard to real service to our customers, but even with the very best of intentions without your men trained to courteously explain them to the customer these intentions would be worthless and the customer might be offended in such a way that he would never return again.

We feel that there is no dealer who can afford to neglect this very important part of his business, and if he is to succeed in the future, and to stand out as he wishes to do, he must extend every thoughtful action and courtesy to the owners of his cars, in order that they in turn will constantly say a good word for his institution.

Making Smiles Ring the Cash Register

The "Smile" and the "Funny Story" Boost Sales for Hollywood Dealer Who Makes Good Humor a Feature of His Merchandising

SMILES and wholesome humor, featured in an unusual merchandising policy, have contributed largely toward building a remarkable business in Hollywood, California, for Frank and Walter Muller, owners of Muller Brothers service station and accessory store. Muller Brothers is indeed a distinctive institution. There is something "absolutely different" in the atmosphere at the Hollywood establishment.

Smiles—jokes—laughter, bubbling good nature, overwhelm all outward signs of hard commercialism.

"Have you heard this one?" seems to be as important a part of a salesman's conversation as "Do you need some oil?"

"EVERYBODY'S happy at Muller Bros." Every employee greets every customer with a winning smile and "new ones" are liberally uncorked on every turn.

"I don't believe in stern business faces or a stern business atmosphere," said Frank Muller. "There is enough of the serious side of life in the ordinary course of events, and I believe in conducting my business with a smile. We have the best-natured customers of any service station in the world. Why, our customers even register kicks with a smile. However, there are few occasions for any kicks here. As the latest issue of The Air Hose, our house organ, says: 'Volstead needn't worry about us. We never get a kick out of anybody.'"

Muller Brothers put out a house organ "every now and when we get the money" that probably has greater reader interest than any other house organ of its kind in the country. It reaches 7000 motorists in Hollywood, from Mary Pickford and Charlie Chaplin to flivver pilots, and they all read it. It is brimful of rich humor of a varied and original variety, but behind it all there is a veiled merchandising theme that sells merchandise and service.

Motorists in Hollywood watch for "The Air Hose" as they would for their favorite magazine.

From the current issue of the Muller Brothers house organ the following "lead" article is quoted under the heading, "National Convention of Muller Patrons to Convene on Labor Day:"

"It has been our ambition to bring together all the patrons of the World's Greatest Service Station. We'll realize the dream on Labor Day. We're going to gather 'round our gas tanks for a big get-acquainted celebration.

"Everyone who has ever had the pleasure of trading with us is invited. We want you to bring the children, your empty gas tanks and your check books. It will be a good ol' fashioned get-together party. We'll talk about old times, about each other, about our neighbors and considerably about those who don't trade with us. You will hear all about your own affairs from someone else. And think of the thrill and the joy of meeting all your old friends—people you haven't seen for two or three days.

"Muller Brothers are going to no expense to make the day eventful. Those who find it convenient are requested to bring at least three flat tires. If the pump service is delayed, you may remove the cap from your gas tank and allow what you've got to evaporate.

"Although it is Labor Day the festivities will be carried out strictly upon a basis of law and order. You'll get what you order if we got it. If we haven't got it, you can depend upon getting something else.

"We don't belong to any union, but there is plenty of strength in union and plenty of the same stuff in our gasoline.

"There's that much in common between us, although it isn't as common as some competitors might lead you to believe. Furthermore, we can tell a union suit as far as we can see a clothes line."

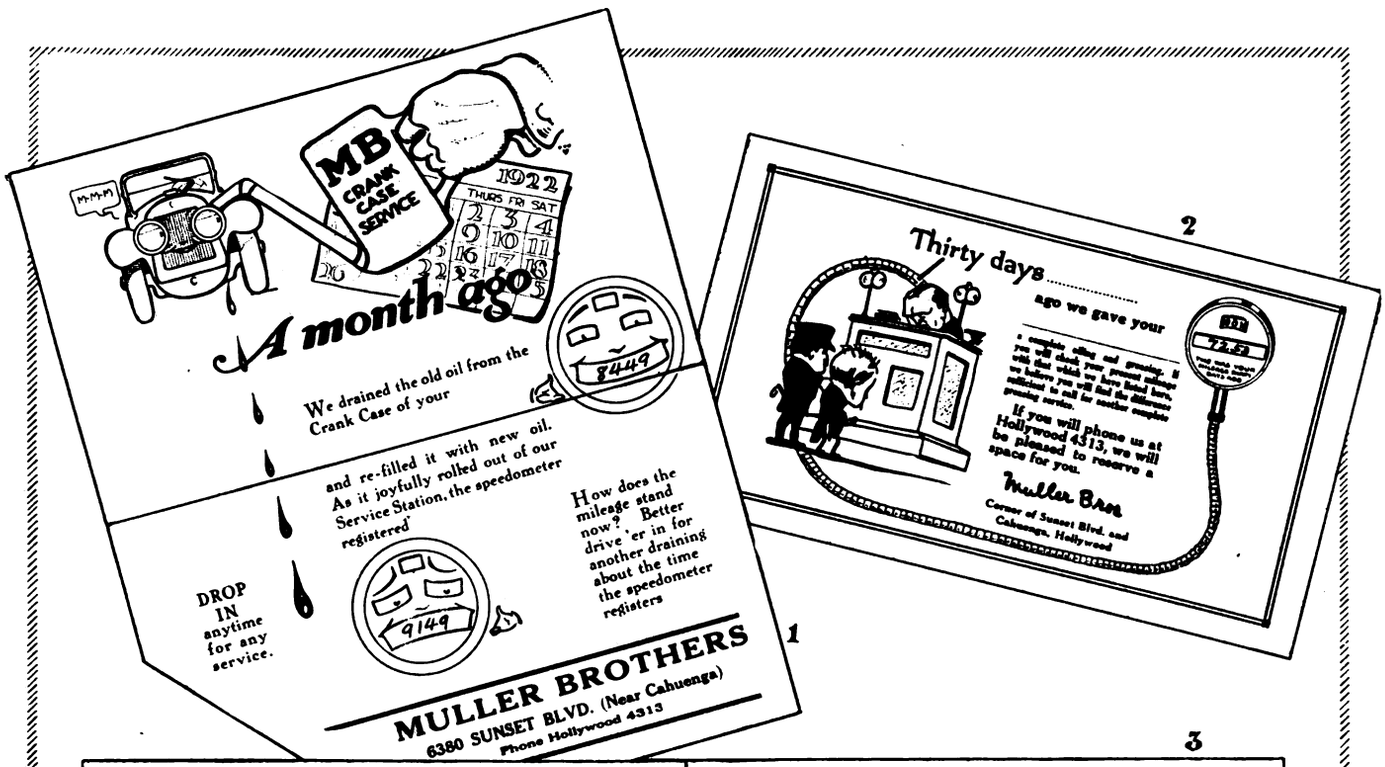
Some dealers may consider such reading matter as the above pure nonsense, but whatever it is, it is bringing an overwhelming volume of business to Muller Brothers for Hollywood motorists like this brand of humor.

"We've had to add to our circulation lists every month in order to satisfy requests for 'The Air Hose,'" said Mr. Muller. "It's the greatest 'merchandiser' we have ever employed, and yet there are no direct appeals for merchandise carried in it."

Frank and Walter Muller started up in business in Hollywood about three and a half years ago after they were discharged from the army. They ventured first in a small way, as their capital was small. They had one pump and a small stock of accessories. To-day their service station and store buildings cover more than three acres and their establishment represents the very last word in equipment and service features.

THERE is just one rule at Muller Brothers':

"Keep 'em Smilin'."



Every employee has a smile for every customer. Smiles, laughs, funny stories and bubbling good nature are an important part of the Muller Brothers' brand of salesmanship. Customers like the friendly atmosphere of the place and they tell others about it.

"The Air Hose," the firm's house organ, published "every now and when we get the money," fairly sparkles with humor. People ask to be put on the mailing list of this paper. Read the two pages from it which are reproduced on the opposite page. They are typical of the Muller Brothers' "Smile" policy.

You'll get a good laugh out of this story—and some selling ideas, too.

ALL NIGHT SERVICE

Ordinarily the World's Greatest Service Stations close at 10:00 P.M. However, we don't want to disappoint our regular customers. So if you run out of gas, break a tire or develop an agonizing squeak during the night, just call us up at the store. Hang onto the phone and be patient. We open promptly at 7:00 A.M.

◆ ◆

If you can't get us on the phone we'll grant you the privilege of swearing.

If you call another service station we'll do the swearing.

◆ ◆

Something Must Be Wrong

The motor vehicle department reports that 3927 people bought new autos in California last month.

There's some dirty work somewhere. Our books show only 3721 new customers for the same period.

◆ ◆

No Need to Tickle 'Em

The reason Al and Bill are kept on the gas tanks exclusively is because we insist upon treating all customers alike, regardless of what kind of car they got or how much they buy. The first two gas men we had, guaged their good nature by the amount of gas sold. They'd grin at a flivver, smile at a Dodge, chuckle at a Buick, laugh at a Cadillac and go into convulsions over a Rolls-Royce.

A motorcycle pulled up one day and they cried themselves to death.

Muller Brothers
AIR HOSE

GAS N. OIL, Editor

MULLER BROS., AUTO NECCESSITIES
638 Sunset Blvd., Corner Cahuenga
Hollywood, California

Phone Holly 4111

The government probably would step in to settle a strike at Muller Brothers sooner than they did in the rail tie-up. Imagine the seriousness of 98 per cent of Hollywood's automobiles being squeaky, dirty and out of gas at the same time.

◆ ◆

Volstead needn't worry about us. We never get a kick out of anybody.

◆ ◆

Will Hays told us he was sorry he didn't bring his automobile with him. He said it wasn't because he needed the car, but that he wanted to go back and tell his friends he had enjoyed the honor of trading with us.

◆ ◆

KIPLING TODAY

A modern flapper and her ultra modern escort—

"A Rag, a Bone and a Hunk 'O Cheese."

◆ ◆

One of the boys who used to have his foot on the rail frequently in the good old days, rolled up in front of our gas tanks. He told the tankman to "fill 'er up and have one yourself."

◆ ◆

Sunset boulevard in front of our place is Hollywood's official brake testing ground. Our place shines in their eyes as they drive past. They slam on the binders. If they stop quickly they come in and buy gas. If they can't stop suddenly they go round the block, then come back and have their brakes lined. Try it yourself.

Page Three — The Air Hose at *Mullers*

Will Hays Came and Went.

The rail strike came and went.
Our printer came and went
(without getting his money),
But Hood Tires go on forever.

◆ ◆

Special Offer This Month

During September we're going to give our usual $9 worth of service absolutely free with every purchase. Your only expense so far as gas is concerned will be a small charge of 23 cents a gallon.

A good spare tire is last, but not least

GAS MAY GO UP

Here's a gentle warning to our customers. It might be well to lay in a supply of gasoline at present prices. Several gallons can be stored in the family fruit jars in the cellar near the furnace. The reason—

Mathilde is going to marry Max pretty soon. Maybe Grandpa Rockefeller doesn't exactly approve. But in the event he loosens up and forces a million or so on the unsuspecting Max as a wedding present—well, just figure it out for yourself.

◆ ◆

We oughta do a rushing business if those rubber bathing suits become popular. You can depend upon the patching and vulcanizing done in our rubber department.

◆ ◆

WARNING TO GIRLS

When a man asks you to go for a ride, don't take any chances. Find out first where he buys his gas, oil and tires.

Every hill that requires low gear is instantly related to our gasoline profit

MUTTON ROMANCE

He called her his little lamb. Then she got his goat, pulled the wool over his eyes and fleeced him. Now he's the most sheepish looking bird in the world.

OH, SKINNAY!

A thin school mom called Lena Catt
Cavorted on the beach at Catalina;
And there never was a lean-ah cat
Than cattish Lena Catt at Catalina.

◆ ◆

If you haven't got a car, buy a horn for the kiddies to play with.

◆ ◆

When all cars are equipped with Hood tires we'll turn our tire repair department into a cafeteria.

WE CAN FIX ANYTHING THAT'S PUNCTURED EXCEPT A ROMANCE.

A Hood tire will run 20,000 miles on the rubber, 2,000 miles on the carcass, 5,000 miles more on its reputation and heck knows how much farther on the fact that we sold it to you.

No, Oscar! It takes wind to keep your tires up—not garters.

1 and 2—These two pieces of literature feature the monthly lubrication service sold by Muller Brothers. Both of them emphasize the importance of regular lubrication and also serve as timely reminders. 3—Two pages reproduced from "The Air Hose," the Muller Brothers house organ. There is a lot of real humor on these pages. Read them through and you'll agree with us

Safety and Usefulness of Highways First in Oregon System

Widening and Fencing of Curves, Elimination of Grade Crossings, Adequate Caution Signs and Enforcement of a Good Traffic Law Enhance Safety of Travel and Efficiency of Traffic Control

By H. W. LYMAN

CONSTRUCTION of State highways along the lines of the greatest safety to all who use them, as well as along the lines of the greatest permanence and usefulness, and erection of such signs and signals as may be necessary or desirable to keep the highways safe for travel and cut the number of accidents to the minimum, is one of the paramount duties of a State highway department.

Such is the position taken by the Oregon State Highway Commission, and as a result Oregon has already become known throughout the Pacific Coast country as a safe State in which to drive, and other Western States are adopting the system which has been worked out in Oregon.

In a general way, it may be said that there are three fundamental points in Oregon's system, which, it should be understood, embrace all the primary State roads outside the corporate limits of cities and towns, or in other words, the more important country roads. The cities and towns are left to solve their own road problems, as in practically all other States, although working in harmony with the State highway officials.

These three points are: 1—Safe construction, including widening of curves, super-elevation on curves, construction of fences and guards along hill sides and at other dangerous points and the elimination of railroad grade crossings.

2—Adequate signing of the highways, including the erection of a large number of caution signs, uniform in character, at possible points of danger; placing of a large number of red reflector lights and highway lighthouses at sharp curves and danger points and the painting of a line down the center of the road along many of the curves.

3—An adequate traffic law, enforced by a squadron of state motorcycle officers, co-operating with county officers and city police. The third feature is common in all States, at least in theory, but in the first two Oregon may be said to have made an important contrib ution to highway development, at least so far as the West is concerned.

OREGON roads, passing for the most part through forests or over mountains, cannot of necessity be made as wide and straight as can roads in the Middle West, and therefore proper construction becomes a problem to be carefully studied. In general the policy is maintained of eliminating so far as possible all sharp and blind curves, widening all curves four feet more than the straight road, dishing all curves so as to swing cars naturally around the curves and eliminating danger of skidding. Strong fences are put up along dangerous curves, and in some places masonry retaining walls have been erected to eliminate as far as possible danger of cars running over the side hills. These fences are made of stout beams and planking set firmly in the ground and are painted white and are uniform throughout. Erection of all such guards is designated as part of the construction of the road itself and is completed along with the road improvement.

One of the most important contributions in development of safer highways made by Oregon has been toward elimination of grade crossings. Remarkable progress has been made in this regard in the last two years, and the avowed intention of the State highway commission is to eliminate every railroad grade crossing in the state. This work has been accomplished in some cases by relocation of road and in others by bridging over or tunneling under the railroad tracks. In at least one instance cost of a viaduct and new location to eliminate one grade crossing exceeded $80,000, but this did not deter the highway commission, which has adopted the blanket policy of complete elimination of all primary grade crossings.

HIGHWAY development and traffic control are going to continue to wield a strong influence on motor car buying for a long time to come. Poor highway facilities and inadequate traffic control already are exerting strong sales resistance in some localities.

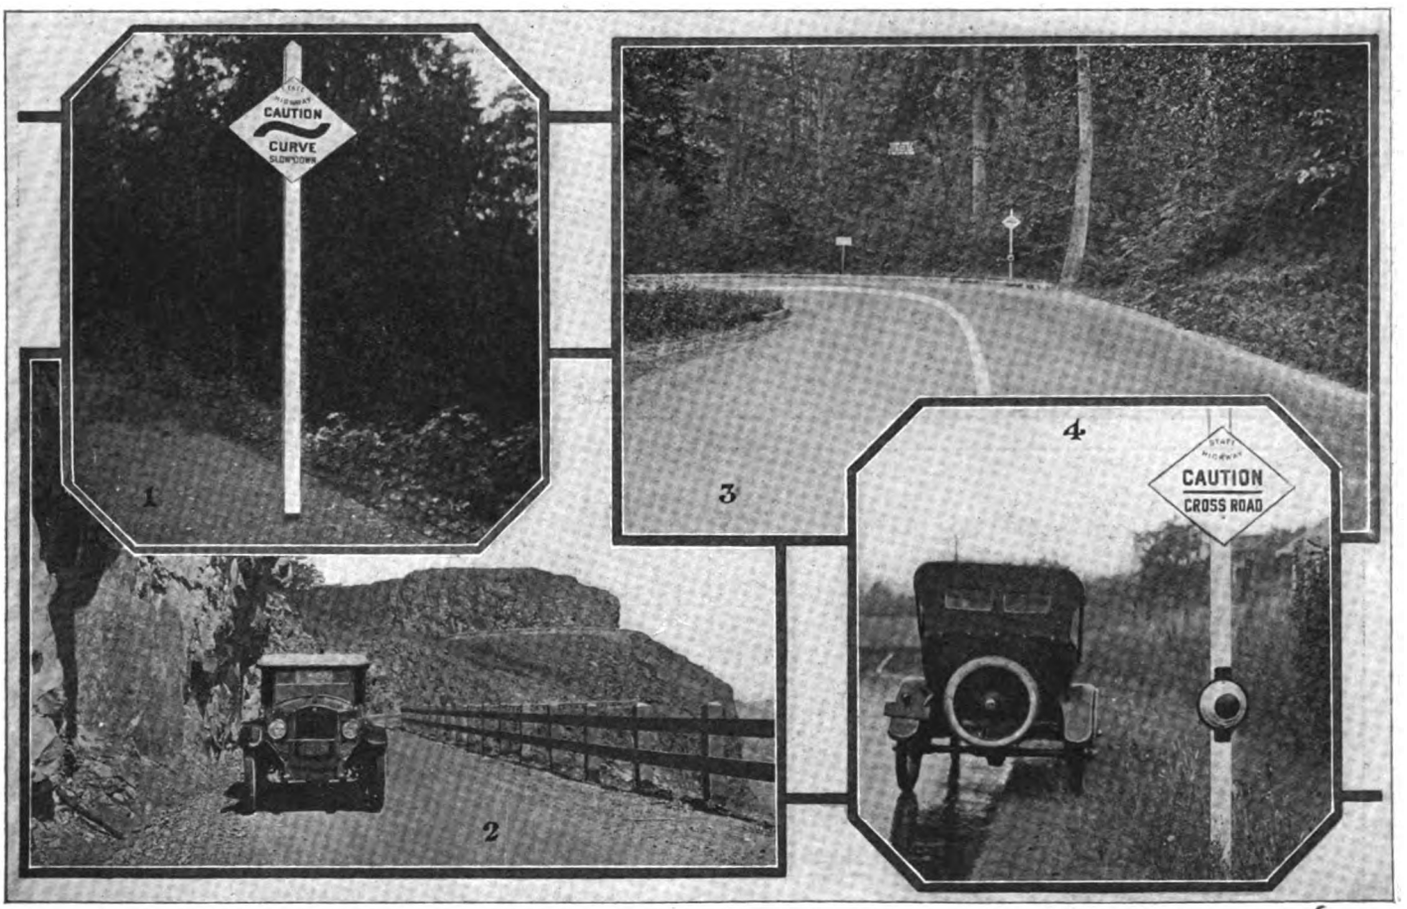
Motor World is presenting from time to time such articles as this one to provide the dealer with information upon which to base intelligent suggestions for the improvement of local highway conditions. There have been several stories in the past months and there will be more in the future.

The State highway department has adopted a standard caution sign which has been put up at dangerous points on all main roads of the State and is being put up on additional roads as they are built. Erection of such signs is considered just as much a part of the building of the road as is the drainage or the pavement surface. These signs are made of sheet iron enameled white, with black lettering bearing the caution slogan. They are diamond shaped, 18 inches along the sides, with angles of 103 and 77 degrees and are fastened to posts four by four inches in size, which are sunk securely in the ground. Such signs are placed at the driver's right edge of the road a few feet outside the pavement or gravel surface and at such points to

Digitized by Google

command the attention of the oncoming driver. They are set approximately 400 feet ahead of the points regarding which they are to warn the motorist.

Taking the position that none of its completed roads are dangerous, the highway department has eliminated that word and has substituted "Caution." As the sign has been standardized, there are across the top in small letters the words, "State Highway"; next in large letters appears the word "Caution," following which there is an insignia of a standard kind, such as a black curved line for a curve, cross line for road intersection, etc., and under this in large letters appears the descriptive words, such as "Curve, Slow down," or "School," or "Cross Roads," etc. In this way every possible kind of danger point is described to the oncoming motorist, and he learns to at once be on the alert and to drive with caution immediately he sees one of the signs ahead.

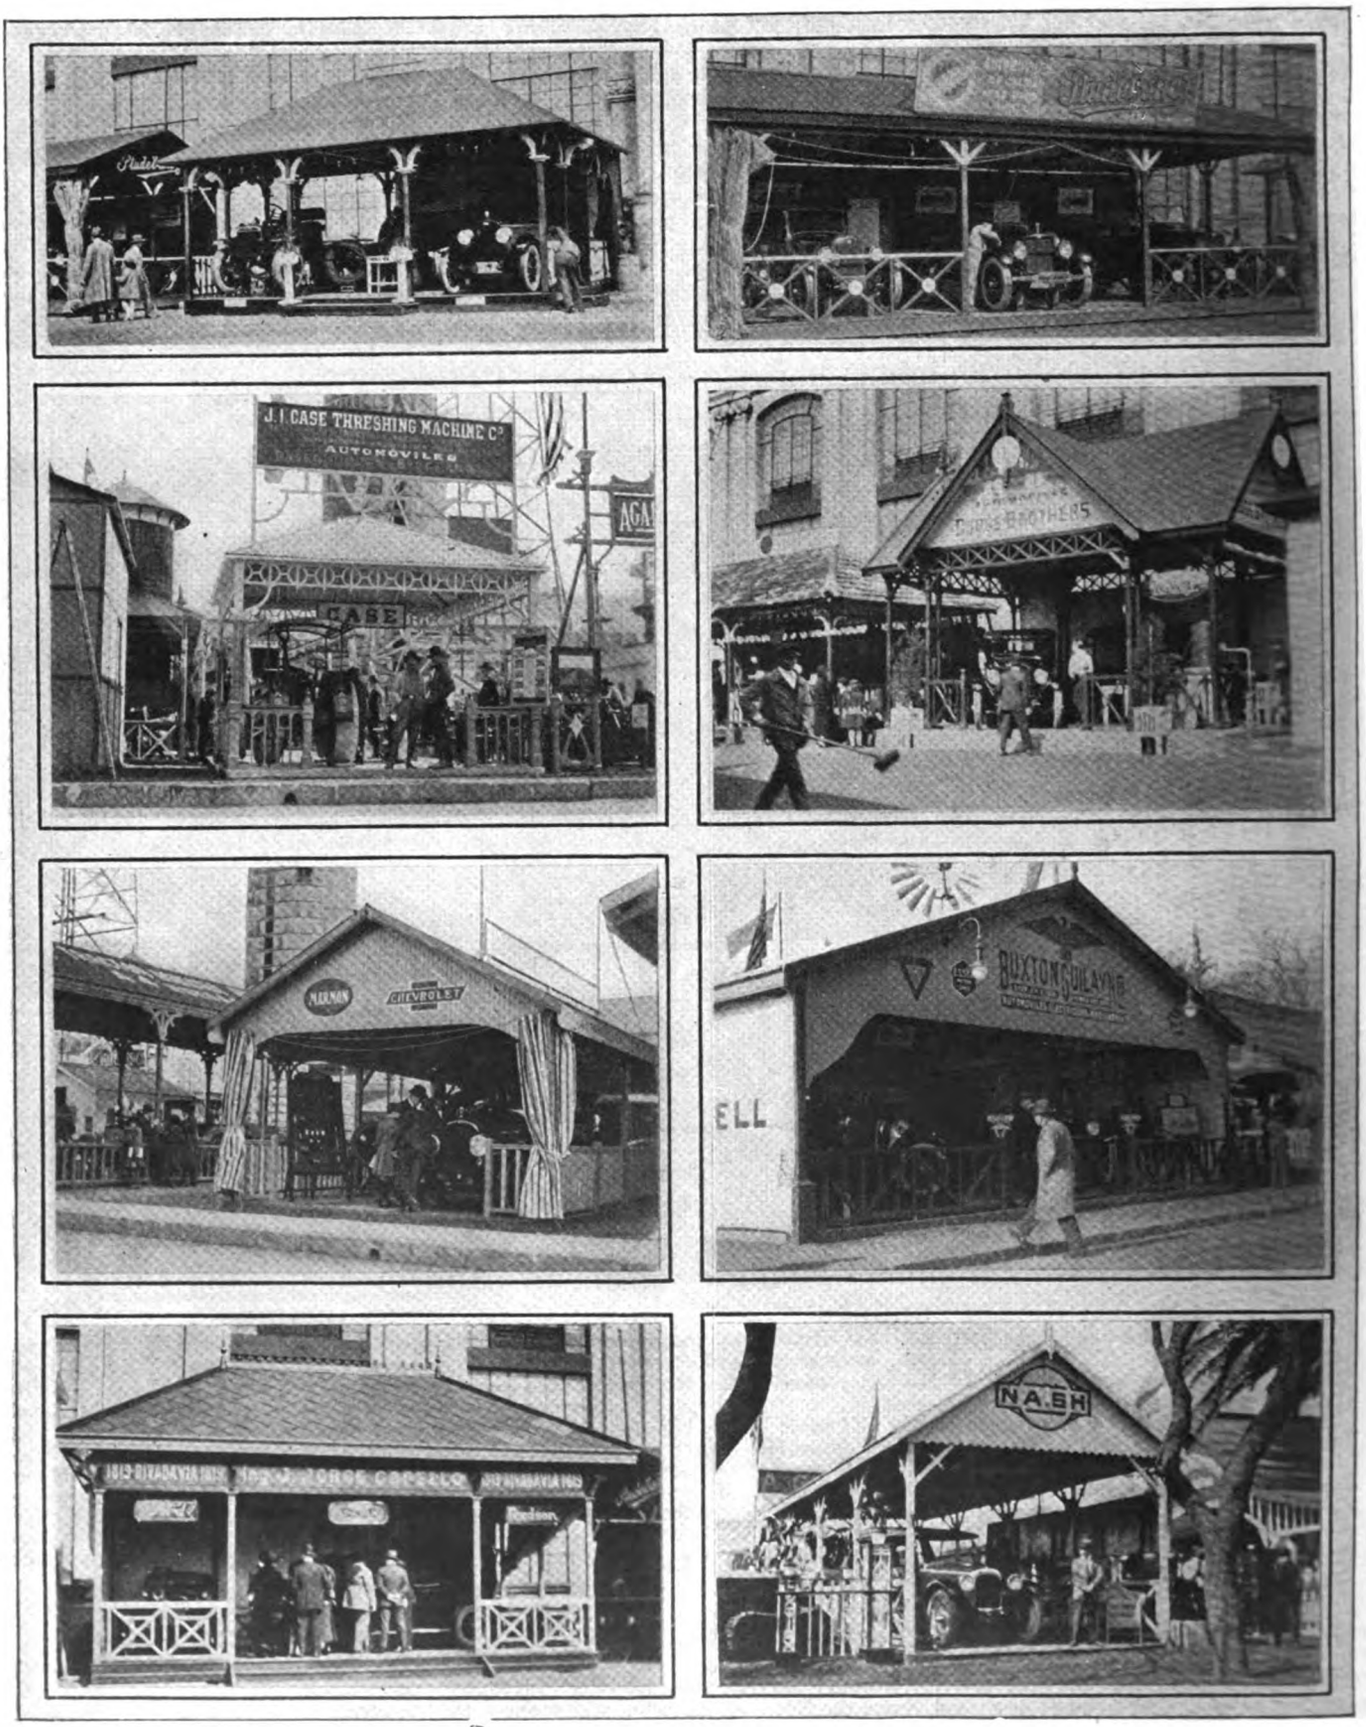


In placing the above signs a study is made of the position of the average driver's headlight as he comes down the road, and the signs are erected so that the lights will fall upon them at night. In addition many of the signs are equipped with red bull's eye reflectors placed immediately under the metal diamonds which show up brightly at night and automatically warn the driver.

In addition the highway commission has recently begun experiments with highway lighthouses, and have erected five at hazardous points on the main roads, these lights being arranged to automatically flash a red light at intervals of about every two seconds. If these lights prove beneficial others will be erected, despite their high cost.

Painting of a white line down the center line of the road on curves has recently been taken up and is proving highly desirable, so much so that the practice may be put into effect throughout the State. This plan, which consists of a white painted line about two inches wide, running down the center line of the curve, was put into use on the Columbia river highway, where traffic is unusually heavy for the width of the road, and has proved effective in keeping drivers on their own side of the road and in showing the location of the center of the road on dark or foggy nights. Of course this system cannot be used except on pavement.

The highway department has one primary object in all this work and is driving straight toward that end. That is to make the Oregon highways just as fool proof as possible and to cut down to a minimum the number of highway accidents. While definite figures are not available, it is known that the past year has seen a distinct lessening in the number of accidents on the State highways outside the corporate limits of cities and towns, despite the fact that traffic has greatly increased during the period.



Protecting Motorists on Oregon Highways

1—Standard caution sign for all curves that are in any way hazardous. Many are equipped with red reflectors for night signalling in addition. 2—View showing method in which mountain highways are protected along the outside by erection of strong fences and walls. In the foreground is the standard heavy timber fence, painted white, while in the distance is shown a standard retaining wall of stone masonry. Many miles of both such protecting walls have been put up on Oregon roads. The view is on the Columbia River highway. 3—View showing curve on Columbia River highway marked with white line down center to guide traffic. Note the standard caution sign at the beginning of the curve located so lights at night will fall upon it. 4—One of the many standard caution signs erected by Oregon State highway department to warn motorists of cross roads, school, sharp curve or other hazardous point. Note red reflector to warn drivers at night. The approaching headlight lights this reflector up as brightly as if it had an electric globe behind it.

MOTOR WORLD has still more of these traffic stories in reserve for publication. Two of them describe interesting and progressive developments in traffic control in cities where an effort has been made, with success, to make motoring not only safer but more pleasant. Another discusses fundamentals which dealers might suggest to public officials of their communities to bring about improved traffic conditions. Watch for these traffic stories—about one a month.

Editorial Notes

The Woman Who Drives Her Own

IN a little town in New Jersey the other day a group of school teachers threatened to strike because the town frowned on their request for a garage in which to park their cars during sessions.

The lines of candidates for drivers' licenses in states that require them are remarkable in the high percentage of women present.

The large number of women designated as owners in the registration lists is often a subject of comment.

All of which suggests the question: "Are automobile dealers fully cognizant of the sales opportunities that exist among women who own and drive their own cars.

Women as direct buyers of automobiles are yearly becoming a larger factor in the merchandising potentialities of the industry. Their influence long has been felt in the design of closed car interiors and in the manufacture of many of the accessories to adorn the motor car. However, up to recent times this influence was regarded mostly as an influence that exerted itself through the husband or father who bought the car.

To-day thousands of women in all parts of the country are not only exerting an influence through male relatives in the sale of cars, but they are actually purchasing cars themselves, driving them themselves and depending upon them for personal transportation in business, social and professional pursuits.

Isn't it time for the men who sell the products of the automotive industry to recognize the fact that the "Woman Who Drives Her Own" is definitely in the market in numbers large enough to justify special merchandising attention?

How many women in your town, for instance, are engaged in commercial and professional pursuits that make them financially able to own an automobile? How many of these women could be sold automobiles if they were made the object of a well-planned merchandising effort?

Isn't it time for consideration in every dealer organization of "The Woman Who Drives Her Own?"

The Weekly Sales Meeting

THERE is, perhaps, no one thing that holds such potentialities of success in an automotive selling business as properly conducted weekly sales meetings.

Many inspiring things have been said and written about the force of unity in action. The world is full of inspiring examples of great accomplishments made possible by the united effort of a group of men. The great business enterprises of America to-day stand as monuments to the collective effort of serious men with one ideal their guiding star.

Thinking men wonder how any business can hope for success without first solidifying its organization and coordinating its efforts. And yet, the automobile dealer, whose commodity has a high unit price, whose business is done mostly away from the watchful eyes of its executives, is very often totally disinterested or but only lukewarm in his attitude toward this great factor of success —the strength of united action.

Periodical sales meetings, if properly conducted, will play a great part coordinating the effort of salesmen, in standardizing selling methods, in educating and increasing the efficiency of sales forces.

Such meetings provide the opportunity to crystallize the best thoughts on the merchandising of a product under existing conditions; through the exchange of ideas that is made possible. They give salesmen splendid opportunities to ask questions and listen to advice. They reawaken in everyone from the dealer down the enthusiastic interest and refreshed viewpoint that so often is apt to suffer in their close daily contact with the details of their jobs.

The opportunity for the exchange of new and successful selling ideas is one of the big benefits that weekly sales meetings provide. Many effective selling ideas that might otherwise remain locked in the mind of one man are made available to all, to the benefit of the whole organization collectively and individually, as a result of such meetings.

The automotive dealer needs as much, if not more than any other business man, every force that will help him centralize his selling efforts around one high standard policy and the strength that unity of thought and action will give every phase of his business.

Let's let neither the despondency of impending failure or the assurance of present successes cause us to neglect that good old institution—the weekly sales meeting.

"Aim high to avoid shooting yourself in the heel," says George E. Bond of the Kansas City Motor Car Dealers' Association, paraphrasing the ancient advice to "hitch your wagon to a star."

New Jersey, by a majority of about 10,000, voted in favor or a $40,000,000 Highway Bond issue at the election the other day. Sort of "paving the way" for better automotive business, eh?

Suit on Breach of Warranty Must Prove Fraud

Small Chance of Damages Against Dealer Who Sold 1915 Model Believing It Was a 1916 Model

EDITOR Motor World: As an interested reader of Motor World for several years, I would like to ask your opinion of the following:

Mr. Smith purchases an automobile of Mr. Brown, a sub-dealer, in August, 1916. Mr. Jones, the master dealer, tells Mr. Smith, the purchaser (before he purchases the car), that it is a 1916 model.

Mr. Jones, the master dealer, thinks he is correct in telling Mr. Smith, the purchaser, it is a 1916 model, as the factory in these years called any model shipped out after July 1 a succeeding year model.

This car was received at master dealer's town Oct. 31, 1915, and was supposed to have been shipped from factory only a few days previous. The serial number of this car in factory master parts book and in serial supplement of the National Used Car Market Report shows it to be a 1915 model.

The master dealer wrote the factory, asking what year model the car was, and the factory referred the letter to their large distributor and they in turn answered that the car was produced and shipped in what was known as the 1916 year.

The 1915 model was listed at $230 less than the list price of the 1916 f.o.b. factory, but there was not any change in the body or engine—the only change being from celluloid to glass in the rear curtain. The car was sold to Mr. Smith, the purchaser, for $125 less than the delivered price of this make of car at the time of delivery. Mr. Smith is now threatening to sue the master dealer, Mr. Jones, for the difference in the factory list price of 1915 and 1916 list models, or $230. What chance is there of Mr. Smith recovering anything at this time? If there is any chance of recovering at all what could he recover?—Subscriber, Chesterton, Md.

Answer.—If the facts in your letter are correctly stated there certainly was no fraud or deceit on the part of the dealer, and an action could not successfully be maintained on that theory. If the purchaser succeeded in successfully setting up a breach of warranty as to the year model of the car the usual damages would be the difference between what the car was actually worth as sold and what it would have been worth if as warranted. In my opinion it is reasonable to fix this at the difference between the value of the celluloid and the glass in the curtains of the respective models, as after all, the cars were the same—the car sold was a "new" car—there was no misrepresentation or deceit, and I am not sure from reading your letter that the dealer was not actually justified in calling the car sold a 1916 model—when it was sold after July, 1915.

If the purchaser should start a suit the dealer should retain counsel and vigorously defend it with good chances of success.

Purchaser Upheld in Title Dispute

That where the selling agent of a motor truck company was allowed by the company to sell trucks as his own property even though they were covered by a chattel mortgage given by the dealer to the company, and he was in the habit of thus obtaining money to pay the company for the trucks delivered to him, the motor company was held to be estopped to setting up its own title to the trucks as against purchasers from the dealer who had no knowledge of the company's claim under its chattel mortgages, although they had been properly recorded.—Gramm Bernstein Motor Truck Co. vs. Todd, 209 Pacific Reporter, page 3. (Washington State).

Practical Questions of

Business Law

Are discussed every week on this page

By GEORGE F. KAISER
Attorney at Law

Readers are at liberty to write to the legal editor of Motor World for help in solving their business problems. Their inquiries will be answered through the mails.

Agreements to Not Re-engage in Business

The Court of Chancery of New Jersey, in the recent case of Messinger vs. Franklin, reported in 118 Atlantic Reporter, at page 260, decided that on the sale of a retail business a provision in the contract of sale, that the seller would not re-engage in a competitive business "within an area of at least ten city blocks," was too indefinite a restriction and was too uncertain as to its meaning to be enforced by the courts. The buyer plea to restrain the seller from re-engaging in the same kind of business was therefore denied.

In another New Jersey case recently before the same court, where a party had sold out his business and agreed not to re-engage in a competitive business the court enforced the agreement which had been made between the seller and the buyer and refused to allow the seller to transfer his property to his wife, re-engage in business under her name and thus carry on a competing business through the use of a subterfuge.—Clabella vs. Weidech, 113 Atlantic Reporter, page 259.

Recent Motor Vehicle Lien Cases

Missouri.—Any person who has a lien on chattel for work and labor done thereon may retain possession of the chattel until paid. Barton vs. Brundage, 240 Southwestern Reporter, page 890. If the owner wrongfully takes possession of the property on which there is a lien, lienor may replevin and force the owner to return the property until the lien is discharged. — Barton vs. Brundage. (Same).

West Virginia.—A mechanic or artisan providing labor and material and performing labor on an automobile at the owner's request or direction has a common law lien thereon for the value of materials and labor and a right to retain possession of the property until paid, notwithstanding Code 1913C, 75, Par. 12, Sec. 3853.—Stallard vs. Stepp, 112 Southeastern Reporter, page 184.

Must File Incorporation

The Supreme Court of Arkansas recently, in the case of Moise vs. Burkhart, decided that persons associated together and doing business as a corporation, are liable as co-partners, if they have neglected to file the articles of incorporation with the Secretary of State.—242 S. W. Rep., pg. 810.

Must Execute Bill of Sale

That a person selling a second hand automobile who does not execute a bill of sale and transfer the license fee receipt cannot recover the balance of the purchase money due him on a note, although he innocently neglected to transfer the license fee receipt as required by law, was the decision in the lately decided Texas case of Foster vs. Beall, reported in 242 S. W. Rep., pg. 1117.

Distributor Stages Traveling Closed Car Show

Four Closed Models Shown in Various Cities in Territory Get Public Attention and Sales

THREE progressive towns in Colorado and one in Wyoming were treated recently to a novel and practical motor enterprise in the form of a "traveling" closed car show, staged two days in each town by the local Cadillac dealer, through the co-operation of the R. R. Hall Cadillac Co. of Denver, distributor for these two States and Western Nebraska. The distributing firm supplied four closed models for these unique exhibits, and sent its territorial salesman, W. B. Taylor, to supervise the shows. The local dealers decorated their salesrooms and advertised the events to their respective communities, and the results were highly gratifying to all concerned—including the public, which expressed both interest and delight. The shows were welcomed as events well worth considering as an asset to civic pride, and they served to stimulate a broader appreciation of the automotive industry's representation in these fortunate communities.

The towns visited on this first "circuit" were Boulder, Fort Collins and Greeley, Colo., and Cheyenne, Wyo., and the attendance at the four shows was estimated, respectively, at 1000, 1200, 800 and 1500. The local dealers participating at the respective points were Bolinger-Mitchell Motors, Inc., H. C. Bradley, Sherman Auto Co. and Mentz Motor Co.

There was an average of one closed car sale in each of the towns as a direct result of the two-day show, and all the dealers made worth-while additions to their lists of prospective customers. Other dealers in the territory are asking for similar co-operation, and the distributing firm plans to continue this show program each fall, gradually increasing the number of towns visited in order to cover the territory as fully as possible.

An "Economy Run" Idea

THERE has been a veritable epidemic of "economy runs" staged in Southern California during recent months, but it remained for Paul G. Hoffman, Studebaker dealer in Los Angeles, to come forth with a new sort of a demonstration to show the economy of operation of its particular line of cars. The Hoffman Company, when it decided to hold an economy run, borrowed nine veteran Studebakers from their owners. Each of the cars was a Studebaker big six, that had passed the 50,000-mile mark, some of them so far past that the speedometer required six figures to record the mileage.

Gathered from different points in Southern California by Studebaker dealers the cars represented more than 1,000,000 miles of travel. One that was entered had done more than 350,000 miles of hard service. Another entry is credited with 250,000 miles of service and was taken directly from the owner to make the run.

Seven of the cars finished with a perfect score for the 239 miles of travel, ninety miles of which are over mountain roads with steep grades that twist around turns over paths that are rutted and pitted with chuck holes.

Trophies were awarded to the winning cars.

The Hoffman company published large display space in the daily newspapers featuring the economy run, with very substantial results.

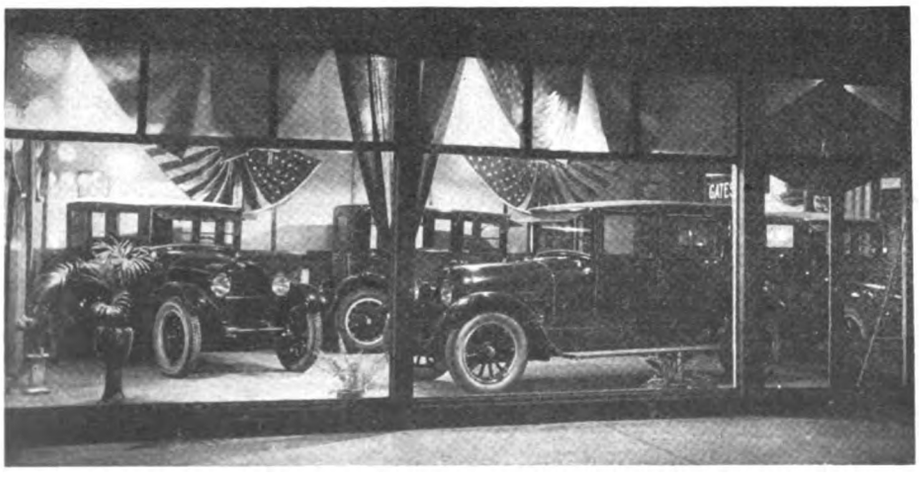
Ideas On Selling and Management

You will find them on this and the opposite page—ideas that will make dollars or save dollars for the

Car Dealer Truck Dealer Equipment and Tire Dealer Tractor Dealer Repairman

Some of our readers are contributors to this section of Motor World. Have you developed a plan that might help some other men? If you have, will you write it out and send it in?

Competitions Better Than Bonuses



BONUSES and prizes are all very well for stimulating salesmen to unusual effort in selling new or used cars, but E. G. Waltz, manager of the used car department for the Franklin Detroit Co., believes that he has a better method.

"Salesmen have become so accustomed to the offers of bonuses and prizes," he says, "that they have come to pay very little attention to them, in a way. Of course, they are always glad to earn the extra money or the prize and to excel the other fellows, but after all it doesn't cost them anything in particular in case they lose.

"Our plan is to arrange a contest in which the losers really lose something. In other words, we not only put a premium on sales, but we put a penalty on failure to make sales.

"Last month, for example, we took the new car salesmen in with us and divided up into two teams of seven men each. The contest was based on total sales of used cars, and the losers had to take the winners out to a popular road house and treat them to a frog and chicken dinner.

"A salesman may think, 'Oh well, what if the other side does beat us; it doesn't amount to a great deal anyway.' But if that same salesman knows that it's going to cost him several dollars out of his own pocket, to say nothing of commissions, to lose the contest, I find that he'll get out and hustle like everything."

Here is one stop of the traveling closed car show staged by the co-operation of the R. R. Hall Cadillac Co., Denver. This show was held in the salesroom of the Mentz Motor Co., Cheyenne, Wyo.. dealer

Display Sells Accessories in Small Towns

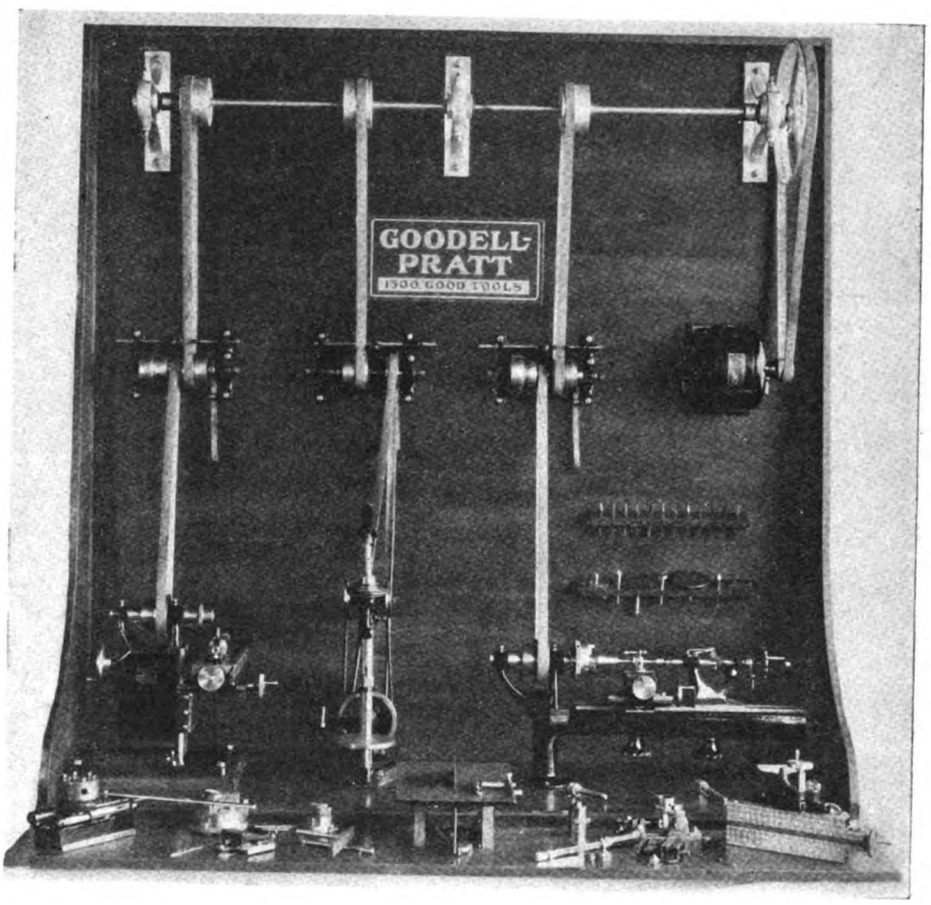
Garages with Well Balanced Stock and Good Display Can Get Large Volume of Business

THE big proportion of accessories bought by farmers and small-town motorists are bought in the cities, except—

Except when the small-town car dealer or garageman carries a good stock of accessories and displays them well.

In such case, the motorists, whether farmers or town people, buy accessories of the local dealer.

The habits of small-town dealers are fairly well established. Most of them don't even carry much of a parts stock. It's so easy to order from the city when a customer asks for something. As for accessories—the small-town dealer is usually actually surprised when the motorists ask him for any except the barest necessities.



There are a few dealers, here and there, in the small towns, who have seen the possibilities in accessories. They have noted the daily arrivals of miscellaneous items of motor car equipment at the railroad stations and postoffice, and have presumed that they could get the business by preparing for it.

The P. H. Rea Garage, at Marshall, Mo., a town of 5000 people, is one which has gone after accessory business. It has carried a large stock of accessories. It shows them in the windows—and especially in glass-front cases at the entrance to the garage. The company has a large garage business and many visitors. Every visitor sees the accessories, and he sees also the large and varied assortments of accessories visible in the stockroom behind the counter.

This accessory display cabinet, with several shelves, extends about fifteen feet along the north side of the garage section, and the counter, where all statements are issued, where orders are given and payment made for service or parts, adjoins it. The display cabinet is built into the partition which separates the stockroom from the garage. The glass-front of the cabinet has doors—but the doors are locked. A customer wanting an accessory points to it, and the salesman gets it from the inside.

The value of the visibility of the accessories and large stock of parts is great. Not only does every person entering the garage, even if he only pauses a moment, see many things, but most visitors stand a few minutes at the counter, and, glancing around, inevitably are led to think of many items. They also carry away the impression that this establishment carries great variety and quantities of everything.

"Does it pay to handle accessories on a pretty large scale in this small town?" P. E. Ott, manager, echoed the question. "I should say it does! Many years the accessories have practically paid the expenses of the garage."

Display Shows Tools in Motion

There is something fascinating about the element of motion in a store window, and the attractive set-up shown in the accompanying illustration, which has been shown by automotive establishments in Worcester, Greenfield, Rochester and one or two other places, has proved an effective means of stimulating business among car and truck owners and repairmen. The wheels run continuously and noiselessly throughout the business day and the attractive exhibit of bench drill, milling machine, lathe and various attachments carries an educational value along with its efficacy as a silent salesman. The exhibit is put on through the co-operation of the Goodell-Pratt Co., Greenfield, Mass.

Making Advertising Specific

ADVERTISING that is specific is always more effective in selling than advertising which is simply general.

Since this is the case, it will help in selling more goods to make your advertising as specific as possible. And one splendid way for making your advertising more specific is by devoting your advertising to certain, definite topics. For instance, you could devote one advertisement to a talk on the goods you carry which help in night driving. Another ad might deal with the articles you carry which are of aid to the man who washes and polishes his own car. Another ad could deal with aids to women drivers. And so on.

Selling Accessories for Closed Cars

PEOPLE who can afford closed cars can, nearly always, afford to purchase accessories which will make their closed cars comfortable.

Since this is the case, then, it would be a good idea for the accessory dealer to feature in his window displays and advertising step lights, heaters, cigar lighters, flower holders, seat covers and so on.

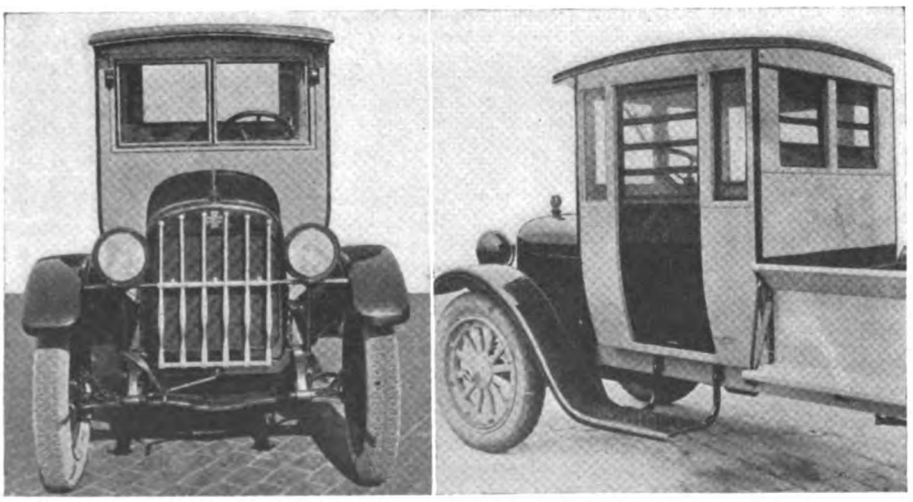
Mason Road King Priced at $1200

Will Be Built by Durant Subsidiary—Rated Capacity Is One Ton

A ONE ton speed truck has been developed by the Mason Motor Truck Co., a subsidiary of Durant Motors, Inc. The new truck will be marketed under the trade name Mason Road King. A number of body types will be standardized, including a stake body and an open express body. The prices at the factory are as follows: Chassis, $1,200; with cab, $1,325; with cab and stake body, $1,415; with cab and express body, $1,450.



The engine is a four-cylinder Hercules of 4-in. bore and 5-in. stroke. It is fitted to a 1¼-in. carbureter which is supplied with fuel by gravity from a 12 gal. tank mounted on the dash. The cylinders are block-cast, with a detachable head and an aluminum oil sump. Full electric equipment is provided, including starting, lighting, and ignition, the whole system being of Auto-Lite make. A USL storage battery of 117 ampere-hours capacity is included in the equipment. Lubrication of the engine is by pressure to the main bearings and by splash to interior parts. An oil pressure gage is fitted to the dashboard.

The cooling water is positively circulated by means of a pump, the latter being provided with a "through" shaft for the generator drive. The flat tube, cellular type radiator is of large capacity and back of it is fitted an 18-in. fan driven by a 1½-in. flat belt from the forward end of the accessory shaft. The fan spindle is mounted in a vertical slot of the fan bracket, and the belt tension can be readily adjusted by means of a screw with lock nut located on top of the bracket in a very accessible position.

The Mason Road King with cab and open express body as shown is priced at $1450. The wheelbase is 130 in. and the tires are 34 x 5 in. pneumatics

The clutch is a plate type enclosed in the flywheel. The gearset is a three-speed type of Warner manufacture and is separately mounted on the sub-frame. Between it and the clutch, there is a Spicer double universal joint to take care of any misalignment between the engine and gearset bearings. The reduction ratios of this gearset are as follows: First forward, 3.53; second, 1.74; third, direct drive; reverse, 3.97. The control lever for the gearset is mounted on the cover plate.

Left—Front view of the Mason Road King showing the adjustable ventilating windshield, radiator guard and method of headlamp bracing. Right—Three-quarter rear view of cab showing the curtain equipment. The curtains slide in grooves and are pulled down into position

The rear system is of the torque arm type, comprising an exposed tubular propeller shaft with two Spicer universal joints. Final drive is by spiral bevel gears with a reduction ratio of 4.9 to 1. A specially low reduction gear of 5.5 to 1 will be furnished for hilly countries, if desired. The rear axle is of the full-floating type of built-up construction. The truck has a wheelbase of 130-in. and the standard 56-in. tread.

The frame is of pressed steel, the two side members being parallel with each other and having a 5⅞ x 1¾ x ⅛-in. section. Half elliptic springs are used all around, the front springs being 38-in. long and 2-in. wide, and the rear springs 40-in. long and 2½-in. wide. Driving thrust is taken up on the rear springs. The wheels are of the wood type, fitted with demountable rims and 34 x 5-in. pneumatic tires all around. Both sets of brakes act on drums on the rear wheels, which drums are 14-in. in diameter and have a width of braking surface of 2¾-in. The outside or contracting brakes are the service brakes. The front axle is of the usual I-beam section, 2⅝ x 1¾-in. The steering gear is mounted on the left-hand side of the chassis.

The truck chassis with cab but without body weighs 3320 lbs. The complete truck with stake body weighs 3950 lbs., and with box body, 3690 lbs. The cab furnished has sliding curtain doors with celluloid windows that can be quickly lowered or raised. Equipment furnished with the truck includes a pump, jack, set of tools, head, dash and tail lamps, ammeter, Stewart speedometer and ventilating windshield. Lubrication of the chassis bearings is partly by grease and partly by oil.

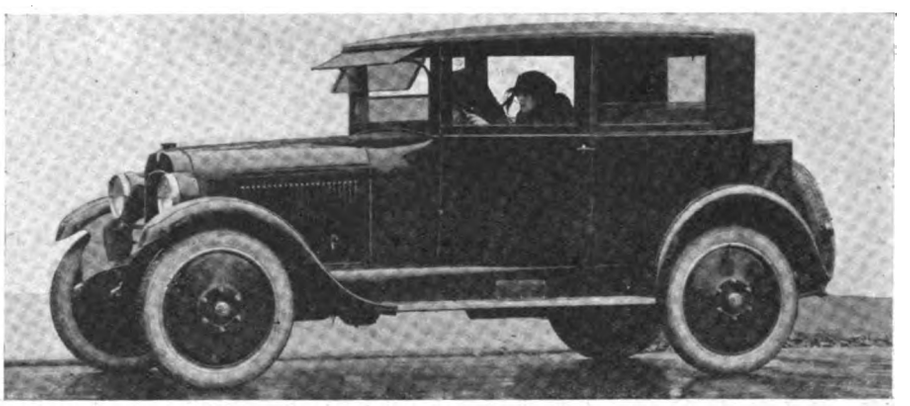
New Chalmers Coach Lists at $1585



THE Chalmers six coach, just put on the market, is a five-passenger closed car of the composite type, built on the standard Chalmers chassis and listing at $1,585.

Distinctive features in design are found in the unusual width of the body, the broad doors, the front seats which fold and then tip forward—the driver's chair completely clearing the steering wheel and wide windows all around offering clear view for all passengers.

The body is maroon with black superstructure. A carmine stripe on maroon runs around the body several inches below the belt. Black disk wheels with maroon trimming add to the striking appearance. Special attention has been given the substantial fabric covering of the rear and rear side panels. Seams are eliminated by running fabric cut in one piece from side-window to the opposite side-window.

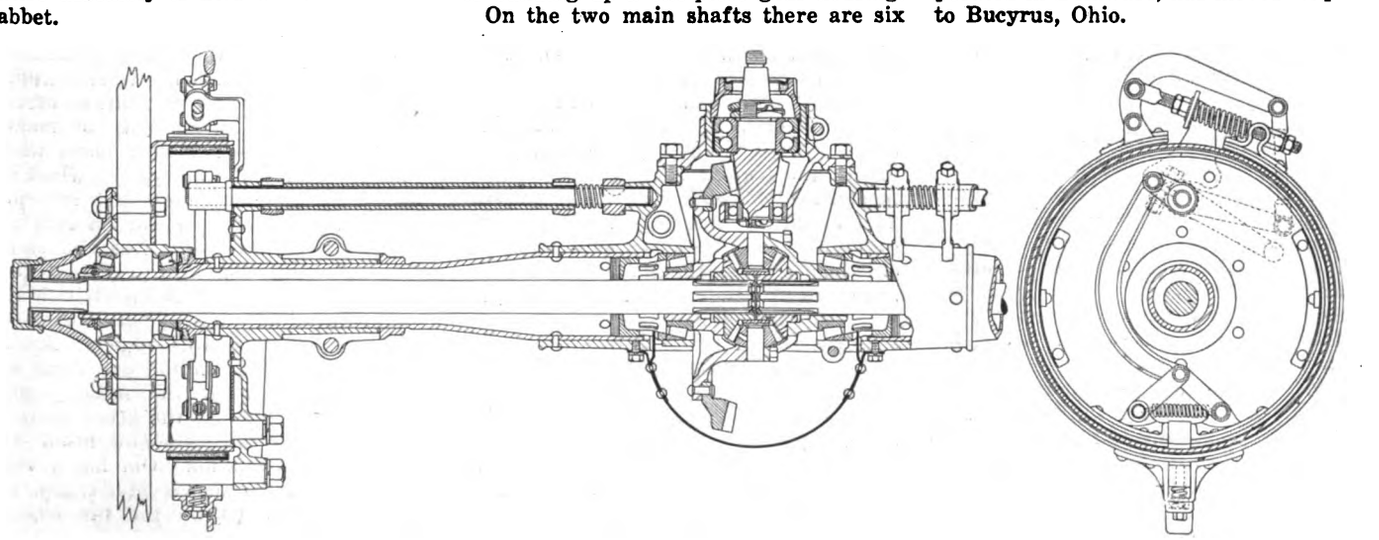
The roof, which is also fabric covered, is sloped at an angle to harmonize with the slope of the hood. The interior trim is in broadcloth with hardware of satin finish. The door-window lifters are of the lever type, raising or lowering the windows with less than a half turn. Rear quarter windows are operated by a strap arrangement. There is a roller curtain for the rear light.

A large trunk is mounted on a nickeled trunk rack at the rear. For this a dust cover is also supplied. Wood trunk bars of natural finish protect the body. Additional equipment includes parking lights, windshield visor, rear view mirror, windshield cleaner, dome light, non-skid cord tires, five disk wheels and heater. The upper glass of the windshield is hinged from the top, the lower from the bottom. Both sections swing outward, and by this arrangement ventilation is controlled. The entire assembly is held all around in a rabbet.

The new Chalmers coach seats five passengers. It lists at $1585

Flint Has a New Axle for Light Trucks and Buses

A NEW one-ton axle for light speed trucks and buses has been brought out by the Flint Motor Axle Co. It differs from the passenger car axle in that it is made heavier to stand the added stresses due to the higher loads. It is spiral bevel type, the spiral bevel gear and pinion being of larger dimensions than those required for passenger car practice, and the pinion shaft is supported by ball bearings on both sides of the pinion, giving a straddle construction, and hence a more rigid support on the pinion shaft to insure true pitch line contact.



The gearcase or center housing is made of malleable iron cast in one piece, the tube hole being bored to the same diameter that is required for the bearings on the sides of the differential. This is done for production reasons, as the malleable casting permits of lower priced manufacture than the usual pressed steel housing construction, or by the method of building up a one-piece gear housing.

On the two main shafts there are six roller bearings, all of the same size, and the shaft is splined on both ends, the hub having a pressed fit and the side gear and differential having a slide fit in the splines. The main tubes are large diameter of 30-40 carbon steel. The tube narrows down to 3 in. diameter at the spring support.

The axle main shafts are 1½ in. diameter. This axle is designed to stand 4000 lb. live and dead loads. The corresponding front axle is made to provide load-carrying capacities of 1400 to 2200 lb. The loads mentioned are those for which the axles are guaranteed, and in the design of the axle, factors of safety of from 6 to 9 are claimed to have been incorporated. The axle, which is a floating type, can be furnished in gear ratios of 4.9, 4.4, 5.2 and 5.5 to 1. The axle can either be furnished in torque arm or Hotchkiss type drive.

Turn Auto Moves

CLEVELAND, Nov. 10—The American Turn Auto Corp., recently incorporated in Delaware, has moved its plant to Bucyrus, Ohio.

A sectional view of the new Flint 1-ton axle for light speed trucks and buses. It is of the spiral bevel type and the center housing is of malleable iron

Small Engines Are Most Popular at London Show

Many Four Passenger Cars with Engines of Less Than 120 Cu. In. Exhibited—Framed Side Panels Give Better Protection on Open Cars

LONDON, ENGLAND, Nov. 3.

THE outstanding feature of the Sixteenth Annual London Motor Car Show is the large number of new models with four-cylinder engines of less than 120 cu. in. piston displacement. These new models are of the four passenger type and sell at from $1,200 to $2,000. They represent a continued endeavor to secure lower operating costs through the use of smaller and more efficient engines. A number of makers, who formerly specialized on large cars, are introducing smaller models. There is a marked increase in the number of overhead valve engines. A number of new small six cylinder models are also exhibited.

The new British designs generally show that more consideration has been given to production costs without, however, lowering the standard of body work, of finish, or of the quality of the accessories. In response to a buyer's demand for better weather protection, framed detachable side panels for open cars are now almost universally supplied. Some of these side panels have elaborate framing and attachments. On one car the panels are of glass but celluloid is used in all other cases.

Many of these panels are usable when the top is down, the rear panels then forming a V-shaped shield for the passengers on the rear seat. Most makers are adding standard sedan bodies to their line. The enclosed body on a light car costs about $500 more than the open body.

United States Well Represented

There are a total of 159 different makes of cars being shown. The United States is represented by Dodge, Hupmobile, Paige, Case, King, Moon, Durant, Packard, Buick, Chevrolet, Oakland, Cadillac, Chandler, Cleveland, Gardner, Essex, Hudson and Overland. France, Italy and Belgium are also represented at the show.

It is evident that the most popular type of car for 1923 will be a four-cylinder, four passenger model of 90-120 cu. in. piston displacement, selling at from $1,500 to $2,000. Six cylinder cars of similar size are mostly new models and are not attracting much attention because of the higher prices asked for them. Buyers capable of paying these prices apparently prefer four-cylinder models of larger piston displacement. There is considerable interest in two-passenger fours listing at from $1,000 to $1,250.

The British motor taxation system penalizes engines of large displacement and slow speeds. This condition encourages a home demand for cars that are not popular overseas. This operates to curtail production and to maintain prices at comparatively high levels. However, prices generally show a downward trend. American cars cost on the average 20 per cent less than last year, British 15 per cent less and continental cars about 12 per cent less.

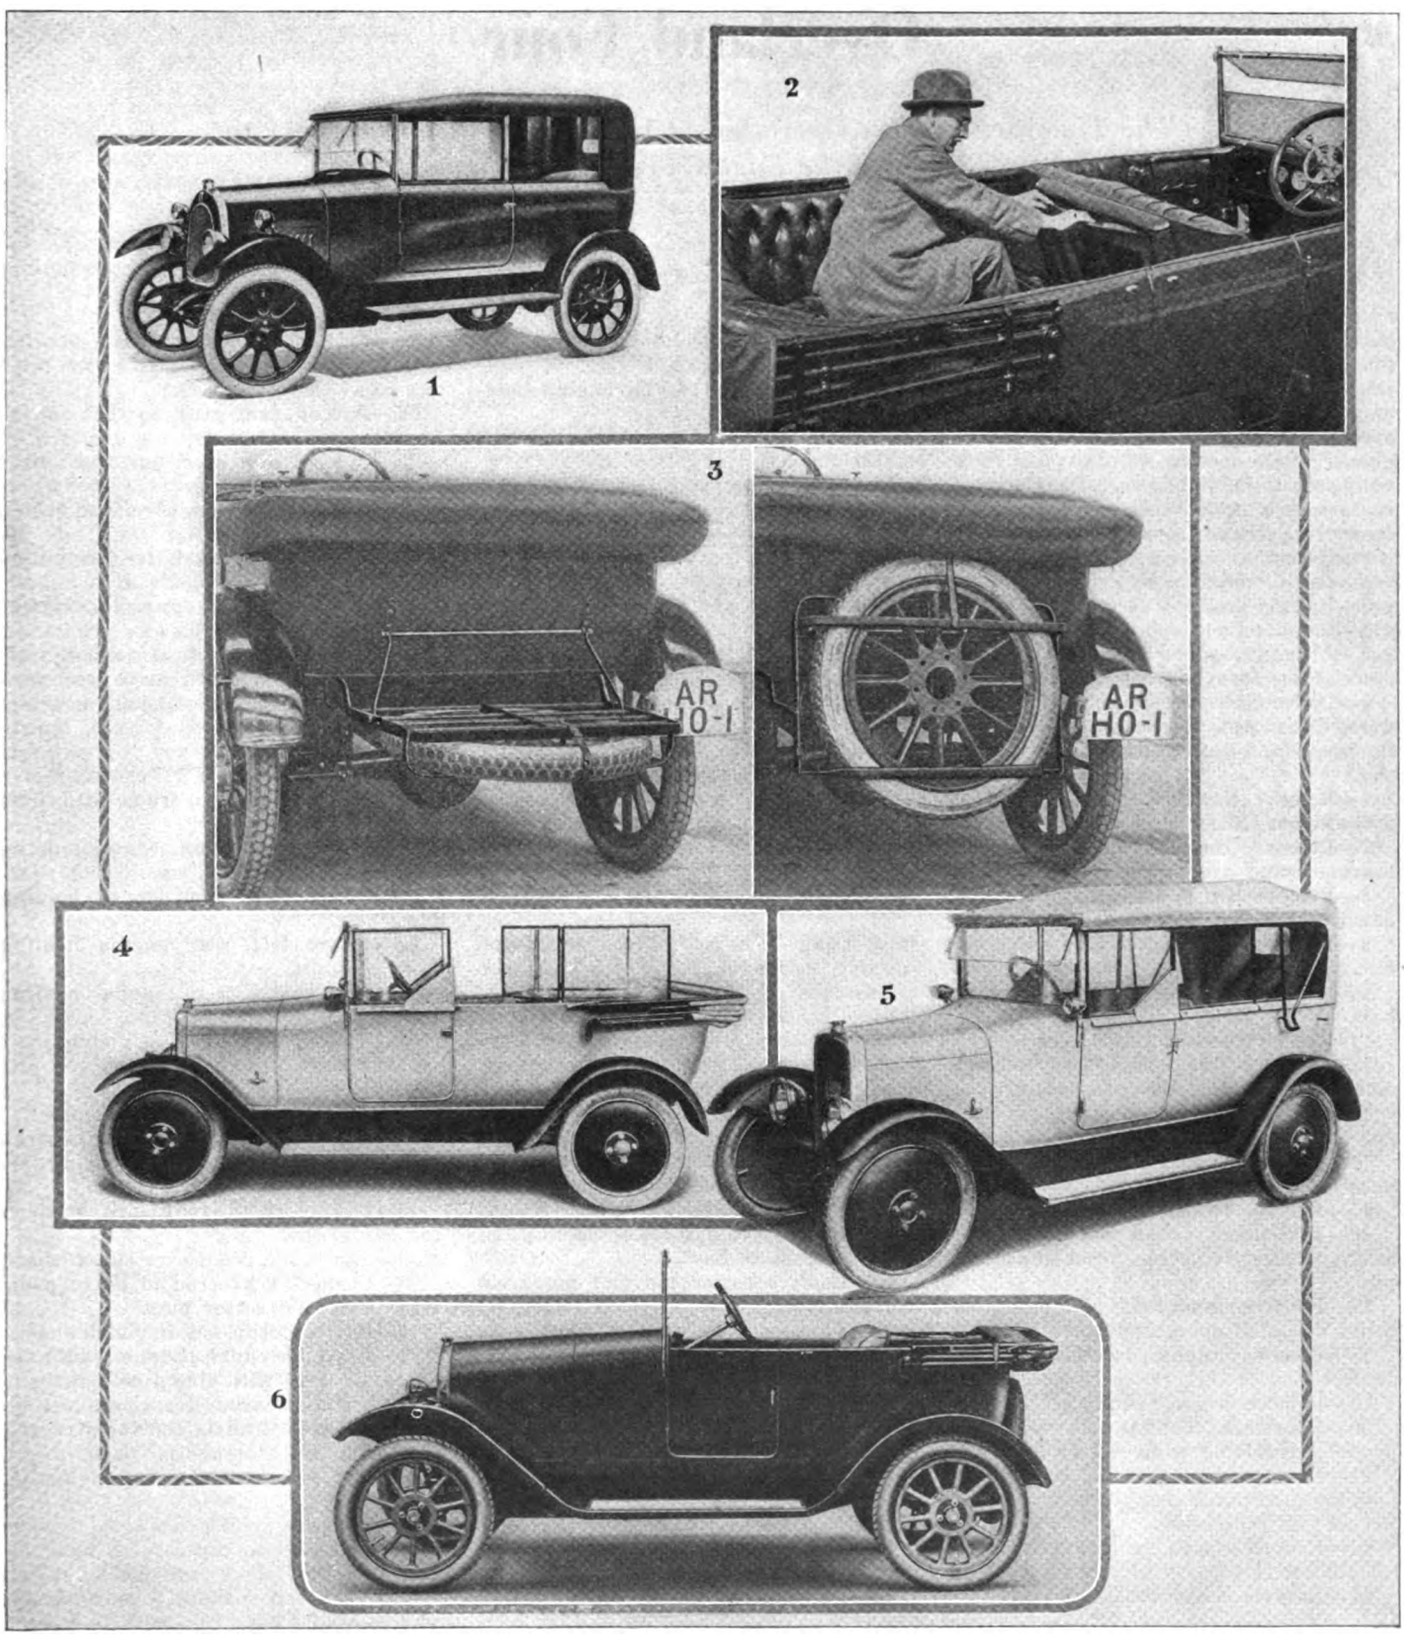
Morris, who now has the largest output of any British maker and who is planning a production of 15,000 cars for next year, offers a four passenger 12 hp. car with 102 in. wheelbase at about $1,250. This price is not approached by any other British make of similar specifications.

More Chassis Models

British makers generally are increasing the number of their chassis models and body types. Daimler is introducing two small sizes, one of 87 cu. in. displacement and the other of 132 cu. in., both having four speed gearsets amidships. This company is also producing the 86 cu. in. size with a three speed gearset which is a unit with the power plant, and a new four cylinder chassis of 86 cu. in. displacement. A two cylinder air-cooled 10 hp. car is also included in the Daimler line. With the exception of the air-cooled engine, all power plants are of the Knight type. Some of these models are offered in two chassis lengths. The result is that this maker has 12 different chassis models with which he offers 55 optional bodies. Wolseley has a line of five different chassis ranging from a two cylinder 7 hp. model to a six cylinder 24 hp. model.

The show is remarkably free from unusual designs. The following percentages apply to individual models of all nations exhibiting. Disregarding two-cylinder models, which show no increase in popularity, fours constitute 75 per cent, sixes 19 per cent, eights 5 per cent, and twelves 1 per cent of the total, all of these figures being practically as for last year. Detachable heads are apparently gaining favor. The L-head and T-head type of engine have lost ground and the overhead valve type with push rods has gained. Sleeve valve engines show a slight increase. Magneto ignition shows a slight loss. Aluminum pistons are used on 48 per cent of the models as compared with 34 per cent last year. Spiral bevel rear axles are used on 83 per cent of the cars, as contrasted with 67 per cent a year ago. The practice of mounting one brake on the transmission is less popular. Forty-eight per cent of the cars exhibited have unit power plants as compared with 27 per cent a year ago.

Equipment Is More Complete



Grease gun chassis lubrication and leather spring covers are now regular equipment on 25 per cent of all British cars. Rear trunk carriers are found on 15 per cent of all four passenger models and rear folding windshields on six makes. The provision for storing frame side panels on open cars usually consists of a compartment behind the back upholstery. Other plans include a pocket behind the front seat panel, large door pockets, or a drawer under the rear seat. The body types of several makes of light cars with from 60 to 70 cu. in. displacement are miniatures of the close coupled four passenger type. The rear seat accommodating two children or one adult sitting slantwise.

Disk wheels show a slight decrease in popularity whereas wire wheels appear upon about the same percentage of cars as last year. The majority of makers use a pressed steel, hollow spoke wheel. The popularity of this type of wheel has increased materially during the past year. Wood wheels appear on very few models. Straight side tires are slowly gaining favor. They are regular equipment on six per cent of the British cars as compared with one per cent last year. The new users of this type of tire include Rolls-Royce on the one hand and the Singer, one of the most popular British light cars, at the other extreme.

Two British cars are now fitted with the Entz transmission. One has a 3⅛ x 5⅛ four cylinder sleeve valve engine and sells at about $3,750 for the chassis. The other has an overhead camshaft engine with a 4 in. bore and 5½ in. stroke.

New Body Trends at the London Show

1—The 12 h.p. Bean folding top sedan has one door on each side and sliding front seats. Central pillar folds down on top of door. 2—Upholstered pocket behind driver's seat on Sunbeam car for detachable framed side panels which are furnished instead of side curtains. 3—Combination Phoenix luggage and wheel carrier. 4 and 5—New 10 h.p. Singer with framed side panels. With top down, the side panels form a tonneau windshield. 6—The new Humber four cylinder car. The cylinder dimensions are about 2¼ x 4 in. The price is about $1300.

Installing a Set of Oversize Push Rods on the Overland Four

The Time Set on This Operation is 5½ Hours—It Is Necessary to Remove the Engine From the Chassis

AFTER considerable service push rods will show evidence of wear. The guides will wear also and the remedy is to ream the guides out to the stock oversize and put in new oversize push rods. The evidence of need for this operation is considerable noise which may be located at this point by careful observation or with the use of a microphone. Side motion of the push rods will confirm the diagnosis. If the trouble is found to be at this point, the following sequence of operations should be carried out:

1—Drain radiator, oil and gearcase.
2—Remove hood.
3—Remove front splasher by removing one ⅜ in. and two ⅜ in. cap screws and two ¼ in. stove bolts.
4—Disconnect the positive battery wire, disconnect the headlamp wires at the lamps and draw through the radiator shell.
5—Remove the lamp stay rod.
6—Remove the radiator shell.
7—Remove the starting crankshaft bracket bolts.
8—Remove two ⅜ in. radiator holding down bolts.
9—Remove the radiator stay rod ⅜ in. nut.
10—Loosen the clamps on the radiator hose.
11—Remove the radiator.
12—Remove clamp bolts and pull out clutch and brake pedal pads.
13—Disconnect speedometer cable at speedometer gear end.
14—Disconnect accelerator rod at carbureter.
15—Remove two floor boards.
16—Disconnect brake rod from foot brake pedal by removing cotter and clevis pin.
17—Remove clamp bolts holding clutch pedal to clutch operating shaft.
18—Remove clutch pedal and key from shaft.
19—Remove brake pedal.
20—Disconnect hand brake rod from lever by removing wing nut from rod.
21—Remove four ⅜ in. cap screws holding gear shift box to gearset and lift off gear shift box.
22—Remove spark control wire from distributor.
23—Remove choke wire from carbureter.
24—Remove gas throttle wire from carbureter.
25—Shut off gasoline.
26—Remove gasoline line.
27—Remove starting motor cable from starting motor.
28—Remove generator wire at generator.
29—Remove wires from coil and remove coil.
30—Remove two bolts holding muffler pipe to exhaust manifold.
31—Remove four ⅝ in. engine holding down bolts.
32—Put engine lifting hook in No. 3 spark plug hole.
33—With crane and chain falls carefully remove engine. Place engine on suitable bench or stand. (Two men necessary.)
34—Remove cylinder head.
35—Remove valves, pins and springs.
36—Remove fan belt and with drift drive pin out of crankshaft fan pulley and pry off pulley.
37—Remove cap screws holding timing gear case cover and remove cover. Replace one bolt to hold generator in place.
38—Drain oil base.
39—Remove cap screws holding oil base and remove base.
40—Remove cotter pin and nut from cam gear.
41—Turn engine over so that gear marks register.
42—With gear puller pull cam gear.
43—Remove distributor cap.
44—Take off intake manifold but do not disturb exhaust manifold.
45—Remove valve covers.
46—Block up under valve springs with blocks of wood 2⅛ in. long.
47—Remove two front camshaft bearing cap screws and drive out bearings.
48—Pull out camshaft. Either tie up push rods or hold them up so that camshaft will slip by easily. Be careful to replace push rods in their original positions. (Two men are necessary.)
49—With special reamer, ream out push rod guides. Keep the reamer well oiled and make sure that none of the filings fall into engine. One oversize push rod can be put in without pulling out the engine.
50—Install camshaft.
51—Put in front camshaft bearing with oil groove at top and fasten with two cap screws and locks.
52—Put on cam gear so that marks register.
53—Put on cam gear nut and cotter pin.
54—Replace gear case cover and fasten with cap screws.
55—Drive on crankshaft fan pulley and drive in pin.
56—Replace valves, springs and pins.
57—Put on cylinder head.
58—Lower engine into frame very carefully. One man at rear to steer propeller shaft into universal joint housing. (Two men are required for this operation.) It may be necessary to pry engine into position.
59—Line up engine in frame with short pinch bar.
60—Put in right front engine holding down bolt.
61—Insert right rear engine holding down bolt.
62—Insert left rear engine holding down bolt.
63—Insert left front engine holding down bolt.
64—Put on front and side engine pans and fasten with lock washers and nuts securely.
65—Place sliding gears in neutral.
66—Place gear shift lever in neutral.
67—Put on gear shift housing assembly.
68—Tighten with four lock washers and cap screws.
69—Slip brake pedal over clutch shaft.
70—Connect brake rod to brake pedal with clevis and cotter pins.
71—Put Woodruff key in clutch shaft.
72—Assemble clutch pedal on shaft and clamp securely with clamp bolt and nut.
73—Connect carbureter choke wire.
74—Connect throttle control wire.
75—Connect starting motor wire.
76—Put on gas line from carbureter to tank.
77—Connect muffler head to exhaust manifold with two cap screws, nuts and lock washers. Make sure that gasket is placed between exhaust manifold and muffler head flange.
78—Put on coil, fastening with two ¼ in. stove bolts, nuts and lock washers.
79—Fasten wires from distributor to coil and ignition wire from switch to coil.
80—Connect up generator wire.

Better Mechanics

Article No. 265

Readers are invited to ask this department for suggestions to work out mechanical difficulties. When asking for information, please state whether you maintain a permanent file of Motor World, as many inquiries are answered by reference to previous issues.

Digitized by Google

81—Fasten spark control wire to distributor.

82—Check spark timing by removing No. 1 plug. Hand crank engine until No. 1 piston is at the top of its travel on compression stroke. This can be determined by putting a wire through the spark plug hole to top of piston. Continue cranking slowly until top of piston is flush with cylinder block. The breaker points in the distributor should be just starting to open as contact point is coming in contact with No. 1 contact post in the distributor cover. If timing is off, release clamp screws that hold distributor to generator, and set timing by remeshing distributor gears. Make sure that timing is checked with fully retarded spark.

83—Put on radiator and fasten with two bolts, lock washers and nuts.

84—Assemble radiator hose and clamp securely.

85—Fasten radiator stay rod with lock washer and ⅜ in. nut.

86—Fasten starting crankshaft bracket to radiator with two ⅜ in. bolts, lock washers and nuts.

87—Put radiator shell in place.

88—Slip front splasher under radiator shell, line up holes in shell and splasher and fasten to frame with one ⅜ in. two ⅝ in. cap screws and two ¼ in. stove bolts, lock washers and nuts.

89—String head lamp wires through radiator and shell and fasten in lamp sockets.

90—Fasten radiator shell to radiator with two rivets.

91—Put on front lamp stay rod and radiator stay bar.

92—Fill radiator with water.

93—Put five quarts oil in engine base.

94—Connect speedometer cable.

95—Put in floor boards.

96—Put on pedal pads, clamping with clamp bolts.

97—Connect accelerator to carbureter.

98—Put in spark plugs.

99—Connect battery cable to battery.

100—Put on hood.

Adjustment of Lincoln Brakes

THE Lincoln is equipped with two independent sets of brakes, the foot or service brake and the hand or emergency brake. The foot brake is operated by the right foot pedal and the hand brake by the lever at the right of the driver. The foot brake is external or contracting upon, the hand brake internal or expanding within, the brake drum. The brake load is equally distributed to each brake band by pull rods which operate through equalizing bars. The brake bands should be adjusted as nearly alike as possible so that an approximately equal movement of the brake levers will be required to make them grip the drums.

Occasional oiling of the brake levers and connections will considerably increase the efficiency and ease of operation. If they seize too suddenly or squeak when applied a few drops of neatsfoot oil or a mixture of oil and flake graphite applied to the lining will usually remedy this trouble. This should be sparingly applied, as a careless application will greatly reduce the efficiency of the brakes.

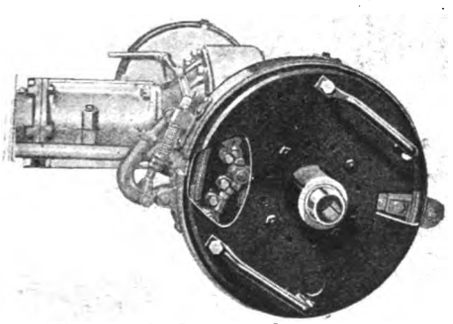

Fig. 1—A dummy drum or gage for adjusting the Lincoln brakes

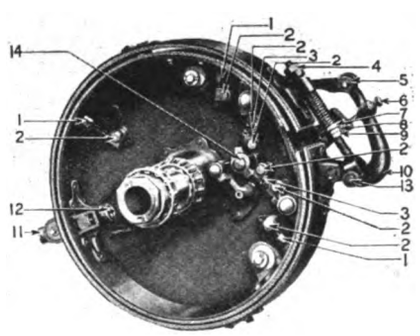
To Adjust Foot Brakes

Compensation for ordinary wear may be made by turning the nut (4), Fig. 2 and only after considerable use is it necessary to make more complete adjustment. Wear of brake linings cannot be taken up by any adjustment of brake pull rod or by adjustment of the stop screws (6) for lever (10) which are properly set at the factory and bear no relation to adjustment for wear. To make a complete brake adjustment, a gage for adjusting brakes, Tool 618, will be found of great convenience. Remove axle shaft, wheel and bearings, slide the gage into position on the axle as shown in Fig. 1. The gage represents, and is the same size as, the brake drums. Lubricate all clevis pins and other moving parts in the brake mechanism and work oil in by moving foot pedal and hand lever back and forth several times. Remove cotter pin from the adjusting screw (11) and screw clockwise until the brake lining at this point just clears the drum. Replace cotter. Loosen the adjusting nuts (8) and (9) under the stop (7), using the pair of special wrenches in the tool kit, and screw down until the lower half of the brake band comes up and just clears the drum. Then tighten both nuts securely. Next adjust nut (4); turn by half revolutions in a clockwise direction until the top half of the band just clears the drum. It should now be possible to revolve the drum without any binding or dragging of bands. Pull forward on link (5) until the end of screw (6) is approximately ¼ in. away from the stop. If adjustment is correct you will be unable to move drum with the hands. When the brake is fully applied by pushing down hard on the foot pedal the shortest distance from center of pin (13) in lever (10) to the drum should be approximately 2⅜ in. The foot pedal pad when completely compressed with the brake tight on the drum must be at least 2 in. from the floor board. If it is less than this figure the pull rod between the pedal and intermediate brake cross shaft may be shortened to correct this condition.

Adjusting Hand Brake

A limited amount of wear may be taken care of by jacking up the wheel and removing the plug in the brake drum between the wheel spokes. Revolve the wheel until the four clamp screws (2) which secure screw (3) can be seen. Loosen the clamp screws and turn each of the screws (3) a part of a revolution in a clockwise direction, using the special wrench furnished in the tool kit. Pull back vigorously on the hand lever. If the lever stands in the third or fourth notch, the adjustment is satisfactory. When correct adjustment is obtained tighten clamp screws and replace plug. To make complete adjustment, the wheels should be removed as for foot brake adjustment. Loosen the seven clamping screws (2) which secure (1) and (3). Remove the cotter pin in adjusting screw (12). Apply the gage tool 618 and turn screw (12) until the brake lining just clears the drum. Replace cotter pin. Revolve drum until adjusting screws (3) can be seen. Adjust screws (3) as explained before so that when



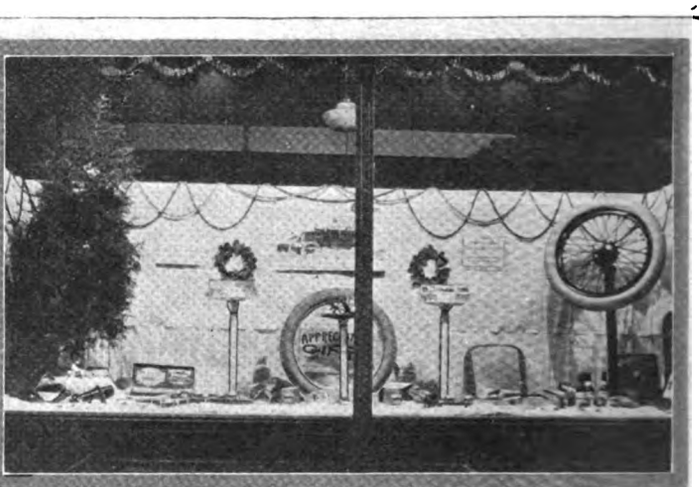


Fig. 2—Adjusting and inspection points on the Lincoln brake

lever is pulled back vigorously center of the pin (14) will stand 1½ in. from the inside of the drum and the lever will stand in the third or fourth notch. Then tighten the four clamp screws (2) which secure the adjusting screws (3) with the hand lever fully released. Revolve the drum and adjust the two forward upper and lower band adjusting screws (1) as much as possible without causing lining to drag on drum. Revolve drum and adjust rear band adjusting screw in same manner. Then back off these three screws one-half revolution and tighten clamp screws. If adjustments are correct pulling the hand lever back to the second notch prevents turning by hand.

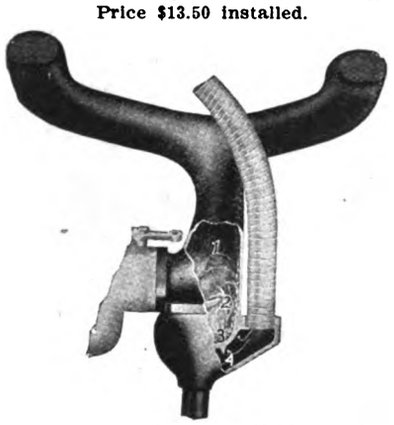
Equipment to Sell

New Devices for the Car and Truck

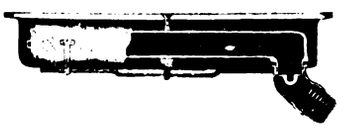
Reid Air Spring



Reid Air Spring Co., 121 George Street, New Haven, Conn.
Price, $150 per set of four

The air springs are installed by removing the horn and riveting the Reid brackets in place in the original rivet holes. The frame is not cut. The air springs can be removed at any time and the original horn replaced. It is said that there is no tendency for the car to tip or sway when turning corners.

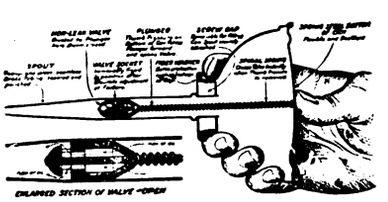
Stew Pot Revaporizer



W. G. Engineering Co., East Moline, Ill.
Price $13.50 installed.

The stew pot is a manifold attachment which heats only the heavy ends of the gas, allowing the gas vapors to be drawn into the cylinders unheated. The heavy gas forming in drops runs into the stew pot where it is vaporized and drawn in with the rest of the mixture.

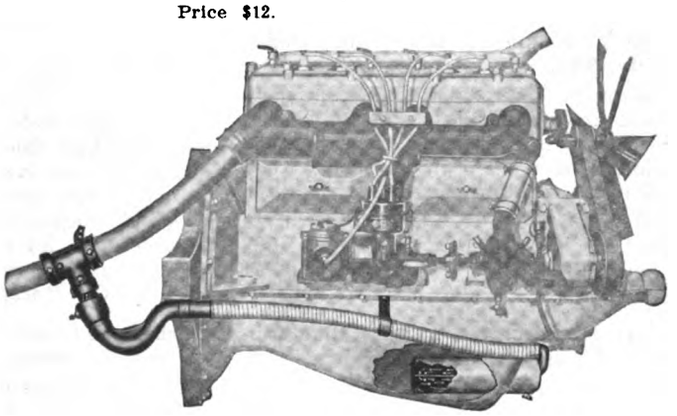
Linendoll Car Heater



Norwalk Auto Parts Co., Norwalk, Ohio

The heater is of the flush type, only the grating showing on a line with the floor. The heater pan is of sheet steel and acts as a container for the heating coil. It is provided with drain grooves which lead to a clean-out hole in the bottom. The heating coil is of cast metal and the cross connections are reversible to connect to the exhaust lines on either right or left side. The heat control is on the instrument board, and the valve has a tongue of such shape that once it is closed it seats on a ledge on all four sides. The coverplate is polished aluminum, with four locating faces on the other side held rigidly in position by one screw. The heaters can be taken apart and cleaned from the inside of the car.

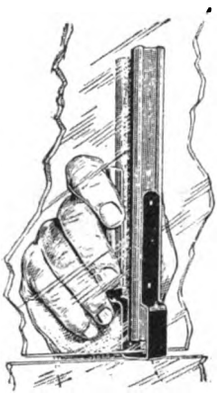
O-No-Drip Oil Can



Arthur S. Harding Co.,
100 Boylston Street, Boston, Mass.
Price 50 cents.

The oil can has a valve in the spout which is operated directly by the spring steel bottom of the can. The spout is seamless brass and is a tight fit for the valve.

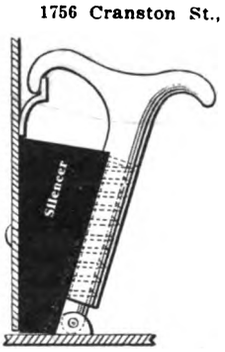
E-vap-O Heaters



Harvey E. Mack Co., Harmon Place at Thirteenth Street, Minneapolis.
Price $12.

An exhaust heater for heating crankcase oil to prevent freezing of oil around the screen. This is accomplished by raising the temperature inside the crankcase to such a point that moist vapors which get by the piston rings, pass out through the breather pipe instead of condensing into water and mixing with the oil. Unburned fuel which also finds its way into the crankcase is vaporized by the heat and disposed of in the same manner. A sheet-iron drum is introduced into the front of the crankcase and hot exhaust gas is passed through this constantly. A separate outlet is provided for this exhaust.

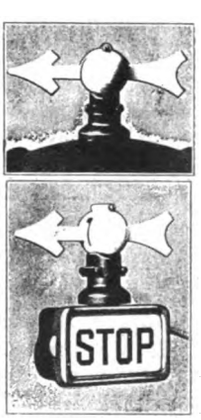
Ace Windshield Cleaner



New England Tube & Stamping Co.,
West Haven, Conn.
Price $1.

The cleaner consists of two parallel rubber strips which move horizontally across the outside of the glass and a felt strip which keeps the inside surface free from fog and steam. The materials used consist of polished aluminum with a black enamel spring frame.

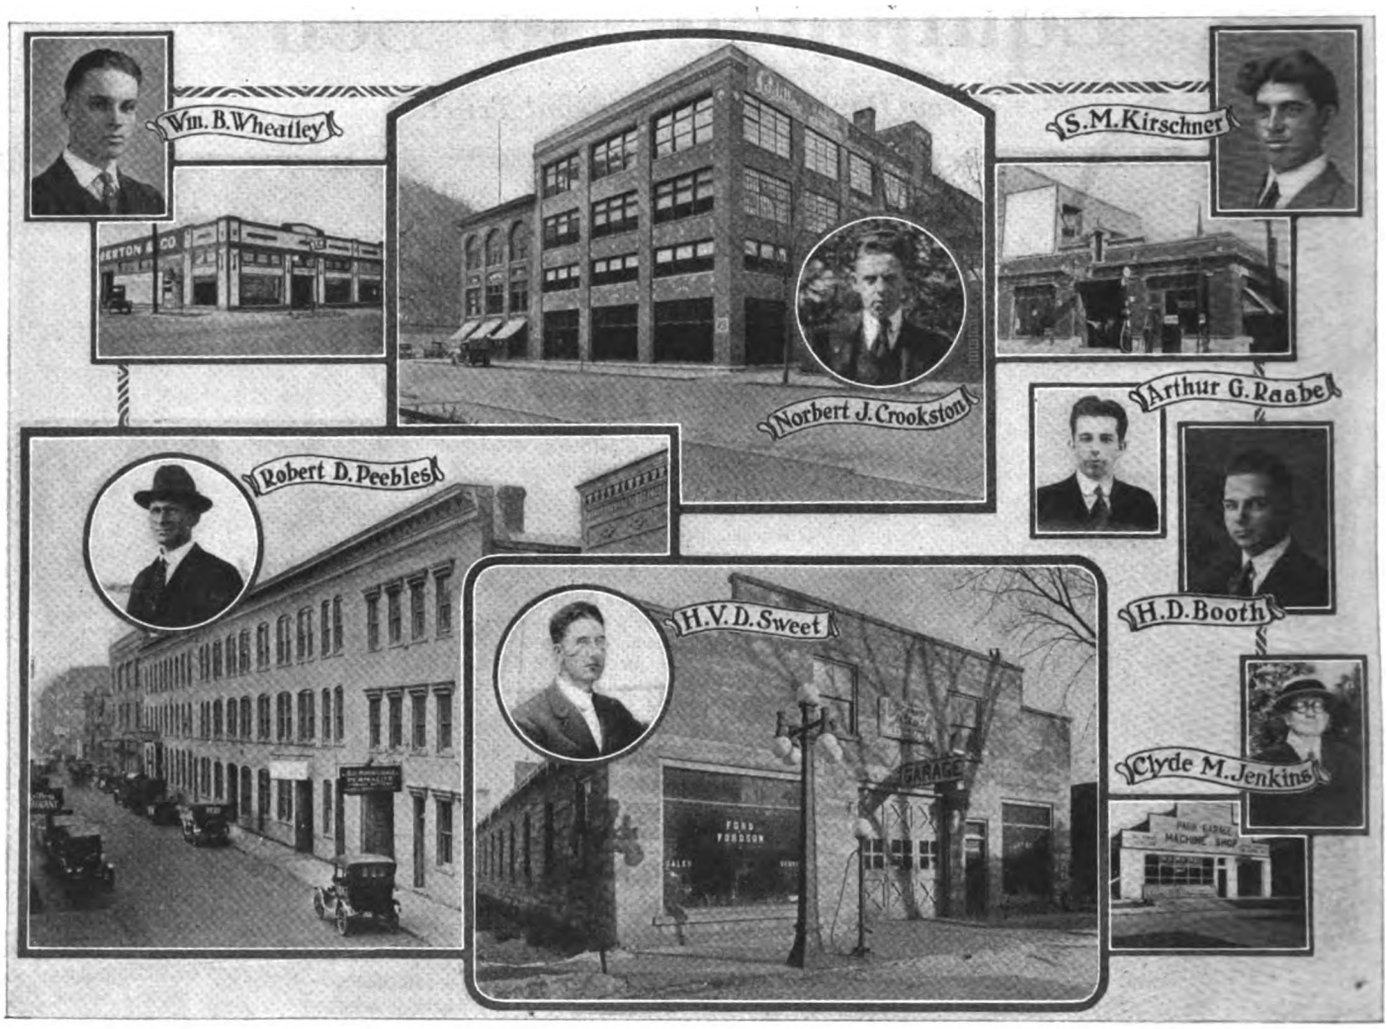
Hood Silencer



Atlantic Tubing Co.,
1756 Cranston St., Providence, R. I.

The hood silencer is made of hard resilient rubber, of such a shape that it will fit nearly all cars. It goes in the space between the hood latch and the hood and prevents rattle and wear.

Traf-I-Kop Traffic Signal



Motor Products Co.,
Norwalk, Ohio.

The device is a semi-automatic arrangement for signaling the intention to turn or stop. It consists of a white arrow mounted on the left front fender, and a similar arrow mounted on the left rear fender pointing straight ahead or straight away driving. The arrows are connected by steel cables inclosed in waterproof conduit to an operating device or switch located on the steering column of the car. At night a white light is displayed only when the arrows indicate a turn. On the left rear fender is a stop signal which flashes a red light when the service brake is depressed.

Where Repairshop Shortcuts Come From

NEARLY three thousand five hundred repair shop shortcuts have been published in Motor World since the beginning of the department in the issue of April 14, 1915, over seven years ago. We have often wondered ourselves what some of the contributors to this department looked like and what kind of places they worked in. So we wrote for some pictures and here they are. These men have been among those whose names appear most often on the Repairshop Shortcut page. We hope they will keep going strong and have a lot of contenders for honorable mention. We have gone a long way but we are only starting.

Arthur G. Raabe, Brooklyn, N. Y.

After graduating from high school in 1916, he got a job as stock clerk with the New York Chandler distributor. Later the distributor made electric trucks, and Raabe worked as mechanic, electrician and demonstrator. His further experiences were as superintendent of a fleet of trucks and estimator for a railroad. His first shortcut was published in 1919, and he is still going strong.

S. M. Kirschner, Foreman, The Harvard Garage, Harvard, Ill.

S. M. started polishing brass lamps on cars in a garage in Wisconsin in 1909. He learned something of the innards of a car, then went with another garage and learned a lot about bearings. Later he went with the Rambler factory in the final testing department and received his first initiation into the electrical starting and lighting equipment business with the 24-volt outfits that were used at that time. He has been with the Harvard Garage since 1915.

Clyde M. Jenkins, Jenkins Bros., Dodge City, Kan.

Early in 1910 Jenkins took a short course in automobile repairing and a short time later secured a position as manager of a shop in Anthony, Kan., which he later purchased and operated until 1915. Several other garages were under his management until 1921, when he and his brother opened the present business, later taking another partner.

Robert D. Peebles, Foreman, Blue Ribbon Garage, Bridgeport, Conn.

After a short experience with stationary and portable farm engines in 1906, Peebles took a Y. M. C. A. course and then served three years with Packard in Boston, later becoming foreman of the Packard, Manchester, N. H., branch, which position he held until 1917, when he went with the Blue Ribbon Garage, handling the Packard and Dodge.

H. V. D. Sweet, Foreman, Canajoharie Motor Sales Co., Canajoharie, N. Y.

From shop helper in 1907, Sweet has been through the mill, acting as mechanic, automotive electrician and foreman. He has served as foreman in Reo, Oakland, Ford and Chevrolet shops, and at present is foreman and electrical expert and has charge of the manufacture of the ECO storage battery.

Norbert J. Crookston, Mechanic, Johnstown Automobile Co., Johnstown, Pa.

Mr. Crookston is evidently a modest young man who faces the camera only on occasions of World Wars and picnics. The snapshot is slashed from a group

Repairshop Shortcuts

at some outing. He is one of the old and valued Cadillac experts and has been connected with the service department of this company since 1908. He finds time to work out some original ideas in addition to giving prompt and efficient first floor service to Cadillacs.

William B. Wheatley, Foreman, R. G. Edgerton & Co., Norfolk, Va.

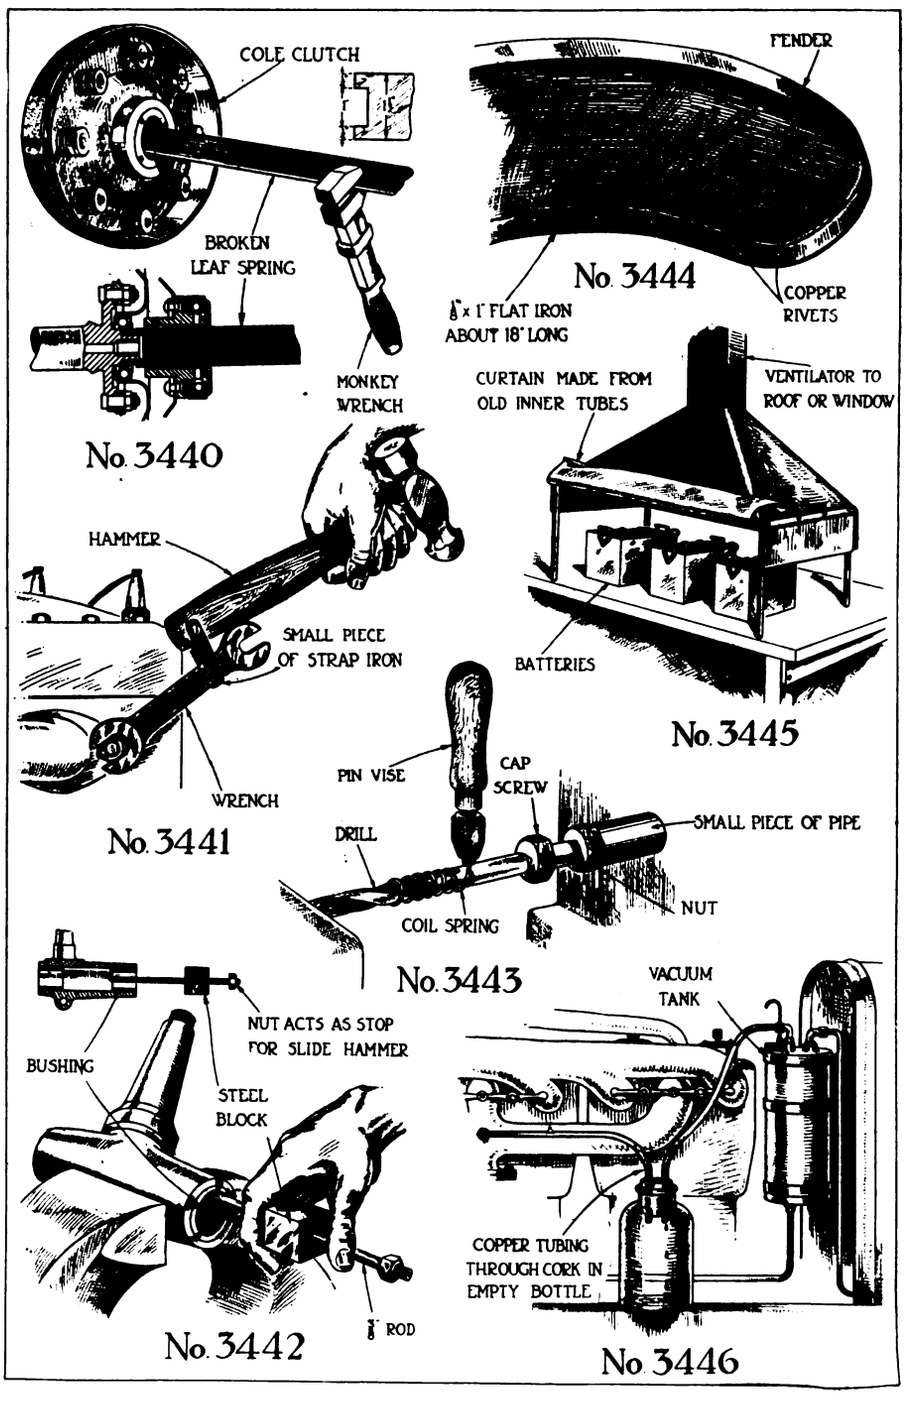
Wheatley has been living a Dr. Jekyll and Mr. Hyde existence in his 20 years of life. He has been going to all kinds of schools and colleges, and at the same time, or while he sleeps or something, he has been putting the stethoscope on the hearts of Flivvers, building cyclecars when he was a youth of 12 and all that sort of thing. He is now shop foreman for the Virginia distributor of the Reo, having only recently taken the position. He sent his first shortcut to Motor World in 1917.

H. D. Booth, Mechanic, Cortland, N. Y.

Booth started as a wash boy in a garage, learning the mechanical end when the wash rack was dull. Later he spent his entire time as mechanic, and is now associated with a small but progressive garage on the main highway between Syracuse and Binghamton.

No. 3440—Cole Clutch Bearing Tool—A tool to remove and assemble the split nut on the Cole 8 clutch bearing is made from a piece of 1½ in. spring 17 in. long. This is used with a 12 in. monkey wrench. The spring is ground to fit the clutch.—Ed. Ruesch, Buffalo, N. Y.

No. 3441—Solid Wrench Extension—An extension to secure more leverage on solid wrenches is made by attaching a loop of strap iron to the handle of a hammer. The use is indicated in the illustration.—Arthur G. Raabe, Long Island City, N. Y.



No. 3442—Bearing Sleeve Puller—A bearing sleeve puller is made from a piece of rod with a nut on one end and the other end bent over at right angles. A steel block with a hole slides on the rod and when the hook is placed in back of the bushing the nut acts as a stop for the slide hammer.—Arthur G. Raabe, Long Island City, N. Y.

No. 3443—Improvised Drill From Coiled Spring—For drilling in very close quarters, a device consisting of a handle and a coil spring is used to turn the drill. Pulling the spring in the direction in which it is wound diminishes the inside diameter and causes it to grip the drill. The opposite direction opens it up.—G. A. Luers, Washington, D. C.

No. 3444—Reinforcing Broken Fenders—A strip of 1 x ⅛ in. flat iron is bent to the shape of the fender and riveted to the inside. Flat head tinner's rivets or copper rivets with the head of the rivet on the outside are used to attach the strip to the fender.—E. J. McKinney, Blackshear Garage, Blackshear, Ga.

No. 3445—Vapor Hood for Batteries—A hood for taking off the hydrogen gas is made from sheet metal and a flue goes to the roof or window. Curtain flaps made from old inner tubes are dropped down when batteries are being charged.—Arthur G. Raabe, Long Island City, N. Y.

No. 3446—Test for Vacuum Tank—Vacuum tanks that are suspected of pumping gas to the manifold can be tested with two pieces of copper tubing with vacuum tank ferrules and nuts, a cork and a bottle. If gasoline drops into the bottle, gas is being pumped into the manifold.—Hayes D. Pettit, Wilmington Motor Service Co., Wilmington, N. C.

Maine Dealers Keenly Interested in Better Sales Methods

Fine Spirit of Dealers from Widely Scattered Sections of State Shown at Bangor Meeting—Co-operative Action Started —Need of State Association Stressed

BANGOR, ME., Nov. 9.

AUTOMOBILE dealers of Maine need a representative, vigorous State association. They have an association, an infant association, formed and supported, so far, by less than 100 of the 600 automotive tradesmen in the commonwealth. The association has ambition but hardly the strength to undertake the heavy tasks that lie immediately ahead in subjects of legislation, highway administration, taxation and others inseparably tied up with the growth and prosperity of the industry.

The dealers of Maine held a meeting here yesterday and to-day which called sharp attention to the lack of adequate organization which is proving a hindrance to the development of the trade in the Pine Tree State, just as it is in numerous other unorganized or weakly organized States. It was a State convention but not a convention of the State association, though delegates were drawn from the ranks of members as well as non-members. The meeting was not called to promote the State association but it did put in such a strong light some of the weaknesses of the trade due to lack of statewide organization that it would seem a vigorous building up of the association would follow.

It developed that the coming legislature is likely to consider a gasoline tax, in addition to present levies on the motor vehicle using public, that use of motor vehicle tax revenues is being, to some extent, already and may be further diverted away from highway maintenance, and that serious restrictions of motor truck development are under consideration. In the face of these unfavorable prospects the best the convention could do, in its unorganized State, was to declare itself opposed to use of motor vehicle revenues for anything but highway maintenance, capital investment for road building to come out of general taxes, and to make the small but organized Maine Automobile Dealers Association the agency for presentation of its thoughts before the motorists of the State and the legislature.

The convention brought together more than 150 dealers, many of whom traveled by train or motor car the long distances that must be traveled to get from city to city in this State of vast area with a comparatively small population. The meeting showed the dealers keenly interested in better sales methods, sounder financing, saner handling of used cars and legislation to promote the wider use of motor vehicles. It revealed also a remarkably friendly spirit among competing dealers, which will help the process of statewide organization if it is undertaken while enthusiasm over the convention still runs high.

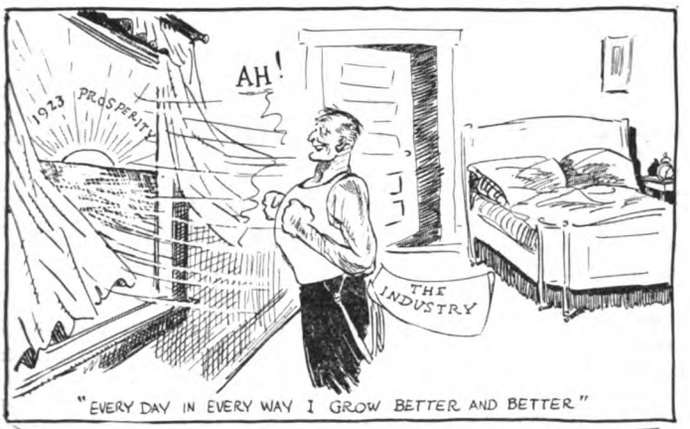
An Interesting Program

The principal speakers were Henry Meixell of the National Motor Vehicle Conference Committee, who suggested practical methods of working for constructive legislation: L. B. Sanders, secretary of the Boston Used Car Statistical Bureau, who made one of his stirring addresses on the folly of over-trading and the employment of dealer co-operation to overcome it; and Neal G. Adair, editor of Motor World, who gave a talk, illustrated with charts, on methods of intensifying sales methods in a dealer territory. Col. I. K. Stetson, president of the First National Bank of Bangor, advised the dealers to keep close to their bankers and to refuse sales rather than sacrifice profits in used car trading. Major George C. Webber, of Auburn, an attorney, talked on legislative problems of the State affecting the trade. Webber made a suggestion that would apply anywhere when he urged dealers, in their organization efforts relating to legislation, not to forget the friendly cultivation of the legislators of their own districts, who thus can be won over to causes supported by their dealer constituents.

The convention had an interesting novelty in the appearance of different chairmen for the different meetings. This spread the direction of affairs around the State and gave variety to the proceedings. Another feature was the "town meeting" idea for meals. The delegates ate lunch and dinner together, in formal assemblage, throughout the convention and the sessions followed the meals in the same hall.

The used car discussion resulted in a determination of Bangor dealers to stiffen their co-operative plans while the Portland dealers have arranged for a meeting, with Sanders of Boston present, to develop their co-operative work.

Maine Dealers Who Promoted State Convention



First row, left to right: Miles B. Mank, Miles B. Mank Motor Co., Portland; Myron D. Kidder, Myron D. Kidder Co., Inc., Portland; Haven Sawyer, Sawyer Motor Car Co., Bangor; W. B. Thombs, Portland. Second row: Carl Curtis, Lewiston Buick Co., Lewiston; V. S. Darling, Darling Automobile Co., Auburn; C. G. Abbott, the Henley-Kimball Co., Portland

Closed Bodies Big Need of Plants

CAR MAKERS OPERATE ON HIGH SCHEDULES

Open Models Being Equipped with Sport Special Trimmings to Meet Demand

DETROIT, Nov. 11—Maintaining production marks at points approximating those of the earlier months of the year is largely a matter of material supply, closed bodies being the principal obstacle to continued heavy operations. Demand for open models is limited to special sections of the country and to export markets. Some factories report demand for closed bodies now to be in excess of 75 per cent of output.

Several factories which have been among the leaders during the year are now operating on low schedules because of failure of the closed body supply. Orders on many of their closed models are piled two months ahead and the plants are operating at 30 to 50 per cent of former production figures. One of these factories, with orders far ahead, showed an operating deficit in the last two months.

For the most part dealers are declining to take open models for stocking against spring demand and are clamoring for all the closed models they can get. There is a general demand for closed cars from cities in every part of the country. Price uncertainty has caused dealers to fight shy against accepting any models except those for which they have a ready market. If there is to be any stocking it will be light and will not take place in any volume until the spring season is at hand.

New Sport Models Produced

A large part of the present open body business is in special models with sport trimmings, the usual open types not making special appeal except in those cars which recently have been remodeled or repriced. New sport models will be brought out by a number of factories in the near future to meet the demand now existing for cars of this type.

Ford Motor Co. will continue to build at the rate of upward of 5000 cars daily, a rate maintained through October. Sales are running in excess of production and the company is extending its output as rapidly as it can. Chevrolet is now on a basis of about 1200 daily and will increase this to 2000 as rapidly as it can execute its new factory and production plans.

Buick is operating at close to 800 cars daily, this total including its Flint, Detroit and the McLaughlin Buick plant in Canada. Studebaker continues at its maximum of about 450 daily in all plants. Dodge Brothers' is operating at about 600 daily, its normal capacity, Hudson-Essex at about 250 daily, Hupp at about 125 daily, and Paige-Jewett at 125.

Maxwell has run into a shortage of closed bodies and production has been reduced considerably below earlier season figures but will re-bound as rapidly as the body plant can be brought up to high output. Chalmers operations continue at the former rate pending the completion of negotiations for the taking over of the company by Maxwell.

Cadillac continues to lead in the better priced car field, holding its schedule close to 100 cars daily. Packard production

(*Continued on page* 44)

Olds Breaks Post-War Records

LANSING, Nov. 14—As the result of a price reduction late in September all post-war production records of the Olds Motor Works were broken during October, according to Guy Peasley, general sales manager.

Not only did the company break post-war records and those of the boom period of 1920, but October was also the biggest month the company has had in its 25 years of experience, with the single exception of one month in 1918, during the height of the war boom.

Look for These Stories Next Week—

NEXT week's Motor World, the Nov. 22 issue, will contain complete reports of three important conventions of the industry. It is probable that in each of these there will be crystallized many ideas of particular interest to dealers in cars, trucks, equipment and tires.

Read these stories and become acquainted with the bigger problems of your business, as seen by the industry's leaders in these groups.

Watch for these stories:

1—The Automotive Equipment Association Convention and Show in Chicago. A complete story, with illustrations of this big annual gathering of automotive equipment manufacturers and jobbers.

2—The Service Managers Convention in Chicago. Here factory service managers will talk about things that affect every dealer.

3—The National Tire Dealers Convention in Milwaukee. This meeting promises to develop some particularly interesting thoughts on tire merchandising.

MAKERS IN MILWAUKEE FOLLOW OCTOBER PACE

Body Shortage Being Experienced in Car Factories of That District

MILWAUKEE. Nov. 13—Production schedules of passenger car manufacturers in this district not only are maintaining the October rate, but in most instances factories are finding it a struggle to make deliveries on closed car orders from distributors and dealers. The call for open cars has encountered some of the expected let-down which the late fall season always has brought, but it still is surprising how well this demand is being sustained.

Despite the acute railroad freight situation as it affects supplies of materials and shipment of finished products, it appears that the main problem of passenger car factories at this time is in the body shops. Enclosed bodies are at a higher premium right now than they were at any time this year.

More Body Room Next Year

Provision being made by all factories and by the body concerns here has not reached the stage where appreciable relief has been effected. In most cases the additional facilities will not be available until after Jan. 1, because construction and equipment work was late in getting under way, inasmuch as the imperative need did not demonstrate itself until mid-year, or if it did, manufacturers were conservative and delayed such undertakings until absolutely certain that the new capacity would be occupied for a reasonable length of time.

The railroad transportation situation, admittedly serious and acute, presents the grave prospect of the usual winter operating difficulties coming to be superimposed on the handicaps of car and locomotive shortage mainly responsible for the existing condition.

DUFFUS JOINS FIELD STAFF OF N. A. D. A.

ST. LOUIS, Nov. 14—R. O. Duffus has been appointed an assistant general manager of the National Automobile Dealers' Association, further augmenting the association's field staff.

He formerly was manager of the Packard branch at Kalamazoo, Mich., and later of the Lincoln sales department of R. E. Fair, Ford dealer in the same city. He also was acting secretary of the Kalamazoo Automobile Dealers Association. He will begin his service with the N. A. D. A. on Nov. 15, assisting at first in organization work in Indiana.

Ethics Stressed at Iowa Meeting

ASSOCIATION PLANS TO EDUCATE PEOPLE

Gordon Lee, in Address, Emphasizes Importance of Strong State Organizations

DES MOINES, Nov. 13—Iowa motor tradesmen will make a consistent campaign before the people of the State in the next year to emphasize the ethical standards of the automobile business. In its first annual convention held here Friday, the Iowa Automotive Merchants Association, formerly the Iowa Motor Trades Bureau, gave particular stress to a higher standard of ethics in business. The association proposes to increase its membership to 5000 by May, 1923. At present it has four all-time representatives in the field arousing the automotive dealers of Iowa to the need for stronger unified action.

Gordon Lee, chief of the automotive division of the Department of Commerce, who made the principal address at the convention, emphasized the importance of strong State trade associations. He told the dealers that his department recognized the value of organized effort as shown in the motor trades and hoped to receive appropriations from Congress which would permit the same attention to domestic motor trades as it is now giving to foreign trade.

Saginaw Results Explained

A. V. Comings of Philadelphia told the dealers what the Saginaw plan has meant to dealers there in actual profits on used car business and also explained the California association's emblem and its importance to member dealers.

Walter E. Heller, president of the W. E. Heller Finance Co. of Chicago, said that the automotive finance field was entirely separate from regular banking, as it offered much more flexible arrangements and gave opportunity for creating business.

At its business session the association went on record as being strongly opposed to any attempt to introduce a lien law at the coming session of the Iowa legislature. Resolutions declaring for a strictly cash basis for all repairs and parts were unanimously adopted. The association will fight any attempt to repeal favorable sections of the present highway law and will defend many of the advantageous provisions covering motor vehicles passed at the last session of the Iowa legislature, which was fathered by the Iowa Motor Trades Bureau.

No action was taken as to the position to be assumed by the association on the proposal of State officials made some time ago for material reduction in motor vehicle license fees. Plans for protecting the industry's welfare during the legislative session are well under way.

Designs for an outside emblem to be displayed by members were adopted.

An active publicity campaign to acquaint people generally with high standards of conduct of the motor trades business is to be launched through means of high school contests, public speeches, stickers and co-operative advertising in local papers.

Dean Schooler of Des Moines, Oakland dealer and long-time manager of the Des Moines show, was named president for the ensuing year; C. A. Morris, Cadillac dealer, Waterloo, vice-president, and George Darling, Franklin, Hudson and Essex of Marshalltown, treasurer. Fifteen directors, representing as many districts in the State, also were named.

The Motor Trades Bureau of the Des Moines Chamber of Commerce was host at the banquet addressed by Gordon Lee and Ralph Faxon of St. Louis.

MODEL PREFERENCE ASKED OF OWNERS

NEW YORK, Nov. 13—J. C. Long, secretary of the Educational Committee of the National Automobile Chamber of Commerce, is sending out a questionnaire to 20,000 owners asking them concerning their next purchase.

Long wants to know if they will buy an open or a closed car and why their preference. It is expected that this will produce replies that will be of great help to manufacturers in trying to anticipate the body demands for the coming season.

EARL QUITS COMPANY BEARING HIS NAME

DETROIT, Nov. 13—The resignation of Clarence A. Earl as president and general manager of Earl Motors, Inc., formerly the Briscoe Motors Corp., Jackson, effective Oct. 31, has been accepted by the board of directors, and steps preliminary to a reorganization of the personnel and finances of the company will be taken at a meeting of the board this week. Earl's resignation followed a period of plant inactivity extending back several months.

As it stands to-day the company is cleared of inventory and has a good dealer organization, but is short of working capital. It is declared this now will be provided by the bankers. George C. Scobie, treasurer, has been in Chicago during the week working with bankers on plans for the reorganization.

500 REPRESENTATIVES OPEN A. E. A. MEETING

Nelson H. Oliver Nominated for President to Succeed Howard M. Dine

CHICAGO, Nov. 13—With approximately 500 delegates and alternates present, the seventh annual convention of the Automotive Equipment Association opened in the Coliseum to-day. The convention assembled in the morning. In the afternoon the fourth annual business exhibit of the association got under way.

Eighteen new members were elected, five jobbers and thirteen manufacturers. A. Schrader's Son, Inc., of New York, being among the latter. It was voted to hold the 1923 summer convention at Dixville Notch, N. H.

Nelson H. Oliver, sales manager of the Metal Specialties Manufacturing Co., Chicago, was nominated for president to succeed Howard M. Dine, of the Dine-De Wees Co., Canton, jobber. William E Wissler, manager of the Automotive Equipment Department of the Herring Motor Co., Des Moines, was nominated for vice-president. The election will be held the latter part of the week.

Delegates to the convention from manufacturing and jobbing houses, and sales and purchasing representatives of the manufacturing and jobber members, began arriving in Chicago the latter part of last week and filling the lobbies of the Congress Hotel, registration headquarters.

The Board of Directors, Membership Committee and various other committees held sessions Friday and Saturday of last week. General sessions of the convention are being held on Monday, Thursday and Friday of this week, and the jobbers' divisional and manufacturers' divisional meetings Tuesday and Wednesday.

Willys-Overland Report

TOLEDO, Nov. 14—The report of the Willys-Overland Co. and subsidiaries for the quarter ended Sept. 30, 1922, shows estimated earnings of $4,099,675, from which reserve of $475,000 for balance of price decrease was deducted, leaving a balance of $3,624,675. Shipments for the last quarter were: Overland, Model 4, 27,448; Willys-Knight, Model 20, 8277; Willys-Knight, Model 27, 352; total 36,077.

Lincoln Agreement Ends

DETROIT, Nov. 15—Lincoln Motor Co. has given notice that the stockholders protective agreement dated Nov. 20, 1921, has been terminated.

Digitized by Google

MASON TIRE LISTED 5 PER CENT HIGHER

Company, However, Undercut All Competitors in Last Price Reduction

AKRON, Nov. 15—Mason Tire & Rubber Co. of Kent, near Akron has announced a blanket increase of five per cent in prices of all tires, effective today.

Just what effect the Mason move will have upon Akron tire manufacturers is problematical. Tire men here refuse to commit themselves as to whether or not their companies definitely are planning price boosts this month, although many admit that such upward price revisions are logical in view of the steady increase in cost of cotton and crude rubber.

When tire companies, a few weeks ago, engaged in their last price-cutting scrimmage with each other, Mason undercut practically all competitors so that the 5 per cent increase does not put Mason tires at a mark materially higher than the standard list prices on the same size tires of other manufacturers.

OPEN AND CLOSED CAR PRICES CUT BY KING

DETROIT, Nov. 13—Reductions of $300 on the open models, $200 on the coupe and $150 on the sedan are announced by the King Motor Car Co. The new list is as follows:

Model	Old Price	New Price
Roadster	$1,795	$1,495
5-pass. phaeton	1,795	1,495
4-pass. sport	1,795	1,495
Coupe	2,400	2,200
Sedan, regular	2,550	2,400

Moon Sales Gain 390 Per Cent

ST. LOUIS, Nov. 13—The Moon Motor Car Co. reports that its sales for October were 390 per cent greater than sales for October of last year, and were 70 per cent of the sales for last August, which was the largest month in the company's history.

The dropping off of business in some sections of the country has been to a large extent compensated for by an increase in other sections, notably in Texas and California. The November production schedule calls for the same output as in October.

Knox Tire Reorganized

MOUNT VERNON, OHIO, Nov. 13—There has been a reorganization of the Knox Tire & Rubber Co., whose plant here was recently purchased by the reorganization committee for $175,000.

Hudson Earnings

DETROIT, Nov. 11—Net earnings of the Hudson Motor Car Co. for the quarter ending Aug. 31 were $3,656,218, or at the rate of $3 a share on the outstanding stock of the company. Total profits for the quarter were $4,183,327.

SETS SERVICE PRICE FOR ONE FULL YEAR

DETROIT, Nov. 15 — Simons Sales Co., distributor of Willys-Overland cars for Michigan, is offering a year's upkeep on any new Overland car bought from this time on for $25.

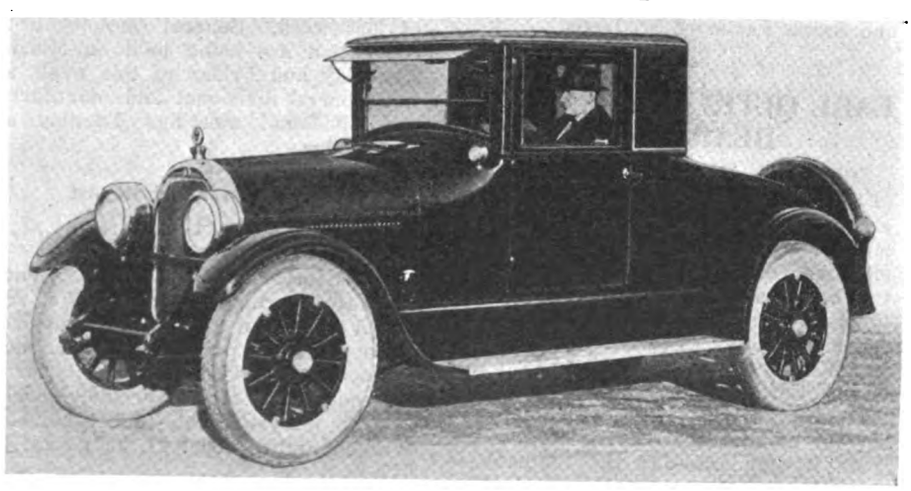
The offer includes labor and all parts and equipment, except tires and batteries and also excepts damages due to wrecks. The new offer follows two years' operation of the flat rate system and is a development of this in that it sets a service figure for a whole year in advance and guarantees it.

ALL MONTHS OF YEAR SHOW TRACTOR GAIN

Report of Cleveland Reserve Bank Shows Bright Prospect for 1923

CLEVELAND, Nov. 14—Every month in 1922 so far has shown a substantial increase in tractor sales over the corresponding months of 1921, declares the Cleveland Reserve Bank in its Monthly Business Review. Next year looks even better and production for 1923 is starting with schedules much larger than those of the last two years.

The bank says:



The most hopeful phase of the tractor situation at present is the buying attitude of the farmer. While, broadly speaking, farm products are still out of line in exchange value for the products of other industries, the farmer is looking optimistically to 1923. In fact the farmers are more optimistic than retail dealers, who despite the business now being done with farmers are ordering quite conservatively and cautiously. The most notable improvements in business are from the sections of the country where crops have been best. Probably the South is the most productive of business now, while the poorer section is that where wheat predominates.

There has been some slight restriction of shipments from factories because production has been curtailed by shortage of labor.

Most of the tractor and implement companies have announced prices for 1923 trade. These average about the same as those which have prevailed for the last two or three months. In the new price lines, guarantees against any declines prior to June 1, 1923, are quite general. One of the larger companies, however, is soliciting business under a price less contract.

The atmosphere surrounding the industry is the most hopeful in many months. There are indications that the gradual improvement evident during the last few months will continue throughout the winter and that the selling season of 1923 will find the industry fully recovered from its adversity.

Peerless Brings Out a Roadster Coupe, $3,300

Peerless has added a new body to the line, this a two-passenger roadster coupé to sell for $3,300. The rear and rear side panels are covered with a weatherproof top material and the interior is finished in motor cloth of a neutral shade. The cover on the rear deck lifts high and free and the storage compartment holds a good sized trunk or several suitcases. Standard equipment includes electric rear signal, cowl ventilator, engine driven tire pump, MotoMeter and extension lamp and cord

AUTOCAR INCREASES PRICES DECEMBER 11

ARDMORE, PA., Nov. 14—The Autocar Co. has announced a price increase on all truck models, to take effect Dec. 11. The new prices will be as follows:

SHORT WHEELBASE MODELS

	Old Price	New Price
4 to 6 ton	$3,950	$4,200
2 to 3 ton	2,950	3,100
1½ to 2 ton	1,950	2,200

LONG WHEELBASE MODELS

	Old Price	New Price
4 to 6 ton	$4,100	$4,350
2 to 3 ton	3,075	3,200
1½ to 2 ton	2,050	2,300

Asks to Sell Parker Assets

INDIANAPOLIS, Nov. 13—Permission to sell the assets of the Parker Tire & Rubber Co. of this city has been asked by the receiver, The Bankers Trust Co.

NEW COMPANY FORMED TO CONTINUE SIMPLEX

Buys Plant and Assets from Mercer Motors—Chassis Lists at $10,000

NEW YORK, Nov. 13—The Crane-Simplex Co. of New York, Inc., with a factory in Long Island City, and executive headquarters at 115 Broadway, has purchased from the Mercer Motors Co. the plant and assets of the old Simplex Automobile Co. and has resumed the manufacture of the Crane-Simplex, discontinued in 1917, when the Government took over the plant for war work.

The new company, which is capitalized at $500,000, all preferred stock, will confine itself to the manufacture of the chassis only, which will list at $10,000 and which will be essentially the old Simplex with a six-cylinder engine with 4.375-in. bore and 6.25-in. stroke, and a wheelbase of 143.5-in.

100 Chassis a Year Planned

It is planned to make 100 chassis a year and the output for the next five years has been taken by a selling organization, the Crane-Simplex Distributing Co., 200 West 59th Street, New York City. In addition the new company also controls the Jephson-Scott body plant at East Orange, N. J., formerly Quinby, and if a customer wishes it a Jephson-Scott body will be fitted, although that is not compulsory.

Officials of the Crane-Simplex company, the manufacturing end, include L. R. Ayer, treasurer of Lawrence Chamberlain & Co., a financial house at 115 Broadway, who has been elected president; J. H. Bawden, who has been with the Mercer company for the past 12 years, vice-president and general manager; Harvey B. Clark, who has been identified with Simplex since 1905, treasurer; Frederick H. Brand, also a Simplex veteran, assistant treasurer, and W. B. Sheahy of the law firm of Breed, Abbott & Morgan, secretary.

Crane Motor Taken Over

In addition this new organization has taken over the Crane Motor Car Co., which has been tied up with Simplex, although H. M. Crane is not identified with the proposition. This deal carries with it the Crane overhead 4 x 6 engine, which will be developed by General Manager Bawden for future use, although it will not be used in the Simplex now being manufactured.

After 1917 the Government held possession for two years, using the plant for the manufacture of the Hispano-Suiza engine. In 1919 the Mercer Motors Co., of Trenton, N. J., bought the assets, and when Mercer separated from Hare's Motors it took the Simplex assets with it. Only recently the deal, in which Bawden played a most prominent part, was consummated, whereby this veteran car rejoins the American automobile family.

57 RADIO STATIONS SENT OUT MESSAGE

ST. LOUIS, Nov. 15—Reports received by the National Automobile Dealers Association show that on the night of Oct. 12 the association's message on "Your Car and Your Dealer" was sent out from 57 radio broadcasting stations. It is estimated that several hundred thousand persons heard this address.

LYCOMING PRODUCES NEW MODEL ENGINE

WILLIAMSPORT, PA., Nov. 10—A new 4-cylinder engine, which will be known as the Model C series, has been put in production by the Lycoming Motors Corp. of this city. Important features of the engine are a five-bearing crankshaft, and a system of force-feed lubrication in which the pressure is controlled by the throttle. The engine is being produced with 3½, 3⅝ and 3¾-in. bore and 5-in. stroke. A complete description of this engine will appear in Motor World of Nov. 22.

REEVES TO HELP WRITE BOOK ON ASSOCIATIONS

WASHINGTON, Nov. 14 — Alfred Reeves, general manager of the National Automobile Chamber of Commerce, has been appointed a member of the General Committee Co-operating on Trade Association activities, by Secretary Hoover.

The purpose of the committee is the compilation of a book on trade association activities embracing more than 4500 trade associations.

The work of the automobile industry, as embodied in the activities of the N. A. C. C. will be shown by Reeves.

FRANKLIN POSTPONES BUILDING LIGHT CAR

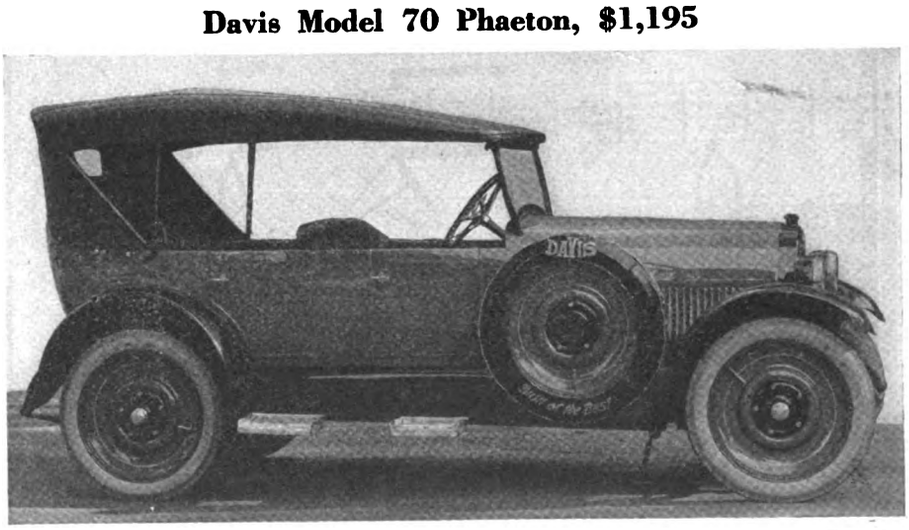
Company Says Rising Cost of Material Makes Production Impossible Now

SYRACUSE, Nov. 10—Production of the new Franklin four, which was to sell for about $1,000 and be on the market next April, has been indefinitely postponed by action of the board of directors of the Franklin Automobile Co.

The rising cost of materials, which it said made it impossible to produce the car at the price intended, is the reason for a change in the plans of the company. The sale of additional stock has been discontinued.

The company also announced that it has discharged the force of 300 men which has been working at the experimental plant and only a few engineers will be retained.

The indications are that the new Franklin four will not appear on the market at any time next year. Work on the proposed plant for the new car has not been started, though the company has already purchased a large factory site east of the city.



Officials of the company refused to discuss in any way the decision to postpone production, which came as a great surprise in automotive circles here.

The plant for the six cylinder car will continue to operate at its present capacity.

Re-organizing Syracuse Rubber

SYRACUSE, Nov. 14—Re-organization of the Syracuse Rubber Co., maker of the Syra-Cord, is underway, following the appointment by Federal Judge Cooper of William Rafferty of this city as receiver for the company. The company consented to the appointment of a receiver.

Davis Model 70 Phaeton, $1,195

The new phaeton is mounted on the 71 chassis. The body is finished in Royal blue with brown Spanish leather upholstery. The radiator is nickel plated and the equipment includes disk wheels, military steps, skirt fenders and a one piece windshield. Other models in the line for 1923 are the Legionaire, a four-passenger sport model, $1.495; a coupé, $1,795, and Californian, a car with a year round top. These are in addition to the regular line models

INTEREST IN A. E. A. WORK ON INCREASE

Comparison of Period Shows Number of Meetings Was Tripled This Year

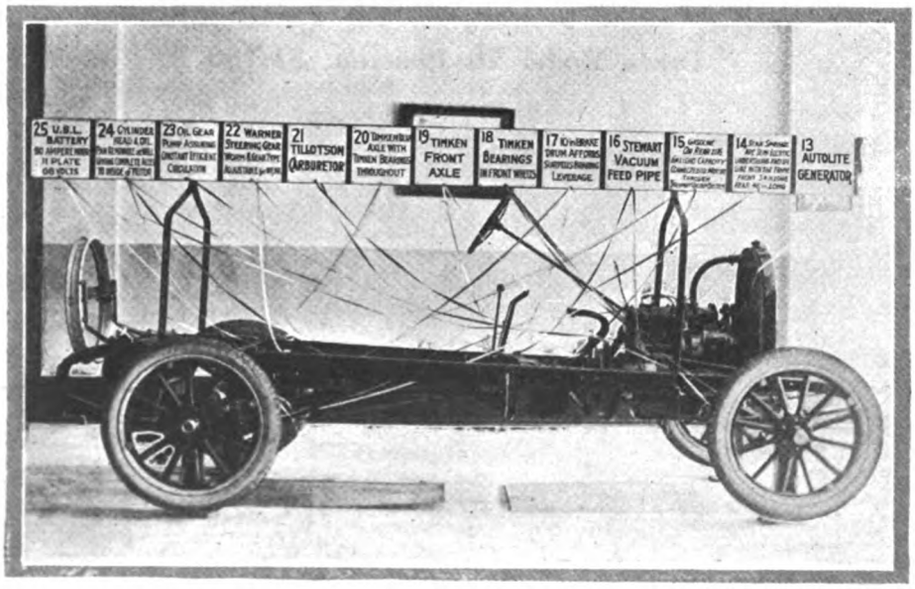
CHICAGO, Nov. 13 — Remarkable growth of the merchandising campaign of the Automotive Equipment Association is shown by a comparison of the number of meetings and attendance last year and this year. The 1921 campaign got actively under way about Aug. 1, and from that date to the first week in November 37 meetings were held, attended by 1875 people. From Aug. 1 this year to the first week in November, 129 meetings were held and the attendance was 10,757. At the 1921 meetings the moving picture entitled "Ask 'Em to Buy" was exhibited. This year a new film entitled "Shop Profits" was prepared, and at many meetings both pictures were shown.

Several automotive jobbing and manufacturing firms conducted meetings this fall. George A. Brush, representing Ozburn-Abston & Co. of Memphis, held 26 meetings, at which the attendance was 948. Midwest Auto Supply Co., Dubuque, Iowa, held nine meetings. McCauley-Ward Motor Supply Co., Waco, Tex., held 32 meetings with an attendance of 956 Black & Decker Manufacturing Co. held 19 meetings with an attendance of 1977. L. A. Cavanaugh of the Motor Car Supply Co., Calgary, Canada, held 14 meetings, attended by 500 persons.

Two Pacific Coast jobbers recently gave the Merchandising Committee figures representing the increase in business in certain lines which they attribute to the "Ask 'Em to Buy" movement. One company noted the following increases in one year in the lines designated: Motometer, 50 per cent; fan belts, 100 per cent; bumpers, 125 per cent; spotlights, 200 per cent. Increases noted by the other company were: Fan belts, 100 per cent; motometers, 103 per cent; bumpers, 78 per cent; stop signals, 600 per cent; brake lining, 40 per cent; spot lights, 100 per cent.

DORT BLACKSMITH TAKES TRIP EAST

DETROIT, Nov. 8—Accompanying J. Dallas Dort on his trip through the Eastern cities incidental to the showing of the new Dort six models, is "Art" Bickford, a blacksmith in the Dort factory, who has been associated with Dort for the past 32 years.



"Art" is only a blacksmith, Dort said, but he might have been superintendent of the plant many years ago if he had wanted to accept better positions as they were offered him. He preferred to remain a blacksmith, though because he didn't want additional responsibilities and he asked "what are you going to do with a man as happy as that."

Everywhere Dort goes, Bickford goes.

He is going to be his companion throughout the Eastern trip, seeing most of the cities for the first time.

Bickford received $1,950 of the undivided profits of the Durant-Dort Carriage Co. in 1917 when it became the Dort Motor Car Co. He was one of the many employees receiving a reward for long service.

Introducing a New Car

A display that attracted hundreds and was particularly effective in impressing spectators with the units that are used in the Star car was staged by the Conant Automobile Co., Houston, upon the introduction of the Star car in Texas by that distributor. Each unit of the car was numbered and ribbons ran from the units to a sign held above the car with an iron bracket which identified it

$2,115,828 EARNED BY PACKARD IN YEAR

Current Assets Reported Seven and One-Half Times Current Liabilities

DETROIT, Nov. 13—Re-electing all directors and officers, stockholders of the Packard Motor Car Co., at their meeting here, received the annual report showing net profits for the fiscal year of $2,115,828 on factory sales of $38,000,000. The earnings were all in the last six months, the first six showing a loss. Net current assets are seven and one-half times the current liabilities. The total assets are five times the total liabilities, including the company's outstanding bonds.

President Alvan Macauley, in a statement to the stockholders, said:

The company prepared during the depression for better times by improving its working personnel, decreasing its inventories, improving its facilities and developing a new product with the result that we now are producing cars and trucks at the rate of 1800 a month. Our program calls for a production of approximately 2250 a month, commencing in December. This is the greatest output in the company's history, and it is being accomplished with a smaller organization and a much reduced inventory.

Company's Balance Sheet

The general balance sheets show total assets of $56,308,090, a reduction of about $2,400,000 from last year, principally represented by the reduced inventory. The company's cash position has improved by almost $6,000,000. The surplus of $17,004,438 represents an increase of about $11,000,000; current and accrued liabilities have been increased about $6,000,000, and reserve for continuances has been cut from $2,500,000 to $750,000. Debentures outstanding have been reduced $2,453,000. No change has been made in preferred stock outstanding which totals $14,789,800. Total common stock is $11,885,100.

JACKSON PREPARING TO MAKE NEW MODELS

DETROIT, Nov. 10—Jackson Motors Corp., a division of Associated Motor Industries, is employing about 60 men in the development of tools, jigs, etc., for new models which are expected to be introduced some time around the first of the year, according to C. L. Halliday, vice-president and general manager.

Definite production plans have not been formed, but the plant at Jackson will be used principally for the manufacture of Jackson cars and will also be used in part for body building for Jackson and other cars in the Associated line.

No fundamental changes from the former Jackson models are expected according to Halliday, except that the cars will be refined both as to chassis and bodies to bring them up to latest developments in the industry.

SUGGESTS FLAT CARS TO TAKE SHIPMENTS

Dealer, Who Receives Notice, Thinks Tramps Will Be Chief Beneficiary

LOS ANGELES, Nov. 13—The freight situation has become acute with automobile distributors in southern California. Representatives of some of the most popular makes of cars are thirty days behind in deliveries of open models and sixty days behind in closed cars. One company has twenty-two carloads en route from the factory, and trace of them has been lost.

Dealers who are in position to make immediate deliveries are enjoying the business they would not have otherwise. This is because of the large number of cancellations and the customer's determination to buy a car that he can get without delay. One distributor has been notified by his factory that the only way shipments can be made to him will be by using flat cars.

This puts him in a quandary because cars shipped at this time of the year with only a canvas-covering to protect them from the weather usually are damaged in transit. Not only do they suffer from exposure to the weather, but there always is an especially large number of tramps headed for southern California in the winter, and when they steal a rail ride they like nothing better than to occupy the soft upholstery of an automobile.

Usually they are very careless in their habits and enjoy such pastiming as cutting holes in the leather, carving their initials on the instrument board, or scratching them in the finish. This makes the dealers hesitate before ordering shipments by flat car. However, they feel if they do not take this chance they will be without cars.

Railroads acknowledge their inability to meet the situation. It is reported that at one point in Nevada there are approximately 100 carloads of automobiles in the freight yards waiting for motive power to bring them to this city.

RAILROADS BUILDING MORE FREIGHT CARS

NEW YORK, Nov. 10—James S. Marvin, head of the traffic department of the National Automobile Chamber of Commerce, sees relief ahead for the industry in the report he has received that six railroads have ordered 3900 new automobile cars, which will bring the total in service up to 110,000. The new cars have been ordered by the Northern Pacific, Norfolk & Western, A. T. & Santa Fe, 1000 each; C. N. & St. P., 500; C. R. I. & P., 300, and Western Pacific, 100. In addition, the Grand Trunk is figuring on ordering 2000, the C. R. I. & P. and C. N. & St. P. an additional 500 each.

Marvin also calls attention to the fact that the Car Service Division at Washington has sent out another order to all railroads to relieve grain shipping. Box cars are ordered sent West empty from territory west of Pittsburgh, Cleveland and Detroit. Automobile cars are specified as exempt from this, and instructions to send these cars into manufacturing territory are re-stated.

FARMER SEES OLD AD; WANTS "AUTO BUGGY"

CHICAGO, Nov. 10—An advertisement of the International Harvester Co.'s "auto buggy," published in a farm paper in 1908, has just brought a response from a Northern Wisconsin farmer who asked for a catalog. Under date of Nov. 5, 1922, the farmer wrote:

"Will you please send me a catalog of your auto buggy. I am sending you a picture of the auto buggy of which I would like a catalog."

Attached to the letter was a clipping of the advertisement.

The vehicle described in this advertisement was the forerunner of the International Harvester Co.'s present line of International trucks ranging in size from 2000 to 10,000 pounds capacity.

This pioneer vehicle was powered with a two-cylinder air-cooled engine and was cranked at the side. The body followed the lines of the spring wagon, which was useful to the farmer both as a passenger vehicle and for hauling light loads of produce to market. The "auto buggy" was equipped with solid rubber tires and a removable rear seat was provided.

Piedmont Plant Sold

LYNCHBURG, VA., Nov. 14—The plant of the Piedmont Motor Car Co. has been sold at auction under a deed of trust and was bought in by the First National Bank of Lynchburg, beneficiary.

GOOD CROPS HELPING SAN FRANCISCO TRADE

Farmers and Fruit Growers Are Receiving Pay for Year's Production

SAN FRANCISCO, Nov. 11—San Francisco car and truck dealers, and garage and repair men are enjoying a steadily rising prosperity, largely due to the excellent crops of this year, and the fact that the farmers and fruit-growers are now receiving their pay for the year's production. As a result of this influx of money and business, a number of firms are expanding their facilities for handling automotive traffic.

The Clydesdale Motor Truck Co. of California, has opened a garage, service and repair station especially for motor trucks. With 25,000 square feet of floor space, equipment is being installed to service and repair trucks of any size or make, the entire top floor of the building is being reserved for Clydesdale trucks, with 24-hour service.

The Ruckstell axle plant, at Berkeley, making a two-speed axle for Fords, has found its growing business demands larger space, and is increasing the size of the factory to nearly double its present capacity.

The Pacific Nash Motor Co. has expanded its organization considerably to take care of increasing business in central and northern California. Five new men have been added to the sales force, and J. R. Hall of the Pacific Nash organization in Salt Lake City has been brought to San Francisco to be assistant manager of the local establishment.

William L. Hughson, Ford-Lincoln dealer of San Francisco, delivered the first of the radio talks on "How to Buy an Automobile," prepared by the National Automobile Dealers Association. The talk attracted a great deal of attention in the press of all the cities around San Francisco Bay.

Vane of N. A. D. A. Asks Dealers to Help in Returning Freight Cars to Automotive Producing Centers

ST. LOUIS, Nov. 10—Co-operating with the National Automobile Chamber of Commerce in its efforts to relieve the freight car shortage, C. A. Vane, general manager of the National Automobile Dealers Association, has sent out the following letter to members throughout the country:

The natural inability of the railroads to provide freight cars, a result of the strike, is being seriously aggravated, so far as the automobile industry is concerned, by the indifference of the carriers toward returning automobile box cars to the automobile manufacturing territory, particularly Michigan, Indiana and Ohio.

There are thousands of automobile cars that have been shipped from these loading points into the South, West and Southwest and the railroads of those territories are reloading them with cotton, lumber, sand, cement, flour and other such commodities that could just as easily be put in ordinary box cars.

This situation is getting so serious that shipments may have to be seriously curtailed and driveaways resorted to, to keep factories in production.

Will you please take up with your local dealers association the appointment of a committee to call upon the railroads in your territory to desist from this improper use of automobile equipment and get it back immediately to the manufacturing area. If you will report to this office any misuse of this equipment in your territory, we will take it up immediately with the American Railway Association so that proper steps can be taken by them to get the offending carrier in line.

DORT OPENS BRANCH TO SOLVE PROBLEMS

Will Be Used to Work Out Better Methods of Selling and Servicing Cars

DETROIT, Nov. 14—Dort Motor Car Co. has opened a branch in Detroit under the management of E. J. Poxson, assistant general sales manager at the factory, who will also retain his factory connection, so that there will be a distinct factory tie-up in the conduct of the branch.

It is the plan of the company to use the branch as an experimental studio in which will be worked out methods for improving retail merchandising and servicing of cars. As methods are tested out and found productive, they will be recommended for adoption by all Dort retail establishments.

With the exception of New York, Detroit will be the only city in which a factory branch will be maintained, and this because of the proximity to the factory and the generally close competitive conduct of the market. Very careful investigation and analysis of the market will be made and its particular requirements from both sales and service angles studied.

Specialized Salesman Plan

In its selling plan, the company will operate to a large extent on a specialized salesman plan rather than the districting plan. Salesmen equipped to handle certain types of trade will specialize upon them with the fundamental thought of easy servicing as a common working ground. They will be free to extend their activities to any part of the city where their class of trade may be found. As a dealer organization is built up in the city, the same open privileges will be extended. Only distributor territory will be restricted. Two years' experience has shown the open plan most successful.

On business involving trade-ins the company will make it a policy to accept cars only at a price permitting of ready resale. Where the appraisal price is considered unsatisfactory by the prospective buyer, he will be urged to have the car he already owns reconditioned and operated to a point where he considers it as having given full worth.

Concentrate on Closed Cars

The branch is adopting as one of its most important functions that of maintaining all Dort cars in first class operating condition. In selling cars, Poxson said, he has reached the conclusion that a salesman's efforts should be directed to selling the closed car as the one which will give the most satisfaction to the buyer. The conveniences of the closed vehicle will always be fully detailed, so that a prospect, should he take an open model, may not feel dissatisfied later that the company did not have his interest fully at heart in helping him with his selection.

About 700 persons attended the opening of the branch, at which the first showing in the city of the Dort six was made. All models exhibited were sold and delivered the next day. Similar openings are to be staged in important cities throughout the country, President J. Dallas Dort attending those in Eastern cities in person and J. D. Mansfield, general sales manager, attending those in the West.

TIRE SALESMAN FRAUD, SAYS GARAGE KEEPER

A MAN claiming to represent a company known as the Springfield Tire & Rubber Co., of Springfield, Mo., has been defrauding garage men and tire dealers in Missouri, Arkansas, Kansas and Oklahoma. A garage proprietor at Lockesburg, Ark., writes that on Sept. 21, 1922, he gave this fraudulent salesman an order for six tires, paying a deposit of $6.

The salesman gave a printed receipt bearing the name of the Springfield Tire & Rubber Co., which was represented as the manufacturer. The tires were priced very low. The salesman signed the name "Frank Clayton," but information received is that he has used a number of other names.

The Springfield Chamber of Commerce states that there is no such company as the Springfield Tire & Rubber Co. and that it is doing all in its power to expose this fraud which it has learned has been practiced rather extensively.

DORRIS HAS ADDITION TO 1923 BODY STYLES

ST. LOUIS, Nov. 10—The Dorris Motor Car Co. have added the Pasadena to their line of body styles for 1923. The new body is mounted on the standard chassis and is a 4-passenger sport type. A trunk is mounted on an aluminum rack attached to the frame at the rear of the car, together with a tire carrier for two tires.

Stock colors for the new model are Holland blue, maroon and gun metal gray. A three-quarter inch body molding extends over the hood to the radiator. The upholstery is leather. The top is made of unlined Burbank material with natural wood bows with nickel fittings.

The instrument board is black walnut. A ventilator placed in the cowl is easily controlled from the dash. The windshield stanchions are bronze, nickel plated. Regular equipment is artillery wheels with 33 x 5 in. cord tires.

Lewis-Hall Receiver

DETROIT, Nov. 11—The Federal Court has named the Union Trust Co. of Detroit receiver for the Lewis-Hall Motors Corp., a manufacturer of trucks.

NO BANK ANTAGONISM, DODGE HEAD DECLARES

President Haynes, After Six Weeks' Trip, Sees New Cycle of Prosperity

DETROIT, Nov. 11—Following a six weeks' trip through the Northwest and Pacific Coast territory President F. J. Haynes of Dodge Brothers declared that the general business condition is "healthy from the feet up." With John A. Nichols, Jr., general sales manager of the company, he visited Dodge Brothers dealers, bankers and other merchants in all important cities getting first-hand impressions.

A new cycle of prosperity has started, Haynes said, which is sound and healthy and has none of the aspects of boom times. Bankers and merchants everywhere regard it as substantial, permanent improvement. They are content to witness a gradual improvement because they have just seen a tragic example of the other kind of development—the kind that accumulates so much momentum that the brakes of good business judgment are useless in an emergency.

Haynes said the improved conditions were most noticeable in the cities and larger towns, but that the purchasing power and inclination to buy in the rural sections are improving appreciably. Both Haynes and Nichols were impressed with the absence of antagonism which has been attributed to bankers by automobile men in some parts of the country.

In almost every State there was declared to be less evidence than ever before of the usual winter slow-down in business. This condition was declared to be reflected at the factory, which is maintaining production at a point approximating the high-pressure marks of earlier in the year.

JOBBERS IN NEW YORK TO MEET DURING SHOW

NEW YORK, Nov. 11—Automotive equipment jobbers of New York, Brooklyn and Newark are planning for a big merchandising meeting in New York during show week. The date has been tentatively set for Wednesday of that week.

The general arrangements, which have not been worked out in detail, provide for engaging a hall or theater to accommodate 1500 to 2000 dealers and salesmen. The "Ask 'em to Buy" and "Shop Profits" films are to be shown, and Ray W. Sherman, merchandising director of the Automotive Equipment Association, will be asked to deliver the principal address.

Franklin Oversold

SYRACUSE, Nov. 14—The Franklin Automobile Co. reports that the number of unfilled orders now on hand is equivalent to all of November production and one-third of December production as well.

NASH SAYS DEALERS SHOULD STOCK CARS

Believes Railroad Situation Will Get Worse During Winter Months

BOSTON, Nov. 14—"If any motor dealer could make a survey of the railroad situation as I have made it they would go to their bankers to-day and make arrangements to stock up with cars right away for Spring delivery," Charles W. Nash, president of Nash Motors Co., told the 160 dealers, comprising the C. P. Rockwell organization, when they gathered for the annual fall conference.

He said:

"Railroad officials tell me that while conditions are mighty poor now they are nothing to what they are going to be this winter. And rather than have our Nash cars subjected to being driven overland through snow in the winter, making the cars second-hand before delivered to buyers, I would close the plants for a couple of months. We could struggle along.

"Motor cars are going to be built. They are going to be sold. The public wants cars. And those who do not order them now are going to find that when the spring rush comes along they will be waiting and wailing. That will be their own fault."

Nash told the dealers that there was going to be a greater call for trucks, due to the railroad situation.

8 NEW BODY MODELS ANNOUNCED BY STUTZ

INDIANAPOLIS, Nov. 11—Eight new body models have been announced by the Stutz Motor Car Co. The new line will be known as the Speedway Four Series. No changes have been made in the chassis. Prices on the new models are as follows:

7-pass. Phaeton	$2,640
4-pass. Sportster	2,790
2-pass. Roadster	2,450
De Luxe Bearcat Roadster	2,760
7-pass., California top....	3,015
4-pass., California top....	3,165
4-pass Coupe	3,490
5-pass. Sportsedan	4,450

These prices are substantially the same as those of the old line.

NEW LOCOMOBILE MODEL HAS NO BODY CHANGE

BRIDGEPORT, CONN., Nov. 13—A new model Locomobile to be known as the Series 8 is now ready for production. The chassis remains practically the same as before, the improvements being in the nature of refinements rather than radical departures from Locomobile traditions.

The changes include the use of a Delco battery ignition system of the two-spark type with two independent units, each with its own coil, breaker and distributor, a new type clutch and a new arrangement of timing gears.

The springs are more resilient, and the manifolding is hot-water jacketed. The bodies show no changes and the prices remain the same as before, ranging from $7,600 for the phaeton to $11,000 for the sedan. The chassis price is $6,800.

LOW RATE TIRE OFFER CAUSES MAN'S ARREST

MINNEAPOLIS, Nov. 11—Post-office inspectors attracted by the large amount of mail delivered to the Edlund Tire Co., arrested Joseph Schwindemann, a boiler maker, on a charge of using the mails with intent to defraud. Some $25,000 in checks and money were found. It is said that circulars had been sent out by Schwindemann in the name of the company, bankrupt, offering various standard makes of tires at low rates. The circular recited the tires would be sent on approval, but $1 must be sent to cover crating charges, only six tires to a customer. The inspectors found no tires in the rooming house where the letters were delivered. Schwindemann said a man in Chicago had promised to send the tires if he got the orders. Hundreds of letters have been received since the arrest was made. One dealer, from Shell Rock, Iowa, drove 12 hours to Minneapolis, intending to buy out the company that could make such tire offers.

I. M. Lewis Leaves Bessemer

GROVE CITY, PA., Nov. 14.—I. M. Lewis has resigned from the Bessemer Motor Truck Co.

RECEIVER WILL SELL CHALMERS PROPERTY

Maxwell, Holding Most of Notes and Claims, Will Probably Be Purchaser

DETROIT, Nov. 14—The plant and properties of the Chalmers Motor Corp. will be sold at receiver's sale on Dec. 7 under the terms of a final decree entered in Federal Court on the petition filed by the Fisk Rubber Co. and the Metropolitan Trust Co. of New York for the appointment of a receiver. William S. Sayres has been named special master to conduct the sale, the upset price on the entire property being fixed at $1,987,500.

Most of the notes and claims outstanding are held by Maxwell. Though technically the sale is open to the highest bidder, the conditions are such that it is practically limited to the Maxwell interests, and the property will be bought in by this company at a reasonable market figure as part of its plan to merge the two companies and rejuvenate the Chalmers line.

Pending the sale, the affairs of the Chalmers company are being directed by B. E. Hutchinson, treasurer of Maxwell, as receiver. Limited production is being carried on until full control is vested in Maxwell when it will undertake an extensive expansion. The Chalmers plant will be continued as the six-cylinder car plant and will be further used to extend the manufacturing requirements of the two cars.

Further Cut in Gasoline

CHICAGO, Nov. 14.—Another cent has been taken from the price of gasoline by the Standard Oil Co. of Indiana. The service station price in Chicago is now 20 cents a gallon.

View of Montreal Closed Car Show

Sales made and prospects secured justified the holding of a show this fall in the Canadian city. The exhibits were arranged with plenty of aisle space and room around the cars and particular attention was paid to the decorations of the Drill Hall, where the show was held

FENN ADVISES MILK SHIPPERS ON TRUCKS

Tells Convention of Importance of Motor Transport in Distribution

SPRINGFIELD, MASS., Nov. 14—At the annual meeting of the National Milk Producers' Federation here, the question of improving facilities of distribution and reducing transportation costs occupied a prominent place in the discussions. This side of the dairyman's business has become a serious problem because of the rising costs of production and the uphill battle for lower railroad rates.

In opening the discussion President Milo D. Campbell of Coldwater, Mich., spoke of the scant encouragement that the milk associations received from the Interstate Commerce Commission at a recent meeting in Washington, when the question of lower freight rates was argued.

City Using Trucks

F. W. Fenn, of the National Automobile Chamber of Commerce, spoke on the importance of motor transport in milk distribution. He told of the impetus given to the motor truck handling of milk by the World War and ensuing conditions, until now the proportion of the milk supply transported by motor trucks amounts to 97 per cent for Cincinnati, 90 per cent for Atlanta, 80 per cent for Indianapolis, and 40 per cent for Kansas City. While this method has demonstrated its superiority especially on hauls of 60 miles and less, the advantages are found to hold good on longer hauls.

Motor truck service may be made available to the farmers throughout a given territory, he explained, either by carrying the product in horse-drawn vehicles or small trucks to pickup points, or by a joint arrangement which may consist simply of a single farmer making the deliveries for a group, enabling the rest to be engaged in other work at home, or through a co-operative association.

As means of promoting efficiency and profit in moving milk with motor trucks, he mentioned, first, the equipping of the trucks with glass-lined thermos tanks which secures a lower acidity test, better temperature en route, freedom from churning en route, no appreciable shrinkage, less ice per gallon, elimination of storage capacity before pasteurization, and a large saving of labor.

Favors Use of Trailers

The moving of milk by truck may be further facilitated, he explained, by the introduction of trailers with tanks mounted on them and equipped with solid rubber tires eight inches in diameter, front and rear.

A big saving factor, Fenn said, is to be found in standardization, securing mechanical units, spare parts and supplies that will be interchangeable. This enables purchases to be made in quantities, promotes labor-saving and helps to develop a trained personnel, capable of giving the same efficient service wherever the standardized practice is in force.

Answering the contention that the motor trucks should pay more in taxes for the support of highways, Fenn stated that motor cars and trucks are now paying $350,000,000 yearly to the Government for this object, or about one-half the total maintenance cost.

H. R. Leonard of St. Paul, manager of the Twin City Milk Producers' Association, said that out of 10,000,000 pounds of milk sent by his association into St. Paul and Minneapolis monthly, 8,000,000 are transported by trucks.

BOSTON OFFERS PRIZE TO HALT CONGESTION

BOSTON, Nov. 13—Automobile dealers of Boston are interested in the offer made by Mayor James M. Curley to the Massachusetts Institute of Technology in an effort to solve the problem of congested traffic here. The dealers realize that less congestion would result in more sales and lessen accidents, not to mention saving a great amount of time wasted in trying to get through the crooked, narrow streets of the city.

Mayor Curley announces a prize of $500 to the student who furnishes him with the best practical working plan or plans for unsnarling Boston's acute vehicle traffic congestion, for improved methods of keeping public highways clean and for correcting and minimizing the unsanitary condition arising from certain types of industrial and commercial establishments within the city limits.

CLOSED BODIES BIG NEED OF FACTORIES

(*Continued from page* 36)

is continuing steadily at about 2000 monthly. Lincoln is at capacity, but the production facilities are low, and will continue so until the completion of plant extensions now under way. Wills St. Claire is operating at approximately 20 cars daily.

Oakland and Oldsmobile sales are continuing high, production at the factory showing increases in October with probable further gain in November. Both are operating in excess of 100 cars daily. Reo is building in excess of 100 a day, this total including cars and trucks. Columbia is building about 50 daily.

Dort is building about 100 cars daily. Durant is making 100 Durant fours daily at the Lansing plant, and is starting in on a production of more than 100 a day on the Star car. Gray is now building about 100 cars daily and is making additions to its dealer organization steadily. Earl Motors is building about 1000 a month.

CANNOT USE SOCONY PUMP FOR OTHER FUEL

Utilities Corporation Restrained in Suit Instituted by Standard Oil Co.

NEW YORK, Nov. 13—An injunction has been granted by Supreme Court Justice O'Malley to the Standard Oil Co. of New York which restrains the Utilities Oil Corp. from delivering its petroleum products to customers who use only the pumps and equipment bearing the Socony mark.

In other words, so long as Socony furnishes the equipment for the use of the dealers in retailing gasoline and oil, those dealers cannot use it in handling petroleum products of other companies. The Standard Oil Co. of New York is required to give a bond of $10,000 to the defendant to pay any damages the latter may be found to have sustained if the injunction is vacated by a higher court.

Justice O'Malley holds that the decision will not prevent the use by dealers and garage owners of their own storage tanks to which are attached pumps or equipment other than that owned by the Socony people and which do not bear the Standard label.

The defendants contended that the Standard was seeking to obtain a virtual monopoly by means of the suit, but Justice O'Malley decided that even customers of the Standard have the right to sell oil of other brands as long as they do not use the Standard equipment and do not represent the products sold to be those of the plaintiff.

NEW JERSEY APPROVES HIGHWAY BOND ISSUE

NEWARK, Nov. 11—The people of New Jersey having approved a highway building program at the recent election by a majority of nearly 10,000 votes, steps are being taken toward making permanent the association of more than 80 cities and commercial organizations which sponsored the project.

The program adopted provides for the raising of $40,000,000 in the next five years to complete the State highway system at a rate of $8,000,000 a year. In this State the revenues from motor vehicle regulation can be used only for highway maintenance. New Jersey is the twenty-fourth State to establish a good roads' movement.

The association has established a permanent headquarters in Newark and will devote its energies particularly to assisting the State authorities in the investment of the money to the best interests of all concerned.

The officers are: John L. Brock, automotive dealer, Trenton, president; George Caddock, State Highway Commissioner, vice-president; Horace A. Barnell, automotive dealer, Newark, treasurer; Harry Meixell, National Automobile Chamber of Commerce, secretary.

CHANGES IN THE TRADE

Kelly Springfield Motor Truck Co. has opened a Pittsburgh branch.

H. S. Hamilton has resigned as manager of the Chicago office of **Rolls-Royce of America, Inc.**

James M. Malone has been appointed sales manager of **R. C. Cook Co.**, Chicago distributor of Velie, King and Flat.

International Harvester Co. has opened a used truck department at Nashville, Tenn., with Joseph Chemig in charge.

Stutz-Graves Motor Co., Nashville, Tenn., is now distributing the Cleveland for central Tennessee and southern Kentucky.

Murray Page has been appointed to succeed **W. S. Porter** as manager of the Chicago branch of the **Locomobile Co.**, on Michigan Avenue near Twenty-third Street.

Frank E. Witt has been appointed assistant general manager of the **W. C. Auble Motor Car Co.**, Chicago Durant and Star agency. He was formerly sales manager.

Thomas R. Brown, Jr., formerly office manager of the Howe Rubber Corp., New York, has been appointed New York district manager.

The Temple Auto Supply Co., New Haven, Conn., has been organized with **Bennet D. Lear** as president and treasurer and **Mabel Lear** as secretary.

W. E. Stalnaker and **A. S. Johnson** have purchased the franchise for the Earl car in Chicago and surrounding territory from the **Brown Moriarty Co.**, 2634 S. Michigan Avenue.

T. J. Turley, formerly implement jobber and dealer of Owensboro, Ky., has become associated with the **J. I. Case Plow Works Co.** as division manager of the southeast division.

W. J. Millar has been appointed distributor for the Kissel Kar and trucks in the Sangamon County, Illinois, territory, and has opened a sales agency and service station in Springfield, Ill.

Schultz & Goodman, formerly tractor distributors at Bondville, Ill., have removed to Champaign, Ill., where they will distribute the Durant and Star cars in the Champaign County territory.

Black & Decker Manufacturing Co.'s Philadelphia branch office and service station, formerly located at 318 North Broad Street, has relocated, the new address being 824 North Broad Street.

J. B. Van Noy, pioneer automotive dealer and distributor for the Overland car in 1915 and 1916 in Oklahoma City, Okla., has become associated with the **Elbert S. Hatcher Co.** at Springfield, Ill.

Fulenwider Brothers of Birmingham, Ala., have bought the interests of the **Burk Automobile Co.**, Ford agents in several north Alabama towns, thus acquiring at least four Ford agencies in the State.

J. C. Anderson has resigned as secretary and business manager of **Lahr Motor Sales Co.** of Bismarck, N. D., after a service covering the last six years. Anderson is as yet undecided as to business plans.

Dr. D. E. Thatcher, physician and druggist at Dallas, Wis., has disposed of his practice and business to engage in the automotive trade at Chippewa Falls, Wis., having purchased an interest in the **G. E. Dick Motor Co.**, of which he becomes sales manager.

H. H. Balcom, formerly manager of the **Bay State** sales organization, Hartford, Conn., has joined the sales department of the **Oldsmobile Co.**, Hartford, Conn. The latter company has taken over the **Hoadley Garage** for a parts and service station.

Buick Repair Station, Hartford, Conn., formerly located in the **Hartford Buick Co.** sales and service building, has severed all connections with the Buick agency and taken over the former Pierce Arrow service station. **Fred G. Hadley**, the proprietor, has added to the working force.

W. Howard Metcalf

President of the Automobile Accessories Business Association of Philadelphia, who has been elected a member of the Pennsylvania Legislature.

F. J. Wildes, formerly with the **E. W. Clark Motor Co.**, Milwaukee, Wisconsin distributor of the Maxwell and Chalmers, has been appointed retail sales manager of the **Chidester-Frint Co.**, Milwaukee, State distributor of the Durant and Star. Wildes will supervise sales in Milwaukee city and county.

Columbia-Kissel Motor Co. has been formed to take on the distribution of the Columbia Six and the Kissel Kar lines in Philadelphia. The officers of the company are as follows: **E. J. Finkelstein**, president, and **Samuel F. Levy**, secretary and treasurer. **A. C. Rowland** is retail salesmanager, and **J. W. Turner**, wholesale salesmanager.

Miles Piston Ring Sales Co. has been organized in New York City as the eastern direct factory representatives for the **Miles Piston Ring Co.** of Chicago, taking over the exclusive sales work for the States of New York, New Jersey, Connecticut and Rhode Island. The work will be under the direction of **L. M. Zach** and **V. Steinfeld.**

Kalamazoo Implement Co., **Otis J. Boylan**, proprietor, handling the Reo line, has bought out the **Kalamazoo Auto Exchange**, Kalamazoo, Mich., and will occupy the establishment with a used car department. **R. J. Bixler**, former proprietor of the exchange, and **W. J. Davidson** will have charge of this department in the future.

St. Cyr Auto Repair Co., Hartford, Conn., has added to its line by taking on the Westcott, handling the car business under the name of the **St. Cyr Auto Co.** The concern has the agency for Hartford County. **H. H. Sexton**, formerly of the Overland and Bay State sales organizations, has joined the company as manager of the Westcott sales department.

Swain-Hickman Co., for six years distributor in the Philadelphia territory for Republic trucks, has entered the business of supplying truck replacement parts, as factory representative for a number of parts makers. Distribution will be made to distributors, dealers and repair concerns. The company's territory will include eastern Pennsylvania, southern New Jersey and Maryland.

Emmet V. Pollard of the sales organization of the **General Tire & Rubber Co.**, who has been a special representative in New York territory for some time past, has been transferred to Texas, where he will be manager of the Dallas branch of the company. Pollard has been in tire sales for the past eight years, half of which have been in the service of General. **Tom Moore** continues as southern district manager.

John D. Carmody, formerly a territory manager for the **Champion Spark Plug Co.** and more recently a district manager of the **Wainwright Engineering Co.**, has been appointed middle western manager for the **Columbus McKinnon Chain Co.** of Columbus, manufacturer of Dreadnaught tire chains. Carmody will have his headquarters in Chicago and will cover Illinois, Iowa, Missouri, Minnesota, Wisconsin, Kansas, Nebraska, North and South Dakota.

G. H. Hilbish has been appointed special factory representative out of Akron by the **Star Rubber Co., Inc.**, of that city. Hilbish served with the B. F. Goodrich organization in various capacities for nine years, and later with Goodyear for approximately eight. With the latter company he had charge of the Akron branch, was afterward connected with its Cleveland and Grand Rapids branches and more recently served as manager of Goodyear's Toledo branch.

DE PALMA MAY DRIVE PACKARD IN CONTEST

LOS ANGELES, Nov. 13—Considerable speculation has been aroused in Pacific Coast racing circles by the announcement that Ralph De Palma will drive in the annual Thanksgiving Day 250-mile classic on the Beverly Hills speedway. This is due to the fact that while making public the announcement of his intention, De Palma refused to divulge the identity of the car he will drive.

Recently the Packard factory made known the fact it intends to re-enter racing. De Palma always has been very close to the Packard organization, and some of his greatest achievements have been accomplished with cars of that make. The driver's only comment on the subject is that he understands the Packard company expects to have its cars ready for the Memorial Day event at Indianapolis, but there are many who believe at least one of the cars may receive its try-out in the Thanksgiving Day event.

Nash Output

CHICAGO, Nov. 14—Nash Motors at Kenosha is producing about 192 sixes and fours daily at its Kenosha and Milwaukee plants.

ASSOCIATION ACTIVITIES

Indiana State Convention

INDIANAPOLIS, Nov. 10—At a meeting of the Indianapolis Automobile Trade Association directors, decision was reached to join with the Indiana Automotive Trade Association in its plans to hold a convention and banquet here early in December, and to offer substantial co-operation to make the convention a success and of great value to the dealers of the entire State.

Matters of moment to the automotive trade are expected to be considered by the next Indiana State legislature, which meets early in 1923, and it is felt important that the trade of the entire State get together and discuss problems that may arise at that time.

This is not the first time that the local association has rendered valuable service to the State organization, for when the automotive trade body of the State was organized some two years ago the local trade group financed the organizing convention. At that time a large portion of all State distributors had headquarters in this city, but since then, due to general changes in distribution plans of many companies, this city no longer is the only important distributing center.

Criticisms and Suggestions Asked

CHICAGO, Nov. 10—Members of the Chicago Automobile Trade Association have been requested by the association to suggest new activities they would like to see undertaken or to offer any criticism they believe to be justified. The letter making this request was accompanied by a headed sheet of paper upon which to write the suggestion or criticism.

Detroit Breaks Even on Show

DETROIT, Nov. 15 — Detroit automobile dealers were given some first hand information on the sale of stocks and bonds at the monthly meeting of the association by Charles A. Nyman, sales manager of the First National Co. of Detroit, as part of a series of talks on various forms of merchandising which Manager H. H. Shuart has arranged for the monthly get-togethers.

A report on the closed car show just concluded showed that the association broke about even on the expense of holding it, and that it had resulted very satisfactorily from a business standpoint for dealers. Winter show plans were discussed, but no definite action was taken owing to the lack of a satisfactory building at this time.

Three new companies were elected to membership, the Marmon Detroit Co., Cunningham-Richards Co. and the Detroit Franklin Co. Application for membership from Pungs-Schmittdel Co. was received. Two changes in distributorships in the Detroit district were noted, Pungs-Schmittdel relinquishing a dealership of Studebaker to take on Stutz distribution, and Miller-Judd Co. changing from Liberty to Nash.

Allied Industries Formed

MINNEAPOLIS, Nov. 14 — Formation of the Allied Automotive Industries of Minneapolis has been completed at a second meeting. The initial meeting was Oct. 17. Members of the board of trustees chosen are as follows: At large—Frank L. Cochran of the Standard Oil Co., F. C. Moyer of the Goodyear Tire & Rubber Co., A. L. A. Spitler of the Northwest Oldsmobile Co., A. C. Reinhard of Reinhard Bros. Co., John Hancock of the Pure Oil Co. and Joseph Donnelly of the Mack Truck Co.

Minneapolis Automobile Trade Association —Harvey E. Mack of the Harvey E. Mack Co. and William Eggleston of the Northwest Automobile Co.

Minneapolis Garage Men's Association — W. R. Vashro of the B. L. Eckes Co. and W. J. Potts of the Potts Motor Co.

Tire Dealers Association—Henry Alden of the Minneapolis Rubber Co. and E. E. Bullis of the Northern Tire Service Co.

Northwest Tractor Trade Association — W. R. Biggs of the Avery Co. and J. E. Gardner of the J. I. Case Threshing Machine Co.

Vehicle Men's Association — Frederick Ritzinger of the Wallis Coach and Carriage Co. and L. K. Ritchie of the Boyd Transfer & Storage Co.

The officers are also members of the board, and two are to be named for the battery men's organization.

An amendment to the by-laws permits firm as well as individual membership.

Harry E. Pence said the organization may properly make known its wishes to the city council, members of whom are framing a wheelage ordinance for taxation purposes.

Joseph Chapman of the L. S. Donaldson Co. said that a movement for a convention hall can be accelerated by the allied organization. J. H. W. Mackie of the Payne Motor Co., president, was chairman of the meeting.

Syracuse Adopts Used Car Plan

SYRACUSE, Nov. 14—The Syracuse Automobile Dealers Association has adopted a co-operative used car market value information plan similar to that in use in Boston and a number of other cities. Under the plan actual selling prices of used cars and models are reported to the association by co-operating dealers and this information is compiled and relayed on a master report to all dealers.

A slight departure from other plans is found in the printing of cars not represented in Syracuse in red ink, for purposes of distinction.

Closed Cars as Christmas Gift

CHICAGO, Nov. 15—Thomas J. Hay, president of the Chicago Automobile Trade Association, has issued a statement, given considerable publicity in the daily press, calling attention to the suitability of the closed automobile as a Christmas gift, and stating that the inquiries for cars for that purpose this year are more numerous than ever before.

Comet Assets $461,000

DECATUR, ILL., Nov. 13—Assets of the Comet Automobile Co. of this city amount to $461,000 and the total ascertained liabilities, other than the $250,000 of bonds held as collateral security by the Farmers State Bank & Trust Co., are considered to be less than half the assets.

The future of the company is uncertain. The receivers will make no effort to operate the plant. They are now taking an inventory. The parts department is open in order that owners of Comet cars can purchase spare or extra parts if they require them. The receivers will probably also order the completion of a number of cars which were nearly ready at the time the plant closed.

Ogren Increases Capital

MILWAUKEE, Nov. 13—An increase in authorized capitalization from $500,000 to $1,000,000 is one of the final steps taken by the Ogren Motor Car Co. of Milwaukee in a general reorganization program. The company was established about five years ago and manufactures the Ogren six, a custom built car. Fred G. Smith, formerly of Cleveland, one of the original stockholders, has been made president and general manager.

Earnings of Mack Trucks

NEW YORK, Nov. 14—Mack Trucks, Inc., reports net earnings of $1,205,738, after charges for depreciation, maintenance and repairs, for the quarter ended Sept. 30, 1922. This is equal to $3.25 a share on 283,108 shares of common stock. This is in marked contrast to the same quarter of 1921, when the company reported net profits of only $12,633.

For the nine months ended Sept. 30 net profits totaled $2,766,564, equal to $6.79 a share on the common. Total current assets as shown by the financial statement of Sept. 30 are $22,052,844; liabilities, $32,428,940.

Chandler's Successful History Attracts Successful Dealers

THE MOST SUCCESSFUL motor car dealers have always been associated with successful cars.

Chandler's ten year history is one of sound success.

The permanence of Chandler as an important factor in the popular price field is beyond question.

A company that has always met production and marketing problems with masterful judgment, will continue to do so.

Chandler Six will enter 1923 with the added momentum of a highly successful 1922.

Dealers determined to sell one of the leading lines next year can negotiate now just as intelligently as in January—

And with greater probability of obtaining a franchise.

Are You Ready for Christmas Sales?

A most appropriate Christmas gift to a motoring friend would be a full set of CHAMPIONS.

A window display of full sets of CHAMPIONS packed in a neat Christmas wrapper for the popular cars in your territory, will make many sales—as the cost is within reach of all—and the gifts will prove both sensible and serviceable.

Priming Plugs Are an Excellent Christmas Gift

Our sales department will be glad to send you, without charge, the proper size Christmas wrapping paper to use for full sets of CHAMPIONS. Write us today.

Why Buy an Electric Drill?

Frequently an automotive repair man says:

"Yes, I would like to have a Portable Electric Drill, but I can't see my way clear to tying up $85 or $100 right at this time. I wouldn't use the drill enough to make it worth while."

YOU CAN BUY BLACK & DECKER PORTABLE ELECTRIC DRILLS ON TERMS

If you don't want to invest the full amount, you can make a small down payment, and take care of the balance in small monthly payments.

YOU CAN MAKE THE TOOL PAY FOR ITSELF

And when it is paid for, it goes right on earning extra money for you.

THE AMOUNT OF TIME YOU SPEND DRILLING HOLES IS ASTONISHING

A Portable Electric Drill is very much like a hammer. You pick it up and use it for a few seconds and lay it down. You do this thousands of times. You use it more than you realize.

666 USES FOR PORTABLE ELECTRIC DRILLS IN AUTOMOTIVE REPAIR SHOPS

As the result of the Black & Decker Prize Contest we have a list of 666 uses for Portable Electric Drills in Automotive Repair Shops, which we will gladly send you on request.

Because--

It has surplus power and does fast work.

It is light in weight, well balanced and easy to handle.

It is controlled *"With the Pistol Grip and Trigger Switch."*

It is arranged so that the cord can be quickly and easily renewed.

It has a cable clamp which holds the cable in a vise-like grip, taking all strain off the conductors.

It has extra large bearings; consequently exceptionally long life.

It has a commutator end cover entirely independent of the armature shaft bearing.

It has the toughest, strongest gears engineers have been able to design—stub tooth of special steel heat treated.

It has no gears running on studs.

It has full ventilation. Cooling air is circulated around outside of motor field as well as through gap between armature and field.

It is extremely rigid and exceptionally strong due to hexagonal body design.

It is grease lubricated throughout.

It has a spindle offset for close corner drilling.

It is unusually accessible. All parts are interchangeable.

Why buy a **BLACK & DECKER** Portable Electric Drill

Leave the Battery In the Car

—the Hoyt Cell Tester will find the weak cell instantly.

No need taking the battery apart or even out of the car when equipped with a Hoyt Cell Tester.

Simply place the two sharp steel prods, one on the positive, the other on the negative terminal of any cell—*and read direct.*

Now is the time to equip with Hoyt Cell Testers. For Summer's hard grind has weakened most batteries and as a result a lot of valuable "fixing up" business will drive up to your shop.

Be prepared to handle it.

The high grade "moving coil" voltmeter of the Hoyt, hung on brackets across the two prods, will tell you the battery condition at a glance.

Learn the details. Descriptive data—and our interesting trade proposition—will be sent on request.

Greatest Equipment Show Is a Business Builder

Exhibit in Chicago Gives Promise of Big Business Gain in 1923—Next Show to Be Closed, but with Modifications —New Push Put Behind Merchandising Campaign

By NEAL G. ADAIR

THE Automotive Equipment Association has just concluded a momentous convention in Chicago. The meeting, attended by 1500 men, saw the greatest exposition of the industry's products ever staged. It revealed prospective business for 1923 which gives every indication of running well ahead of the present year. It united in renewed co-operative efforts the manufacturer and jobber elements in the association, whose divergent views in the early hours of the convention threatened a serious rupture.

The show was the storm center of the convention. It was the association's first closed show, with the doors opening only for members and their representatives. The jobbers wanted the rule continued for the next annual exhibit. The manufacturers insisted on admission of non-member jobbers. Feeling ran high for a day or two but the jobbers saved the day with a compromise offer which the manufacturers unanimously accepted, the compromise making the 1923 show a closed exhibition except to non-member jobbers invited to attend by the board of directors.

THE adoption of the compromise started the convention on a series of harmonious sessions which carried the association to new heights of co-operative action. The merchandising campaign, leading constructive work of the association, was given new endorsement both by manufacturers and jobbers, promising a far broader and more aggressive activity in the next six months than at any time since the inauguration of the movement in the summer of 1921. Nelson H. Oliver, new president of the association, in a keynote address, called merchandising the predominant task of the industry and appealed to the membership to center their energies on merchandising work, for the greater profit of manufacturers, wholesalers and retailers and the greater service to the public.

Association members agreed in large number to get actively into the merchandising campaign, headed by Ray W. Sherman, working to broaden the market for the industry's products by assisting the retailer to realize more fully on the possibilities of service to his public with profit to himself.

Closer Harmony Insured

The convention left the association stronger than at any time in its history. There was wide approval of the suggestion of Howard M. Dine of Canton, Ohio, retiring president that less emphasis be laid on the difference between manufacturer members and jobber members and that all be regarded just as members working for the common good. Commissioner William M. Webster, presiding, did much to aid the process of drawing the two divisions of the membership into closer harmony. The show introduced a large number of new accessory and replacement and shop equipment items which will be described in next week's Motor World.

The convention and show brought together the largest crowd ever assembled at an A. E. A. meeting. At one convention session the doorkeepers counted 1260 men, including a few more than 500 delegates representing the membership. In attendance at the convention and show —manufacturers, jobbers, manufacturers' sales managers and salesmen and jobbers' sales managers, salesmen and buyers—there were fully 1500 persons.

The show, too, set a new record. There were 215 exhibits as compared with less than 200 at last year's show. They presented an inspiring array of the merchandise of the automotive

Digitized by Google

equipment industry—garage equipment, including heavy machinery and the lighter tools; accessories for the car and truck, replacement items for all parts of the automobile and tools for resale to the motor vehicle driving public. Billions of dollars of plant investment, hundreds of millions of dollars of annual production were represented in the exhibits, many of them brilliant examples of show merchandising. And in the "audience" —among the jobbers in attendance— there was represented many more millions invested in facilities of distribution.

Show a Business Getter

Even with the restricted attendance of jobbers under the closed show rule, the exhibit was quite generally conceded a better business show than the ones of 1921 and 1920. The smaller attendance gave a greater opportunity for conferences between manufacturers and jobbers and their representatives. The jobbers, because they had initiated the closed show decision, apparently went out of their way somewhat to listen to the sales talks of the exhibitors and, in some cases, to sign distribution contracts and place orders. The bulk of business done, however, and the interest shown by jobbers was not based on sentiment but on the confidence expressed by the majority of jobbers that the gains in business during the past few months are to be continued through 1923.

A few manufacturers complained of light patronage but just as many reported business written far in excess of last year. The bulk of the exhibitors united in terming the show the most successful the association has held.

Next Show Closed "With Modifications"

The manufacturers were not willing, however, to sanction another show with attendance limited to members. Before the exhibit had opened, before there was any opportunity to test the closed show idea, it was seen that the manufacturers were almost unanimously opposed to another exhibit under such rules. As the week wore on and the show presented a vigorous buying interest the manufacturers still stood their ground, contending for the right to show their products to the aggressive jobbers in the trade regardless of their association affiliation or lack of it. They contended that the investment required of the manufacturer for exhibiting entitled him to a larger audience than the less than 200 jobbers in the association. The manufacturers were unwilling, however, to open the show to exhibits of non-member manufacturers should space be available in later expositions.

The jobbers' contention for a closed show was based on their assertion that with hundreds of outside jobbers present the member jobbers are unable to get the attention to which they feel they are entitled from manufacturers and their representatives. Several jobbers told of going home from last year's show without getting a chance to talk with the representatives of several manufacturers whose lines attracted them.

The controversy was deadlocked for awhile, but the jobbers' suggested compromise, contained in a resolution offered by William E. Wissler, the new vice-president of the association, was adopted without opposition and with cheers as soon as it was brought out on the floor.

The fifth annual show, to be held next November in the Coliseum at the same time as the eighth annual convention, will be open for exhibit purposes to member manufacturers only. On the jobbers' side it will be open also to members only except jobbers whose names are approved by the board of directors. Presumably manufacturers and jobbers will submit names of non-member jobbers they would like to have attend, and the list as finally passed upon by the directors will receive formal invitations. This plan will keep the show strictly a wholesale trade show and at the same time will make the attendance more thoroughly representative of the industry than the exhibit just concluded.

Trade Conditions Reported

The gathering of manufacturers and jobbers in Chicago, particularly the assembly of jobbers, gave an opportunity for an interesting check-up on trade conditions.

Allowing for the normal seasonal decline, conditions are improving steadily in nearly all sections of the country. Some of the Rocky Mountain States and a section of the Southwest are still suffering from restricted credit and jobber business has been poor because of dealers' inability to finance purchases either of shop equipment or accessories. In other sections jobbers are still finding it necessary to ship some goods C.O.D., and some business is lost because dealers and garagemen will not buy under this requirement, but generally throughout the country dealers are beginning to get results in "asking 'em to pay," and business this fall is much better than a year ago.

The general run of jobbers at the convention had done 10 to 30 per cent more business, in tonnage, this year than in the same period of 1921. This gave them a dollar and cents result about equal to last year's and in some cases considerably better. Purchases of garage equipment have been on the upgrade for several months.

The New A. E. A. Leaders

The A. E. A. chose its new president from Chicago. He is Nelson H. Oliver, general sales manager of the Metal Specialties Mfg. Co., whose plant is in the Illinois metropolis. He is a former member of the board of directors and a present member of the committee which directs the merchandising campaign. The vice-president comes from the ranks of the jobbers. He is William E. Wissler, head of the automotive equipment department of the Herring Motor Co. of Des Moines, an automotive concern with a passenger car dealership and other interests. He also is on the merchandising committee. The new chairman of the board of directors is Earl V. Hennecke, general sales manager of the Moto-Meter Co., with headquarters in Long Island City, N. Y.

The outstanding accomplishments of the convention were the plans for intensifying the merchandising campaign, benefitting the retail as well as the manufacturing and jobbing divisions of the industry, the perpetuation of the annual business exhibit, which is one of the notable merchandising institutions of the automotive field, and the welding of the two elements of the A. E. A. membership into a more effective working unit.

Speakers outside the industry who addressed the convention were Judge James H. Wilkerson of the United States District Court in Chicago and William A. Durgin of the United States Department of Commerce. Wilkerson's address was a plea for universal respect of the law, and Durgin gave an illustrated talk on elimination of waste and simplified practices, which prompted the A. E. A. standardization committee to change its name to the committee on simplified practices and to make preliminary plans for cooperation with the Society of Automotive Industries and other organizations for simplification of manufacturing practices in the equipment field.

Show a Big One and Well Arranged

In addition to being the largest show yet held by the A. E. A., this year's business exhibit was the most attractive. With 215 manufacturers exhibiting, the demand for space was so great that it was necessary to cut down the allotments of the larger exhibitors from four to three and three to two spaces, and there were indications that, if the exhibit grows next year, as it did this, it will be necessary to engage the armory next to the Coliseum and place some exhibitors there, unless a contemplated second floor is built in the Coliseum.

There were numerous exhibits with a high degree of merchandising development in their arrangement. Numerous manufacturers plainly had spent many hundreds of dollars in special display backgrounds, stands and showcases, some of which not only invited the attention of jobbers but contained suggestion for jobber displays to sell retailers and dealer exhibits to win public attention.

Delegates, alternates and guests realized almost as soon as they had stepped inside the Coliseum that this was the best show staged by their association.

Novelties in Exhibits

There was much to attract attention and cause comment in some of the exhibits. The American Hammered Piston Ring Co., which showed a hammering machine finishing its pistons, had a caliphone mounted behind the hammer. The unseen voice, explaining the hammering process, kept the front of the exhibit crowded most of the time. Van Cleef Bros. had a pair of flaxen-haired "Dutch girls" on duty in the exhibit personifying the company's trade mark. The Quality Piston Ring Co. had a silk-gowned girl in a swing, made of a giant ring. Real girls, surely, swing, swing-

Digitized by Google

ing and making the men in the aisles think twice about "quality."

Christmas Sales Promoted

The A. E. A. Merchandising Department got attention for its slogan, "Let's Make This an Automotive Christmas," by dressing an automotive equipment Christmas window, which stood at the front of the convention hall, by using a decorated Christmas tree in its exhibit and by hanging one of its red, white and green slogan cards in every exhibit.

There were many exhibits which had demonstrations as well as displays of their products. Quite a few used miniature movies to illustrate the utility or salability of their merchandise.

New Impetus for Merchandising Campaign

The merchandising campaign, which has been in progress 16 months, with vigorous support by only a minority of manufacturer and jobber members, was given a new start in a testimonial hour during one of the general sessions. A number of jobbers told of increased sales in some lines of equipment, running as high as 100 and 200 per cent, as a result of sales promotion co-operation with their dealers. Two dealers, called into the convention as guests, told how they had built big, profitable automotive equipment businesses in small towns after jobber salesmen had shown them the opportunity.

When the testimonial session was over, one old line jobber from an Eastern State exclaimed:

"Hanged if we haven't been slackers," and turning to the man in the next seat, "What about you?"

"Guilty, too," was the reply, and judging from the applause and the showing of hands when Merchandising Director Sherman asked for promises of support of the department, the next six months will witness a much wider activity in sales promotion work than has been seen at any time since the campaign started.

Little Town Dealer a Convention High Light

The presentation of dealer stories by an Iowa and an Illinois dealer, proved to be among the convention high lights.

John Hall, head of the Hall Motor Co., Ford dealer in Ida Grove, Iowa, was introduced to tell how he had made automotive equipment an important and profitable part of his business, but he progressed into a stirring address on ideas, initiative and hard work as the foundation of salesmanship. Hall proved to be an orator, and not only that, but a logical thinker. He asserted that unwillingness to think was the cause of much of the lack of success in salesmanship, in the manufacturing and jobbing as well as the retail fields. His talk, coming from a dealer, was as startling as it was convincing in this assemblage of manufacturers and jobbers and their representatives. It won for Hall one of the most enthusiastic receptions ever given a speaker before the A. E. A.

Hall said he had never believed in the accessory business and never "bothered" with it until a salesman of the Herring Motor Co., Des Moines jobber, convinced him, after months of patient work, that it was worth trying. It didn't take Hall long, he said, to get his accessory business built up to approximately $1,000 a month, and this in a town of 2000 population. He uses advertising, display, demonstration and "Ask 'em to Buy."

Hall was followed by Louis Weiburg, accessory dealer in Pekin, Ill., in the territory of the Washington Auto Supply Co., of Washington, Ill., George Rinkenberger, president. Weiburg, a typical small town dealer, said he had been doing what he thought was a good business until one of Rinkenberger's salesmen showed him the simple steps in selling accessories at the curb by "asking 'em to buy." Weiburg has been practising this for months with his gas and oil customers and has built up his monthly volume of accessory sales more than 50 per cent, he said.

Jobbers' Stories Convincing

Jobbers who told stories of territory-wide results of sales promotion campaigning included N. F. Ozburn of Ozburn-Abston & Co., Memphis, Tenn.; L. A. Cavanaugh of the Motor Car Supply Co., Ltd., Calgary, Canada, and C. F. Wright of Ballou & Wright, Portland, Ore., and Seattle, Wash.

Ozburn told the story related in Motor World of Nov. 8 of five meetings a week held in his territory in the last 40 weeks, an activity which, he said, had given a new lease of life and a new opportunity for profits to hundreds of dealers in the southern territory. Ozburn said the effort had been worth all that it had cost, as his firm naturally had shared the profits of its dealers. He said the work, showing both the "Ask 'em to Buy" and "Shop Profits" films, would be continued.

Cavanaugh said results already were becoming apparent of meetings held in the Western Canadian territory only a few weeks ago. "Ask 'em to pay" suggestions, he said, had been particularly

helpful to dealers whose credit was tied up by too free accommodation of customers.

One Salesman, One Dealer, One Million Dollars

Wright told of campaigns last spring and this fall along the Pacific Coast, with Merchandising Director Sherman taking part. Gains of 100 to 200 per cent in dealers' business in some popular equipment lines had resulted, he said. He added that dealers were now beginning to apply with profit the lesson of the "Shop Profits" film.

The merchandising director's recommendation to the jobber members was for a campaign to assist dealers in building up their automotive equipment business. He urged that every jobber's sales manager arrange with his salesmen to select one dealer each as a likely prospect for intensified assistance over a six months' period beginning Dec. 1. The salesman would pay special attention to this dealer's sales work, helping him to select seasonably salable merchandise, display and demonstrate and ask motorists to buy it. Sherman said that if 1000 of the 4000 salesmen with jobbing houses of the A. E. A. would carry out the plan suggested, he believed the aggregate increase in business, on a basis of a $1,000 minimum gain for each dealer, would be $1,000,000. He suggested as the slogan for the campaign, "One Salesman, One Dealer, One Million Dollars."

The suggestion met with a hearty reception in the divisional meeting of jobbers. A majority of the sales managers present said they would put the plan in force in their organizations.

When Dealers Profit Jobbers Do, Too

In the divisional meeting Sherman told of results obtained with the "Ask 'em to Buy" and "Shop Profits" phases of the merchandising campaign. He cited numerous cases of jobbers who had made substantial additions to their business by fostering the movement in their territories, in some cases by holding meetings showing the films, in others by individual work with their more aggressive dealers and in others by a combination of the two plans. He called attention, however, to the fact that so far only a minority of the association jobbers had engaged actively in the work, and so only a minority were getting full returns on the investment which all association members have made in the campaign. He said the big job is to get all dealers to realize what some now thoroughly understand, that every car coming to the dealer's or garageman's door is a market both for merchandise and service and can be made a profitable market for the dealer by sales effort.

The merchandising director's statements were supported by C. E. Justus of Justus & Parker Co., Columbus, Ohio; Frank White of the Orr Iron Co., Evansville, Ind., and others, who told stirring stories of added profits for dealers and increased business for their houses brought about by co-operation with the merchandising campaign.

Sherman also urged activity by the jobbers to stimulate their dealers to work for the sale of accessories as Christmas gifts. He mentioned window and counter cards, stickers for mail matter, sales letters and circulars illustrating automotive gift ideas as helps which jobbers can put in the hands of dealers to build holiday business.

Manufacturers to Co-operate

Sherman's talk to the manufacturers' divisional meeting was a request for the support of sales executives to emphasize to the retailer how he can make profits selling or using the manufacturers' product. He made a special plea that every manufacturer member of the association get out at least one piece of printed or illustrated matter in the next six months devoted exclusively to this idea. A showing of hands indicated that a number of manufacturers were prepared to heed the request.

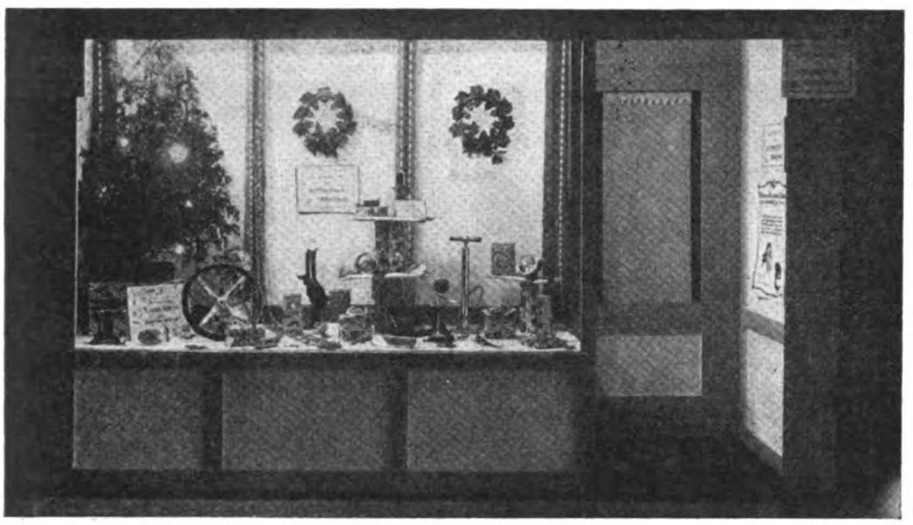
Sherman pointed out that the manufacturers cannot expect to reap the benefits of a successful merchandising campaign if they leave all the work to the jobbers. He cited several instances of manufacturers who had obtained definite results by issuing advertisements and mail literature, in some cases telling the story of the dealer's profit in handling an item of merchandise and in others showing how the use of a piece of shop equipment had built profits. Sherman stressed the fact that specific statements of the profit-making possibilities of an article are necessary to get the retailer actively interested and so supplement the work of the jobber salesman and the broader undertaking of the merchandising movement.

New Universal Catalog

It was decided to get out a second edition of the Universal Catalog, describing products of manufacturer members of the association, in time for the November meeting next year. The new catalog probably will be of loose-leaf rather than bound style.

Relief for Canadians

The manufacturers' division recommended to individual members that refunds for defective goods returned by Canadian jobbers be based on the laid-down price in Canada, that is, including the Canadian import duty. Canadian jobbers have complained of the burden of bearing the customs charge in case of these refunds, a condition which naturally has worked to the advantage of Canadian manufacturers competing with American makers of some automotive lines.



The Social Side

The social side of the convention was seen in numerous large and small dinner and lunch parties and in a dinner-dance-entertainment in the Gold Room of the Congress Hotel, attended by more than 600 members, their families and guests.

Next Meeting in New England

The A. E. A. having held its summer meetings in various sections of the country, including the Pacific Coast, Rocky Mountains and Middle West, decided to go next summer to New England, meeting June 25 to July 1 at the Balsam House, Dixville Notch, New Hampshire. This resort, in the White Mountains, is about 240 miles from New York and 15 miles from the Canadian border. It is reached by train or motor car. It was selected after a survey of New England hotels by Frank T. Chase of the Frank Mossberg Co., North Attleboro, Mass., representing the board of directors. It will accommodate the 600 or more delegates and their families who usually attend the summer convention and in addi-

Any Dealer Can Dress a Window Like This

A real window, presented by the A. E. A. merchandising department, was a feature of the Chicago convention and show. tion to sleeping and dining accommodations, motoring and sports facilities, there is an auditorium large enough for the convention sessions.

Nine New Directors

Nine directors were elected, one to fill a vacancy and eight to fill expired terms. They are: Nelson H. Oliver, Metal Specialties Mfg. Co., Chicago; Wallace G. Page, American Motor Equipment Co., Boston; G. H. Southard, Jr., J. & B. Mfg. Co., Pittsfield, Mass.; C. C. Hillis, Electric Appliance Co., San Francisco; R. J. Cahall, Cahall Motor Supply Co., Philadelphia; F. B. Caswell, Champion Spark Plug Co., Toledo; N. F. Ozburn, Ozburn-Abston & Co., Memphis; A. H. Bowman, Bowman Bros., Ltd., Saskatoon, Canada; Percival Stern, Interstate Electric Co., New Orleans.

Hold-over members of the board are: C. L. Stebbins, Double Fabric Tire Co., Auburn, Ind.; W. H. Parkin, National Standard Co., Niles, Mich.; S. D. Black, Black & Decker Mfg. Co., Baltimore, Md.; W. E. Wissler, Herring Motor Co., Des Moines; D. A. McConnell, Klaxon Co., Newark, N. J.; H. H. Reinhard, Reinhard Bros., Minneapolis; E. V. Hennecke, Moto-Meter Co., Inc., Long Island City, N. Y.; B. L. Clements, Borderland Auto Supply Co., El Paso; C. F. Hodgson, Weaver Mfg. Co., Springfield, Ill.; A. D. McMullen, Motor Mercantile Co., Salt Lake City; W. C. Hecker, Curtis Pneumatic Machinery Co., St. Louis; W. L. Moncur, Cutten & Foster, Ltd., Toronto; W. T. Morris, American Chain Co., Bridgeport, Conn.; G. Norman Baughman, G. Norman Baughman Co., Tampa, Fla.

New Members

Eight jobbers and fourteen manufacturers were added to the roster, as follows:

Jobbers:

Evans Rubber and Supply Co., Fresno, Cal.; Mossman-Yarnelle Co., Fort Wayne, Ind.; Orgill Brothers & Co., Memphis; Perry & Sherman, Utica, N. Y.; The Ready Auto Supply Co., Inc., Brooklyn, N. Y.; Vermont Hardware Co., Burlington, Vt.; The Walter Tips Co., Austin, Tex.; James Martin Co., New York.

Manufacturers:

B. J. Corp., New York; Burgess-Norton Mfg. Co., Geneva, Ill.; Gladiator Mfg. Co., Auburn, Ind.; Grigsby-Grunow-Hinds Co., Chicago; Kay-Bee Mfg. Co., Los Angeles; Keasby & Mattison Co., Ambler, Pa.; Parker & Waterman Mfg. Co., Los Angeles; Perfection Gear Co., Chicago; Rub-Tex Products, Inc., Indianapolis; Carter Carbureter Co., St. Louis; A. Schrader's Sons, Inc., Brooklyn, N. Y.; The Sunderland Co., Warsaw, Ind.; The Toledo Steel Products Co., Toledo; Williams Brothers Aircraft Corp., San Francisco.

Equipment Men Visit Jackson Plant

JACKSON, MICH., Nov. 18—One hundred and fifty men of the automotive equipment industry, many of them jobbers who have been in attendance at the Automotive Equipment Association convention in Chicago, came here to-day as guests of the Sparks-Withington Co. They arrived on a special train, and after a morning trip through the plant where Sparton horns are made, went to Ann Arbor for the Michigan-Wisconsin football game.

New Trade Body to Promote Use of Shop Equipment

CHICAGO, Nov. 18—The Service Equipment Associates, an organization to promote education as to the proper understanding and use of equipment in automotive maintenance establishments, was organized at the Congress Hotel last night. G. W. Brogan of the Black & Decker Mfg. Co., presided.

The organization had its beginning last May when a group of equipment manufacturers agreed upon a plan of pooled advertising of the promotional or educational sort. This advertising was planned to promote improved equipment and has centered about the slogan "The well equipped shop gets the business." This advertising was first placed in *Motor Age* and MOTOR WORLD and later extended to other publications. Not all of the group joined in the advertisements in all of the papers.

There was no formal organization back of this plan but several months trial had convinced most of the participants that it was worth while and Nov. 10 a meeting of all who had participated was called and a more formal organization was discussed and a committee named to draft the plan. This plan was placed before the members of the groups and some invited guests last night. Short talks were made by William Webster, Commissioner of the A. E. A. and Ray W. Sherman, merchandising director.

The organization name of Service Equipment Associates was decided upon. Three members of an executive commission were elected as follows: For three years, G. W. Brogan, The Black & Decker Mfg. Co.: For two years, S. V. Wood, Mid-West Mfg. Co.; for one year, Charles F. Hodgson, Weaver Mfg. Co.

Four meetings will be held each year, two of which will be on the occasion of the Automotive Equipment Association meetings. All meetings are to be of the round table order and promotion of the use of better and more complete equipment is to be the only objective. The member firms, three of which were elected to membership last night are: T. R. Almond Mfg. Co., American Bureau of Engineering, The Black & Decker Mfg. Co., The Burton Rogers Co., Continental Auto Parts Co., Greenfield Tap & Die Corp., Jacobs Mfg. Co., Manley Mfg. Co., Micro Machine Co., Mid-West Manufacturing Co., Frank Mossberg Co., Oxweld Acetylene Co., Weaver Mfg. Co., Joseph Weidenhoff, Wright Mfg. Co., Bonney Forge & Tool Works, Stevens & Company, Kellogg Manufacturing Co.

Makers Endorse Local Service Associations

Factory Service Managers Put Stamp of Approval on Local Service Association Idea—Seek Uniform Factory Policies Covering Parts Sales—Convention Very Favorable to Flat Rate System

By J. HOWARD PILE

CHICAGO, Nov. 16.

THE local service association and its activities, its relation to the dealer, the car owner and the manufacturer formed the major topics of discussion at the semi-annual convention of N. A. C. C. factory service managers held at the La Salle Hotel Nov. 14 and 15. The entire second day was devoted to these subjects alone and the importance of the growing movement of organization among local service men was given the recognition that it has earned. The other subjects taken up were about equally divided between problems of factory shipping, accounting and handling, and policies affecting distributors, dealers and local service stations.

The service association is no new topic at these conventions, which have been held in May and November since 1919. In fact some mention has been made at each convention. At first the subject was admitted with evident distrust and a feeling that the time devoted to it was an intrusion on subjects nearer the hearts of the delegates. Later more time was given to it and the feeling generally toward the movement was much improved. The culmination was the absolute endorsement of the movement by a unanimous vote in favor of the local association and an overwhelming sentiment favoring every possible help in maintaining those in existence and in assisting in the formation of others.

THE day devoted to the service association was started off with a three-cornered discussion presenting the viewpoints of the car owner, the dealer and the manufacturer. Alexander Johnston, Editor of *Motor*, addressed the delegates from the viewpoint of the car owner. He cited the thousands of letters received by his publication annually from car owners requesting advice on repair problems and making complaints of overcharges on the part of service shops. He said that the adoption of the flat rate was a great help in checking up such complaints. He thought that the formation of local service associations would be a great help to the car owner, particularly through the co-operation of the factories with these associations.

The dealer viewpoint was presented by Eugene Silver, Chicago distributor of the Cole. He told of the attempt to form a service association before the war, but it was not successful because its membership was largely made up of those whose interest was primarily the selling of accessories and equipment rather than a betterment of service to the car owner. During the period of the war nothing was done, but after business began to settle down a bit after the war another effort was made to form such an association. The former lines of endeavor were discarded altogether and the membership was confined entirely to dealers' service managers.

Dealers Educated

Almost from the start the dealers began to find out things through their service managers' organization, and some of the things surprised them. For instance, they found that dealers generally were not getting the insurance business that they should be getting. An investigation by the service association showed that the reason they were not getting it was that they were being consistently underbid by a certain class of repairshops that seemed able to turn the work out at prices below the dealers' costs. Still further sleuthing revealed the fact that these shops secured parts to complete the insurance jobs by buying worn out parts from the dealers' back doors as junk. The insurance companies of course knew nothing about this deception and the car owner did not know anything about it till something began to go wrong with the car. This evil was overcome by a meeting with representatives of the insurance companies and an agreement among the dealers to mutilate their worn out parts before selling the metal. The result has been that the dealers have been able to compete favorably in getting insurance business.

Another evil that was discovered was the fact that dealers and distributors of cars and trucks were actually carrying pirate parts in their own stock bins and selling them to customers although carrying on propaganda to the car and truck owners to use genuine parts only. Many dealers could not believe this until they actually went into their stock bins and found out the truth. The channels through which these parts crept into the bins were simple. It seems that certain small repair shops, having secured an order to make repairs on, say, a Blank car, would go to the Blank dealer, get the parts required, pay cash for them and get a bill to show to the car owner as evidence that he was getting genuine parts. Then later, these shops would return such parts not positively marked with the maker's name or trade mark, but the parts returned would be pirate parts. The stock clerk would put them back in stock and return the cash to the shop.

Silver told of other evils that were discovered through the local service association and further spoke highly of the flat rate system, and said that in his belief every dealer in Chicago would

Digitized by Google

be operating on the flat rate system by the first of the year.

The point of view of the manufacturer was admirably handled by B. B. Bachman, chief engineer of the Autocar Co. and president of the Society of Automotive Engineers. He reviewed briefly the history of the development of the automobile and said that necessarily the designing engineer was the first in the field because there could be no problems of service, production or selling until the vehicle had first been laid down and built. After the design had been worked out, the next class of engineer to come to the front was the production engineer, whose problems are those of directing machine and hand processes so that the vehicle can be produced economically in quantities sufficient to meet the demand. Bachman said that although the service problem had started as soon as the first automobile was on the road, that the developing of engineers to keep the car running had not kept pace with the rest of the industry, and he felt that the time was now ripe for the development of a high class of service engineers. After telling of the great benefits derived by associations of other classes of engineers, he could not help feeling that the local service association would do much to build a higher grade of car and truck service.

C. A. Vane, general manager of the National Automobile Dealers Association, made a short address supplementing what Silver had said, and went on record as emphatically endorsing the service association movement. F. A. Bonham of Durant felt that the local service association bore somewhat the same relation to automobile service as the fair trade leagues bear to general business. They put the business on a higher plane and remove or considerably reduce suspicion on the part of the buyer.

Having disposed of the theoretical value of service associations, their practical application was demonstrated by short talks by local association representatives from different parts of the country. J. Howard Pile, representing the New York association, told of the formation of the organization, the quality of the membership and some of its accomplishments during its three years of existence. The improvement in the labor situation due to the personal acquaintance of the employers was one of the points brought out. Other helpful things were made possible through this personal acquaintance which had never been possible before the formation of the association. The formation of the Vigilance Committee and its several successful actions against gyps were cited.

Work of Associations

Fred M. Smith, secretary of the Brooklyn association, gave a brief history of his organization, and told of the overcoming of strikes and labor trouble, the successful conclusion of which was brought about by the fact that the members of the organization stood together and refused unjust demands and carried on helpful education to mechanics. A great deal of interest was shown in the campaign for winter repair business, which was successfully carried out by the Brooklyn association last fall through the expenditure of some $3,000 in newspaper advertising and the distribution of over 50,000 printed folders, stickers and other propaganda, all designed to get car owners to bring their cars in for repairs during the fall and winter. No such campaign could ever be carried out by dealers acting independently, but by joining forces they had been able to put the idea over in such a big way that the results were more than satisfactory.

Herbert Buckman, representing the Cleveland Automobile Merchants and Manufacturers Association, made a snappy address in which he told of the great benefits the local organization had been to the dealers in Cleveland. A rather amusing but serious situation was brought to light in this city. The several dealers had come to the conclusion that it was more economical to have each car traded in reconditioned at the shop of the dealer in that car. For instance, the Buick dealer, taking an Overland car in trade, would have the car reconditioned at the Overland shop, which would have all the trained mechanics and special tools necessary to conduct the repairs in the most efficient manner. It came to light, however, that through a difference of factory policies, certain companies would grant discounts and extend credits to other companies, while certain other companies could not break factory rules and were compelled to demand cash and no discount. The result has therefore not been very equitable. Buckman asked that serious consideration be given by the factories to the formation of uniform policies covering these points.

LOCAL service associations consisting of men directly interested in service to the car owner came into their own at the Chicago convention of the factory service managers. The convention unanimously indorsed the work of these associations and pledged the assistance of the factories in the organization of new ones and in the development of those already in existence. They recommended the adoption by these associations of a standard form of emblem and a code of ethics. Speakers before the convention stressed the value of the work done by these associations to the car owner, the dealer and distributor, and the factory.

Other experience talks were given by H. H. Shuart of the Detroit organization and Fred Lundgren of the Cincinnati organization. Following the "experience meeting" typical motion pictures used at service association meetings were shown, one of these being "The Making of an Automobile" produced by the Bureau of Mines and the Studebaker Corp., and the other the "Shop Profits" film of the Automotive Equipment Association. Clyde Jennings, Editor of *Motor Age*, in a talk typifying an address made at a local service association meeting, stressed the importance of the contact between the car owner and the shop. He said that the trouble shooter and the mechanic were making satisfactory strides, but that the diplomatic equipment of the service salesman was not developed sufficiently to keep pace with the rest of the organization.

Unanimous Endorsement Voted

Following the complete presentation of the local service association from every conceivable angle, the factory delegates took the following action:

1—They unanimously endorsed, by vote, the work of the local service associations, voted to continue propaganda through the service division tending to the formation of new associations and to assist in every way possible the twenty-five existing associations.

2—They approved and recommended the A. S. A. emblem which is now being used for lapel buttons, stationery and advertising by the New York, Brooklyn, Newark and Philadelphia associations.

3—They recommend the adoption of some sort of pledge or code of ethics by the members of the several associations and offered the pledge used by the Brooklyn association as a possible form.

4—They agreed to use all possible factory organization to assist in the successful operation of present associations and to help other organizations to get started.

The subjects relating to factory service departments were handled on the first day of the convention. The sessions were opened with an address by Thomas J. Hay, president of the Chicago Automobile Trade Association, being followed by H. J. Leonard, vice-president and general manager of the Stephens Motor Car Co. Hay welcomed the delegates to Chicago and referred to the part service had played in the success of his own organization.

The subject of pirate parts, which comes up at every meeting, is still going strong, but at this convention less time was given to experiences of different factories with the problem and, after the reading of a committee report asking the continued influence of factory and sales departments toward the use of genuine parts, a suggestion was made that some general propaganda be carried to the car owner through various mediums to have him insist on genuine parts and advising him to take his repair work to authorized shops where such parts could be procured.

Much general information was obtained in the discussion of the shipment of parts in carload lots. This is of importance to both owner and dealer because it means a considerable saving of transportation costs. In many cases the shipment of new cars does not fill a box

Digitized by Google

car to its minimum capacity, and the dealer has to pay a less than carload rate or the carload rate when the car is not full. The additional weight can, in many cases, be made up with parts shipments which bring the cost down considerably. The dealer can profit by this by placing his orders sufficiently in advance so that the factory can make the shipments to fill the cars at least to their minimum capacity and sometimes to their maximum capacity.

Considerable confusion exists in the matter of which parts are taxable and which are non-taxable. It is almost impossible for any factory or any dealer to properly classify the parts to conform to the rulings of the Federal Government. Many factories have, therefore, sent duplicate copies of their parts book to the Tax Bureau for the marking of taxable parts. It has been observed that there is no seeming uniformity in the markings when the books are returned, a pet cock, for example, which may be used in several places on the car, being taxable when used one place and non-taxable when used in another place. The practice among dealers in charging the tax on parts could not be ascertained, but much difference in practice existed among the factories.

A. Crosley, manager of the parts department of the Autocar factory, warned of the necessity of extending the tax returns on the invoices so that at any time the amounts of the taxes could be determined by a government inspection. He said that no matter how carefully the handling of the tax problem was conducted, there was always a possibility of unknowingly breaking the law, and the only protection was to record the amount of the tax and who paid it, so that it could be returned to conform to a tax ruling. It was brought out that three manufacturers absorb the tax, and in such a case there was a technical question of whether the amount of the tax absorbed should be stated on the invoice. It was generally considered that it should be stated. A comparison of taxable parts showed that some companies ran as low as 19 per cent and some as high as 50 per cent.

Discounts to Independents

The question of granting parts discounts to independent shops is another one of the regular debates. Nothing at all new was brought out on this subject, but the discussion showed a much more liberal attitude on the part of practically all manufacturers. Some makers are allowing a regular discount in all open territory and allowing the distributor or dealer to use his own judgment as to the granting of the discount in the territory in his jurisdiction.

At least one manufacturer has a very constructive policy of granting service contracts to approved independents in open territory. It has been the experience of this manufacturer that such contracts are very often the means of selling cars and sometimes ripen into sales contracts. In periods of abnormal turnover in car dealerships these service contracts are very valuable to the manufacturer to maintain the cars already in the territory and to take care of parts distribution and service in adjacent territories. C. D. Cowles, parts manager for Pierce-Arrow, said that he thought there was a direct parallel between the selling of completed vehicles and service parts in this matter of granting discounts.

A very interesting sidelight on the service industry was given by W. L. Wise of the National Cash Register Co. While the products of this company are distributed and serviced by branches and agents, all of which are under the direct control of the factory, Wise said that much the same problems of pirate parts, lubrication and repair service had to be met and that the organization had to be fully equipped to handle all cases with expedition.

CHEAPER and better service for the owner seemed to be in the minds of the factory service managers at the Chicago convention. The shipment of parts with cars to avoid freight expense was one money saving idea brought out. The subject of stronger and lighter packing and boxing was also discussed. The factories seemed to be more inclined to be liberal in the matter of granting parts discounts to independent shops.

The boxing and crating of parts for shipment is a subject that has not heretofore been brought out at any convention, nor has there ever been very much opportunity to exchange views between service men. Jefferson Caylor, of the General Box Co., Chicago, gave some salient facts regarding the boxing of parts and vehicles for export and showed instances in which savings could be effected by study of the boxing problem. He said that there was hardly a box or crate that could not be reduced in weight by a real study. In many cases savings of 50 per cent tare weight have been effected. This means a great deal to the dealer in the reduction of costs as he has to pay the expense unless he can charge it back to the customer. It is distinctly to the advantage of the factory and the car owner to reduce this cost, because every decrease in cost removes just so much sales resistance. Caylor advocated boxes which would not be over a weight to be readily handled by two men.

A wide difference in policy exists between manufacturers in the matter of goods for export. One maker charges 25 cents per cubic foot, another 3 per cent of the invoice and another allows 5 per cent less discount on export vehicles and parts. Others come at many points between these. The expense on fenders can be greatly reduced by placing at least three fenders to the crate as such a crate does not cost any more than one or two fender crates. There is some tendency for car makers to buy at least some of their boxes and crates from concerns making a specialty of packing and shipping containers. As far as could be learned, none of them buy all of their boxes and only about a dozen make all their own boxes.

Flat Rates Idea Established

It may seem strange that not a great deal of discussion was given to the subject of flat rates. The reason is, however, that there were practically no opponents to the system, what argument there was being as to the best form in which to present the flat rate to the car owner. From practically a universal objection to the plan three years ago, the service managers have gradually come to accept it as THE thing, with the exception of two or three makers who have special conditions under which such a system does not satisfactorily operate. R. A. Shelly, Dort service manager, stated that a recent census of dealers throughout the country indicated that over 75 per cent were in favor of flat rates. He spoke of the growing tendency of the use of the piece work system in connection with flat rates, and W. R. Webster, Overland service manager, confirmed the truth of the success of the plan and stated that some of the Overland branches were working the plan out with satisfaction to all parties.

Lubrication and inspection policies did not show a great divergence, but several ideas that are worth noting were brought out. W. M. Warner, Cadillac service manager, said that the Chicago distributor uses a small paster which is stuck on the speedometer. On this paster is noted the mileage reading at which the car should be brought into the shop for inspection. When the season mileage and the figures on the paster agree, there is a direct reminder to the owner. The period of free inspection varies from the usual 90 days upward, and some dealers are making a flat charge for inspection, oiling and adjustment for six months or a year, this charge running anywhere from $10 to $50. The Simons Sales Co., handling the Overland in Detroit, has such a service for one year for $25.

New Jersey Good Roads Association to Meet

NEWARK, Nov. 18—The New Jersey Good Roads Association, which has become a permanent organization composed of leading automotive and other business men of the State since the approval of the $40,000,000 highway building program by the voters on election day by a majority of more than 16,000, will hold its first annual dinner at the Robert Treat Hotel here on Dec. 5.

Among the speakers will be Alfred Reeves, general manager of the National Automobile Chamber of Commerce, Senator Edge and Governor-elect Silzer.

Tire Dealers and Makers Pledge Support Toward Uplift in Merchandising

National Convention in Milwaukee Prepares the Way for Strong Dealer Body—Membership Campaign to Be Launched

MILWAUKEE, Nov. 17.

GEORGE J. BURGER of New York was elected president of the National Tire Dealers Association at the second annual convention, held in Milwaukee, Nov. 14 to 16. Burger is president also of the Greater New York Tire Dealers Association. He succeeds R. F. Valentine of Cleveland, who guided the destinies of the association during the first year of its active existence.

Frank Zeman of Chicago was re-elected vice-president. Directors include Sam A. Rowe, Milwaukee, secretary of the Milwaukee and the Wisconsin Tire Dealers Associations; Valentine, the retiring president, and L. E. Long, Sterling, Ill.

The executive committee, consisting of the officers and directors, will select a secretary and treasurer later. It was decided to employ a paid executive on a whole-time basis, and the committee will take time to comb the field to find a man who meets all of the qualifications necessary to build up a large and influential membership.

"We tire dealers must work in harmony with the manufacturers in order to achieve the best results possible for dealer, maker and consumer," was the keynote of this year's convention as enunciated in an address by the new president, Mr. Burger. Discussions during the various sessions developed clearly that the dealers recognize that, if the tire business is to be purged of evils and nuisances, the dealer must first put his house in order and then he may expect and be assured of the utmost co-operation of the manufacturer.

Many Makers Present

Virtually every representative tire manufacturing concern in the country was represented, and a most friendly attitude and a helpful tone pervaded every expression made by them on the floor of the convention.

While it was discovered to be the main idea of some members in the past to attempt to work upon the manufacturing interests rather than among themselves to eradicate acknowledged evils, at this convention the thought was dominant that it is essential that a strong, powerful body of dealers, committed to ethical practices, be built up, and to such an organization the assistance of the manufacturing group was gladly promised.

Standards of qualifications for eligibility to membership are being formulated, and it is believed that within a relatively short time dealers will be seeking membership in the association instead of requiring strong urging and persuasion to join. Like all new organizations, the tire dealers, since their association was formed a year ago, have waged an uphill fight to make the general body of dealers recognize the importance of belonging to the association and making themselves a part of its work.

Membership Qualifications

At present the qualifications, which will be effective until Jan. 1, are that an applicant for membership must be a bona-fide dealer in tires, whose principal business is the merchandising of tires and whose practices and policies subscribe to the generally accepted principles of legitimate, fair and honorable dealing. The dues of $6 a year will be increased to $15, and as soon as the new secretary is able to put under way a membership campaign, the standards of eligibility will be strengthened. While the association desires a large membership, it intends to make no sacrifice of quality to quantity, for it desires to stand before the manufacturers and the public as a body of high grade merchants whose policies are entirely lacking in any ulterior motive and will command the respect of all concerned.

Briefly the aims of the association, as enunciated at the Milwaukee convention, are:

1. The sale of blemished and seconds to bona-fide dealers instead of "gyps" and brokers.
2. The discontinuance of basing equipment accounts on five instead of four tires.
3. The absorption of the war tax.
4. The reducing of direct sales to national and commercial accounts.
5. The enactment of ordinances, already accomplished in 25 cities, prohibiting spurious advertising and misrepresentation.
6. Increased margin of profit to the dealer.
7. Abolition of mileage adjustments.
8. Mutilation of all tires returned for adjustment.

That an advance of 5 to 10 per cent in the price of tires is to be looked for was the statement made by a number of dealers on the floor, although no direct intimation of increased tire prices was given by representatives of manufacturers in public expressions.

A tour of inspection of the plant of the Federal Rubber Co. at Cudahy, a suburb of Milwaukee, was a feature of the Wednesday morning session. Of interest was a tire-changing contest in the open air in the parking space at the rear of the Hotel Pfister. "Charlie" Paine, the present champion, was defeated by Fred Schmidt of Milwaukee, but his world's record, recently made, was not broken. Schmidt was timed at 3 min. 31 sec. in jacking up a Ford car equipped with standard clincher tires, removing one tire, putting on a new casing and tube, pumping it up with a single action hand pump and releasing the jack.

Farm Equipment Makers See Upward Turn in 1923

CHICAGO, Nov. 18.

THE National Association of Farm Equipment Manufacturers tractor and thresher department's two-day convention at the Auditorium Hotel opening on Nov. 16 was featured with lively discussions.

Perhaps the most important step taken at the meeting was the approval of the National Institute of Progressive Farming. Guy Hall, the mainstay of this department made a brief report of the progress of the institute in the past year, presenting reproductions of the vast amount of publicity which had been given the industry as a result of the work of the institute and explaining the value of newspaper publicity in selling the power farming idea.

The finance committee, assigned to find a means of financing the progressive farming department, asked that the association base contributions of members on sales, with $100 being the minimum

Digitized by Google

and $3,000 the maximum contribution. It was decided, too to send requests to affiliated associations for financial assistance to promote this work.

"Selling the Tractor Idea" was the subject of Dave Darrah of the Hart-Parr Co. who dwelt on the need of confidence on the part of the farmer in the industry and in power farming. He told how this confidence could be gained by honest educational advertising, warning against the wrongful use of publicity and branding carelessness in carrying the power farming idea to farmers as harmful to the industry.

Darrah spoke of the vastness of the power farming industry, calling attention to the fact that its mission was to sell to the largest industry in the world a better means of obtaining a livelihood. He also went on record as indorsing wholly, the work of Hall and the Institute of Progressive Farming, stressing particularly the necessity of favorable publicity for the tractor.

He cited five advertisements which were run recently by the First National Bank of Omaha as proof that the banks recognized the great importance of the power farming industry. The ads referred to by Darrah were presented by Hall and were wholly in the interests of power farming machines. A letter from the vice-president of the bank asked for an expression from the members on the ads and it was decided that each one would write a letter of approval and comment to the bank.

In another discussion it was decided that no national tractor demonstrations and no national tractor shows be held under the auspices of the department. Instead, "Power Farming Day" at the leading state fairs was indorsed by the organization with the provision that all exhibits be confined to State grounds. Definite arrangements for the 1923 fairs were left to Guy Hall who will take the matter up with the State Fair Association at the Toronto convention in January.

The proposed tractor show to be held during the Farmer's Week at the Ohio State University, Jan. 27-31, 1923, was approved so far as the show was concerned, but tractor tests were left optional to the individual manufacturer. The show and demonstration committee was appointed to look after the details of the Columbus event.

In commenting on the 1923 outlook, Floyd R. Todd of the Deere Co. predicted that 1923 would be the turning point in the industry and that 1924 would witness the greatest selling period the industry has ever known.

"What Kind of Tractor Advertising Pays Best" was talked on by H. E. Orr of the Cleveland Tractor Co. with subsequent discussion led by A. C. Seyfarth of the International Harvester Co. who urged that the power farming idea be more prominent in the advertising copy of the manufacturers and that they see the importance of "hooking up" the national advertising with the dealers'.

Representatives of the Federal Reserve Bank addressed the meeting, asking for monthly figures on sales and production from every manufacturer, to aid them in compiling charts and tables which would readily show the condition of the industry. It was pointed out that such a plan would aid materially in the selling end of the business as reports issued by the bank would show where the effort was needed. The bank men also stated that strict secrecy and confidence were regarded for any manufacturer's figures, explaining that the purpose of the reports was to arrive at an average of sales and production of the industry as a whole.

J. P. Bartholomew read a report on foreign trade on the first day and W. H. Strackhouse delivered a talk on "Industrial Freedom." Finley P. Mount was re-elected chairman of the tractor and thresher group for the coming year.

An Unusual Lesson in Salesmanship

A CLEVER object lesson in salesmanship which would pay other organizations to follow was staged recently by L. J. Hannah, manager of the Hannah-Miles Co., Louisville distributor for Dodge Brothers cars.

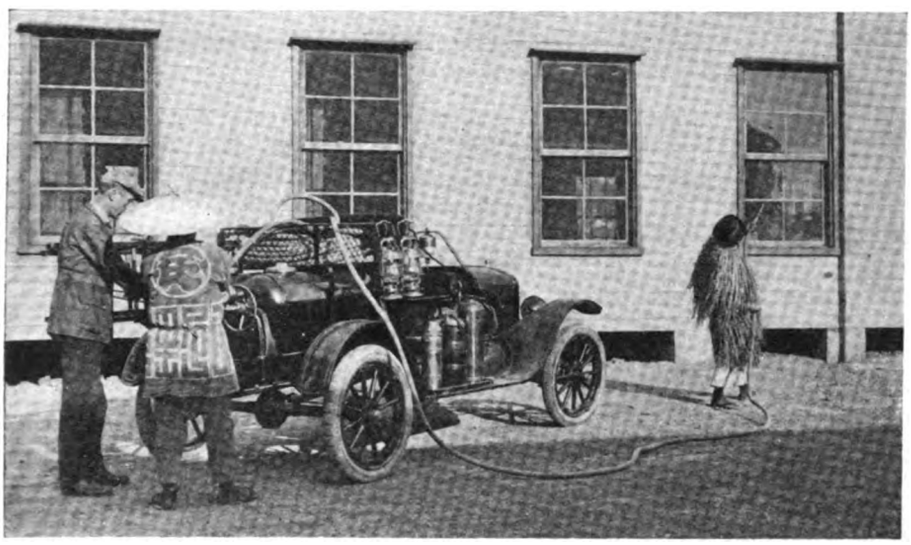
Hannah was holding an important conference in his office the other afternoon, when a salesman called at the desk of his private secretary just outside the door and asked to see the manager. The door was slightly ajar and the salesman was overheard by Hannah, who called out that he was very busy at that moment. Immediately the salesman began in an inoffensive way to make it a point to see Hannah, at the same time edging to the door.

Before the Dodge Brothers' dealer realized it, the man had actually gained admittance to the room, and so interesting and persuasive was the visitor that a happy thought struck Hannah. For a long time he had been trying to drive home to his salesmen the idea of not letting the prospective buyer of Dodge Brothers' motor vehicles put them off too easily. So Hannah told the visiting salesman that on the following evening he had a meeting of all the salesmen in his territory scheduled, and if the caller would gain entrance to the meeting and sell him the proposition before his men he would sign an order. The salesman took him up. Before his departure the Dodge Brothers' dealer warned him that he would make everything connected with the affair as difficult for the visitor as possible.

The salesman was selling motion picture advertising. A contest was to be placed on the screen at one of the city's leading movie houses, and the plan was to sell different business men pictures of themselves taken in poses that would be difficult to recognize. A second picture was to be shown after the prizes were decided, showing front views of the business men and their establishments.

On the following evening the sales organization of the Hannah-Miles Co. met in a secluded room on the second floor of the building. A short time later the night watchman was at the door knocking, stating that a man was outside demanding to see Hannah on business of the utmost importance. The latter insisted that he could not be disturbed, but the visitor was even more persuasive —at no time making himself obnoxious, however—than he had been the previous afternoon.

Eventually he gained access into the room and immediately presented his proposition to Hannah in the presence of his salesmen. The motion picture representative was on to his job. He had put in his spare time studying up on the early history and achievements of Dodge Brothers and used this to great advantage. Hannah used every argument he could think of to reject the proposition, but at every point was kept on the defensive by the visitor. Secretly the dealer was glad of this, because he had been continually warning his automobile salesmen to always keep their prospects on the defensive. In the end Hannah signed the order to enter the contest. He then explained the circumstances to his organization and invited the motion picture representative to make a talk on salesmanship, and the latter made a splendid one, too.



The motion picture advertising cost the Hannah-Miles Co., $25, but Hannah said it was worth a great deal more to his firm.

Selling Accessories to Truck Owners

A SPECIAL drive directed at the owners of trucks to get them to equip their trucks with complete sets of extra spark plugs, with spotlights and with visors, with fire extinguishers, etc., has been a profitable undertaking for some accessory dealers. Every truck owner who hasn't a complete equipment of accessories on his truck is making it harder for the driver to be efficient and is, consequently, losing money. Make a note of all the trucks seen in the city which aren't completely equipped with accessories and then, each morning, as a part of the day's business routine, call up the owners of these trucks and sell them the accessories they should have.

Interesting Things Automotive

American automotive products are rapidly establishing themselves as necessities in all parts of the world. Japanese firemen in Osaka are shown in this picture trying out a Ford "fire wagon" recently imported

Considerable interest has been occasioned by the arrival in this country of six officials of the Egyptian government who have been sent here to study the automotive industry. They are representatives of the Ministry of Transport and Communication. They will spend the greater part of their three years' stay in Detroit, the first year of which will be at the Michigan State Automobile School

This scene in one of the principal streets of Johannesburg was enacted recently when the South African city's first dealer procession of automotive products was held. The parade was staged by the White dealer and was composed of White bus and truck models

Editorial Notes

Not Quite Enough New Cars

ANYONE searching for an "answer" to the used car situation will find the final phrase of it in the words, "Not quite enough new automobiles."

Correct buying and intelligent selling of used cars can accomplish much toward lightening the worries and reducing the losses of the trade but these commendable practices combined will not cure the condition that many hundreds of dealers find themselves in to-day, with considerable stocks of used cars on hand and the certainty that they will have to carry some of them through the winter, restricting their ability to invest in new cars.

Dealers in a number of cities are making a questionnaire inquiry, through their associations, to determine what has stopped the sale of used cars, generally speaking. The approach of winter logically is the chief reason but these dealers seem to think there is another reason for so nearly complete a halt in used car business as is reported in some centers. These dealers are quite likely to find part of the reason, at least, if they will look carefully for it, in the ease with which the public can get most of the makes of new cars it wants, except some closed models, and in the prevailing low price levels.

It is interesting to note that in Boston, where a minimum allowance co-operation plan, vigorously administered, has effected a notable reduction in used car losses, dealers are confronted with an uncomfortably heavy accumulation of used cars. Cars bought far below the maximum figures, in some cases, and so priced for resale at low levels, are not finding buyers, most likely because of some of the conditions noted in preceding paragraphs. This statement should not be taken to indicate any dissatisfaction on the part of participants with the Boston plan. An analysis of a statement of more than 5000 used cars bought and sold under the Boston plan this year shows a gross profit of more than 1 per cent, after conditioning costs are accounted for. This has not yielded a net profit because there are selling, storing, insuring and other handling charges, which put the final result on the loss side of the ledger, possibly as high as 10 or 15 per cent, but a year ago, without co-operation, the Boston dealers had a gross loss on used cars running into hundreds of thousands of dollars. The difference between that and a gross profit, even one that has no "pay dirt" of net profit, is enough to make the Hub merchants energetic supporters of their co-operation plan.

The situation in Boston and far less favored communities emphasizes the fact that used car co-operation is calling for another essential co-operator, the manufacturer. When every manufacturer, and his dealers with him, like a few that need not be mentioned, figures territorial allotments on the foundation of combined new and used car requirements we shall have not quite enough new automobiles to meet the desires of every buyer who wants one on a few hours' or a few days' notice. Then, too, we shall have a healthier market for used cars.

About Legislators

A MAINE attorney, addressing a convention of automobile dealers of his State, made a suggestion that well could be applied by automotive tradesmen anywhere. "Be friendly with your local senators and representatives," he said. "It will go a long way toward getting them on your side when subjects concerning your industry are up for legislation." This is a good thought. The average legislator is neither ignorant nor crooked. He resents an unnecessary fighting attitude on the part of a group of men, automotive men or any other class, favoring or opposing proposed legislation. He is one of an assemblage of men overwhelmed with bills on subjects with which they are not familiar. He would welcome help, friendly help. The automotive trade association or committee that goes before a legislature with many of its members friendly with individual automotive men in their home territories has its battle for justice to the industry and the motor vehicle using public half won.

Do you know your Senator or Representative? Are you showing a friendly interest in his job and his ambitions as a legislator? If you don't can you get acquainted with him and what he hopes to do? Can you get a chance to tell him the automotive story? Legislatures in nearly all the States will convene soon. Better get busy.

A Banker's Advice

A BANKER who spoke at an automobile dealers' convention urged his audience to remember two things:

Get closer to your banker.

Don't pay more for used cars than you can sell them for.

Sound advice!

The banker said the average man in his business despairs sometimes over aloofness of his automobile dealer customers. They don't confide in him enough to permit his giving the advice he would be glad to give. Tell your banker your manufacturer's demands, he said; tell him about the attitude of your customers; tell him why you need funds, not just when you need them; let him suggest how you can get in the position to meet your notes on time and conserve your profits.

Many an automotive business man could learn something from his banker.

Try it.

Some Interesting Car Merchandising Thoughts

Ohio Writer Discusses Some of the Industry's Selling Problems—Suggests Change in Method of Paying Used Car Salesmen

EDITOR, Motor World:

The growth of the automobile industry has been phenomenal. To-day it is still at the height of prosperity, yet the student of the automobile business knows that it is now on the threshold of a new era, and that the industry if it still goes forward will do so along the lines of new ideas, new efforts and new conditions.

Almost from the beginning, the industry has been more a problem of production than anything else, but conditions are arising continually which show that there are problems which are gradually superseding that of production.

The first cloud in the horizon occurred during the fall of 1920 and the year 1921. How was it met? Why, the "buck was passed" entirely to the sales department. Articles were written, much was said about the time having arrived when the salesmen could no longer sit around and wait for the orders to come over the transom.

This was good as far as it went but why stop at the salesmen? It should have applied to every other division of the business also, particularly the management. The greatest difficulty to be overcome in the business to-day is the fact that the men managing the business have done so for so many years under the conditions existing that these conditions have become so much a part of them, that it is almost impossible for them to understand new conditions and work out remedies.

The time has come when the wise men of the industry will go outside to secure men who are highly developed in the powers of merchandising and, having secured them, will subserve their own ideas, and let the "Moses lead them out of the wilderness." A mighty good example of this is the experience of the manufacturer of a popular priced automobile ranging in the $1,000 to $2,000 class, who went outside of the industry to get men of this type, placed them in charge of various branches and the result was that the period from fall 1920 to spring 1922 was the most prosperous of their career, and this manufacturer jumped into one of the foremost positions of those in his class.

It is certainly amusing to read the cures suggested for solving the "used car problem." The fact of the matter is that there should not be a used car problem. Records will probably show that somewhere between sixty and seventy per cent of the deals involve tradeins, that means that there are only sixty to seventy per cent as many used cars to sell as new cars, and there are more prospects for them. To illustrate, a new car lists at $1,000. After the first year of usage it is worth $750; after the second year, say, it is worth $500. At $750 it should be the equal of any new car selling for $750, and at $500 it should be the equal of any new car selling for $500 with the advantage of having the appearance of a higher class car. If this were not true, there would be no justification in listing it at $1,000 originally. We must agree that there are more buyers who can spend $750 than those who can spend $1,000, and at $500 there is still a larger field of buyers. Under good, sensible methods of business then, there should be no difficulty in moving the used cars at their actual values.

What then is the trouble? Simply that the dealer himself through wide publicity has stamped the Used Car as undesirable merchandise. He has told the public time and again: "For heaven's sake, come take these used cars away, I am sick of looking at the old things,—no down payment—no interest —no insurance—five days free rides—bring 'em back if you don't like them—anything at all to get rid of them—only take them out of my sight." Turn to the used car ads in almost any newspaper.

What then is the answer? The dealer through this publicity has made the used car the very foundation on which he will have to build if he wants to stay in business. This outcast child of his has become the most important factor in his business. In view of all this, a check upon the reputable automobile dealers of Cleveland revealed this fact, that a high powered salesman who could sell 100 used cars could earn the princely salary of $200 a month, while a new car salesman selling the same number of cars for the same companies would earn from $500 to $700 a month. Right there lies the answer to the whole problem. First the dealer must advertise and give publicity to the used car which will place it where it of right belongs, and then he should build a sales organization by a plan of compensation which will be at least as attractive if not more so to the used car salesman as compared with the new car salesman.

Then there is the question of advertising. A prominent magazine man said "It's a good thing we have not taken into our heads to censor motor car copy for sense and intelligence or rather the lack of it. On that basis about ninety per cent of the automobile copy would be left out of magazines and newspapers, at least that's the reflection we get via the mails from our subscribers." Sad but only too true. The trouble is this. The factory engineer gets the idea, then he gets enthused, the management is called in, the advertising man is also called in and perhaps the agency man is there too, and soon the engineer's enthusiasm pervades all of them in his wonderful creation, but they all overlook the fact that the "hick down in Squeedunk," who may be a potential buyer of the car, is not thinking in the same channels that they are.

The time has come when the wise advertising manager is going to get out and mingle with this self-same "hick of "Squeedunk," the workman at the bench, the busy man of the store, and the professional man at his office. He is going to learn their language and then he is going to go back to his factory and make his advertising talk to them in that language.

These are just a few ideas of one who is watching the developments most interestedly. If there is anything worth while in it, I feel that I have been repaid for the effort in writing it.—Ohio Dealer.

Write to Motor World About It

New Engine Has Five Bearing Crankshaft

Smooth Operation, Power and Flexibility Secured in New Four-Cylinder Lycoming Engine

UNUSUALLY smooth operation at all speeds has been secured in the new Lycoming four cylinder engine through the use of long connecting rods and light reciprocating parts. The performance of the new engine is highly satisfactory from the standpoints of power and flexibility. For test purposes, one of the new engines was installed in a car weighing about 2700 lbs. with a rear axle gear reduction of 4.8 to 1. It is claimed that a speed of 65 m.p.h. has been obtained with this car and that it will accelerate from 5 to 25 m.p.h. in eight seconds. A stiff five-bearing crankshaft and a system of force feed lubrication, in which the pressure is controlled by the throttle, are important constructional features, which undoubtedly will contribute much to durability of the engine. The new engine will be known as the Model C Series and is offered with 3½, 3⅝ or 3¾ in. bore and 5 in. stroke.

Cylinders Cast in Block

The cylinder block, the upper half of the crankcase and the detachable cylinder head are all gray iron castings. The lower half of the crankcase is of pressed steel. The water jackets are integral with the block and water passages are provided around all valve ports, spark plug bosses and over the combustion chamber. The crankcase is stiffened by webs carrying the main bearings. The flywheel housing is an integral part of this casting.

The five-bearing crankshaft is drop forged and heat treated. All bearing surfaces are ground and the shaft is drilled for force feed lubrication. The finished shaft is tested for dynamic balance. Either Lynite, an aluminum alloy, or cast iron pistons may be had with this engine. Three piston rings are used, all located above the pin. The piston pins are made of case hardened steel, drilled hollow and ground. Full floating piston pins are used in the Lynite pistons. The connecting rods are bronze bushed. When the cast iron pistons are used, the pins are clamped in the connecting rods, the bearing being in the bosses.

Long Connecting Rods

The connecting rods are 12 in. long. They are drop forgings of I-beam sections. Bronze backed, babbitt lined bearings are used in the big end bearings as well as in the main bearings. No shims are used to fit the bearings.

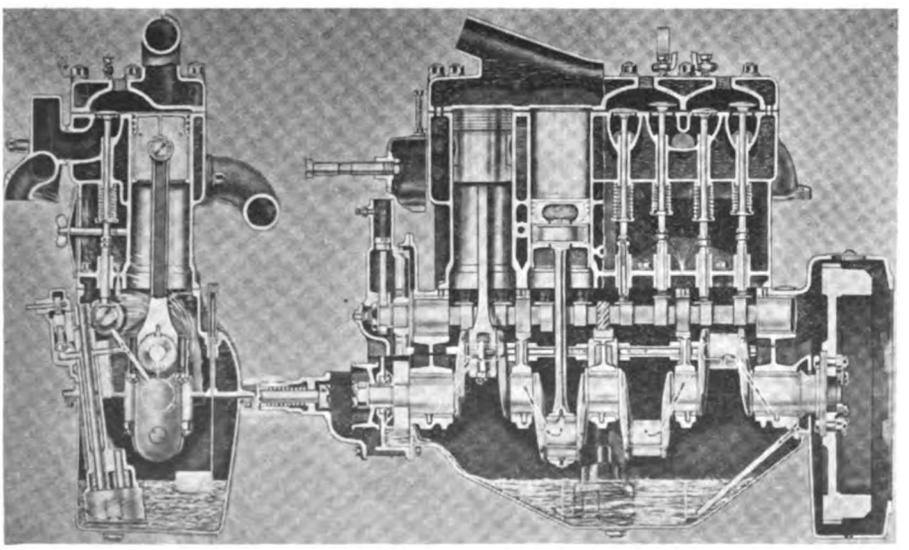
The valves are interchangeable and have cast iron heads welded to steel stems. The tappets are hardened and ground, and fitted with hardened steel adjusting screws and locknuts.

The camshaft is a drop forging, case hardened and ground. It is carried in four removable bronze bushings. A spring operated plunger bearing on a hardened steel button on the front end of the camshaft takes the end thrust and automatically adjusts for wear in the timing gears, which are helically cut. The crankshaft and generator gears are fibre and the camshaft gear cast iron.

The flywheel is semi-steel, machined all over and tested for dynamic balance. It is bolted to a flange forged integrally with the crankshaft. Teeth for the starting motor are cut in the periphery of the flywheel.

The intake and exhaust manifolds are an integral casting which is held in position by clamps. A hot spot is provided to assist in the vaporization of the fuel.

Cooling is by thermo-syphon. The fan drive pulley is mounted on the front end of the crankshaft and the fan is carried on an adjustable bracket attached to the front end of the block. Provision is made for mounting the ignition unit at the front end of the gear case over the timing gears. It is driven by the camshaft gear.



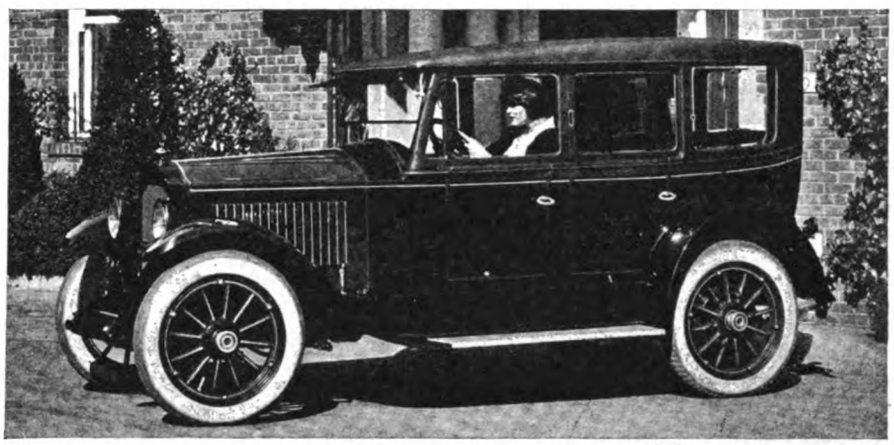
Pressure lubrication is used. Oil is carried under pressure to all main, connecting rod, big end and camshaft bearings. The entire circulating system is contained in the upper half of the crankcase. The gear type of oil pump is driven at camshaft speed by spiral gears located at the center of the camshaft. It is supported by the upper half of the crankcase but extends down into the oil reservoir. This construction permits removal of the oil pan without interference with other parts of the lubrication system. The pump intake is always immersed in oil and requires no priming.

The pump discharges directly into the distributor tube cast into the upper half of the crankcase. This tube is connected by holes drilled through the webs to all camshaft and main bearings. A nozzle on the front end of the distributor tube directs a continuous stream of oil onto the timing gears. Valves, push rods, pistons and piston pins are lubricated by oil thrown off the crankshaft.

Oil Pressure Depends on Load

The oil pressure varies from 2 to 5 lbs. at idling speeds up to 25 lbs at wide open throttle. A pressure relief valve is provided which discharges into a bypass leading back to the oil reservoir. This relief valve is connected to the throttle. In this way the oil pressure is regulated to conform to the load on the engine. Maximum pressure is secured with wide open throttle and minimum with closed throttle. An oil strainer is provided at the pump inlet. The oil level indicator is operated by a cork float and is in plain view on the side of the engine.

The engine is designed for three-point suspension. The front support is a trunnion on the crankshaft center line. The two rear support pads are cast on the flywheel housing. The bell housing flange is either No. 3 or No. 5 S.A.E. standard size. Provision is made for the installation of a two-unit starting-lighting system.



Transverse and longitudinal sectional views of the new Lycoming engine. Among the features of this engine are the five bearing crankshaft, the long connecting rods and the pressure lubrication system.

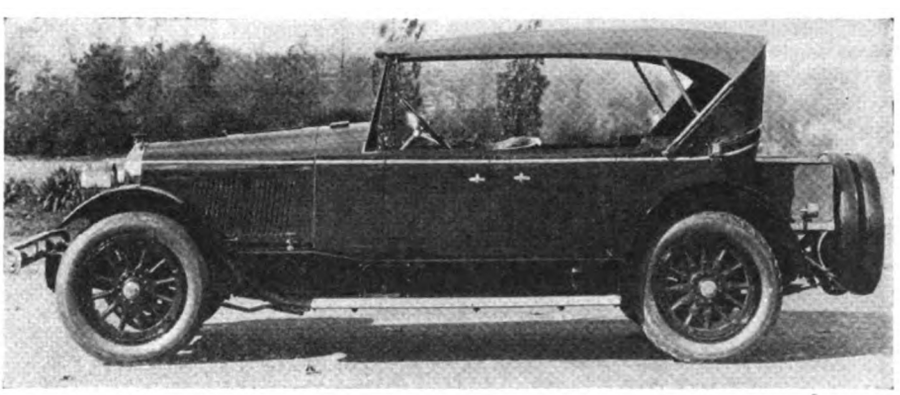
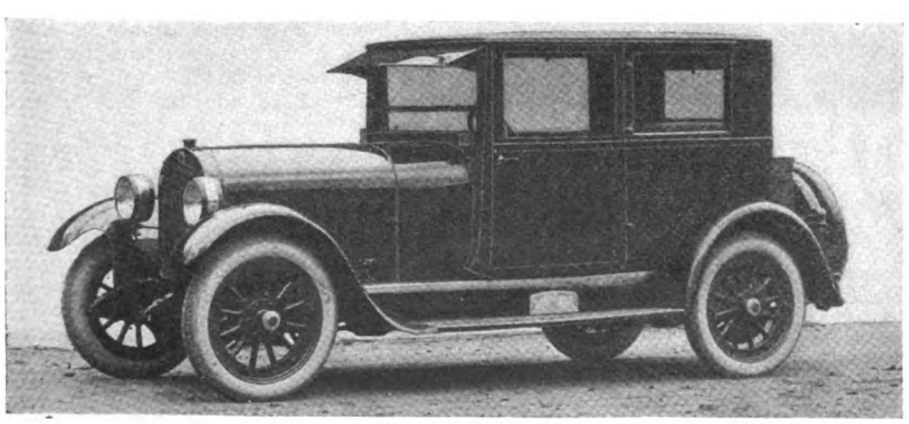
Some Interesting New Top and Body Offerings

Larkins All Weather Top

This top is of the permanent type with sliding windows. The frame is of ash and the covering is Fabrikoid. There are numerous color options. A dome light is installed in the top over the tonneau. The top is fitted with a drip molding and a lock is installed by means of which the car may be locked





New Auburn Four-Passenger Closed Model at $2,060

This new close-coupled, four-passenger, two-door sedan type will be known as the Brougham. The right front seat is of the tilting style to permit easy entrance to the rear seat. The trunk and rack at the rear are regular equipment

The Pasadena—A New Dorris Sport Model

This is the new four-passenger Dorris sport job. Stock colors are Holland blue, maroon and gun metal gray. The body molding extending over the hood to the radiator shell is ¾ in. wide. The windshield stanchions are of bronze nickel plated. The top bows are in natural wood with nickel plated fittings. The trunk rack at the rear is of aluminum

A New Westcott Closed Model

This new Westcott body model is priced at $2,490. The body is hung low and the hood lines are unusually long. The touring trunk at the rear is included in the equipment

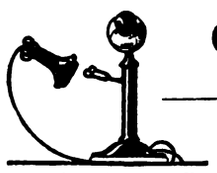
Fair Canvassers Get Ford Prospects

Girls on Straight Salary and Small Bonus for Sales Declared Best Yet by Detroit Dealer

THE problem of maintaining an adequate list of prospects for his salesmen is one that every dealer must solve. This different dealers do in different ways, many of them going to the extent of employing junior salesmen to canvass from house to house or to call possible prospects on the telephone.



Johns Brothers, Detroit Ford dealer, operates a plan which is declared to produce much better results than any other, that of employing girls to canvass from house to house.

Each girl is assigned a certain territory and is sent out to gather information. It is her task to learn whether the one on whom she calls is interested in buying a Ford, and if so whether he now has a car and what kind it is. This information she notes on a prospect slip, which she turns in at the end of the day. If the prospect is interested at the time, a salesman goes out to call on him at once; if he reports that he will be in the market later, the slip is filed to come up at that time; if he is not interested at all, the girl at least leaves a Johns Brothers card with him.

The principal advantage of the plan, according to Henry Johns, one of the proprietors, is that a girl or woman can gain entrance to a home and obtain information much more readily than can a man. This is due, he explains, to the fact that the husband is usually away from home during the day and that it is to the wife that the canvasser must talk when he calls. The housewife, not expecting callers, is very likely to be in deshabille and to feel a hesitancy in admitting a male caller or even in talking to him at the door, while, on the other hand, she has little or no objection to admitting one of her sex, as the latter "knows how it is."

The girls are paid straight salaries of $20 to $25 a week and are, in addition, paid a bonus of $5 on each sale resulting from their canvasses.

Johns Brothers has employed as many as twelve girls at a time for this work, but the number naturally varies in accordance with the need of prospects.

M A LIST OF PHILA. TRAFFIC OWNERS SENT ON REQUEST

A Truck Selling Idea

The blotter shown above is a novel piece of advertising that has brought good results in retail sales for The Traffic Truck Sales Co. of Philadelphia. After a salesman has called on a prospect, one of these blotters is immediately forwarded to him with the name, address and telephone number of a Traffic truck user, in the same business, typewritten on the line directly under "Call." It is one of the few direct pieces of advertising that in the majority of cases escapes the waste-basket, until its performance as a blotter has served its purpose

Prospect Report Form Used by Girl Canvassers

JOHNS BROS. DETROIT, MICH. 7811 GRATIOT

Report of Call by: Mary Abbot Salesman

Date October 31 1922

Firm Name: William Springer

Address: 4312 Garland

Buyers Name: Grinnell

Party Interviewed: Mrs. Springer

Make of Machine now using: F. Touring

Interested: F. Sedan

Call Back Date: after holidays

Remarks: Mrs S. says they're sure to get F. Sedan, but want to wait till after X'mas.

Here is a fac-simile of the prospect report form used by Johns Brothers, Detroit Ford dealer. Women do the canvassing in a house-to-house effort, and all promising reports are followed up by salesmen. The women are paid $20 and $25 a week salary and $5 for each sale that results

Selling Open Car Comfort

IN selling open cars in the winter time it is always a splendid talking point to tell the prospect about how tightly the curtains fit. In fact, this is one of the very best winter sales arguments for open cars. And, since this is the case, the dealer who demonstrates cars in his salesrooms with curtains all in place is always sure to get the early and eager interest of the prospect.

When Closed Cars Are Scarce

"WHEN, in December or January, I find a prospect wants a closed car, and I can't deliver one to him," said a successful middle western dealer, "I point out to him the fact that in three or four months the open car season will again be with us, and that, during the meantime, his side curtains will make a car snug and cosy and warm for the rest of the winter. Quite often this fact that spring is only a comparatively short distance away enables me to sell open cars to folks who have thought they wouldn't want anything but closed jobs. But, of course, it is only when I can't get closed jobs that I use such an argument."

Accessory Store in Waiting Room Gets Sales

Attractive Display Proves Big Profit Producer in Service Station of Los Angeles Studebaker Dealer

TEN-FOLD increase in the sale of accessories in a seven months' period. This is what Paul G. Hoffman, Studebaker dealer in Los Angeles, has accomplished.

Accessories were formerly displayed at the Hoffman establishment in a very conservative way in corners in the general sales room or in a nook in the service department. About seven months ago, Hoffman installed an accessory shop at the left of the main entrance to the service department. The store is separated from the service floor by an all-glass partition. Every motorist entering or leaving the service floor cannot help seeing the complete line of accessories on display in the accessory department. Furthermore, the "waiting room" for all service customers is in the accessory store.

All automobile salesmen employed by Hoffman are required to bring customers to the accessory shop after making a sale. It has been found that the new car purchasers are the largest buyers at the Hoffman store.

"Proper display is the keynote to our success with accessories," said Sales Manager Carpenter. "The remarkable increase in our sales of accessories in such a short period shows what display means."

This is the accessory store operated by Paul G. Hoffman, Studebaker dealer in Los Angeles, in his building, which has been a source of additional profit for his business

A Good Selling Slogan

"WE have a slogan at our store that helps us considerably in remembering to do the things that will help us get more business," said a successful middle western accessory dealer. "Our slogan is this: 'Every accessory purchaser a gasoline user, and every gasoline patron an accessory customer.' In other words, when a man buys gasoline from us we solicit him to buy accessories and when we sell an accessory to a man we solicit him to buy his gasoline and oil from us. All of which helps considerably in getting more business."

License Numbers Identify Cars in Garage

INSTEAD of placing the name of an automobile owner above his stall in The American Garage, Evanston, Ill., W. F. MacDonald, the manager, substitutes the State license number.

This plan makes it easy for the washer at night to return a car to the proper space if he does not know all the cars in the garage, which has a capacity of almost 100. It is meeting with approval of the garage patrons, too. Many owners do not wish their names in letters five inches high posted above their spaces in the garage.

Another unique idea in this garage is that the floor slopes toward the outside, causing all water and grease to drain back and not to the center, where, in many garages, it is annoying to car owners who are obliged to wade through damp spots to leave the building. The floor of The American Garage pitches to the north and to the south. Troughs alongside the walls pitch to the east and to the west, and thence water and grease flow into a drain pipe. This is less expensive, too, than the usual scheme, because there is only one grading.

Tagging Helps Sales

The effectiveness of tags hung on the steering wheel or radiator cap of cars to sell a product was demonstrated recently in a special campaign conducted by "X" Laboratories in Ohio. A picture of the tags used is shown above. Special representatives of the company distributed the tags which were placed on cars in garages and other places where large numbers gathered, and by special canvassers

Vacuum Cleaner Helps Filling Station Sales

THE Corey Filling Station, Hartford, Conn., has added a vacuum cleaning outfit to its equipment, and the installation has paid very well. When the customer drives into the yard, he sees a large sign on the wall, which says:

Just Say
"Take Care of It"
And We Will Be Valets to Your Car.
Closed Cars
Vacuum Cleaned
While You Wait
50 Cents

The sign has done more than was expected of it. Owners spotting the suggestion of a vacuum cleaning of car interiors readily consented to have the trick performed. This little item has been the means of adding business, according to the management. In cases where cushions were badly soiled, the Corey station turned them over to a dyeing and cleaning house on the opposite side of the street.

How Priority Lien Rights Differ in States

Legal Editor Points Out Necessity of Knowing Your State's Lien Law When Priority Questions Arise

EDITOR Motor World:—We are very much interested in the article on page 30 of the Oct. 4 issue of Motor World, entitled "Date of Lien Fixes Priority in Michigan."

We have two cases at the present time of cars financed on the installment plan in the State of New Jersey on the conditional sale plan. The cars have been sent to garages for repairs. The buyers have not the money to pay for these repairs amounting to $300 and $400—and the garagemen will not release the cars until the bills are paid.

Due to the fact that the cars are tied up the buyers are not able to use them, which means that the monthly payments will not be made to us.

We asked the garagemen to release the cars but they refuse to do so until their bills are paid. Cars were repaired without our consent. Will you kindly advise us what our rights are in these cases? Under the conditional sales contracts the title to the car remains in our name until we issue a release. The garagemen's liens date a number of months after our conditional sales contracts took effect. —C. F. Corporation, Hackensack, N. J.

Answer:—The article you refer to is a case decided under the law of Michigan. Your case must be decided under the law of New Jersey in which State garagemen's liens are given priority to the liens of vendees under conditional sales contracts. The only practical thing for you to do is pay the repair charges, have your attorney get the repairman's liens assigned to you and then foreclose your respective liens. Do not pay any attention to the law of any other State than your own in this matter. The following table shows the respective priorities under various claims of lien in the different states so far as they can be determined at this time:

Where repairman's lien has priority: Arkansas, California, Maryland, Mississippi, New York, New Jersey, Kansas, Oregon, Wisconsin.

Where lien of holder of chattel mortgage or conditional bill of sale has priority: Connecticut, Georgia, Idaho, Illinois, Nebraska, Nevada, Oregon, Tennessee, Texas, Washington, West Virginia.

In many states, like Virginia, there is no special statutory garagemen's lien law but only the general common law lien of artisans and mechanics. In these states the holders of conditional bills of sale or chattel mortgages have a lien prior to that of garagemen who repair cars.

Practical Questions of

Business Law

Are discussed every week on this page

By GEORGE F. KAISER
Attorney at Law

Readers are at liberty to write to the legal editor of Motor World for help in solving their business problems. Their inquiries will be answered through the mails.

How Insurance Is "Short Rated"

EDITOR Motor World:—We recently had occasion to cancel a fire insurance policy which we had taken out for a year when it had only run six months. Now instead of giving us back 50 per cent of the premium we paid, the broker tells us the policy was "short rated" and wants us to take about 30 per cent for the remaining six months when we will not have that insurance and although we only did have that insurance for six months. Please tell us is this legal and right, and how do they get that way?—K. C. Co., Rochester, N. Y.

Answer.—It seems to be correct. When a policy is taken out by you and subsequently cancelled, you do not get a pro rata return of the premium you paid, but as you say, the premium is "short rated"; that is, you pay the following percentage for the following number of days the policy has been in force:

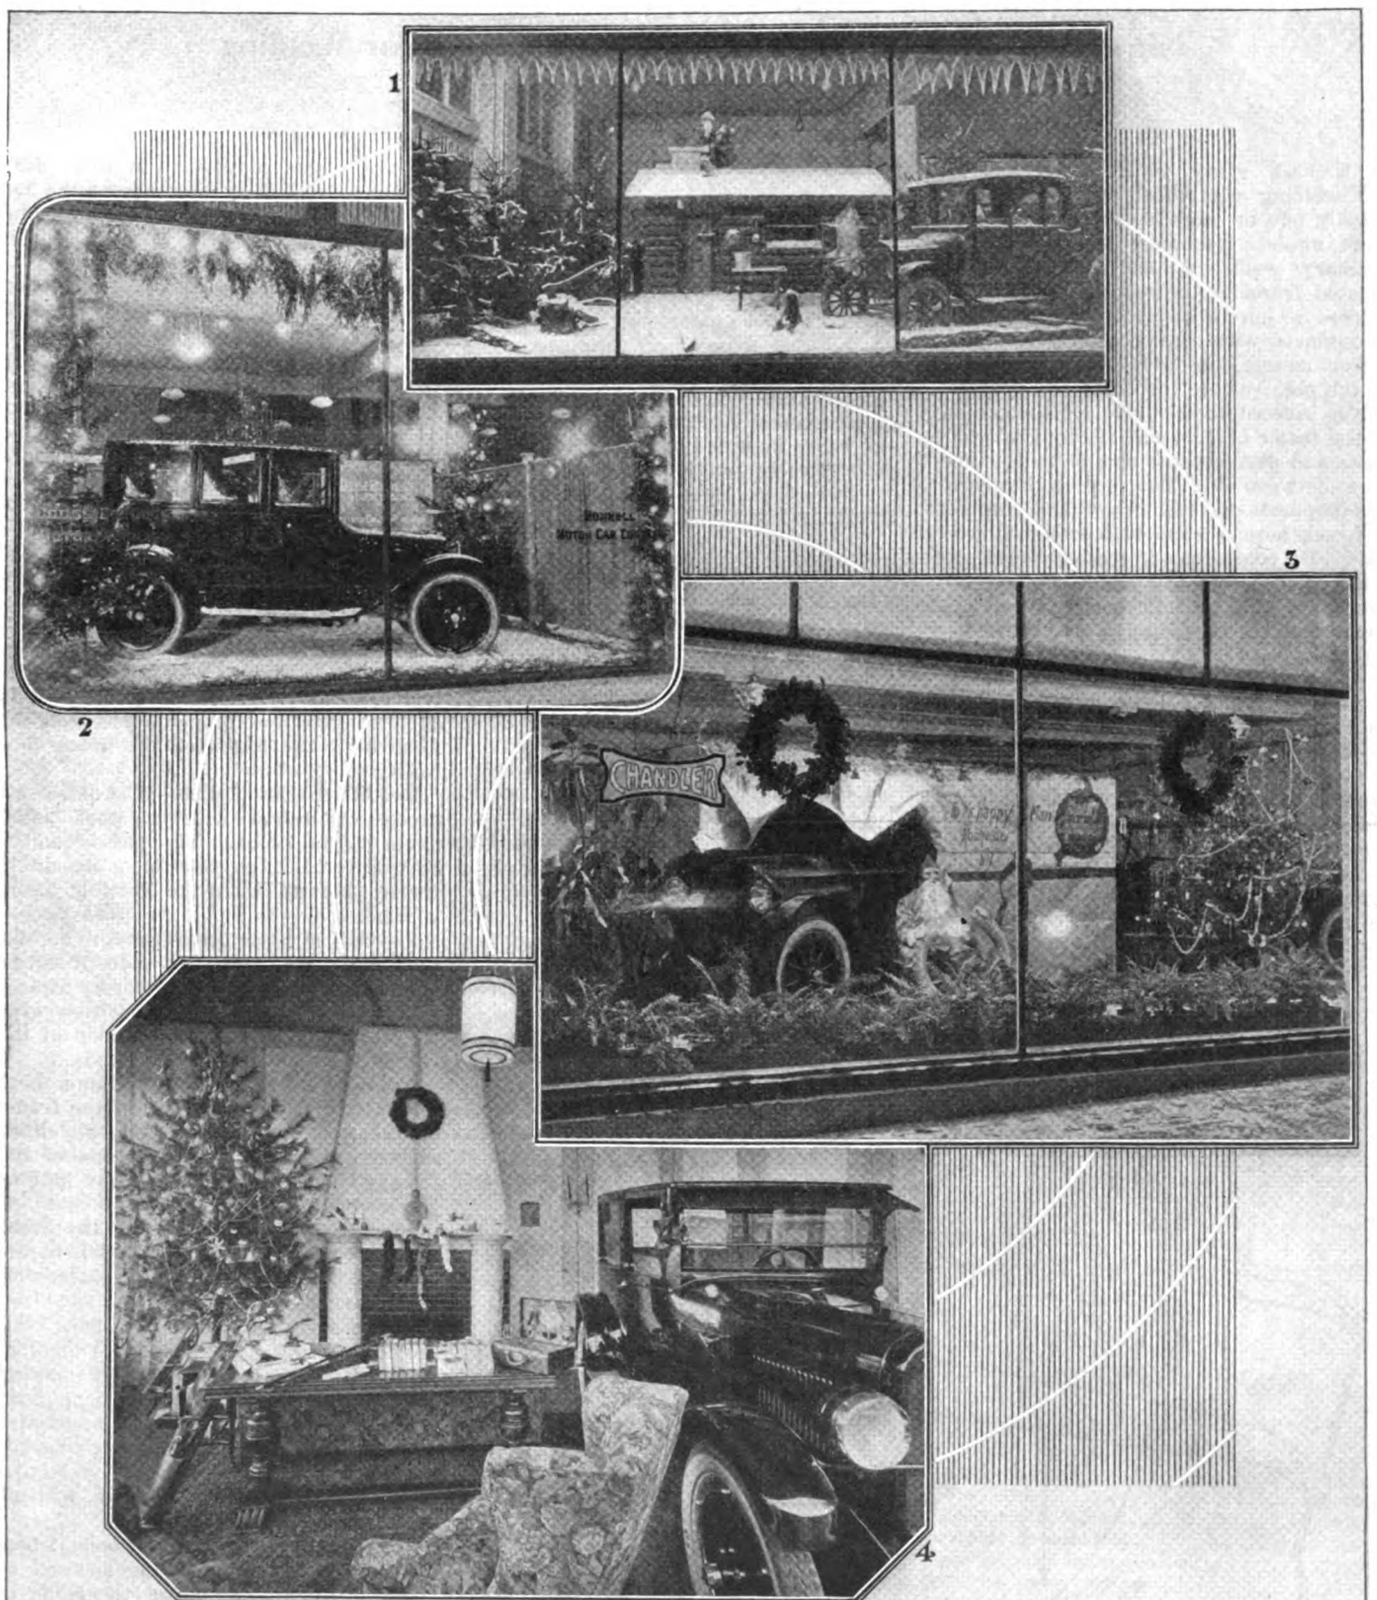
Care in Copying Car Number Is Necessary

That a person purchasing a Ford Car No. 2558516 was not bound by the fact that a mortgage on the car had been recorded giving the number of the car as No. 355816 or put under the obligation of inquiring whether through some mistake the two numbers were intended to identify the same car was the decision in the Iowa case of First Mortgage Loan Co. vs. Durfee, reported in 188 Northwestern Reporter, pg. 777.



The court said that a record of a chattel mortgage which fails to show the true number of a car, but gives a different number which it does not bear, does not put a purchaser on inquiry.

Law Implies Warranty

The Alabama courts decided in a recent case that in the absence of an express warranty the law implies a warranty on the part of the seller of an automobile that it is reasonably adapted to the uses for which it was made and sold, and that it is a reasonably good automobile, its class and price considered.—Franklin Motor Car Co. vs. Ratleff. 92 Southern Reporter, pg. 450.

Christmas Display Ideas for the Car Dealer

Here are some clever Christmas displays that present the motor car as a gift suggestion: 1—*A log cabin scene with Santa Claus about to climb down the chimney was cleverly made by the Francis Motor Car Co., Ford dealer in Portland, Ore.* 2—*Holiday trimmings and some artificial snow made a pretty setting for the Dodge sedan used as a Christmas display by the Bonnell Motor Car Co. of Newark, N. J.* 3—*Strong Motors, Inc., Chandler distributor in Rochester, N. Y., made a particularly attractive "car in a Christmas package" display last Christmas.* 4—*The gift idea was visualized in a display used by Harry J. DeBear when general manager of the Maxwell-Chalmers Distributing Corp. in New York. The car was brought right into the home in a Christmas morning atmosphere*

How to Weld a Broken Frame

Straightening the Frame—Preparing the Break for Welding —Instructions for Welding

NEARLY every repair shop has a welding equipment, and there are usually one or more mechanics who are more or less proficient in making the ordinary weld. A badly broken and twisted frame is, however, usually considered a job to be sent to the expert or replaced with a new one.

Fortunately, the break usually occurs at the point where the front cross member is riveted to the side member; due to the frame being weakened by the rivet holes and also because this point is midway between the two spring hangers and supports the weight of the engine. A break here is somewhat easier to repair. Of course many frames break at other places but the same method of procedure can be followed in repairing them, and the foregoing is only cited as an example.

A frame properly welded, will never come apart; and a little care and precaution in doing the work will insure a good job.

1.—First block up the car under the frame at the rear of the engine on both sides and remove the radiator, fender, hood sills and front spring.

2.—Remove the rivets which hold the front cross member and fender braces in place, and if the frame is out of line force it back to its original position by heating with the welding torch and using a large wrench.

3.—To test the alignment, pass a piece of round steel the same size as the front spring bolts, through the shackle holes in the front of the frame. Measure from both ends of this rod to the floor and compare with the measurements from the frame to the floor. This will tell whether to bend it up or down. The fact that the rod passes through both ends of frame shows no twist present.

4.—Scrape or file all paint or rust from the vicinity of the break and weld all around on the outside, being sure that the filler does not extend above the surface. This may seem a little difficult at first, but by starting at the top and gaging the flame carefully the metal will flow together with but little filler rod added.

5.—In welding the vertical seam start at the bottom and heat the steel until it sparkles freely and flows together. In the meantime, keep the filler rod near the flame and at a welding heat. When the edges flow together, apply the rod. Keep the flame directed upward, rotate the torch gently in little circles and move slowly toward the top. Do not add more filler than will incorporate in the weld or it will have a tendency to flow out. The periodic addition of the rod and the oscillating motion of the torch will form the welded seam in little waves or ripples.

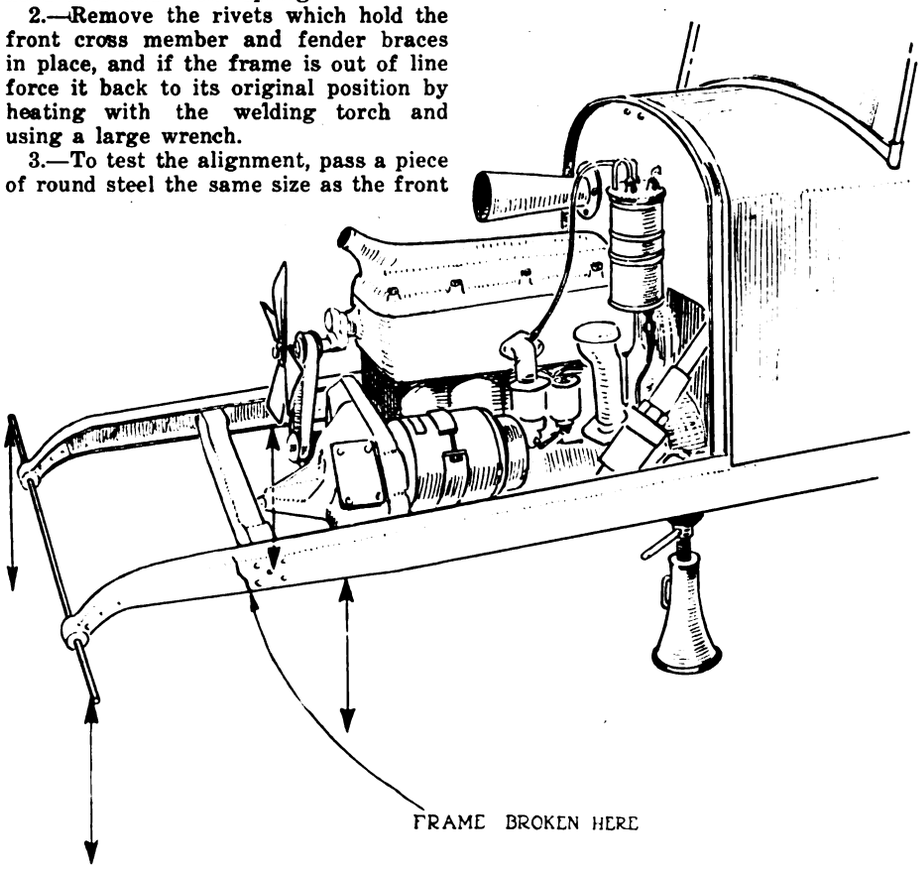
6.—Welding the bottom seam is really easier than the vertical as the metal will drop off if not properly united. In this as, in all welding, do not add the filler until the edges of the break flow together.

7.—After the frame is welded all around reinforce with a steel patch about $\frac{3}{16}$ in. thick. Flat steel can be bought for this purpose on a discarded frame, cut up with the cutting torch, is ideal.

8.—Cut a piece long enough to extend 4 or 5 in. on each side of break and wide enough to wrap entirely around the frame. Bolt this in position over the weld, flat against the outside of the frame and weld the vertical ends.

9.—With a rather large flame, heat the patch along the top line of the frame and hammer it down to a snug fit; clinch the edge of it over the top edge of the frame; heat and bend the lower half of patch and fit the same.

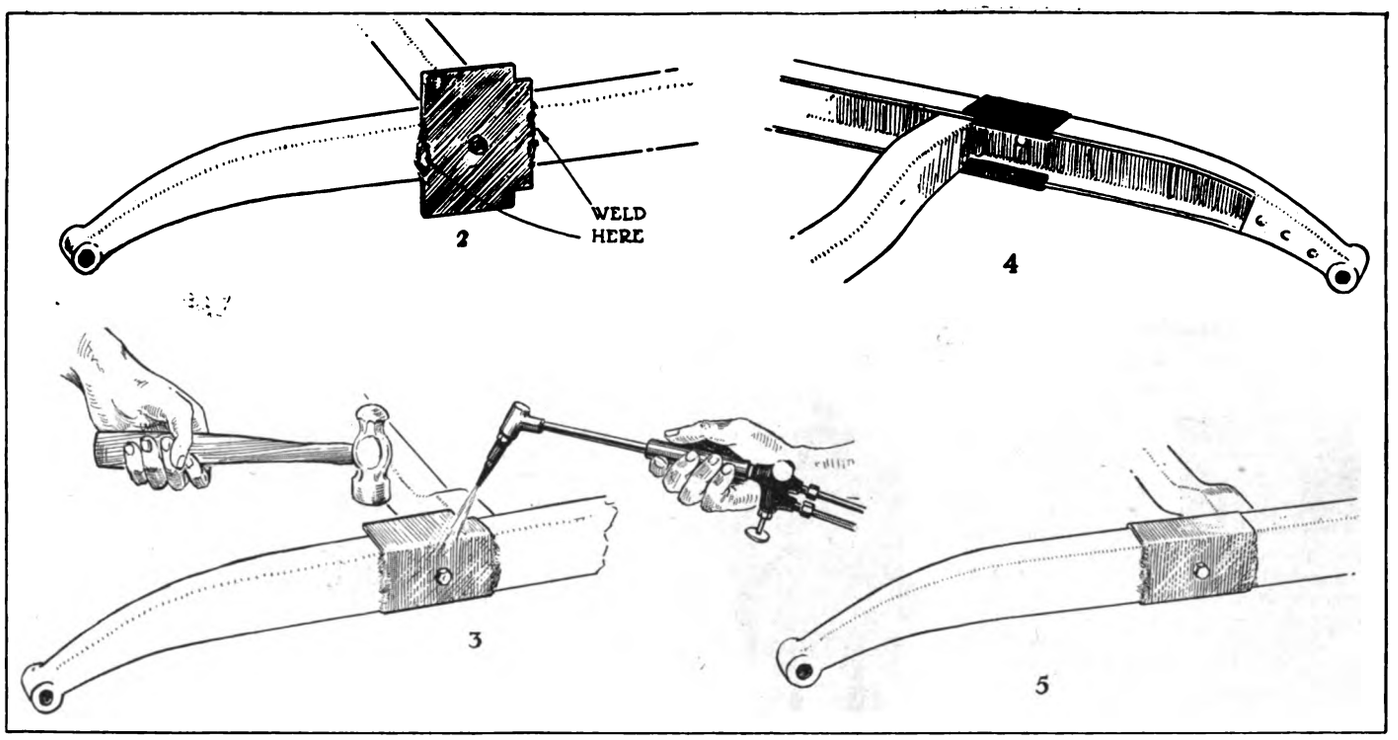
10.—At the intersection of the front cross member, either cut a notch in the steel or heat and stretch to place with a ball pein hammer.



11.—Weld the re-inforcement all around; using, preferably, vanadium steel rod and proceeding as in making the first weld. If properly done very little filler rod will be found necessary. After the job is done heat the surrounding metal to an even cherry heat and allow to cool naturally, that is, without covering or draughts.

12.—When cool, hold the fender irons, etc., in place and mark the location of holes and drill. To bring the irons in the same location as before the $\frac{3}{16}$ in. piece was added it may be necessary to bend them a little. This may be done after they are fastened in place by heating with the torch. Sometimes the forgings are heavy enough that the proper amount can be ground off of the flat

Better Mechanics



ARTICLE No. 266

Readers are invited to ask this department for suggestions to work out mechanical difficulties. When asking for information, please state whether you maintain a permanent file of Motor World, as many inquiries are answered by reference to previous issues.

1—*A round steel bar is passed through the holes for the spring bolts to test the alignment of the frame. This bar should be the same size as the bolts*

Digitized by Google

2—The frame is reinforced at the break with a steel patch. 3—The patch is heated and hammered to a snug fit. 4—The ends of the patch are clinched. 5—The finished patch

surface where they are attached.

13.—A break at practically any place in the frame can be re-inforced, but in case it is under the body sills it will only be necessary to loosen the body bolts and raise it enough to allow the steel to be placed in position without welding the top of the frame. There is but very little strain at this point, and with the patch firmly welded at the bottom and sides the contraction in cooling will make it very solid.

14.—Should the repair be at the end of the rear cross member, the re-inforcement may be placed over the rivets without removing them.

15.—Cover all parts likely to be damaged by the heat with several thicknesses of asbestos paper, dampened to hold it in place. When welding near the engine be sure that the carbureter and vacuum tank are drained and place a handful of wet waste over the gas tank filler hole. Of course it will be necessary to remove the gas tank when making repairs at the rear of the frame.—H. V. D. Sweet.

Oakland Lists Service Tools and Equipment

THE Oakland Motor Car Co., in co-operation with a number of manufacturers of service tools and equipment, has brought out a booklet listing recommended service station equipment for small, medium and large sized shops, devoted to Oakland service. The book consists of 36 pages, describing and illustrating the various equipment recommended, and the following list has been compiled from the book:

Equipment C, for a Small Shop

Surface plate 12 x 16 in.	$10.00
Piston vise	7.50
Car jacks	16.00
Engine lifting fixture	1.75
Car lifting hooks	5.00
Front wheel trammer	6.50
Axle straightening bar	5.00
Connecting rod bearing bar	2.50
4 wheel pullers	15.00
Crank and camshaft gear puller	5.00
Generator gear puller	2.50
Wheel bearing sleeve puller	6.50
Clutch wrench	3.50
Cylinder head bolt wrench	3.50
Wrench for pinion shaft outer nut or universal joint	6.50
Socket wrench for water propeller screw	1.50
Spring leaf spreader	1.75
Piston inserter	3.00
Wire wheel wrenches	4.50
Differential bearing sleeve puller	12.00
Universal nut wrench	3.50
Steering wheel puller	5.00
Timing gage for chain drive	.75
Oil deflector driver	1.00
Clutch nut spanner wrench	1.50
Drive shaft bushing spanner wrench	1.00
Drive shaft pinion adjusting spanner wrench	1.00
Camshaft assembly puller	12.00
Universal bushing puller	7.50
Front cam bearing facer	8.50
Cylinder honing outfit	25.00
Piston ring groove tool	9.00
Connecting rod and piston aligners	29.50
Cylinder head holding fixture	12.00
Cylinder testing gage	35.00
Electric valve grinder	45.00
Castor jack	48.00
Reamer set (8)	28.00
Valve seat refacing tool	5.00
Socket and speed wrench set (10)	12.37
Rocker arm lever	.50
Total cost of "C" equipment	$410.62

Equipment B, for a Medium Sized Shop

Includes all items under "C" and the following.

Portable wrecking truck	$40.00
20-ton arbor press	95.00
½-in. electric drill and bench drill stand	130.00
Straightening press with dial indicator	95.00
Ring gear aligning device	12.50
Brake band riveting machine	20.00
Axle stand	60.00
Engine stand	75.00
Car trestles	30.00
Main bearing alignment bar	50.00
Camshaft bearing alignment reamer	45.00
Center main bearing facing tool	30.00
Transmission stand	8.00
Crankpin retruing tool	185.00
Electric bench grinder 6-in	56.00
Total cost of "B" equipment	$931.50
Cost of "C" equipment	410.62
Total cost of "B" and "C" equipment	$1,342.12

Equipment A, for a Large Shop

Includes all items under "C" and "B" and the following:

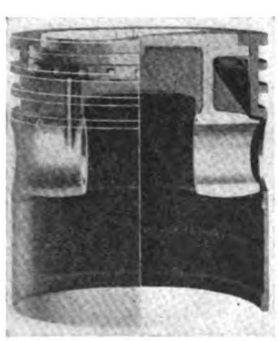
Bench arbor press	$30.00
Wash tank	110.00
Radiator test tank	60.00
Radiator repair tool	7.50
Grinding and milling machine	217.00
Electric valve refacer	150.00
Portable work bench	48.00
Floor crane	100.00
Chain hoist (1-ton)	35.10
Total cost of "A" equipment	$757.60
Cost of "B" and "C" equipment	$1,342.12
Total cost of "A," "B" and "C" equipment	$2,099.72

Digitized by Google

Equipment to Sell

New Devices for the Car and Truck

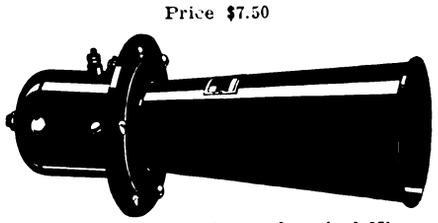
Ann Arbor Automatic Garage Door Holder



Knowes-Stevenson Co., Ann Arbor, Mich.
Price, $3 per pair

The door holders are for private or public garages. The doors are opened and the holders keep them open against the wind until the driver closes them. The operation of closing is accomplished by opening the door an inch or two wider, thus automatically releasing the gravity latch so that the doors close. They are made of cold rolled steel, with a luster finish, which is rustproof.

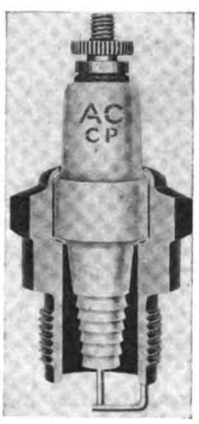
Thermolite Composite Piston



Muskegon Motor Specialty Co.,
Muskegon, Mich.

A composite aluminum and cast iron piston in which the central part of the piston head, the piston pin bosses and the ribbing extending between the two form a separate piece made of an aluminum alloy. The thrust of the explosion is taken directly on this aluminum part and the cast iron part acts merely as a sealing and guiding element. The device for locking the two portions of the pistons together consists of a drawn steel split collar with reinforcing webs for strength and to receive the spanner wrench. The lower face of the locking collar has twelve inclines or cam faces which engage twelve cam faces on the iron skirt, and when locked and pinned, constitute a positive lock. It is claimed that the pistons weigh from 25 to 40 per cent less than cast iron pistons. The pistons are made for replacement as well as for original equipment and the cost is approximately between aluminum and cast iron pistons.

Klaxon-8 Horn



Klaxon Co., Newark, N. J.
Price $7.50

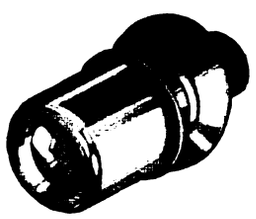
A new ball-bearing horn of typical Klaxon design. The price on the Klaxon-5 has been reduced from $7 to $5.50.

AC Carbon Proof Spark Plug

AC Spark Plug Co., Flint, Mich.
Price, $1

A new line of AC Spark Plugs shows a porcelain of unusual design to prevent the formation of carbon. Around the inner end of the porcelain are molded a series of saw-tooth girdles with sharp edges which contain sufficient heat to burn off oily soot. Since there are several of these fins, the coating cannot become complete and the plug reduces short circuiting by carbon to a minimum. The shell is made in one piece with gaskets between the upper and lower shoulders of the porcelain. Made in all sizes and threads and in lengths to fit various engines.

New Gill Piston Rings



Gill Mfg. Co.,
8300 South Chicago Avenue, Chicago
Prices, 4-in. sizes, Special—50 cents, Servus—40 cents

The Special ring is of the oil-wiping type with a square oil return space around the bottom. The Servus is a step-cut ring. Both types of rings are made from individual gray iron castings.

Check-Lite

Meilicke Mfg. Co.,
940 Wrightwood Avenue, Chicago
Price $1.50

The purpose of this device is to show whether or not the stop signal is operating. It is mounted on the dash and connected in series with the stop signal. When the signal is operated, if this device does not show red, trouble is indicated.

Utility Heaters

Hill Pump Valve Co.,
Belmont & Knox Avenues, Chicago

These heaters are made in register and heelboard styles. A valve is provided so that the heater may be turned on or off. Provision is made for removing dirt. The register heater is finished in polished aluminum or black enamel. Prices ranges from $25 to $15. The heelboard style is furnished in black enamel only. Prices for this style run from $10 to $20.

Philco P. W. M. T. Vehicle Storage Battery

Philadelphia Storage Battery Co.,
Philadelphia

Long life and large capacity are claimed for this new vehicle battery. The diamond grid type of plate is used and the process employed in making the plates is said to give uniform hardness and porosity. Hardwood separators in conjunction with the Philco retainer are used. The positive posts of all cells are solid lead alloy, while the negative posts have projecting threaded studs of brass or other metal with exposed surfaces lead plated. A nut imbedded in the case leaden cap is fitted to the stud of the negative post. The connectors consist of lead plated copper strips with a hole punched on one end and with a lead-alloy head cast on the other end. This construction gives a flexible connector and one that is easily disconnected, as it is only burned at the positive end.

Equipment for the Shop

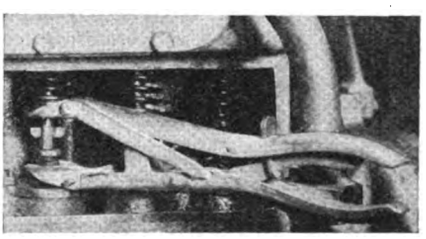
New Machinery and Tools

Garrett Millerette Converter

The Production Machine Tool Co.,
629 East Pearl Street, Cincinnati, Ohio

This is an attachment for lathes, planers, shapers and drill presses for milling work. With the lathe, work can be done on a dividing head on which a large range of milling, such as cutting gears, spur and bevel, surface milling, angle cutting, spline and keyward work, etc., can be done. On the drill press the device spaces the holes to be drilled and holds the work and on a planer and shaper it is used as a dividing head. The index head is connected with the change gears, can be quickly set up as only two gears are used at one time and the index plate is complete showing the gears to be used and the required number of turns of the index handle to obtain divisions from 2 to 360. It can be set at any angle, as both the down slide and the index head turn on a swivel.

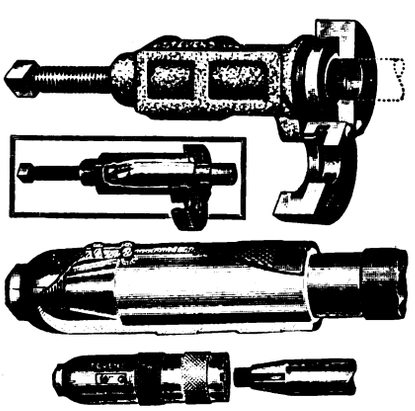
MacKenzie Visible Gasoline Measure



Springfield Mfg. Co.,
Springfield, Ill.

The feature of the system is that there are two glass bowls, each containing one gallon. One of these is filling while the other empties so that the process of delivering gasoline to a car can be made practically continuous. Cylinders can be removed within a few minutes for cleaning or replacement in case of breakage. The operating valve is self-closing and automatic draining as soon as released by the operator. The vacuum system is used to draw the gasoline into the bowls. The telltale shows the operator and purchaser the number of gallons delivered. A small power plant is used for operating, this being cut into any electric circuit.

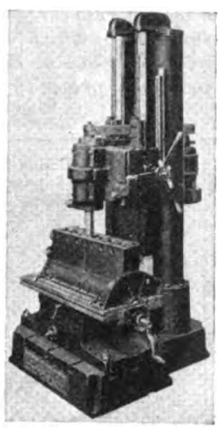
K-D Parallel Jaw Valve Spring Lifters



K-D Mfg. Co.,
510-524 North Plum Street, Lancaster, Pa.
Price $2.10; Special for Fords, $1.10.

The valve spring lifter is so made that the jaws are parallel at preventing the spring from slipping off the seat. The jaws are removable and interchangeable by simply removing the fulcrum pin. Each jaw has a different size opening and the combination of these sizes makes the tool adaptable to practically all sizes and types of springs. A locking device between the handles allows for eleven different positions holding the lifter in place when the spring is raised, thus allowing the operator to use both hands if necessary to remove or replace the key. The locking device does not protrude through the handle.

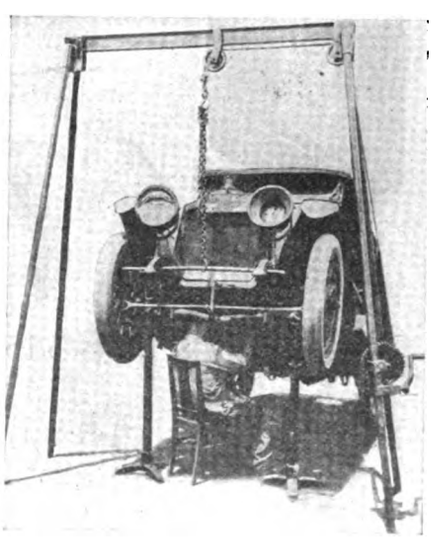
Stevens Puller and Driver for Ford Driveshaft Sleeve No. 2596



Stevens & Co.,
375 Broadway, New York City.
Price $6.50 for puller only, $8 for puller and driver.

The tool is for removing the Ford driveshaft sleeve, No. 2596. The puller has steel jaws that completely surround the sleeve, so that any desired pressure can be applied through the large steel screw without injury to either sleeve or shaft. The inside is machined to a close fit on the sleeve to prevent the tool from springing out of line or jumping off under pressure. The square bosses on the sides are for securing the tool in the vise. The driver is provided with a sight consisting of a special notch and pin to secure the proper alignment of the keyway slots as the sleeve is driven into place.

Williams Cylinder Grinder



Hy-Way Service Co., 225 South St. Joseph Street, South Bend, Ind.

This is a vertical cylinder grinder, all the mechanism being located above the grinding wheel, so that the abrasive dust drops through the cylinder. The longitudinal table slide has sufficient movement in each direction to provide for positioning the spindle for grinding three cylinders each way. A cross slide allows for accurate positioning. A 2-hp. electric motor supplies the power to drive the grinding wheel, transmit the planetary rotary motion to the spindle unit, and feed the head down. A reverse movement carries the grinding wheel and the head back to the starting position. There are twelve available rates of feed, ranging from .007 to .375 in. per revolution of the grinding spindle.

Kimball's Garage Crane or Hoist

Kimball's,
137 Ashmun Street, New Haven, Conn.
Price $80 for 3-in. cross beam; $85 for 4-in. cross beam. Jacks $15 per pair.

The crane is used for hoisting the front or rear end of a car or truck to a height convenient to the mechanic who is working underneath the car. When the car is raised to position, it is held by jacks on which the front or rear axle rests. With the car on the jacks, the crane can be removed and used on another car.

Repairshop Shortcuts

Use a Claim Check

WHEN an owner leaves a car for transient storage or repairing or washing, give him a claim check. If you have no regular form of claim check, give him a sales slip or something which will identify him. You may not think it necessary but he does most of the time. He hesitates to leave personal property valued at anything from a few hundred dollars up to several thousand dollars with no written or printed slip to prove that he left the car with you. It is good business and produces a good impression, and that is what you want.

Send a repairshop shortcut to Motor World. If it is new and practical, we will pay you a dollar.

No. 3447—Stopping a Fender Crack—A fender crack will gradually work clear across a fender unless stopped. The crack can be stopped by drilling a small hole in the metal through the crack near its outer end. A rivet and copper washer are headed up in the hole.—C. A. Umoselle, Hammonton, N. J.

No. 3448 — Hydrometer Holder — A hydrometer holder is made from a battery jar with one side removed. Holes are drilled through the end of the jar and a strip of burning lead run across.—H. V. D. Sweet, Canajoharie, N. Y.

No. 3449—Removing a Spindle Arm Bushing—A spindle arm bushing is removed by placing a spindle arm across the open jaws of a vise and driving a bolt with the head ground off to pass through the spindle arm.—W. B. Wheatley, Brooklyn, N. Y.

No. 3450—Vulcanizing a Tube—To avoid pinching the edges of the inner tube when vulcanizing, place a piece of felt slightly larger than the patch under the tube.—H. V. D. Sweet, Canajoharie, N. Y.

No. 3451—Replacing Dodge Starter-Generator Brushes—Dodge starter-generator brushes are replaced by removing the left engine side pan by taking out the three front cap screws that hold the side pan and the two stove bolts that hold the side pan to the frame side member. The pan is removed and the lower brush is replaced. The upper brushes are replaced from above.—Frank R. Hartrock, Dodge Brothers Service Station, Warren, Ind.

No. 3452—Battery Charging Board—A charging board which does not require series connectors is made by using double throw, double pole switches. When a battery is removed the switch is thrown up, thus completing the circuit for the remaining batteries.—H. V. D. Sweet, Canajoharie, N. Y.

No. 3453—Glass Covering for Battery Bench—Pieces of old windshield glass are cut to fit the top of the battery charging bench. The glass can be kept dry so that there will be less liability of getting a shock.—C. R. Stoflet, Kobe & Smith Auto Co., Scottville, Mich.

DRIVEAWAYS WILL AID WINTER'S DELIVERIES

Head of N. A. C. C. Traffic Division Points to Assistance Given in 1920

NEW YORK, Nov. 20—"Given average favorable winter weather and road conditions and the automobile industry can deliver from one-third to one-half its output over the road," says James S. Marvin, head of the traffic division of the National Automobile Chamber of Commerce, discussing the present transportation problems and the future outlook for getting cars into the hands of the dealers.

In reviewing the situation, Marvin says:—

The railroad situation right now is unchanged, but then we have been favored by good weather. Let a few good old-fashioned blizzards come along and see the difference. The railroads are doing fairly well, but they are not improving and we are liable to have a change of weather at any time. I think, however, that we shall be able to meet the traffic emergency and I am looking to driveaways to help materially.

In our record year, 1920, when we made 2,205,197 cars, our manufacturers delivered 470,867 over the roads. Even in the so-called bad winter months of January and February we kept up a rapid pace, showing 29,283 in January and 43,719 in February.

If we could do this two years ago, how much easier will it be this winter, for since 1920 there have been miles and miles of improved highways opened up. In addition, the various States have got busy in the matter of snow removal and our roads this winter will be able to give us service in consequence.

We are not disturbed by the closing of navigation, for the number of automobiles delivered by boats has been small when compared with the monthly production. Not more than 5000 cars a month are shipped by boats even at busy times.

L. G. PEED APPOINTED HEAD OF WILLYS SALES

TOLEDO, Nov. 20—L. G. Peed has been appointed sales manager of the Willys-Overland Co., succeeding A. C. Barber, who goes to Chicago to become president of the Overland Motor Co., the Overland branch in that city. The Chicago position formerly was held by W. H. Taylor, who, it is understood, contemplates moving to California.

Peed has been assistant sales manager for Overland for about a year, coming to the position from Toledo, where he was branch manager. Previous to that he was retail sales manager of the New York branch.

Ford to Expand in Canada

DETROIT, Nov. 20—Ford Motor Co. of Canada, Ltd., is advertising for bids on the construction of the first large building to be added to the Border City's plant. Building operations will start immediately following the awarding of contracts. The first building will be 1000 x 588 ft. A machine shop and tool shop are to follow, the first 288 x 688, the other 75 x 200. The building program calls for $6,000,000 in three years.

Look for These Stories Next Week—

NEXT week's Motor World will present a particularly timely story containing many real practicable ideas for bringing more Christmas business into the automotive dealer's store and shop. It will help you "Make This an Automotive Christmas."

This issue also will contain:

1—Maximum and minimum time estimate schedule covering electrical repairs, a particularly interesting system worked out and used by an eastern electrical service station.

2—Descriptions of the interesting new automotive equipment for the shop and to sell shown at the Automotive Equipment Association show, held in conjunction with the recent Chicago convention.

3—Several stories describing practical merchandising methods used successfully by some dealers in selling automotive products in winter.

All of these will be in addition to the regular weekly features, including new car, truck and tractor descriptions, law, better mechanics, Repairshop Shortcuts, news of the industry, etc.

Do you read Motor World EVERY week?

ROLLS-ROYCE PRICES MADE ON BODY MODELS

SPRINGFIELD, MASS., Nov. 20—Rolls-Royce of America announces prices on its 12 body models, showing a range of from $10,900 to $13,500, as follows:

	Number of Passengers	Price
Roadster	2-3	$10,900
Phaeton	4-5	10,900
Phaeton	6-7	10,950
Enclosed drive cabriolet	5	12,800
Limousine	6-7	12,850
Sedan	4-5	13,150
Sedan	7	12,900
Enclosed drive limousine	6-7	12,900
Town brougham	6-7	12,850
Suburban limousine	7	12,900
Salamanca cabriolet	4-5	12,950
Full cabriolet	6-7	13,500

Grant Continuing Trucks

CLEVELAND, Nov. 20—The Grant Motor Car Co., which is being operated by Receiver Joseph C. Hostetler, is manufacturing trucks for which there has been a good demand since the receivership. The company for the present is not making new passenger cars. The parts and service departments are being operated so that dealers are enabled to hold the good will established by the car. The work of making an inventory and appraisal is progressing.

MILWAUKEE BECOMES BIG SHIPPING PORT

Made So by Railroad Situation —Driveaways Start There for Distant Centers

MILWAUKEE, Nov. 20—For many dealers in Milwaukee, the problem of getting deliveries from factories remains at least as much if not more important than the actual merchandising of passenger cars. The sale of cars, while not nearly so active as earlier in the fall, still is well sustained at a much better average than in any past November period. There was never a time when selling effort was so intensive as it is at present. Solicitation work has been finely organized and the thorough manner in which dealers are combing prospects is the matter of daily comment in the trade here.

Daily Shipments Made

The freight car shortage is making Milwaukee one of the leading shipping centers for north and western distribution by Michigan manufacturers especially. Great Lakes transit lines are carrying a relatively enormous number of passenger cars from Detroit, Flint, Lansing and even Toledo. Crosby Line steamers have been carrying between 60 and 75 new cars to Milwaukee every day from Muskegon, Mich., to which point the cars are driven from factories for cross-lake transit, to be driven from Milwaukee to Wisconsin, Minnesota, Iowa, Dakota and even Montana.

The Père Marquette Line, which does not ordinarily call at the Muskegon port, has been bringing several boatloads each week since late in October. As an accommodation to Buick, two shipments of 40 cars each were brought from Muskegon to Milwaukee last week by the Père Marquette.

The Crosby Line is planning to put on another steamer for the Muskegon-Milwaukee run, principally to handle motor cars. Officials say they have been requested to provide trans-lake shipping facilities for this purpose all winter and well into the spring. Reports from Muskegon are that warehouses are kept filled with cars awaiting crosslake shipment.

Due to Car Shortage

This is due mainly to the car shortage and the effort to avoid the congestion at the Chicago gateway. Traffic promises to increase by lake when navigation officially closes Dec. 1, due to the closing of the Straits of Mackinac by ice. Some manufacturers who have been shipping cars entirely by water from Lake Huron and Erie points to Superior-Duluth, will then be obliged to take the Muskegon-Milwaukee water route, for with railroad conditions already highly unfavorable, winter operation difficulties now approaching will make all-rail shipments more unreliable and unsatisfactory than they are at present.

G. M. C. TO DISBURSE DIVIDEND ON COMMON

Means Distribution of $10,275,295 to About 50,000 Stockholders

NEW YORK, Nov. 20—A special dividend of 50 cents a share on common stock, decided upon by the directors of the General Motors Corp. means the distribution of $10,275,295 to about 50,000 stockholders. This sum comes out of the estimated earnings of $55,000,000, after all deductions for charges and taxes, for the year 1922. The chief beneficiary will be E. I. du Pont de Nemours & Co., Inc., which, through its subsidiaries, is the largest individual holder of G.M.C. common, with 7,400,000 shares, so it will get $3,700,000 of the dividend.

This is the first dividend on General Motors common stock since the last quarter of 1921 in which year the corporation paid at the rate of $1 a share quarterly. The action of last Thursday, however, does not mean that common will be placed on a regular quarterly dividend basis, the directors being of the opinion that however encouraging the outlook appears to be for the future, the consideration of the question should be deferred until the results and capital requirements of future operations can be satisfactorily ascertained.

At the directors' meeting it was reported that, even after paying the special dividend, the corporation will have a surplus in excess of $40,000,000 at the end of the year. The financial situation is thoroughly satisfactory, directors were told, the indebtedness to banks having been entirely discharged since the first of the year. The liabilities have been reduced by upward of $45,000,000 and the corporation now has no indebtedness other than payrolls, supplies, etc. A comparison of balance sheets of Sept. 30, 1920 and Sept. 30, 1922, shows a reduction of $110,000,000 in liabilities.

LEE TIRE OPENING BRANCHES ON COAST

LOS ANGELES, Nov. 20—Deciding to market its product on the Pacific Coast under the direct jurisdiction of the parent concern, the Lee Tire & Rubber Co. will open branches in the larger cities on Jan. 1, when the Chanslor & Lyon Co. will relinquish the franchise which it has held for 10 years.

The San Francisco branch will be under the management of Tom H. Wilkinson, for many years manager for the United States Rubber Co. In Seattle the Lee branch will occupy its own building and will be in charge of C. C. Miller, formerly manager of the Goodyear branches in Seattle, Spokane and Butte. The branch in Portland will be under the management of D. L. MacPhee, who has resigned as credit manager of the Portland branch of the United States Rubber Co. to accept the position. In Spokane the Lee interests will be represented by G. B. Kemp and R. S. McClintock of the Inland Battery Co., and in Butte, Mont., P. E. Crawley, proprietor of the Broadway Garage, will assume the distribution in eight counties.

A strong Los Angeles connection is being established by the Lee company which will complete the extensive reorganization of their Pacific Coast affairs.

CHICAGO JOBBERS PLAN TO HOLD BIGGEST A. E. A. MEETING IN MEDINAH TEMPLE

CHICAGO, Nov. 21—Ten automotive supply jobbers of this city have combined to hold the largest "Ask 'Em to Buy" and "Shop Profits" meeting in the history of the Better Merchandising Campaign. The committee representing the jobbers has rented the Medinah Temple, which seats 5000 persons for the night of Dec. 6. The promoters confidently expect to fill the hall that evening.

The program will be a talk on "Better Merchandising and More Profits" by Ray Sherman, merchandising director of the Automotive Equipment Association, and the showing of the two films, "Ask 'Em to Buy" and "Shop Profits," which the merchandising committee has produced. A trailer film on "Electrical Trouble Shooting" by the American Bureau of Engineering, Inc., will also be shown. A pipe organ concert will precede the meeting.

The following jobbers are promoting the meeting:

Sheridan Auto Supply Co.	Beckley-Ralston Co.
E. D. Kimball Co.	The Automobile Supply Co.
Universal Automotive Equipment Co.	The Chicago Automotive Supply Co.
Electric Appliance Co.	The Chicago Auto Equipment Co.
Motor Supply Co.	American Bureau of Engineering, Inc.

At a dinner on Thursday, attended by representatives of these firms, the following executive committee was appointed: H. Edsal Olson, chairman; J. C. Ralston and T. M. Brooks.

This will be the first opportunity for the Chicago retail dealers and their employees to see this film. All persons engaged in any branch of automotive retail distribution will be invited.

COMPANY ORGANIZED FOR DURANT BODIES

NEW YORK, Nov. 20—Incorporation of the Hayes-Hunt Corp. at Dover, Del., with authorization to issue 1,000 000 shares of capital stock without nominal or par value marks the debut of a Durant subsidiary which will build about 200,000 closed bodies a year for the big holding organization. It also means the construction of body building plants in connection with the six Durant and Star car-building plants.

Plans have been completed to begin operations first in Elizabeth, where space has been set aside in the big plant formerly owned by the Willys Corp. and now part of the Durant interests. In all likelihood it will be necessary to build plants at Lansing and Oakland, and it is expected that all six body-building factories in various parts of the country will be in full operation by March or April. Work at first will be concentrated in the production of Star closed bodies.

Maxwell-Chalmers Conference

DETROIT, Nov. 18—Seventeen district supervisors of the Maxwell-Chalmers Corp. are guests of the local Maxwell-Chalmers factories this week while in semi-annual conference. In addition to the supervisors W. H. Farrington, general manager of the Maxwell-Chalmers Sales Co., Chicago, was also in attendance.

RICKENBACKER GETS DETROIT SHELL PLANT

DETROIT, Nov. 20—The Rickenbacker Motor Co. has taken over the former plant of the Detroit Shell Co. where shells and ammunition were made during the war. The building adjoins the Rickenbacker property. It will be at least two months before the building will be ready for use. It will be connected with the present Rickenbacker factory by a 60 foot archway, giving the organization approximately 500,000 sq. ft. of floor space.

The new addition will house a continuation of the assembly line and will be the finishing end of the production line.

Other building activity at the Rickenbacker factor, which soon starts its second year of production, include an addition to the office building, an enlarged experimental department, the installation of a complete factory service station for Rickenbacker tourists.

NEW EQUIPMENT BODY CONSIDERS BY-LAWS

CHICAGO, Nov. 18—A business meeting of the Association of Automotive Equipment Manufacturers, attended by 135 members and prospective members, was held at the Congress Hotel to discuss the proposed constitution and by-laws drafted and approved by the board of directors. The constitution was taken up by sections and unlimited discussion was permitted. A number of minor changes were suggested, and when it appeared that the work could not be completed at that meeting it was voted to refer the instrument back to the committee of the board of directors.

Further suggestions will be received up to Nov. 22, and at the association's regular meeting, Nov. 27, final action will be taken. Following this week's meeting, 12 new applications for membership were received.

WYOMING LAUNCHES FIRST STATE SHOW

Casper Proud of Achievement in Staging Highly Successful Exhibit

DENVER, Nov. 18—Automotive distributors for the Rocky Mountain territory are highly elated over the attendance and sales results of the First Annual Wyoming State Automobile Show, held at Casper. And Casper itself is as proud of this new proof of its prominence on the motor map as it is of the fame and wealth it has gained in recent years as center of an internationally known oil field.

"Casper is the livest towns of 25,000 people that I ever saw," began one report to the Motor World correspondent in Denver. "It has about 5000 automobiles, including practically every make from a Rolls-Royce to a Ford. The show proved a tremendous success, and the dealers are delighted because they sold a large number of cars. This is the biggest event ever pulled off in Casper, and visitors attended from all over the State, and also from Nebraska and Colorado points."

Each Booth With Two Cars

Seventeen car dealers took part in the show, each having space for two cars. But those two cars didn't stand in their place all through the show in accordance with automotive show custom and tradition. Far from it. That is all right in New York or Chicago or any other city that takes motor shows as a matter of course, but not in pioneer Casper, where things have to be done differently. Each dealer changed his exhibit completely every day, thus being able to display all his different car models and at the same time treat the public to a new show every day. That this feature proved popular was shown by the heavy repeat attendance and by the favorable comments of visitors attending more than one program of the event.

Another innovation was a system of having each car carry in the lower left-hand corner of the windshield a card six inches square, with the Casper-delivered price neatly marked thereon. This feature won compliments from visitors who have attended so many shows that they feel justified in claiming to be expert judges.

Decorations Elaborate

The show was held in the Arkeon Dance Hall, which was decorated with ferns and flowers, several hundred Japanese lanterns and a score or more of Japanese umbrellas and with autumn leaves in such abundance that the ceiling look like a wildwood bower.

Beside the car exhibits, there were several accessory displays. And while there was a continuous musical and vaudeville program, with a radiophone in addition, the crowds made sure to see all there was to the show proper. The crowds were substantial all the way through also, the paid admissions running as high as 1300 in a single evening, beside a good-sized crowd fortunate enough to be favored by the show committee's rather liberal distribution of passes.

The entertainment features were arranged so that they did not interfere with easy talking between exhibitors and interested visitors. There is already talk of a still bigger event next year.

UNIVERSITY TO GIVE COURSE ON TRACTORS

MADISON, WIS., Nov. 20—Three courses in the operation, care and maintenance of tractors will be conducted by the department of agricultural engineering of the University of Wisconsin. The first course opens Dec. 4, the second on Jan. 8, and the third on Jan. 29. Each class will be limited to 20 pupils and is open to any person, although tuition for residents of Wisconsin is free. Registration and laboratory fees for residents are $15, while non-residents pay $10.34 additional as tuition.

Prof. F. W. Duffee, who directs the work, in a recent bulletin made suggestions to tractor owners to keep their machines busy during the winter. Grinding feed, sawing wood, hauling manure and shelling corn are some of the duties suggested for the tractor after the usual summer and early fall field work is completed. The use of tractors during severe cold weather is not recommended, due to difficulties in starting engines and maintaining proper lubrication.

TIME PAYMENT PLAN ADOPTED BY MILBURN

TOLEDO, Nov. 18—Announcement of a time payment plan has been made by the Milburn Wagon Co., manufacturers of Milburn electric trucks. One arrangement embraces payments over a 12 months' period, the second, payments over 21 months. Substantially all other details of the plan are the same.

The first payment is made when the order is signed and amounts to 10 per cent of the total purchase price; the next payment is made on delivery of the truck and amounts to 15 per cent of the purchase price, freight and war tax being paid at this time. This leaves a balance of 75 per cent which is divided into equal monthly installments and is spread over the 12 or 21 months' period, at the option of the buyer.

Interest at 6 per cent per annum on unpaid balances is charged, thus an amount varying from $75 to $220 to cover the cost of time-financing and insurance, the difference being due to the size of truck and length of time credit is required.

PRICE OF GASOLINE DROPS IN CALIFORNIA

Move Believed to Be Part of Plan to Keep Out Competing Companies

LOS ANGELES, Nov. 21—Without assigning any reason, the retail price of gasoline has been reduced one cent a gallon. This is the first change in price for approximately one year. Despite the enormous quantities produced in this State, California motorists have been paying more for fuel than those in some other parts of the country. By some it is claimed the price reduction is a move on the part of the biggest producers to keep new competition out of this field.

The Shell Oil Co. recently bought out a number of so-called independent concerns and has entered upon a program of expansion. The Associated Oil has gradually advanced its service stations from Northern California to within 40 miles of Los Angeles, and is known to intend to operate here eventually.

At present the Union and Standard companies are the largest operators. The General Petroleum is a big producer, but does not market its product to the retail trade.

Record Consumption in State

Gasoline is now enjoying its record consumption in California. The market is at its best and gasoline is the only oil product of the industry which does not have a surplus stock at this time. Under date of Sept. 1 a report was issued stating that gasoline stocks were 19,000,000 gallons less than on the same date a year ago. This amount is said to be barely a sufficient cushion to protect adequately the industry from a temporary gasoline shortage should any extraordinary circumstances arise to increase the demand.

The production of oil is gaining daily and it is said refineries are reluctant to increase the manufacture of gasoline at this time because of the necessity for accumulating other residue stocks, such as fuel oil, which is produced as a matter of course when gasoline is manufactured.

For every gallon of gasoline it is found that other residuum products, principally fuel oil, are developed at the rate of three to four times the amount of gasoline made. With enormous quantities of crude oil going into storage and new wells being brought in daily, also the demand for gasoline increasing constantly, refineries are at a loss for a market for fuel oil and are hoping to develop a foreign export business.

Clark Heads Tyer Rubber

ANDOVER, MASS., Nov. 20—Myron H. Clark has been elected president of the Tyer Rubber Co., maker of Tyrian tires. Walter E. Piper, formerly manager of the Boston Rubber Co., has been chosen vice-president.

Digitized by Google

LOS ANGELES USING FOUR TENTS AT SHOW

More Than 300 Cars and 50 Trucks Included in Business Getting Exhibit

LOS ANGELES, Nov. 16.—As a business getter, the automobile show being staged this week undoubtedly is proving the best of its kind ever held here. This is particularly true for those lines which have introduced their 1923 models.

Because of lack of adequate housing facilities, four enormous tents are in use to provide 135,000 sq. ft. floor space making this the biggest show Los Angeles ever saw. More than 300 passenger cars and 50 trucks are included in the exhibit. Accessories have a remarkable display.

Dealers report a very pronounced demand for closed cars. Some say that the bulk of show sales will prove to be of this type. Attendance is exceeding all past records with paid admissions for the first five days doubling the same period in any previous show.

As this is the first showing of the new Star car and it is being offered in several models it is providing one of the chief objects in attending. The way orders are being taken indicates that the public is interested.

In contrast with the Star there are being shown a Rolls-Royce limousine and a British Sunbeam.

New Fort Worth Buildings

FORT WORTH, Nov. 18—Fort Worth dealers, nearing the close of a prosperous year, are investing some of their earnings in new buildings. Within the last week, the Mitchell Auto Co. and the George-Crossman Co. have announced the purchase of property and plans for extensive improvements. The Mitchell company, handling Jordan, Cadillac, Cleveland and Chandler cars, will erect a four-story structure of its own. George-Crossman, handling the Studebaker, has purchased its present home and will make many changes at once.

EMERGENCY IN FUEL SHORTAGE IS OVER

WASHINGTON, Nov. 20—Continued improvement in conditions relating to fuel supply has made unnecessary the continuance of the surveys and reports which the United States Chamber of Commerce has been collecting to cooperate with the Federal fuel distribution agency, according to the president of that body, Julius H. Barnes.

He declares that the downward movement of prices and the increase in available supplies has removed the necessity for apprehension over the winter's fuel supply.

Oakland Ships by Express

PONTIAC, MICH., Nov. 20—Oakland Motor Car Co. has shipped several carloads of closed models into the New York territory by express to overcome delays occasioned by freight movement in getting cars into buyers' hands. The company reports it is the first express shipment of cars in two years. The Oakland company now is in full production of its closed models, and regular shipping schedules are starting at once.

CLOSED CARS ATTRACT JERSEY CITY INTEREST

Sixty Per Cent of Models Shown at Annual Exhibit Are of That Type

JERSEY CITY, N. J., Nov. 18—The annual show of the Hudson County Automobile Trade Association has been in progress all this week in the Fourth Regiment Armory in this city. The attendance has been good, and dealers report a satisfactory number of sales from the floor and large numbers of new prospects listed. There is also a healthy demand for cars for spring delivery. The interest is confined largely to closed cars, as might be expected at this season of the year. About 60 per cent of the cars on the floor are of the closed type.

The show presents a bright, cheery appearance, and most of the exhibits are well arranged, although there are a few overcrowded booths. None of the booths have any special decorations or furniture other than what the management furnishes. This condition detracts considerably from the attractiveness of the individual exhibits.

The show has been extensively advertised in the local newspapers as well as in the New York dailies. The management is conducting a voting contest to determine the most popular woman driver in the county. One vote goes with each ticket. To get the ladies out in the afternoon, there is a daily fashion show at 3 p. m. Twelve mannequins have been secured to display the latest in feminine wear. One of the exhibitors is offering a prize for the best 200-word description of the cars he has on display. The show has also been advertised with car cards, window cards and bills.

The Jersey City Show—One of the First of the Year

The Jersey City show, in the Fourth Regiment Armory, presented a bright, cheerful appearance. The booths were not crowded, and this with the wide aisles was a distinct selling feature

COAST TRADE BACKS TOURISTS' HOTEL

CALIFORNIA BUILDING WILL COST $400,000

Is Completely Financed and Should Be Ready Late in Spring of 1923

SANTA BARBARA, CAL., Nov. 18—Members of the automotive industry of California are showing that they have the interests of the motorist as well as themselves at heart, and, incidentally, are making life more attractive for the touring motorist in this State by erecting in this city, at a cost of $400,000, a European plan hotel, especially designed to care for motorists and their cars. The idea originated with C. M. Glover, secretary and treasurer of the Santa Barbara Automobile Trade Association, a local organization of the California Automobile Trade Association.

Members of the local branch got behind the idea with money and personal support, and their work put it across. As a reward for their efforts, the new Mission Tavern, when completed early next year, will be designated as the official headquarters of the California Automobile Trade Association in the Santa Barbara district. Work has been commenced on the structure, which has been completely financed, and if the average progress in construction is maintained, it should be ready for service late in the spring of 1923.

Located in Heart of City

The hotel is located in the heart of the city, occupying a tract 180 x 182 feet, three stories in front and four or five in the rear, containing 250 rooms. There will be garages ample to accommodate the cars of all guests, with a service and equipment station on the first floor and a repair plant in the rear.

A touring bureau will be maintained, where free road-maps, guide-books and similar information may be obtained. A telegraph, telephone and radio office will be on the first floor, and arrangements have been made for motor stage lines to make the hotel their starting point for tours along the coast and through the mountains of this part of California.

A large assembly hall will be provided for meetings of the local and State automobile organizations and the trade associations as well. This is the first hotel on the coast to be erected especially for the automotive trade.

Gramm-Bernstein Receiver

CLEVELAND, Nov. 20—The United States District Court at Toledo has appointed E. G. Kirby, Toledo banker, receiver for the Gramm-Bernstein Motor Truck Co., at Lima, in order to protect the interests of stockholders, creditors and dealers.

Through the appointment of the receiver, the company plant will be operated under the protection of the court. The assets of the corporation are placed at $2,500,000, and the liabilities at $1,600,000.

After being appointed, Kirby visited Lima, went over the assets of the corporation and deputized B. A. Gramm and Max Bernstein as managers of the property. They will continue operating the plant until a reorganization now under way is perfected.

ELECTRIC TAXICABS APPEAR IN NEW YORK

NEW YORK, Nov. 20—A new type of taxicab went into service in New York when the Electrotaxi Corp. placed a fleet of electric cars in operation last week. These are the first electric taxicabs that New York has had since the old electric hansoms of more than 20 years ago. Finished in two tones of gray, the new cabs are in sharp contrast with the color schemes usually employed by public vehicles.

It is the intention of the Electrotaxi Corp. to work the cabs in double shifts, keeping them on the streets from 18 to 20 hours a day. Two sets of batteries are to be used and the battery compartments are specially designed for rapid changing, so that an exhausted battery may be removed and a fresh one substituted in less than 10 minutes. By thus changing the battery, the cars will have an operating radius of approximately 120 miles and a maximum speed of 25 miles per hour.

KISSEL IS ENLARGING ITS PLANT FACILITIES

MILWAUKEE, Nov. 20—The Kissel Motor Car Co. of Hartford, Wis., which is erecting and equipping a new steam generating plant costing $150,000, is preparing to initiate several other projects to provide larger capacity because of the inroads made upon its reserve manufacturing facilities by a constantly enlarging distribution organization.

The program will be put into effect now that the demand for motor vehicles for the transportation of freight as well as passengers is approaching that settled condition when there will be a continuous, steady demand for cars, necessitating a dependable source of supply fully equal to the increased buying demands, officials of the Kissel company said.

LOUISIANA EXPANDS ITS PLAN FOR PARKS

Dealers of State Expect Strong Impetus to Sales Will Follow Action

NEW ORLEANS, Nov. 20—Automobile dealers and motor enthusiasts generally predict unprecedented impetus to sales in Louisiana during the next few years as a result of the formation of the Louisiana State Parks Association on a permanent basis and dedicated to the work of establishing tourist parks in every parish in the state. The association's first convention here was attended by nearly 100 good roads boosters from every part of the state.

Tentative sites for tourist parks already have been selected in several parishes, and many beautiful preserves probably will come under the control of the parks association. Altogether, the movement is seen as the beginning of what very well may be the finest system of state parks in the country.

As the initial effort of the association after its organization, a tract of ten acres in New Orleans' finest park was turned over to the association by the city's commissioner of public property. Formal dedication of the tract was made immediately, and the association's work was well under way.

The state parks program comes as a sequel to the recent announcement that Louisiana is building more miles of highways than any other state.

NEW SALES BUILDING ERECTED IN NEW YORK

NEW YORK, Nov. 18—A new factor has entered New York's automobile row—the Harriss Colonnade Building, covering the block bounded by Broadway, Eighth Avenue, 57th and 58th Streets, which will be ready for occupancy eary next month. Already two prominent makes of cars are represented in the tenantry.

Harry Haupt, president of the Hudson Motor Car Co. of New York, with the end in view of segregating the Hudson and Essex sales department, has taken place in the Harriss Colonnade for the Essex, securing 60 ft. on Broadway and 108 ft. on 57th Street, at an annual rental of $60,000 for more than 6000 sq. ft. The Hudson agency will remain in the Circle Building.

Rolls-Royce also has taken space in the Harriss Colonnade, leasing the large store on the Eighth Avenue and 58th Street corner. At present Rolls-Royce is on Fifth Avenue between 59th and 60th Streets.

NEW YORK STATE DEALERS ORGANIZING

FIRST STEPS TAKEN AT ALBANY MEETING

Report of Committees Will Be Made to Members at National Automobile Show

ALBANY, Nov. 21—Nine special committees named at the initial meeting of the New York State Automobile Merchants Association, held here last week, will report at the meeting of state automotive dealers at the time of the national automobile show in January.

The session was merely formative, and discussion was general of the problems which face automotive dealers of the State. Arrangements were made to develop a strong State organization, which will deal with legislation, finance, used cars, traffic and employment problems.

C. W. Bull, treasurer of the Syracuse Automobile Dealers Association, was elected temporary chairman to hold office until the January meeting. George Ostendorf of Buffalo was named first vice chairman, and Edwin B. Jackson, of New York City, second vice chairman.

Special Committees Named

Nine special committees which will report at the January meeting are as follows:

Used cars—H. Barcroft White of Syracuse; John B. Payne of Troy and Harry Gason of New York.

Legislation—W. Carpenter, Albany; Albert Hirst, New York and M. Sputhwrath, Albany.

Insurance — George Lewis, Brooklyn; Edward Bull, Buffalo and John Van Venschoten, Poughkeepsie.

Finance—E. D. Dean, Binghamton; George Stow, New York and L. R. Mack, Albany.

Traffic—L. J. Eastman, New York; W. E. Jordan, Oswego and J. A. Harden, Schenectady.

Employment—E. H. Baker, Buffalo; A. G. Jones, Norwich and L. M. Champaign, Ithaca.

Publicity—E. A. Jackson, New York; Joseph Haas, Brooklyn and W. R. Schiller, Utica.

The dealers discussed proposed legislation to require automobile owners to register with the county clerk, and in this way make each owner produce a bill of sale. The measure is designed to curb automobile stealing.

The association, as soon as it is officially organized, will start a campaign to organize the dealers in the smaller cities of the State.

Few Changes in Velie

MOLINE, ILL., Nov. 20—Daily production of between 30 and 40 cars is being continued by the Velie Motors Corp. About 30 per cent of this output is closed cars. Officials of the company state that they expect to continue indefinitely production of the present models. The Velie-built engine, which they have been using about a year, has given unusual satisfaction, they say, and they have worked out comfortable and well-appearing body designs, which they expect to continue. The only changes likely to be made are minor refinements, it is stated.

N. A. D. A. POSTER

Prepared by the National Automobile Dealers Association for use on windshields

REO CLUB HAS HARDY, OF OLDS, ADDRESS IT

LANSING, MICH., Nov. 16—A. B. C. Hardy, president of the Olds Motor Works, spoke last week to the Accelerator Club, composed of executives of the Reo Motor Co., on economic phases of factory administration. This is the first time the club has had as its speaker the president of a competing company.

October was the second largest October Olds has had. During the month 414 cars were shipped to San Francisco, and this number would have been exceeded but for freight car congestion and oversale of closed models. New York took 248 cars, and 360 unfilled orders were reported carried over. Wholesale sales in the Minneapolis territory doubled sales for the same month in the past two years. The Willys-Overland Building in Spokane has been taken over by the Oldsmobile distributor there.

New Motometer Models

LONG ISLAND CITY, N. Y., Nov. 17—The Motometer Co., Inc., has brought out three new Motometer models. They are the Midget for Fords at $4; the Aristocrat, incorporating the Midget with a locking device, at $7, and a type with a dial attached to steering column and applicable to air and water-cooled cars. The price on the latter type has not been fixed, but it is expected to be about $15.

TO BUILD SPEEDWAY IN ATLANTIC CITY

Work Expected to Be Completed in Time for Meet July 4, 1923

ATLANTIC CITY, N. J., Nov. 20—Automobile racing will be one of the attractions of this resort next summer, plans having been completed for the construction of a one and one-half mile board speedway by the International Speedway Association.

Concrete grandstands capable of holding 150,000 people will be built at an estimated cost of $2,700,000; another half million will be spent on the track, while it is estimated that the cost to fill in the 400 acres of meadowland which has been selected as the site will reach $160,000. The location selected is between the Pennsylvania Railroad and the Absecon Boulevard, about one and one-half miles from the boardwalk.

Work on the track will start Jan. 1 and it is hoped to complete it in time for the first meet, set for July 4, which will be conducted under sanction of the American Automobile Association.

John S. Prince, builder of many automobile board speedways in this country, is the designer of the new venture. In this one, however, he has deviated from his usual practice in that he plans an inner track one-quarter mile in circumference, which will be used for motorcycle racing and athletic events. In addition it is planned to utilize the infield for baseball, horse shows, etc.

$6,000,000 Company

The International Speedway Co. is incorporated for $6,000,000 of which $4,000,000 probably will be used in building the plant. At present more than a half million has been subscribed, it is said, and it is claimed that the rest of the money is in sight. C. H. Berlekamp, of Cleveland, well known in the tire manufacturing field, is president of the company and Prince is vice-president. The general manager is E. F. Corcoran, while among the directors are Harry Holloway, superintendent of the Briar Hill Steel Co., of Youngstown, Ohio, and Herbert S. Fray, of the James Connolly Construction Co., of Cleveland, and formerly with the International Harvester Co.

New Auburn Light Six

AUBURN, IND., Nov. 17—The Auburn Automobile Co. will shortly bring out a new light six model. It will be smaller than the present six cylinder model, which will be continued. The new model will be furnished with both open and closed bodies.

Digitized by Google

FEW SIGNS OF SLUMP APPEAR IN NEW YORK

Demand for Closed Cars Continues Strong—No Stocking by Dealers

NEW YORK, Nov. 17—There is little evidence of a seasonal slump in passenger car sales in the metropolitan district. Present indications are that sales for November will closely approximate the totals for October. Open car sales have undergone a seasonal slump, but the strong demand for closed models has counterbalanced any losses from this reason.

In some lines closed car sales are being materially hampered by the inability of dealers to get cars from the factory. Open cars are, in most cases, available for immediate delivery, although dealers do not expect to start stocking for spring delivery until next month or perhaps not before January.

In the low and medium price classes, there has been no noticeable slump. Closed cars represent about three-quarters of the sales. In the higher price ranges, there has been some falling off in sales, but, at that, the volume is satisfactory for this season of the year.

The monthly sales analysis published by Sherlock & Arnold shows that in the low and medium price ranges October sales were less than two per cent behind September, and in the higher price class, sales during October were about 30 per cent ahead of September. Total sales for all price classes in October were greater than in November. As compared with October, 1921, October of this year shows an increase of about 30 per cent.

The summary of registrations for the ten months is as follows:

Month	Medium and Low Price	High Price Class
January	2014	283
February	2230	273
March	6352	632
April	8428	862
May	8467	961
June	8203	865
July	7816	678
August	5921	516
September	4592	511
October	4518	665
Total	58541	6246

Ternstedt Increases Space

DETROIT, Nov. 20—The Ternstedt Manufacturing Co., builders of body hardware and metal stampings exclusively for automobile manufacturers, has completed the construction of three new buildings which will add about 300,000 feet of floor space to its former half million, and will give it capacity for practically double its former output. The company declares its expansion required by the certainty of greatly increased automotive activity in 1923 and the immediately following years.

BLACK LINE CENTERS WISCONSIN HIGHWAYS

MILWAUKEE, Nov. 20—Within a year it is expected that every mile of concrete highway in Wisconsin will be marked with a black line running along its center as a promotion of safety. The idea was first tried out in Milwaukee county last spring and has proved so successful that the State highway commission adopted it and has even gone to the expense of building special machinery to paint the line on the road. There is behind the idea a bit of psychology that leads drivers to keep to the right of the "black margin of safety."

The black line in no wise is an obstruction to traffic, but on the other hand is believed to have effected a decrease in the number of highway accidents, although definite figures are not yet available.

CENTRAL OHIO SALES INDICATE NO LET-UP

COLUMBUS, Nov. 20—There is no appreciable let-up in the demand for passenger cars in Columbus and central Ohio territory. The season has been an extra busy one. Passenger cars in both open and closed types are selling briskly.

Closed cars are in greater demand as the cold weather approaches. Cars selling from $1,400 to $2,500 are in the best demand, although there are frequent calls for higher-priced sedans and coupés.

Dealers believe that winter business will be more active than in former seasons and have made preparations accordingly. The open fall so far has aided in the good business, while the constant extensions to the good roads in central Ohio are stimulating winter business.

High Priced Cars Selling

DETROIT, Nov. 18—Verne E. Burnett, advertising manager of the Cadillac Motor Car Co., following a trip through New England and the Middle Atlantic States, reports sales of better priced automobiles in that territory to be running high.

Conditions were quiet in some cities, he said, but in others dealers were having the largest business they have ever had. A large number of medium-price car owners are graduating into the better priced car class, he stated.

Correction

In a shop profits story by L. K. Bridgman, service manager, O. L. Huntting Co., Springfield, Mass., in the October 18 issue of Motor World, he is quoted as saying, "Our aim is to bring a car in for inspection at the end of each 100 miles of travel." This obviously is an error. It should have read: "at the end of each 1000 miles."

HINKLEY ADOPTS NEW MERCHANDISING PLAN

Will Sell Its Engines Direct to Truck Owners on Replacement Basis

DETROIT, Nov. 21—Selling engines direct to fleet owners and individual truckmen on a replacement basis is the new merchandising idea just adopted by Hinkley Motors, Inc., of Ecorse, Mich., maker of Hinkley heavy-duty automotive engines.

Figuring that any good heavy-duty truck should wear out at least three engines, the Hinkley company plans to furnish new engines to the truck owner direct, to replace the worn-out power plant. This does not apply wholly to trucks originally powered by Hinkley, either, for by a new system of motor support a Hinkley installation can be made in any truck of the front-radiator type regardless of the depth of the frame.

It is claimed that owners of Hinkley-motored trucks can economize by this replacement through being able to trade in their worn-out engines as part payment for a rebuilt engine, thus saving time usually lost in an overhaul as well as money.

Seventeen truck manufacturers who now are using Hinkley engines as standard equipment are reported to have indorsed the plan. In preparation for carrying out, the company has appointed the following replacement plan distributors: Buffalo, Standard Welding & Manufacturing Co., 1156 Main Street; New York City, Gorey Automotive Parts Co., 354 West 50th Street; Pittsburgh, Parts Engineering Co., 3371 Bigelow Boulevard; Detroit, MacEwan & Shapley, 3169 East Jefferson Avenue.

MAY BASE INSURANCE ON ACCIDENT RECORD

PHILADELPHIA, Nov. 20—Representatives of companies writing automobile insurance have appointed a special committee to investigate the possibility of grading automobile rates based upon the accident record of individual drivers. This committee has under advisement a plan whereby a motor vehicle operator after a year without accidents could reinsure at lower rates because of his good showing.

These underwriters declare that if compulsory insurance prevailed, a reduction of 50 per cent in the rate would be possible because, at the present time, 80 per cent of the cars in Pennsylvania are uninsured.

Perfection Tire Receiver

WILMINGTON, DEL., Nov. 20—Charles C. Keedy has been appointed receiver for the Perfection Tire & Rubber Co., a Delaware corporation, having its principal offices in Fort Madison, Iowa. The petitioner is the Nemours Trading Co.

TRUCK SAVED NATION IN RAIL BREAKDOWN

Head of U. S. Chamber of Commerce Says General Collapse Was Prevented

DETROIT, Nov. 21—If the 2,600,000,000 tons of freight transported by railroads in the last year had not been supplemented by the 1,400,000,000 tons carried by motor vehicles, there probably would have been an utter collapse in the United States, Julius H. Barnes, president of the Chamber of Commerce of the United States and of the Transcontinental Development Co., said in an address at the Board of Commerce here.

In the field of motor transport the play of natural law of supply and demand has saved the day, he said. The advantage of the motor transport with its flexibility of delivery and its elasticity of road service is clearly apparent, he stated, as long as the public highways afford roadbeds free and open to its operation.

It certainly is true, he observed, that part of the railway channels of to-day never would have been built in competition with the more liquid motor transport, if that transport had been in existence then. This suggests again the vast potentiality of the motor industry in those sections of the world where vast tonnage is to-day awaiting only reasonable access to market. He cited Russia, Asia, Africa and South America as awaiting only highways for development and prosperity.

Comparative decrease in agricultural population in the last twenty years was taken by Barnes as a favorable omen, in that it showed greater efficiency and the use of machinery rather than man power.

H. D. HOWELL LEAVES MARYLAND FOR COAST

BALTIMORE, Nov. 20 — After ten years of successful merchandising, during which he built one of the largest automobile businesses in the state, H. D. Howell, owner and manager of The Howell Motor Co., Maryland distributor for Reo, has sold his business at a figure close to a quarter of a million dollars. Within the next few months, Howell expects to reenter the automobile business in California, possibly in the vicinity of Los Angeles.

It was with reluctance that Howell decided to withdraw from the Maryland field. The health of his family has made the change necessary. Howell, for years, has been an active worker for the best interests of the industry in Maryland and was particularly active in the Baltimore Automobile Dealers Trade Association, where he has filled many offices.

Most of the real estate and equipment of The Howell Motor Co. was purchased by Louis Lambert, of the Lambert Automobile Co. of Baltimore, Hudson and Essex distributor. The Reo account, and all stocks, parts, etc., was bought by E. R. Meyers, president of The Motor Car Co., Baltimore, Overland and Stearns-Knight distributor. Meyers also takes over the Howell Motor Co.'s organization.

TO MAP OUT PATHS FOR "JAY WALKERS"

NEW YORK, Nov. 20—The Bureau of Public Safety, the newest branch of the New York Police Department, has been put into commission under the direction of Special Deputy Police Commissioner Barron Collier, with Marcus Dow as the working head of the bureau. Dow was director of safety for the New York Central Railroad for 10 years and is president of the National Safety Council, which has 3500 industries, employing 7,000,000 men, in its membership.

Dow will start out to educate the public as to the dangers of traffic. One of the first steps to be taken will be to install paths painted in white lines at crossings to prevent "jay walking." Dow also believes motorists need educating, and he will insist that they start more slowly at crossings, following the go-ahead signal of the traffic cop. He believes many accidents are caused in the rush of drivers to get up to speed in a short distance.

OIL CLASSIFICATION AGREEMENT REACHED

WASHINGTON, Nov. 18—Members of the Society of Automotive Engineers, the Government Interdepartmental Petroleum Specifications Committee and representatives of the American Petroleum Institute joined here in discussing specifications for engine lubricating oils prepared by the Lubricants Division of the S. A. E. Standards Committee with a view to reconciling these with present Government specifications.

Most of the discussion dealt with the classification of oils in respect to viscosity and the temperature at which this viscosity should be measured. The S. A. E. and A. P. I. representatives finally agreed on a classification.

It was the sense of the meeting that acidity and emulsion tests of engine oils are of such questionable value as indicating the value of the lubricant that they should not be included in specifications.

Oil men who attended the meeting favored an increase in carbon residue allowable in Conradson test, but a motion to this effect was voted down by automotive and Government representatives.

Case Dividend

RACINE, WIS., Nov. 20—The J. I. Case Threshing Machine Co. has declared the regular quarterly dividend of $1.75 a share on the preferred stock, payable Jan. 1 to stock of record Dec. 11.

GOVERNMENT BEGINS ROAD SURFACE TEST

Experimenting at Arlington to Determine Cause of Bituminous Waving

WASHINGTON, Nov. 20—A series of road tests has been begun by the Bureau of Public Roads at the Arlington Experiment Station here to determine the cause of waving in bituminous road surfaces. A circular track is being used, composed of 27 sections of asphaltic concrete of different mixtures.

Profile measurements of the circular road were made before the tests were begun. Measurements will be taken at frequent intervals as the tests progress in order to determine the rate of formation of inequalities in the surface.

The tests are being made under solid rubber-tired wheels loaded with 600 pounds per inch of width of tire or approximately that of a 5-ton truck, travelling at a speed of 20 m.p.h. The device used will be guided by wheels traveling on rails and is electrically driven, the power being transmitted to one of the wheels used to represent the traffic, which will make the wheel act in exactly the same manner as the drive wheel of a truck.

The wear test of the circular track consists of 61 sections of concrete and the result of the tests will show not only what causes waves in bituminous road surfacing but the best mixtures of concrete and other road material. The tests will require six months to complete, and it is planned to run the machine ten hours a day.

FORD TO BUILD NEW PLANT IN ST. LOUIS

ST. LOUIS, Nov. 18—Construction of a new Ford plant in St. Louis to cost approximately $5,000,000 is projected for next year, according to a statement made by Henry Ford in Detroit.

Ford said that the new plant, which will be five times as large as the present Ford assembly plant here, would be built primarily for assembly, but would have facilities for expansion for the manufacture of parts. The plans as drawn contemplate a main plant, one story high, 1500 feet long by 300 feet wide. Auxiliary plants for wood working and production of certain parts are contemplated.

Revere Motors Sold

INDIANAPOLIS, Nov. 21 — Revere Motors has been sold at judicial sale for $52,000 to a reorganization committee. Henry A. Kraut of Logansport is trustee for the proposed reorganized company. Adolph Munson of Logansport, C. H. Barnes of Chicago and Kraut represented the stockholders. Later they petitioned for a court order asking that the receiver make out a deed to the buyer. This was the only bid for the plant.

DIPLOMACY CAN CURB HIGHWAY ACCIDENTS

Saves Time Over Use of Force —Connecticut Conditions Told S. A. E.

NEW YORK, Nov. 20—As illustrating the difference between brute force and diplomacy in handling traffic and how modern methods of efficiency are working out, Alden L. McMurtry, until recently consulting engineer of the Connecticut State Motor Vehicle Commission, declares that one traffic officer can stop and warn fifty motorists of violations of regulations in the time it would take him to make one arrest and carry the case through the courts.

McMurtry made this statement during his address to the members of the Metropolitan Section of the Society of Automotive Engineers held at the Automobile Club of America.

Old Idea Must Go

The small-town constable idea must go, declared McMurtry, who believes the success of traffic regulation should be measured by the results attained in reducing the number of accidents and not by the number of arrests made. A system of traffic warning is best in that it secures greater co-operation from the motoring public with those who are working to make the highways safer. This idea has proved a success in Connecticut where headlight regulations are enforced with but few arrests. McMurtry believes that enforcement of traffic laws by arrests often works a hardship on the operators.

Connecticut analyzing the highways accidents has found that 81.33 per cent of the accidents in 1921 were due to the operation of the vehicles; 14.6 per cent, to pedestrians and 3.44 per cent to car equipment. Of the accidents caused by operation it is found that 37.9 per cent were because of carelessness of the operator and 19 per cent because of recklessness of the driver. Disregard of the right of way caused 21.9 per cent and loss of control 3 per cent.

Majority Due to Motor Vehicles

Continuing the analysis Connecticut found that 66.2 per cent of the accidents last year involved motor vehicles alone; 15.3 per cent motor vehicle and pedestrians; 12 per cent motor vehicle and other vehicle and 2.9 per cent motor vehicle and stationary object.

Of all the highway accidents 70.33 per cent were passenger cars, 22.3 per cent motor trucks and 7.37 per cent motorcycles.

Reviewing the situation, the Commission believes that it is possible to reduce the number of accidents greatly by scientific methods. Proper police control, it thinks, can cut the percentage 47 per cent, while educational work will reduce it an additional 43.38 per cent. Apparently there is no remedy for the remaining 9.62 per cent.

McMurtry finds that accidents on the road, due to intoxicated drivers, is on the increase and he declares that at no time in the history of motoring has there been so much danger from this source.

Following McMurtry's address David Beecroft, directing editor of the Class Journal Co., urged that more effort be made to make the highways themselves safer through scientific construction. He also urged that the color of highway signals be standardized.

WILL BORROW TRUCKS FOR CHRISTMAS MAIL

WASHINGTON, Nov. 21—Two thousand automobile trucks will supplement the regular mail service during the Christmas rush of mails, it is announced by the Postmaster General, who has arranged for the use of this number of War Department trucks to augment the department's 4400 trucks. In addition, authority has been granted for the rental of several hundred trucks in areas not adjacent to the source of government supply.

NASH NOW BUILDING 75 "FOURS" DAILY

MILWAUKEE, Nov. 20—"More than $20,000,000 worth of products have been shipped out of the four-cylinder Nash passenger car works since this industry was established in Milwaukee less than three years ago," said Ben W. Twyman, general manager of the division, in a talk before the Tripoli Shriners' Luncheon club.

"Ground was broken just three years ago," he said. "To-day we are rushing to completion additions which will double the original capacity. By March 1 we will be employing about 1800 men, against 1000 at present. In addition, there is being built adjacent to these works a new LaFayette plant which will employ from 800 to 1000 more."

He then said:

Our four-cylinder production now is at the rate of 75 cars a day, and yet we are not able to fill all demands promptly. You may ask, where do all these cars go? When one considers that the Nash organization embraces 2000 or more dealers, in nearly every country on the globe, our present output means that each can get on the average of less than one car a month. It is a pretty poor dealer who can't sell that many—our Nash dealers are obliged to turn down several times that many cars each month due to our inability to make as many as they can sell. When we get to a schedule of 125 or 150 a day about March 1, it will mean that our 2000 dealers will be able to get on an average of only two a month.

Monroe Body Plant Burns

DETROIT, Nov. 18—The plant of the Monroe Body Co., Ludington, Mich., manufacturing commercial bodies for Durant subsidiaries, was destroyed by fire this week with a loss of $150,000.

MOON DISTRIBUTORS GATHER AT FACTORY

Place Orders for 50 Per Cent More Cars in 1923 Than Company Ever Built

ST. LOUIS, Nov. 18—At a meeting of all Moon distributors at the factory here orders were placed, with shipping instructions, for 15,625 cars in 1923, nearly 50 per cent more cars than the Moon company has ever produced in one year.

In addition to contracting for this large number of cars, the distributors agreed, under a co-operative warehousing and financing plan sponsored by the company, to take one-third of their total allotments during the three winter months and the remainder in equal monthly quotas, thus enabling the factory to maintain a steady rate of production throughout the year.

Sales Greater Than Output

The distributors were agreed that last spring and summer they could have sold many more cars than they did if the cars had been available. They did not have large stocks on hand, however, and the factory, having dropped to low production during the winter, was unable to expand immediately to meet the demand. Officials of the company desired to maintain the whole factory personnel intact this winter and keep production at a fairly constant level. They appealed to the distributors to aid by stocking cars in warehouses this winter and the distributors responded to the full extent.

Assistant Treasurer Earl F. Nelson explained the financial co-operation in a short talk at a banquet Tuesday evening. He said distributors should use their credit at their banks and through the commercial automobile financing companies when possible, but that if necessary the Moon company was prepared to see that every distributor got sufficient money to finance his winter purchases.

Prepared to Finance Dealer

The Moon company, he said, is prepared to deposit in the local bank of any distributor the amount of money necessary to finance his purchases, with the understanding that the bank will make loans as needed to the distributor over a period of three months.

The bank must take full responsibility for the credit risk and for releasing cars from the warehouse, but the Moon company agrees to take back within three months any new and unused cars upon which loans have been made and not repaid.

Having reached a peak production of 1018 cars in August, the Moon company has reduced its schedule with the coming of winter, and its output this month will be about 650. Orders for materials, however, have been placed for delivery immediately under the new arrangement, and plans are being made to start Dec. 1 on a monthly schedule of 1250 cars.

CHANGES IN THE TRADE

Hughes Motor Car Co., Milwaukee, has been appointed distributor of the Fox air-cooled car.

Henne-Miller Tire Co., Columbus, has remodeled its store and opened an accessory department.

Springfield (Mass.) Durant Co. has appointed **W. J. McCann** as manager of its truck sales division.

A. M. Cheek, for two years Studebaker car agent in Aledo, Ill., territory, has added the Gray car to his agency list.

A. S. Johnson Motor Co., Streator, Ill., has been appointed distributor for the Nash car in the La Salle County territory.

Service Motor Sales Co., Rock Island, Ill., has been named agent for the new Star car in Rock Island and Henry counties.

William Kumpf of Delhi, a suburb of Cincinnati, has joined the **Cincinnati-Oakland Motor Co.** in an executive and sales capacity.

M. J. Flanigan, Ottawa, Ill., has moved to Galesburg, Ill., and will take the Knox and Warren County agency for the Wills Ste. Claire.

McKinley-Gregg Auto Co. has been selected as the agency for the Hudson and Essex motor cars in Allegheny County, of which Pittsburgh is a part.

C. P. Beechinor has taken the agency for the Rickenbacker in Greenfield, Mass., and will have sales and service quarters in **Voetsch Bros.' Garage.**

Schmidt Motor Co., Milwaukee, distributor of the Sayers Six and Clydesdale truck, has been appointed to act in a similar capacity for the **Ames Body Co.**

Alphonse G. Heringhaus of **Lafayette Motors Corp.** has resigned to become associated with the **Fisher Body Corp.** He will travel from the Detroit office of that concern.

James D. Kerr, formerly sales manager of the **MacDougal Motor Car Co.**, has become connected with the **Norton Motor Co.**, Pittsburgh distributors of the Stephens cars.

Bell-Korfmann Co., Milwaukee, has been organized by **R. Ellsworth Bell** and **Calvin Korfmann** to become State distributor of the Rolls-Royce in Wisconsin and Upper Michigan.

Franklin Automobile Co. has appointed the following new dealers: **Motors Limited**, Quebec, P. Q.; **Barnes Motor Co.**, Wilson, N. C.; **North Shore Franklin Co.**, Great Neck, N. Y.

Gardner Motor Co., Oshkosh, Wis., has been appointed Durant and Star dealer in Winnebago County, and has opened a branch at Neenah, under the management of **D. J. McDonald.**

Harold Dunlap, Jacksonville, Ill., has been appointed distributor for the Cadillac car in the Morgan County territory. He will also be distributor of the Exide battery in the same territory.

Heeter & Heeter, Inc., is the name of a new Racine, Wis., corporation to do a general automotive sales and service business. The principals are **Robert L., Terry E.** and **Louis M. Heeter.**

Rewerts & Ehlers, Urbana, Ill., have bought out **Porter & Watkins**, Decatur, Ill. The purchase of this garage and salesroom includes transfer of the Hupmobile car agency in the territory.

Cocoa Garage Corp. has been organized at Cocoa, Fla., and will establish a large service station in that city. Incorporators are **A. G. Porcher**, president; **Horace Bruen, A. C. Fiske** and **H. W. Bell.**

Jackson Auto Co. has been organized and incorporated at Cochran, Ga., and will establish an automobile agency, service station, etc. **Guy D. Jackson** and **J. B. Thompson**, both of Cochran, are the incorporators.

Motor Truck Co. has been organized and incorporated at Greensboro, N. C., by **S. G. Rudd** and **J. A. Hedges.** The company will handle motor trucks and is now preparing to construct a service station at Greensboro.

Seminole Auto Co. has been organized at Sanford, Fla., and will establish an automobile agency and service station in that city. **J. D. Hood**, of Sanford, is president. Other incorporators are **Porter E. Pitts** and **George E. Wells.**

Peter S. Steenstrup, at one time vice-president and general manager of the **General Motors Export Co.**, has located in San Francisco as district sales manager of the **Buick Motor Co.**, with headquarters in the Balfour Building.

Green Brothers is the name of a new company organized at Daytona, Fla., to establish an automotive agency and service station. **S. B. Green** is president, **R. G. Green**, vice-president and treasurer, and **M. J. Green**, secretary.

J. H. Graham, for the past two years distributor of the Case and Davis in Oregon, with headquarters in Portland, has joined the **C. L. Boss Automobile Co.** of Portland as wholesale man, and will cover the State for Hudson and Essex cars.

Charles H. Minogue, formerly associated with **Frank J. Pierson** in the tire and auto accessories business, has opened a store of his own in Springfield, Ohio. He will carry a complete line of automobile accessories and parts for Ford cars.

Bethlehem Motors Corp. has named distributors and dealers of Bethlehem trucks as follows: **Ebert Motor Truck Co.**, Philadelphia; **Merchants Automotive Corp.**, Newark, N. J., and Bethlehem Motor Dept., **Pacific Land Co.**, Los Angeles, Cal.

Tri-City Nash Co., Neenah, Wis., has opened a second branch house at Appleton, Wis. It maintains a branch in Menasha, Wis., as well. **F. W. Abendschein**, president of the Tri-City Nash Co., has been elected president of the Neenah Business Men's Association.

Paul M. Lockwood has become general sales manager of the automotive division of the **Rossendale-Reddaway Belting & Hose Co.**, with mills in Newark, N. J., and general sales office in the Woolworth Building, New York. He was formerly with the **Lockwood Manufacturing Co.**, Kansas City.

A. L. Gifford, for several years in the employ of the Maxwell and Chalmers distributor in Boston and more recently directing the Rhode Island agency for these cars, has become sales manager for the **Norcross-Cameron Co.**, Maxwell, Chalmers and Peerless distributors in Springfield, Mass.

Hopkins Automobile Equipment Co., recently announced formed in Atlanta, has been incorporated under Georgia laws with **W. D. V. Hopkins**, president. Several salesmen will be on the road in the southeastern territory for the new company, which will handle all lines of accessories and equipment.

Charles A. Tway Co. has been organized and incorporated in Atlanta to establish an automobile distributing branch. **Charles W. Tway** and **G. P. Downing** are the incorporators. Tway has been a distributor of the Haynes in Atlanta territory for several years, and is well known in Southern automobile circles.

Motive Parts Co. of Pennsylvania has been formed in Pittsburgh as distributor of parts for Torbensen axles, Buda engines and Russel axles. **E. M. Sheehan**, who has been appointed general manager of the firm, has been identified with the truck business since 1914 as American buyer for H. G. Buford & Co., Ltd., of London.

Walter D. V. Hopkins, formerly vice-president and sales manager of the **Alexander-Seewald Co.**, of Atlanta, one of the largest Southern jobbers of automotive equipment, has resigned his position and organized the **Hopkins Auto Equipment Co.**, in Atlanta, of which he is president and manager. The company will cover Southern territory as jobbers.

Dugas Motor Co. has been organized and incorporated in Atlanta, having a franchise with the **Ford Motor Co. Graham C. Dugan** is president of the company. He was formerly in the automobile business in Atlanta, entering the air service at the beginning of the World War as a private, and being retired as a major. He was decorated during the war for valiant services.

Belle Isle-Street Co. has been organized in Atlanta by **A. L. Belle Isle** and **E. S. Street**, and has taken over distribution in Atlanta territory of Ford and Lincoln cars. Belle Isle has conducted a large Ford agency in Atlanta for several years, and is one of the best known automobile men in the State. Street has been operating a Ford agency at Dublin, Ga., and one at McRae, Ga.

Emmet V. Pollard, of the sales organization of the **General Tire & Rubber Co.**, who has been a special representative in New York territory for some time past, has been transferred to Texas, where he will be manager of the Dallas branch of the company. Pollard has been in tire sales for the past eight years, half of which have been in the service of General. **Tom Moore** continues as Southern district manager.

Springfield Automobile Co. has been appointed distributor of Winton and Velie cars in the Springfield, Mass. territory. **Herbert A. Clark** and **Charles Pettis**, formerly of the **Clark & Breck Co.**, which has handled these products for several years, have gone to the new distributor as sales and service manager, respectively. The Springfield Automobile Co. is said to be the oldest automobile dealer establishment in this State, with a continuous career of 22 years to its credit. During the entire time **Fred G. Jager** has been at the head.

Haynes Automobile Co. announces the appointment of two district sales managers, who will work in the Southern territory recently released from the selling franchise of the **Charles W. Tway Co.**, Haynes distributors at Atlanta. **Oscar G. Woolverton**, associated with the **General Motors Truck Co.** for 11 years, is organizing Texas as a separate selling unit, while **H. M. Fletcher**, another veteran in the automobile industry, has been assigned to Kentucky, Tennessee, Alabama, Mississippi, Louisiana and Arkansas. **Harry Lane Morris**, formerly of the **Morris Motor Sales Co.** of Chicago, will travel for the Haynes company in the Northwest. His territory will include Minnesota, North and South Dakota, Nebraska, Montana, Wyoming, Idaho, Oregon, Washington and 36 counties in Iowa.

ASSOCIATION ACTIVITIES

Ohio Prepares for Convention

TOLEDO, Nov. 19—The program of the sixth annual "Get-Together" convention of the Ohio Automotive Trade Association, to be held here Dec. 6, 7 and 8, provides for the discussion of the following subjects:

Wednesday, Dec. 6 — Present laws and pending legislation affecting registration taxes, restrictions, etc.; how local associations are handling used cars and other co-operative activities (to be led by six local association secretaries).

Thursday, Dec. 7—Truck service and sales: operation of garages; battery service sales and practices; "What's wrong with the tire business?" Service and sales problems as applied to the passenger car.

Friday, Dec. 8—Equipment merchandising; accounting.

The annual business session, including election of officers and transaction of other business, will be held on Friday. Among the interesting features of the program aside from the business session will be the luncheon, entertainment and visit of delegates at the Champion Spark Plug Co., and the regular annual banquet and trip through the plant with the Willys-Overland, Inc., as host.

Georgia May Operate from Atlanta

ATLANTA, Nov. 17—Preparations are being made by members of the Georgia Automotive Dealers Association to resume activities for the welfare of the industry over this State from a central office to be located in Atlanta, following a brief period of inactivity occasioned by the resignation a few months ago of Percy Megahee, executive secretary of the association for several years.

Volney Williams of Savannah, Ga., president, has been conducting Megahee's duties personally, but at a State meeting to be held probably early in 1923 another secretary will be named, if present plans materialize. One thing planned by the association during 1923 is an extensive newspaper advertising campaign to "sell" the automotive industry to the public, and the association to all dealers.

Association Helps Utah Dealers

SALT LAKE CITY, Nov. 18 — Through the efforts of the Intermountain Automotive Trades Association of this city Secretary of State Crockett is contemplating the issue of temporary permits to persons purchasing cars in Utah and driving them to the state line. Heretofore "transit license" cards were issued for this purpose but they were subject to abuse. In consequence of this the cards were withheld with the result that outside customers of local dealers were put to considerable inconvenience unless they obtained a Utah license which had to be paid for at full rates. Crockett says he "will probably" follow the suggestion. It is also likely legislation will be passed in this connection in the new year.

A. E. A. Scranton Meeting

SCRANTON, PA., Nov. 18—Automotive dealers of Scranton and vicinity were present at the first showing in this part of the State of the A. E. A. films "Ask 'Em to Buy" and "Shop Profits." The meeting, which was held in the Elks Club here, was preceded by a dinner. In addition to the A. E. A. films, the dealers saw the Multibestos film "Tell 'Em," which shows the new Multibestos method of relining brakes.

Credit Bureau Helps Michigan

DETROIT, Nov. 17—The Michigan Automotive Trade Association has made arrangements with the Merchants' Credit Bureau to recover rental batteries and collect dead accounts for the members of its battery chapter. This service will also be extended to non-members for a period of fifteen days in order to demonstrate to them the advantages of membership in the association. The Merchants' Credit Bureau is one of the most powerful organizations of its kind in Detroit.

CHANGES IN THE TRADE

The White Co. has established a local sales agency at Hartford, Conn.

E. M. Read, Hartford, Conn., has been appointed service manager of the **Hartford Buick Co.**

Garth Motor Co. of Birmingham has been appointed distributor for the Gray automobile in north Alabama. The company is also distributor for the Rickenbacker.

Hurley Motors Co. of Washington and the **Wilson Nash Motors Co.** of Baltimore have been awarded direct distributing contracts by the **Nash Motors Co.** Territory allotted the Hurley company comprises the District of Columbia and Virginia. The Wilson Nash company controls territory in Maryland.

D. S. Eddins has been appointed regional manager of the Atlantic Coast region of the **Chevrolet Motors Co.,** comprising the following zones: Tarrytown, N. Y. (including the New England district), Buffalo, Pittsburgh, Baltimore and Atlanta. He will supervise all sales operations and all matters pertaining to sales and will have charge of all distribution of production from Tarrytown and Buffalo plants. Headquarters of the new regional manager will be at the Tarrytown plant.

R & V Increasing Force

EAST MOLINE, ILL., Nov. 20—The R & V Knight Motor Co., manufacturer of the R & V Knight four and six cylinder cars, is gradually increasing its force in preparation for greater production.

To Sell Union Truck Plant

DETROIT, Nov. 20—Property of the Union Motor Truck Co. of Bay City will be sold by the referee in bankruptcy on Dec. 12. The plan of the former stockholders to reorganize was abandoned when it was shown that one-fifth of the $100,000 raised would be required to pay the fees of trustees and receiver and court costs.

Want Syra-Cord Continued

SYRACUSE, N. Y., Nov. 20—Creditors of the Syracuse Rubber Co. which recently went into the hands of a receiver will make every effort to save the firm by reorganization.

Approximately $250,000 additional capital will be necessary to effect a reorganization, the creditors believe. None of the creditors is said to favor liquidation of the company and a petition will be sent to Federal Judge Cooper asking permission for the receiver, William F. Rafferty, to continue the business.

May Dissolve Ohio Tractor

COLUMBUS, Nov. 20—The Ohio Tractor Co., which has been manufacturing farm tractors, may soon be dissolved if the plans of the officials are carried out. The concern was reorganized about three years ago, and the name changed from the Columbus Tractor Co.

Receiver for Motors Mortgage

PITTSBURGH, Nov. 16—An ancillary receiver was appointed here yesterday for the Motors Mortgage Corp. The company is engaged in the purchase of bailment leases and conditional sale and chattel mortgage contracts, and in loaning money and financing automobile sales and purchases.

Louis E. Rood Dies

CHICAGO, Nov. 21—Louis E. Rood of Allison-Rood Co., Lincoln and Ford dealers here, died suddenly of heart disease. Funeral services were largely attended by members of the Chicago Automobile Trade Association.

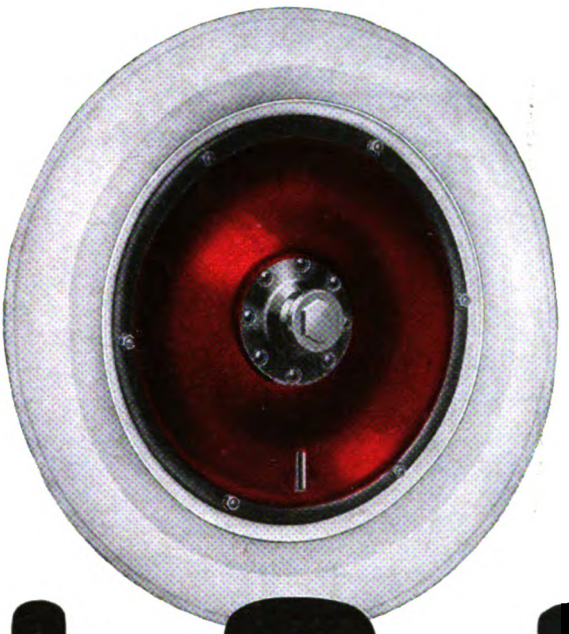
WILLIAMS ACCELERATOR *for FORD CARS*

Less Sales Resistance



Compare the Williams Accelerator with any other Ford foot throttle. When you demonstrate it, there are no complicated parts, no foot rest, no extra attachments to explain. When you sell it, you can be sure of making a satisfied customer. When you install it, you can make the three easy connections in less than ten minutes. Three good reasons why you should show your customers the Williams Accelerator.

NO-LEAK-O Piston Rings

As Business Builders

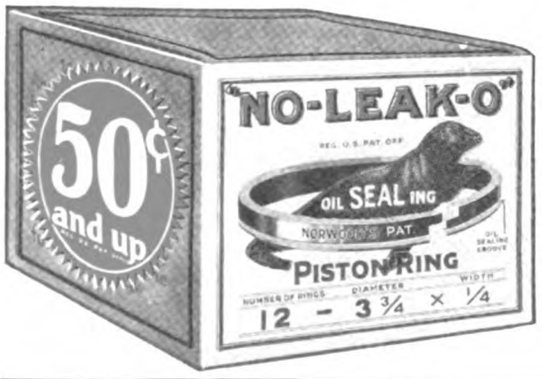
National advertising in the Saturday Evening Post has **made the motoring** public familiar with No-Leak-O **Piston Rings and** the fact that "they Won't Leak Be**cause They're Sea**led With Oil." Their exclusive "oil-**SEALing" groove** means to the motorist real SAVING. **This groove packs** an oil film in between piston and **cylinder walls wh**ich seals in all expanding gas, abso**lutely prevents** "oil pumping," gives *oil control and* ***compression in*** *each individual ring*, and prevents **"unburnt" gas** or kerosene from leaking down into **the crank case to** weaken lubrication.

No-Leak-O Piston Rings are made in one piece—easy to install—**quick seating—of fines**t material—guaranteed against breakage—**individually tested fo**r accuracy—and give equal tension on the **cylinder walls.**

The Nation's standard replacement ring.

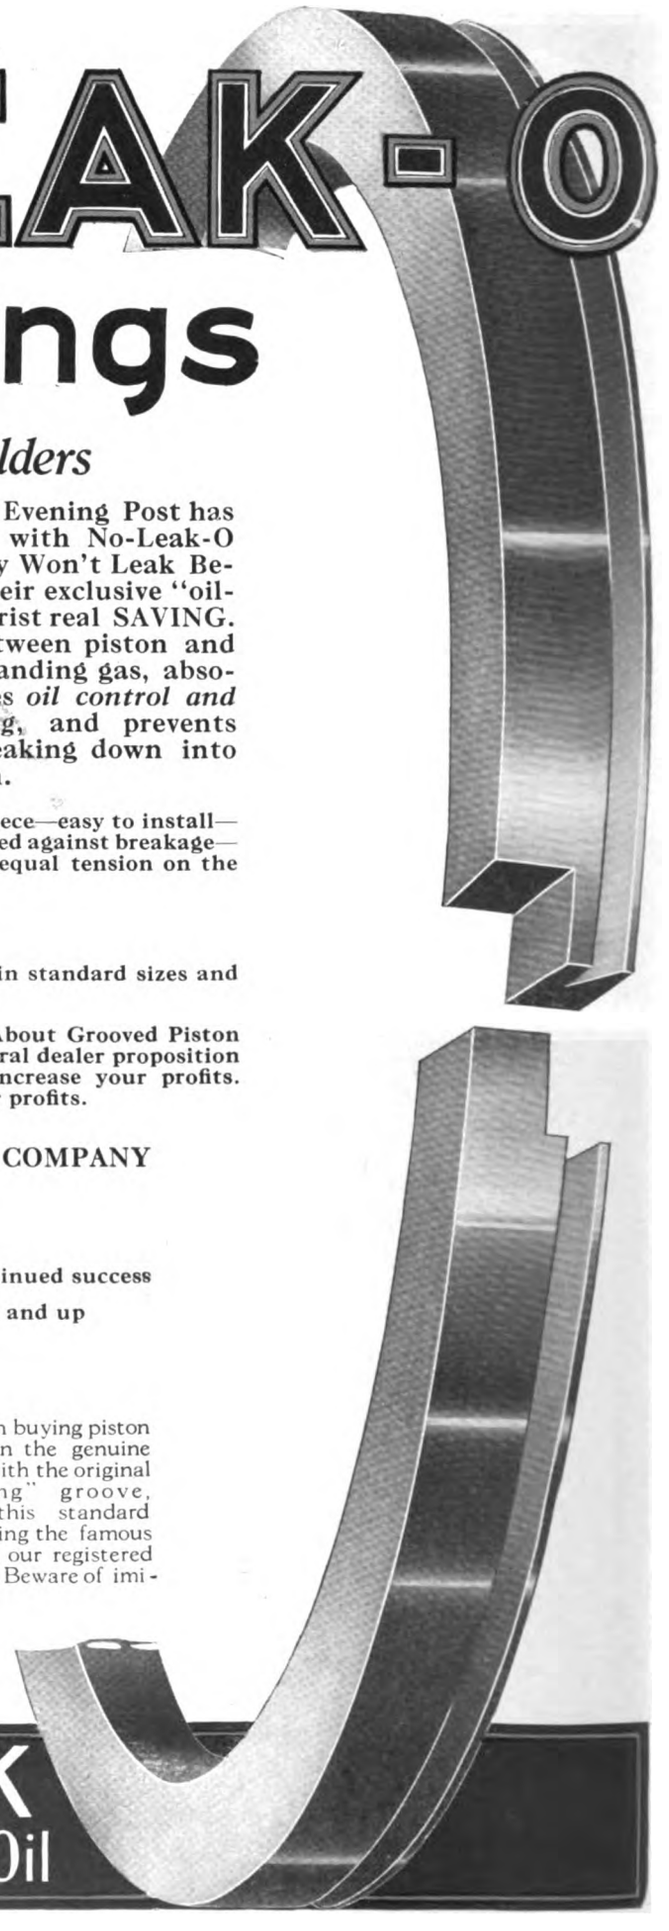
Over 200 reliable jobbers carry No-Leak-O in standard sizes and ***over* sizes. Prompt** service *always*.

Write for free booklet, "Know the Facts About Grooved Piston Rings." Also let us tell you about our liberal dealer proposition and how our National Advertising can increase your profits. Quick action on your part will mean bigger profits.



NO-LEAK-O PISTON RING COMPANY

Dept. T-45



Baltimore, Md.

On price during eight years of continued success

One design—for all cars—50c and up

Important—In buying piston rings insist on the genuine No-Leak-O with the original "oilSEALing" groove, packed in this standard package bearing the famous ring and seal, our registered trade mark. Beware of imitations.

WON'T LEAK
because they're sealed with Oil

Apco Dash Oil Gauge No. 40

A solid cast aluminum gauge which fastens to the Ford instrument board. A hollow wire leads to an air pressure chamber which is threaded into the lower petcock hole in the Ford.

The indicating fluid in the body of the gauge is controlled entirely by the air pressure in the tube through which no oil or liquid passes.

The appearance of the APCO DASH OIL GAUGE compares favorably with any instrument that might be installed on the dash of any car and the convenience of having the oil level in plain sight is very desirable.

There is absolutely nothing to get out of order and once installed, which requires about fifteen minutes, it becomes a necessary part of the car and the saving in oil will pay for the gauge in a very short time.

Absolutely guaranteed to prove satisfactory under the liberal Apco Guarantee.

List Price $3.00

Oldsmobile in Troy, N. Y.

"We have sold in the neighborhood of two hundred and fifty Model 43-A Oldsmobiles since that model came into production and it might interest you to know that the first one to be taken in trade by us was taken in today on a coupe. All the rest are still owned by the original owners with the exception of one which was traded in on a much higher priced car."

—OLDSMOBILE SALES AND SERVICE COMPANY
Q. H. BALL

That's a record that means money to the dealer — not only because of the sales he has already made, but because of the sales these two hundred and fifty satisfied owners will bring him.

Oldsmobile dealers all over the country are making money because they have a line that *sells*. It's a complete line, including fifteen passenger cars ranging in price from $955 to $2025 — and a highly successful one-ton truck at $1095 for the chassis.

And the liberal General Motors financing plan makes it easy to do business.

How is your business? Do you have to have more than one franchise in order to offer a reasonably complete line? Finding a lot of "sales resistance"? Is the financing of your business bothering you? Then investigate thoroughly the Oldsmobile franchise.

Write, wire, or phone.

Are You Going to Profit by the Automotive Christmas?

Some Suggestions for All Kinds of Automotive Dealers

THIS is going to be an automotive Christmas. More than ever before automotive dealers have recognized and have prepared to grasp the possibilities for greater sales and profits this December through selling automotive products with a gift appeal.

That this December's sales, from now on until Christmas eve, will far outstrip the same period in any previous year is almost certain. The question is how much. And this question puts it right up to each individual dealer. Indeed, regardless of what all the other dealers may do, the question of how much more he can sell this December through presenting his stock with a Christmas gift appeal is the most important, timely and profitable question the individual dealer can consider.

THE conditions are favorable. Motor car ownership has increased tremendously in the past few years—there's hardly a family in which at least one member does not own a motor car. Think of the opportunities to sell all of the members of the family automotive equipment for the car owner in the family group, and of the opportunity to sell to his friends besides.

Financial conditions on the whole are improved. People have more to spend and more inclination to spend it this year. They are beginning now to wander around in department stores and novelty shops selecting gifts and paying cash for them or placing deposits that will hold goods for cash sales within the next twenty days. The great bulk of Christmas business always is for cash.

The Christmas shopper invariably looks for something useful, something different, something novel, something that will make the person who receives it remember the giver. Automotive equipment articles fit in nicely in supplying this demand because of their usefulness and because, since they have not been widely distributed as Christmas gifts before, of their originality.

So this is the picture of selling opportunity that the coming month holds for the automotive equipment dealer. *And, now is the last chance he will have to cash in on this opportunity. What is to be done to present automotive products as Christmas gift suggestions MUST BE DONE NOW.*

And, right at this point let's banish the idea that the automotive equipment dealer is the only one in the industry that can profit from the Christmas opportunity. The holidays also bring merchandising opportunities to the car and truck dealer, to the repairman and the

Digitized by Google

garageman. These opportunities, while they may not be translated into sales so promptly as they are by the automotive equipment dealer, exist nevertheless.

Cars for Christmas

For instance, some motor cars will be purchased as Christmas gifts this year, and some car owners will receive as Christmas gifts orders on some repair stations for work on their cars to be done this winter. But the big opportunities that the holiday period hold for the car dealer, repairman and garageman will be in impressing the public during this period through advertising and displays.

A brand new, shining car in the salesroom window, under bright lights, and displayed against a Christmas background will make an impression on a large number of people that may be the determining factor in drawing them to the salesroom when they are in the market for a car months hence. A particularly striking advertisement that puts the car into the Christmas atmosphere at this time; a simple, sincere card expressing the season's sentiment; a bit of Christmas decoration in the salesroom may be directly responsible for the sale of cars, trucks, repair service or some other service in the future. The important thing is to get your business into the Christmas picture at this particular time when the thoughts of everyone are for Christmas and anything that does not have the atmosphere of the holidays is lost from the picture.

If you have not been impressed with this fact before look around you during the coming month; analyze your own reactions in your Christmas shopping. They will help you this year and next year too. Notice which stores you are attracted to—invariably they will be the ones that through their advertising or their display have impressed you with the fact that they are the places to find Christmas gift suggestions. It is a good bet that even the wideawake bootblack will be "in the picture" if it is only a twig of holly in the window or a few paper streamers from the lighting fixtures.

Get Into the Picture

LET'S GET IN THE PICTURE.

But, getting in the picture is the least that can be done by the dealers in automotive products. There is the Christmas selling appeal to be made, and the ways of making this appeal are as many as there are automotive dealers.

Generally these selling activities may be grouped under two headings:

1—*Christmas advertising.*
2—*Christmas display.*

Christmas advertising is of two varieties—the advertising that is done to "get into the picture" and build good-will and the advertising that definitely asks people to buy the things the dealer sells for Christmas gifts. In the same way Christmas display divides itself into two varieties—the kind that presents the car or truck or service in a Christmas atmosphere for the purpose of getting the dealer "into the picture" and the kind that presents those products definitely as gift suggestions. The possibilities of the first form of Christmas display were very aptly illustrated in the Motor World Winter Business Number in a picture of a window used by a Seattle truck dealer.

The central figure of this display was a truck engine enamelled white and suspended from the ceiling with chains. Around the engine, on an easel, was a huge holly wreath. Heavy black hangings, on which were placed two smaller wreaths, and framed cross section views of the engine on easels on either side completed the window. It is not probable that very many people are going to give motor trucks to their friends as Christmas presents, but it is a fact that this display created a very favorable impression on many and led indirectly to subsequent sales. The display did get that truck "in the picture."

The automotive equipment and tire dealer and the motor car dealer can do more than get into the picture in the next three weeks. They can make definite presentation of their products as Christmas gifts, after they have got into the picture by fitting their salesrooms and displays with the things that will help give them Christmas atmosphere.

The motor car dealer can do these things:

1—Trim the salesroom with Christmas greens, red and green crepe paper, wreaths, bells and some of the many other decorative accessories now purchaseable at a modest price.

2—Keep the salesroom open and well lighted evenings—it's a good advertisement if nothing else when the sidewalks are crowded with Christmas shoppers.

3—Advertise the car as a Christmas gift suggestion.

4—Make a "Christmas morning delivery" drive on immediate prospects—use this appeal to get the lingering deals closed up.

5—Make a window display that definitely suggests a car as a Christmas gift.

These are all things that every motor car dealer can do during the next three weeks. There will be some sales of cars as a result of these efforts—a lot more than expected probably—but if no sales at all are made by some individual dealers they will at least have brought their business and the cars they sell more forcibly and favorably to the attention of a lot of people and will have prepared the ground for future sales in the advertising that these activities have brought them.

For the automotive equipment and tire dealer the next three weeks hold definite promise of quick cash sales and real profits. For him it is a case of doing the job just as the department store, the jeweler, the novelty shop and other merchants have been doing it Christmas after Christmas for many years. It is a job of advertising and displaying his goods with the definite suggestion that people buy them and give them this Christmas.

In a general way his job will be well done if he does these things:

1—Use all of the Christmas selling helps that are supplied by manufacturers and jobbers, including window cards, cut-outs, colored wrapping paper, advertising suggestions, etc.

2—Put a Christmas tree or some other Christmas symbol in the display window and make the window carry to the public a suggestion for the buying of the items it contains as Christmas gifts. (A good thing to remember in connection with Christmas window displays is that bright

A Window for the Service Man

A holiday window for the service man. The little house can easily be made by the man who letters your cards. Transparent paper can be used for the windows and an ordinary electric light hung behind the house will illuminate them. Details of the window, including the announcement cards, can be changed to fit the individual business

Digitized by Google

colored, highly polished articles are particularly attractive to the eye of the Christmas shopper.)

3—Advertise frequently in daily newspapers, calling attention to the fact that automotive equipment makes exceptionally useful, original Christmas gifts for everyone who owns an automobile.

effort launched strongly by holding a meeting of the entire organization during the first week of December and asking their assistance in making the month a leader in sales through use of the Christmas appeal.)

Probably one of the best suggestions for the automotive equipment merchant who wishes to use every method available to cash in this Christmas is to observe particularly the advertising and display efforts of the progressive merchants of his vicinity and to adapt to his own use as many of the ideas as he can make fit in with his own business.

Price is a particularly strong factor in Christmas merchandising. For the most part the Christmas shopper is a price buyer. He knows about how much he wishes to spend for each gift and he mostly will buy the gift that fits the price when it has favorably impressed him. Hence, the prominence of price in advertising and displays, and particularly of price groups, is worth considering. Price cards, trimmed with a Christmas decoration should be on every piece of equipment in the display window.

The means of making the Christmas selling appeal are as varied as the personality and size of the dealer and his establishment. The big thought is to do something—not to let the opportunities of the next three weeks slip by without bringing to the automotive dealer his share of the sales and profits that they contain.

Christmas merchandising does not necessarily mean a heavy investment in advertising, display properties, or in any other thing. It only needs full and intelligent use of the things that are at hand to put the automotive stores "in the picture" and drive home to a public that is preparing to spend millions of dollars in the next couple of weeks the great big fact that automotive gifts are the most desirable for the more than 10,000,000 motor car owners this Christmas.

Let's tell the world this is an automotive Christmas and MAKE IT ONE.

A Christmas Ad with Punch

4—Arrange salesroom displays that suggest many different articles as Christmas gifts.

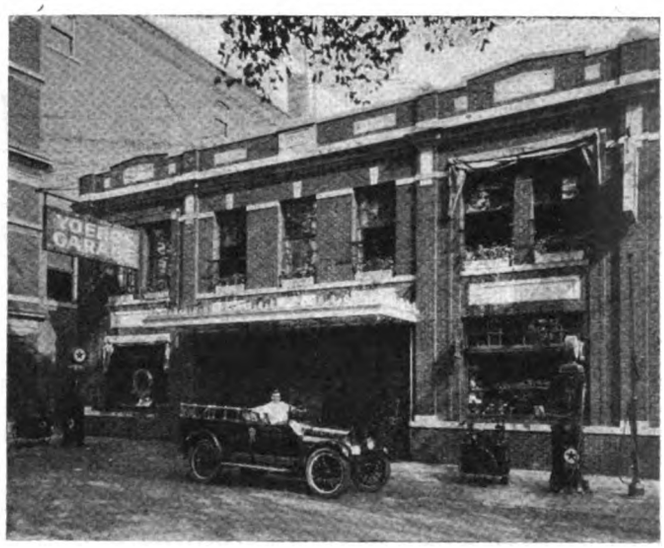
5—Mention the purchase of some items for Christmas gifts to every customer who enters the store between now and Christmas. (Some dealers are planning to get their Christmas merchandising

Stresses Immediate Delivery in Winter Selling

"I NEVER spent any time in the winter," said a successful middle western car dealer, "in digging up spring prospects. I know that when spring comes the prospects will develop automatically. Instead I devote all my time and thought and energy in the winter to moving all the cars I possibly can right at the immediate moment. I never talk spring deliveries, I always talk immediate deliveries. It has always struck me that if there is ever a time in the year when the dealer should clinch sales at once and go after the big and really live prospects at once, it is in the winter time. That's how I keep up a good record of sales in the winter, and, I believe, other dealers could do the same thing by following my plan."

Displayed Engine in Down Town Store Window

GOOD advertising was done by the Cruse-Crawford Mfg. Co., Birmingham, Ala., when it recently placed a Knight sleeve-valve engine in one of the most prominent downtown show windows.



The engine was so arranged that the observer could see the operation of the valve and piston, and demonstrated the difference between the sleeve valve and the poppet valve.

Large crowds gathered around the window at all times during the day, and the display was considered a success by the merchant who let them use his window and by the Cruse-Crawford Co.

Service and Publicity This Tire Dealer's Selling Tools

Customers Stand by Him When Price Cutter Threatens Competition

William P. Yoerg in his service car in front of his store in Holyoke, Mass.

WILLIAM P. YOERG, proprietor of the Yoerg Tire & Rubber Co., Holyoke, Mass., has built up a large and prosperous business as a tire dealer and repairer, on the strength of (1) Personality; (2) Emphasis on Quality and Service, with a fleet of road service wagons to assure speed and efficiency on the service end; (3) Ingenious and Systematic Publicity.

Personality is a big asset with Bill Yoerg as it is with many other successful merchants. Good cheer and good will, an evident desire to help a patron out of every difficulty and send him on his way rejoicing, a genius for remembering faces, the practice of greeting the customer by name on the instant—these are some of the traits that have smoothed the road to prosperity for this enterprising concern.

Yoerg has refused to cut prices or get in inferior stocks for the purpose of swelling sales. *His trade is educated to the idea that it is going to get quality as surely as it gets prompt and satisfactory service.*

Service and Publicity

Service and publicity have gone hand in hand as business builders for this organization. The red and gold service truck that stands as the latest addition to his fleet—you can see him with it in the accompanying picture—is a big help in a publicity sense. But the catch phrase "Call Yoerg, 804," has been perhaps his most effective publicity device. He was first in this region to invent and apply the idea of exploiting the telephone number as an advertisement. He made the combination "Yoerg, 804" familiar to every family or business establishment about Holyoke, having any interest in automobiles. It appears in every advertisement, on all his billboards and on his service trucks. In fact, tire trouble at once brings "Call 804" to mind. In a similar way he has given systematic publicity to United States Tires.

Yoerg started his business some fourteen years ago in a small store, when there were few automobiles in the city. To-day he has a building 60 x 122 feet, two stories high, employing fifteen persons in tire selling and repairing and automobile storage. Gasoline and oil are sold, and a limited stock of small accessories. The storage clientele helps to make tire business. Yoerg handles only one make of tires. But his service he rates as his big factor. He is ready to jump out on the road to a distance of fifty miles, if need be, to help a customer out of a difficulty. For this service he makes no charge, but he reaps his returns in a large and growing patronage composed of the most substantial class of car and truck owners. How he came to build his business on these lines he explains in this wise:

Cut Prices Unnecessary

"At no time in the fourteen years we have been in business have we found it necessary to cut prices in order to get business, so firmly have we established our business on quality and service," says Yoerg. As an instance of what this has meant I will cite an experience we had seven years ago. An out-of-town concern advertised in the local papers that it was about to open a tire repair shop and quoted prices on repairing tires and tubes at about half the rates I was getting. Naturally this started people talking, and they began asking how I expected to meet this new competitor. I immediately mailed a letter to our customers informing them that we were ready to meet the prices offered by the other company, provided we discontinued the system of *service* that had become familiar to the community. We left our customers to decide whether we should stick to our policy or abandon it in favor of low prices. Out of more than 400 replies there was just one that declared in favor of price-cutting, and whoever sent it failed to sign it. The rest were all in favor of our going ahead on the established lines. "Stick to your service," "Hold your prices, we want service," "Your service means too much to us to make price-cutting an inducement"—these were the expressions that came to us from every side. We certainly were proud of the compliments these postal cards brought to us, bearing as they did a stamp of approval for seven years of hard work. Since that occurrence others have tried the price-cutting policy, but with limited success. Holyoke is a city of about 65,000 inhabitants, and I honestly believe it is the cleanest city in the United States as regards the holding of prices on tires, and this because of our pains to educate the car owner to the fact that quality and service should be considered before price."

Yoerg doesn't see any reason why the tire dealer should not establish a fair price and stick to it, subject to market changes, as much as the clothing or shoe dealer. He believes that the tire business is in a way to become stabilized, like other lines of merchandise, and he thinks that if more dealers would take the same resolute stand against destructive price-cutting the tire business would be established on an infinitely better basis, with the failures much less numerous than in recent times.

Uses Billboards That Can Be Read

THE big problem in billboard advertising along a high-speed trolley line is to put one's message across in few enough words to enable the car riders to get it at a single, momentary glance. The same holds true of signs along a highway where motorists are wont to travel at a fast speed.

Joe Thompson, Dodge dealer of Ypsilanti, Mich., has solved this problem. Instead of using a single large board of the usual type, Thompson uses six small boards, each about 24 in. by 36 in., spaced about 200 ft. apart, with not more than two words on each board. The boards read, successively, as one approaches Ypsilanti on the interurban car or on the highway:

"Dodge" "Brothers" "Motor" "Cars" "Joe Thompson" "Ypsilanti."

The unusualness of the method attracts attention and sticks in the mind of the observer. Even should one miss one or more of the boards, or fail to take conscious note of the message, the others tell a nearly enough complete story for him to get the idea.

The Relation of the Repair Shop to Truck Sales

In Which a Salesman Points Out the Need for Teamwork to Insure Satisfied Customers and Reduce Sales Resistance

"HOW much! $1200! Why, man, I don't want to buy a new truck or a fleet of them or anything like that, I only want an overhauling job. Yes—well, I know all about that stuff of quality and so forth, but that ain't puttin' any money in my jeans. That's just the trouble with you fellows up there, you bother the life out of us haulers and tell us how good your truck is and why it's so much better'n any other one in the world, and then when a fellow wants some kind of a little job done, it's good-night for the bankroll. You're robbers, thasall, and I'm for tellin' the world from now on, believe me."

BANG!

"BUT—BUT, are you listening?" And then the foreman realized that his "friend" on the other end had hung up. And it seems as though this is all that ever comes of these phone conversations. Sometimes the foreman may turn to one of the clerks in the shop office, and say something about—that ——— hung up on me—but that ends it.

THE second act of this little scenario begins when the truck sales manager calls one of the salesmen into his private office and goes on a tear about Joe MacNulty going to buy a competitive truck, and picks on the innocent salesman with cruel words. Inside of a half of an hour, the salesman appears at the front gate of Joe's place (Joe being the selfsame gentleman who hung up the phone some time before on the indignant foreman) and finds Joe in and not in a very receptive mood.

"Good-morning," says our hero, the salesman, in a "Sunday-Special" voice adopted by him upon special occasions only, as on Sundays when some of his wife's relations call. Joe nods and proceeds about the greasing on the truck standing in the front yard, which the salesman quickly recognizes as his own make. The salesman advances to the center of the stage, and makes a move as if to shake hands with Joe. Joe points to the grease-stained extremities and asks what he can do for the salesman.

"Why, Joe, how's the wagon running these days? Pretty good, I suppose. Certainly has lasted you a long time, hasn't she?" Not receiving any reply from Joe, who is busy underneath the truck just at that moment, the salesman proceeds.

"By the way, Joe, I hear you were low on that new road job. Do you think you'll be able to handle it with the one truck? She's pretty good, but I don't think she can handle all that stuff. How about another one just like her? You know we just dropped our price and —," but he was rudely, oh! so rudely, interrupted by Joe who came out from under and shook a menacing hand in our hero's face.

"Listen here, buddy, what I'm a-goin' to tell you ain't to be taken personal, but it's about that bunch of lunkheaded robbers that you got up there in your place. Yes, you're right about needin' a new truck, but it ain't goin' to be yours. I'm placin' my order for two, mind you, two not one, of them there Sturdybilts, 'cause I need two trucks on this job, and this here piece of junk ain't a truck a-tall. It's a pushcart. The guy's comin' up here this afternoon to collect for 'em, and I get 'em to-morrow right out of stock. 'Course, I don't expect this baby to last forever or anything like that, but I did think that maybe I could get her overhauled for a reasonable bunch of coin, and if I could, why I was for buyin' another one and makin' the new one and this one, overhauled, do the work. But when I can get the work done on her from a little blacksmith shop up the alley for $600, and you guys want $1,200 for the same job, I'm through, thasall. Why, listen here, buddy, I ain't done nothin' but pay, pay, pay since I had this here baby, and now I know I been robbed.

"There ain't no use of your standin' there and tryin' to argue with me. I'm buyin' the Sturdybilts this afternoon, and that ends it."

But it did not end it for the salesman, although he was struck for a minute with the tale told by his friend Joe, and he was glad Joe went on talking for enough time at least for him to collect his thoughts and get set. He told Joe about the material that would have to be used, the tools required, what it would mean to him to have it done right, and then figured up the cost. He was a salesman, not a mechanic, and he sold Joe the job and sold him a new truck before he left there. And when he returned he "started something" with the repair shop.

However, some of these cases are not so fortunate in their ending; in fact, a lot of them never end, as it were. Salesmen are constantly running into former customers who have dropped mysteriously from sight and prospects who have been unsold after they were practically closed, by some one of the former customers who has a grievance and has spread it broadcast among his friends and club members. A great many of

Digitized by Google

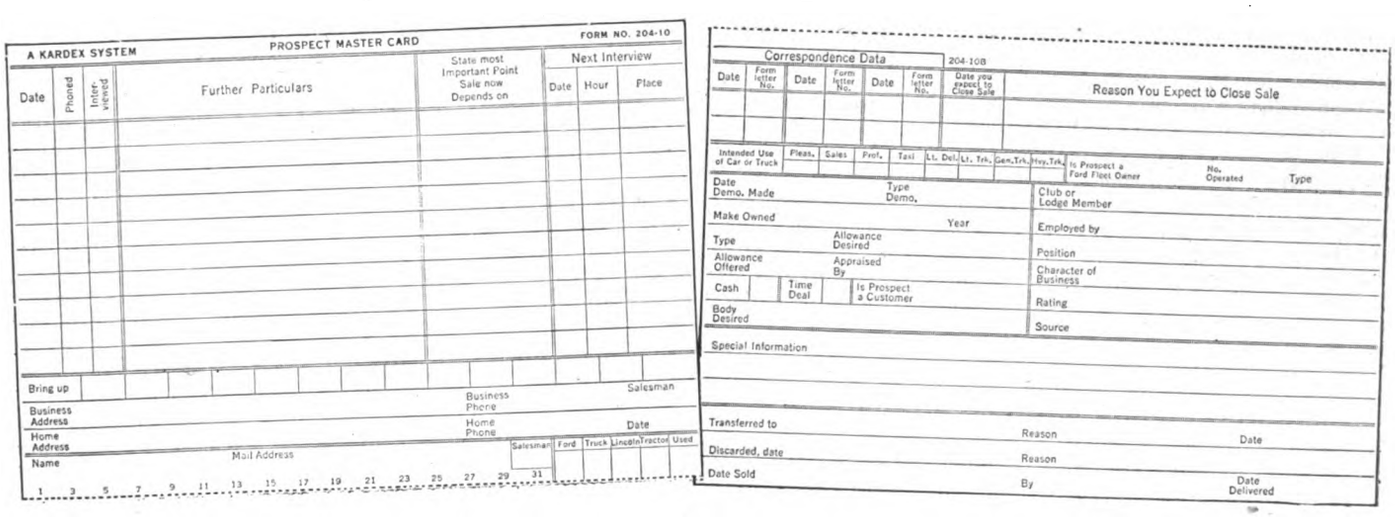
these grievances spring from the repair shop and are never carried into the sales department; in fact, they never leak out of the shop. A driver is unconsciously insulted; he hears one of the mechanics venture an opinion on the profit of the house, that is, that it is tremendous, etc.; the foreman takes off an item from a job for an owner, perhaps legitimately, if it is a big job, and someone else's driver sees it done and does not understand it; he carries the news to his owner—and so it goes. There are ever so many ways that things leak out that are really unjust and easily straightened out if taken up immediately or stamped out entirely if the practice is not a fair one.

I venture to say that more sales are killed or badly maimed by the repair shop than in any other way. It is a sales resistance that the house itself is creating within its own walls that is stronger than all outside influence that may be brought against the product.

A Good Plan of Action

The sad part is that the salesmen labor day in and day out to spread the glad tidings, and for every word of goodness that they say, the repair shop may be causing more unjust criticism than ten times what the salesmen could ever say.

They do it unconsciously—this is the bad part. They're not trying to kill the business or be mean to their firm. No, indeed! It's often just the opposite. They try too hard to please—if this is possible—and by so doing they only do harm. They think they're doing the customer a favor with an item here or there, and either the customer tells his friends or someone who oversees the deduction or the change and does not understand the circumstances tells his friends and there is friction. The little fellow thinks the big fellow is getting allowances that he does not get, and there you have it. Furthermore, if a credit is allowed in some cases, they always expect it, and if they don't get it, they are being "robbed". It is only natural that a mechanic is not expected to be a salesman, but he certainly should be able to convince a man that the job is worth all it costs, and why it is worth more to have it done there than anywhere else.



I think a good plan of action is the one adopted by quite a few of the larger agencies, and that is to have a triplicate copy of all truck repair bills given to the sales department each morning and a copy of all jobs written during the day. In this way the sales departments know exactly what is going on and how much the job costs. They are acquainted with the facts of each case, and if there is anything that looks out of place, they are quick to check it up and get the details. Perhaps a man can have something done that will cheapen the job in dollars and cents and yet give him the same mileage as he would get with the more expensive repairs. The mechanic's psychology is more of a detailed affair, and he likes to see a job done up right—rather than do it just enough to keep the truck running. He also feels an interest in seeing the repair shop pay and be busy so there is no chance of a lay-off, and he will try to increase the job. The sales department can check up on this tendency and keep the service sold. It works.

Weekly Meetings

Another thing is the weekly meetings of all foremen and their assistants with the truck sales department. At these all questions are brought up and answered, and any arguments or discussions that have come up during the week are gone over and straightened out.

Furthermore, the method of sending out a sort of questionnaire, after each repair job, to the owner, asking him whether he is perfectly satisfied with the work or not, works very well. It keeps the customer sold, and if he is not satisfied, it is more or less up to him to let you know. At least you have gone on record and you have made it plain that you are anxious to have him satisfied.

A New System for Sales Department Records

The face of the Kardex prospect card is shown at the left and the reverse at the right

A COMPLETE system of sales records for the automotive dealer has been developed by the Kardex Sales Co., Tonawanda, N. Y. Among the advantages claimed for the system are that it minimizes clerical work and yet gives detailed information and control; it eliminates disputes between salesmen; and that it makes it easy for the sales executive to follow the work of the salesman.

Six forms are used in the system. The field prospect card and the master prospect card are identical except that the former is printed on a buff-colored card and the latter on a white card. The field prospect cards are filed in the salesmen's individual files in alphabetical order. The white master cards are filed in the master file also in alphabetical order.

The third form is the salesman's daily work plan. He removes the cards of the prospects he will call on during the day and makes out his route on this form. Detailed reports of calls are made on the field card and a general report on the daily work plan. The reverse of this form is arranged for records of canvass calls that are made by the salesman.

The fourth form is called the Monthly Sales department analysis. It is arranged so that a daily report of the sales department may be entered. The monthly salesman's analysis provides a similar record for each salesman. The used car appraisal card is the sixth form.

In addition to these forms, the Kardex company has designed some special forms for the Ford dealer.

Complete information regarding these systems may be obtained by writing to the Kardex Sales Co.

Keystone Dealers Pledge Support for Move to Repeal Burdensome Taxation

Second Annual Convention of Pennsylvania Automotive Association in State Capitol Maps Out Broad Program—150 Delegates Attend

HARRISBURG, PA., Nov. 21.

THE Second Annual Convention of the Pennsylvania Automotive Association, which closed its two-day sessions here this afternoon, ended with many expressions of satisfaction from members on the floor. The meetings had proved of great practical benefit to the 150 delegates in attendance.

The delegates had listened to some exceptionally able speakers on topics of vital interest to the industry, along the lines of past experiences and feasible plans for the future and were able to carry back to their salesrooms and shops much that will make for the betterment of business. The association went on record in favor of various proposed laws helpful to the automotive industry, including safety brake inspection as approved by the National Safety Council; more flexible and less restrictive motor vehicle regulatory enactments; favoring a road bond issue to restore exhausted State funds for road building purposes and recommending work co-operative with the National Automobile Dealers' Association and other national bodies in attempting to secure the repeal of burdensome taxes.

FOLLOWING a cordial invitation from the strong Erie delegation to hold the next convention in that city, the association unanimously accepted. A few routine changes in the bylaws were made, two new directors were chosen, four additional vice-presidents and two special secretaries were selected and the former officers re-elected. The officers and directors now are as follows:

President, George G. McFarland, Harrisburg; vice-presidents, J. Burton Arbuckle, Erie; E. T. Satchell, Allentown; J. H. Leppert, Johnstown; George A. Hoeveler, Pittsburgh; and O. E. Conrad, Scranton; secretary-manager of the association, L. H. Hagerling, Erie; secretary to the board of directors, Roy W. Shreiner, Harrisburg; secretary to the treasurer, Harry Shroeder, York; and treasurer, E. A. Clark, York.

Directors — George G. McFarland, Harrisburg; E. A. Clark, York; E. T. Satchell, Allentown; John B. Arbuckle, Erie; J. Miller Kalbach, Reading; Harry Olewine, Hazleton; Roy W. Shreiner, Harrisburg; J. H. Leppert, Johnstown; George A. Hoeveler, Pittsburgh; W. U. Mussina, Williamsport; L. H. Hagerling, Erie; Otto E. Conrad, Scranton; George S. Bray, Wilkes-Barre; W. C. Cheesman, Butler; W. H. Brearley, Philadelphia; and James Gallagher, Chester.

The opening session was held in the House of Representatives, Capitol Building, on Monday. First, there was a meeting of the board of directors in the ante-chamber of the House. This was followed by general registration. The convention was called to order at 10:30 a. m., by President McFarland, who introduced E. E Beidleman, lieutenant governor of Pennsylvania. Mr. Beidleman, who made the address of welcome, said that there should be a spirit of friendliness between the State House and any body of earnest, industry-building business men and emphasized the growth of the automobile trade, to which, he added, much preparation had been given to put it on a sound business basis. This preparation, he said, had included a vast investment, which showed that the industry possessed an unusual degree of stability.

In his address on "Progress," in which he pointed out the strides that the organization has made within the last year, President McFarland said that the association has gone on record as favoring the repeal, or the amendment of the "$100 law" on the sale of used cars.

Furthermore, Mr. McFarland said, the association has gone on record as favoring the State collection of the one-cent gasoline tax from the refiner, rather than from the dealer; as favoring a more liberal interpretation of the dealers' tag law and personal examination of every applicant for a State license. He urged close attention to legislation.

Membership Effort Launched

The report of Secretary Hagerling showed that from a membership of 92, in 1921, when the association was organized, the membership has increased to 533 and, although it is the youngest organization of its kind in the United States, it is also large and well financed.

Following an open meeting, the morning session closed with a recommendation that all members present secure at least one new member within sixty days, for each director. There are now 533 members in the association.

C. A. Vane, St. Louis, general manager of the N. A. D. A., spoke on "Building for Permanency," giving facts and figures on the growth of the trade. He emphasized the necessity for using common sense in the matter of making allowances to customers on their old cars and insisted that there was no other "used car problem," but that it was a matter for every individual dealer to see that he should get a legitimate return on his investment, which would be impossible if over-allowances were made on second-hand cars.
